May 17th, a meeting of the Tri-State Holstein Breeders' Association was held in the Chamber of Commerce rooms at Joplin, Missouri. A constitution and set of by-laws were adopted and a board of directors consisting of the following men were elected: Dr. W. J. Nichols, Asbury; Judge George Beasley, Pittsburg; Charlie Stevens, Columbus; A. Grisham, Hockerville; W. J. Cherry, Mount Vernon, and Harry Workman, Seneca. Gene Moses of Joplin was chosen secretary.

Dues were set at \$1 annually. A committee was appointed to select purebred Holstein bulls for the Joplin Chamber of Commerce Better Bull Club. Calf Clubs are to be developed and a membership campaign will be held, the breeders who obtain the largest number of memberships will be entitled to a free breeding service to the herd bulls owned by Dr. Nichols or Mr. Lindsey. Both of these animals are from dams with large Advanced Registry records.

NORTHUMBERLAND COUNTY FIELD DAY

The Northumberland County, Pennsylvania, Holstein Breeders Association will hold an "outing" and Field Day on June 17th, at Sunny Lawn Stock Farm, Milton. All Holstein breeders and their friends are invited. A very interesting and enjoyable program has been arranged.

Sunny Lawn Stock Farm is situated on the improved highway leading from Lewisburg to Milton and is easily accessible from all points and it is anticipated that a very large number of breeders and their friends will attend.

Murray A. Miller is owner of Sunny Lawn Stock Farm and owns one of the best working herds of Holstein cattle in central Pennsylvania. Remember the place and date and be at Sunny Lawn Stock Farm with your friends on June 17th.

CLUB OFFICIALS PROMOTE SALE

Gilbert Thatcher, Secretary of the Utah Holstein Breeders' Association, recently purchased twenty-seven head of purebred Holsteins in Waukesha County, Wisconsin, and shipped them to Ogden. Mr. Thatcher and C. S. Potter, who is president of the state association, will superintend a sale and the Utah Holstein Breeders' Association will stand back of the event. The purpose is to bring more Holsteins into the state and interest dairymen and others in the breed.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

LEADING VIRGINIA RECORDS

Can you give me any information regarding the highest official milk and butter records made by Holstein-Friesian cows tested in Virginia? H. P. S.

While the BREEDER AND DAIRYMAN has never laid undue stress upon leading records, simply reporting them as items of news and not as evidences of profitable production, we are pleased to answer requests of this kind. We believe you will find the highest official butter records made by Virginia Holsteins in the following list, but we are sorry we do not have the milk records. These are harder to keep track of because the cows making the highest butterfat record do not always make the highest milk record. Then too, the highest milk record and the highest fat records are not always made in the same week; that is, a cow may give a larger flow of milk with a lower average fat percentage than she does in the selected week reported to Superintendent Gardner. The Superintendent himself made some effort to keep track of such records and after several years experience said that his accounts and those of the owners often differed materially for the reason given. The fact that the Association Delegate Convention is held this year in Richmond makes the list of more general interest.

A BOOKLET OF BREED INFORMATION

One of the most interesting booklets that ever came into our office was issued recently by the Waukesha County Holstein-Friesian Breeders' Association. The purpose of this book is to call attention not only to Waukesha County and its Holsteins but also to the quality and blood lines of its purebred herds. The illustrations depict animals in Waukesha County herds and are mostly of herdsires.

A list of the members of the Association with a list of fifty sires in service are given, the second list showing the seven-day milk and butter records and the year butter records of the dams.

One feature that particularly attracted our attention was the article by Leo J. Brosemer, entitled "Cow County, U. S. A.," which we have lifted entire, at the same time apologizing to Mr. Brosemer and the members of the Waukesha Association.

The historical sketch of the Association is worth reading and preserving. The Waukesha County Holstein-Friesian Breeders' Association was organized in 1907 with an original membership of twenty-six. To-day there are nearly 250 members and at present memberships are not solicited. In Waukesha County there are now more than 1,500 men whose herds are headed by purebred Holstein bulls. The claim is made that Waukesha County Holstein breeders have more dollars invested in Holstein cattle than any other county in the world, and that one-third of the 30 lb. cows and one-half of the 1,000 lb. year record cows of Wisconsin are in Waukesha County.

Waukesha County was the first county in the world which elected to have its herds placed under Federal or State Supervision in order to insure freedom from tuberculosis. Every purebred, and, practically every high grade in the county is under such supervision, and one-third of the official testing done in Wisconsin is done in Waukesha County.

The first president of this association was C. R. Montague, a minister of North Prairie. The first secretary was R. L. Baird, who is still a director. Dr. N. W. Downing was the second secretary and was afterwards elected president and C. J. Will was made secretary. The present president is Fred Southcott of Dousman, manager of the Gustave Pabst Farm; W. L. Baird, of Waukesha, is secretary-treasurer, while L. V. Garvens is field secretary and his principal work is to assist intending purchasers to make sales.

The early Holstein history of Waukesha County is interesting. Sixty years ago there were Holsteins brought into the county but the real start was made in 1884 when Julius Rust, then of North Greenfield but now of West Allis, brought twelve purebred heifers from the east at an average price of \$200, which was considered enormous at that time. One of these heifers was Piebe, No. 5975, the foundation animal of the Piebe and Ormsby families. Another heifer was Aaltje Salo, No. 5868, a show animal whose descendants inherited her type and conformation. During the last thirty-five years there have been 353 animals registered in the Holstein-Friesian Herd Book as direct descendants in the female line from this cow, all born on the Rust Farm. She also has a large number of descendants in Waukesha and adjoining counties.

PLANS FOR NEXT JANUARY'S SHOW

Plans for the 1925 Pennsylvania Farm Products Show were discussed at a meeting held in the room of the State Secretary of Agriculture, May 26th, at the Capitol, Harrisburg. Owing to a slight illness of Secretary Willits, who is chairman of the committee, Deputy Secretary of Agriculture John H. McKee, presided. He read his report as treasurer showing total receipts of the 1924 event to be \$16,172.05 while the expenditures were \$15,895.09; the balance on hand after allowing for charges for storage room was \$215.96. Changes and additions to the prize

list were tentatively discussed. Representatives of practically all the allied agricultural organizations were in attendance.

From the livestock angle, it is the intention to make the 1925 event specialize on sheep and swine which were absent from the show of this year. Owing to space limitations it is doubtful if any cattle will be exhibited next January although Prof. Fitts of State College, who is in charge of the cattle representation, said that both the dairy and beef cattle organizations approved the 1924 show and were willing to make similar and even larger exhibits in 1925.

The officers were all reelected for another year. They are Secretary F. P. Willits, chairman; Robt. H. Bell, secretary, Miles Horst, assistant secretary; Deputy Secretary of Agriculture McKee, treasurer; H. E. Klugh, manager. It was decided to have the convocation meeting on Monday evening, January 19th and the show open at 9 A. M. Tuesday morning and continue until Friday evening. A brief discussion was had on the advisability of using roadside posters for advertising and the committee went on record as favoring the use of other forms of advertising. A vote of thanks was given to the Department of Agriculture and its officers, to Harrisburg businessmen and organizations who had cooperated in making the show a success. This was coupled with an expression of regret that the chairman, Secretary Willits, was too ill to be present at the meeting. It was also voted that the chairman should appoint a committee of three to investigate and arrange for the incorporation of the show committee so that a charter could be obtained and by-laws drawn up in order to form a corporation to carry on the show. It was practically the unanimous opinion that no charge should be made for admittance to any part of the 1925 event. A resolution was passed urging the Legislature to make an appropriation in order to secure a site and buildings for a Pennsylvania State Fair, Pennsylvania being the only large state without such a show which was important to demonstrate and advertise its agricultural wealth, possibilities and production.

THE RECORD OF LINDEN CLARA PASMA

In making mention of the remarkable record made by Linden Clara Pasma in our May 8th issue, page 324, we suggested that she may be a world's champion and asked if any readers of the BREEDER AND DAIRYMAN could give information on this subject. Clara freshened April 6, 1923 and during the year of work while enrolled in the Lewis County Testing Association, she produced 24,603 lb. milk, 849.4 lb. butterfat and was milked only twice a day during this period. She is owned by Henry Bouchard, Hanaford Valley, Washington.

Mr. O. H. Baker, chief of the American Jersey Cattle Club Register of Merit and Extension Department calls our attention to a record made several years ago by Irene's Amelia, a

purebred Jersey, owned by Belvidere Farms, Belvidere, N. Y. This cow completed an official year's record of 892 lb. fat or 42.6 lb. more than her Holstein sister and she was never milked more than twice a day during any day of her record period. Of course, her milk production was considerable below that of Linden Clara Pasma, and as far as we know the record of this cow (Clara) has never been equalled for either milk or butterfat by any purebred enrolled in cow testing association work and milked only twice a day.

A BY-PRODUCT OF THE DAIRY INDUSTRY

An important industry is growing up in Minneapolis in the manufacture of casein glue. This product has many recommendations because it is practically odorless, is waterproof, and has great adhesive strength. While in its present form it is a modern industry, the discoverer of this glue starting business in 1917, a form of casein glue was used by the ancient Egyptians, who used a mixture of milk and caustic lime for glueing the ends and corner posts of mummy cases. As everyone knows, the bodies of the ancient Egyptians are found to-day in perfect preservation and the glue joining their caskets holds just as persistently as when they were entombed 3,000 years ago.

The principal manufacturers of casein glue are the Monite Waterproof Glue Company of Minneapolis. The product is used by automobile manufacturing concerns, piano makers and also for veneering furniture. It has found favor in manual training departments at high schools, colleges and universities.

Casein for glue is prepared by coagulating the curd in a vat of skim milk to which is added a starter. When coagulation is complete the whey is drained off and the curd is washed several times in cold water, after which it is pressed, shredded and dried, either in the sun or by artificial heat, then it is mixed with chemicals by a secret process.

EXPORTS OF POWDERED MILK

Japan, Germany and France took a large proportion of the powdered milk sent from this country during April. There were 242,905 lb. sent abroad and more than one-half was taken by these three countries, Japan leading with 55,665 lb.; Germany taking 39,308 lb. and France 36,359 lb. The figures for April of this year and of last year and for the first four months of this year and for the first four months of last year are found in the following table:

April, 1924	242,905 lb.
April, 1923	141,347 lb.
Jan.-April (Inc.) 1924	984,448 lb.
Jan.-April (Inc.) 1923	985,253 lb.

Cow Testing Association Reports

SOUTH DAKOTA TESTING

A steadily increasing interest is shown in South Dakota Cow Testing, says the state official report for April. The average of production shown in the eight testing associations in the state is higher than for the corresponding period a year ago.

Tests are reported for 2,472 cows of which 213 produced more than 40 lb. butterfat and 213 failed to return the cost of their feed. Of the 188 herds tested, 31 averaged more than 25 lb. butterfat per cow. Gladys Leda, a purebred Holstein, owned by the Penitentiary Farm at Sioux Falls, was the highest producer of butterfat with 83.79 lb. Her milk production was 2,205 lb., her fat test 3.8%. She also yielded the largest net income, \$24.82.

The Moody County Association and the Kingsbury-Hamlin Association finished their first year of operation April 30th and immediately began a second year's work. The Kingsbury-Hamlin Association was divided so that there will be an association in each of these two counties this year.

Gladys Leda was the highest producer in the state; Bob Ears, owned by Roy Spurling of the Brookings Association was second with 2,178 lb. milk, 76.23 lb. fat. A grade Holstein owned by C. Zoellner headed the Brown County Association with 1,686 lb. milk, 74.18 lb. fat. Rose, a purebred Holstein, owned by F. E. Johnson of Hetland led the Kingsbury-Hamlin Association with 1,477.8 lb. milk, 69.46 lb. fat. Three of the eight associations were led by purebred Holsteins and four by grade Holsteins.

While a grade Guernsey herd of thirteen animals led the state with an average of 48.94 lb. fat, three of the associations were headed by purebred Holstein herds and two others by grade Holstein herds and the leader of the Day County Association was a herd consisting of Holsteins and Shorthorns. The Erwin-Peterson herd of twelve purebred Holsteins averaged 1,328.2 lb. milk, 42.79 lb. fat; the Penitentiary herd of twenty-three purebreds averaged 1,219.5 lb. milk, 42.77 lb. fat. Mr. Johnson's herd of twenty-one purebreds averaged exactly 1,100 lb. milk, 38.56 lb. fat.

There were 188 herds containing 2,472 cows enrolled in the eight associations. Seventy of these herds averaged better than 25 lb. butterfat during the month of April.

CHILDREN'S PET IS PRODUCER

Mechthilde Colantha De Kol Burke owned by Anton Sternweiss of Lincoln, Wisconsin, has produced during the past year 649.6 lb. butterfat, 16,436 lb. milk while enrolled in the Marshfield Testing Association. She freshened for this record May 6, 1923.

Her feed record for twelve months

shows that she received 6,356 lb. of silage, 2,843 lb. of dry roughage and 1,735 lb. of grain. The farm cost of the succulent and dry roughage is \$35.93 and the grain \$92.24. The value of Colantha's product, figured at current market prices, is \$338.99 which leaves a net profit of \$211.82.

Mr. Sternweiss's cow is of splendid type and dairy temperament and is quite dark in color. She is said to be a great pet of the Sternweiss children.

SIX MONTHS OF VIRGINIA TESTING

By L. P. EMMERICK

There are thirteen Cow Testing Associations in Virginia that have been in continuous operation the past six months. These thirteen associations with a total of 5,754 cows showed an average production of 3,393 lb. milk and 139.3 lb. butterfat.

The Fairfax County No. 1 Cow Testing Association showed the highest butterfat production, the 639 cows in this association having the fine average of 162.0 lb. The Fairfax County No. 2 Cow Testing Association was second with an average production of 152.6 lb., and the Henrico County C. T. A. third with 152.1 lb. butterfat.

In milk production the Henrico County C. T. A. was in the lead, the 564 cows in the association averaged 4,093 lb., the Fairfax County No. 1 C. T. A. was second with 3,945 lb. and the Prince William County C. T. A. third with 3,607 lb. milk.

During the six month period, 493 cows or over 8% of the cows entered in Virginia C. T. A. work were reported as sold as being unprofitable. Eighty-six purebred cows were bought and 27 purebred bulls. An average of 199 cows per month made over 50 lb. butterfat and an average of 622 cows made 40 lb. butterfat.

In four of the six months the high cow for the month made over 100 lb. butterfat. An outstanding record of individual performance is being made by a grade Holstein cow "Flora" owned by Mr. Ben Middleton of Herndon, Va., and a member of the Fairfax County No. 1 C. T. A. During the past three months this cow has made a record of 7,917 lb. milk and 306.7 lb. butterfat, or an average of 102.2 lb. butterfat per month.

According to the U. S. census figures of 1920 there were 357,969 dairy cows in Virginia with an average yearly production of 2,511 lb. milk. If the average yearly production of Virginia cows could be raised to what the Virginia Cow Testing Association cow does in six months, it would make an increased yearly production of 315,728,658 lb. milk or 36,712,634 gallons. Figuring milk at the very normal figure of \$1.50 per hundred this would make an increased income to Virginia farmers of \$4,735,929.87.

WESTERN COW TESTING

During April, 1,510 herds containing 31,668 cows were tested in the 47 associations under the jurisdiction of the Western Dairy Division. These associations were in ten different States.

Oregon leads for average with 40.42 lb. fat for 3,172 cows. Washington is second with 35.28 lb. fat and California third with 33.73 lb. fat for 14,621 cows. The three Utah Associations average 31.46 lb. fat for 1,435 cows. The milkers of Colorado, Idaho, and Arizona averaged 30 lb. fat or better and Nevada's average is 29.22 lb.; Montana's, 26.75 lb.; and the Wyoming Associations bring up the rear with an average of 20.55 lb. fat.

Registered Holsteins occupy second and third places in the list of individual producers, a grade Guernsey with 2,009 lb. milk, 120.5 lb. fat being in first place. A purebred Holstein owned by the Western State Hospital at Steilacoom, Washington, is second for fat with 107.5 lb. and a milk production of 3,468 lb. Washington State institutions are well to the fore in this report as a representative of the herd owned by the Northern State Hospital at Sedro Wooley, is third with 107.4 lb. fat, 2,685 lb. milk. A California grade Holstein owned by Bloom Brothers of Petaluma, is fourth with 107.2 lb. fat. A grade Jersey is next, followed by two registered Holsteins and all three of these produced 97 lb. fat in the month.

CANADIAN OFFICIAL TESTING

Queen Calamity Ormsby heads the April list of cows tested in Canada with a record of 533.8 lb. milk, 37.42 lb. butter. Walnuthill Modest Rose is second with 757 lb. milk, 36.89 lb. butter. Midnight Jewel De Kol is third with 481.8 lb. milk, 30.49 lb. butter and Valleybrook Elsie Tensen is fourth with 557.1 lb. milk, 30.34 lb. butter. These four cows are all in Ontario herds, Queen being owned by E. L. Sweet, Belmont; Rose, by Haley & Lee, Springfield; Jewel, at the Ottawa Experimental Farms; and Elsie by R. W. E. Burnaby, Jefferson.

Pauline Abbekerk Fayne, with 27.29 lb. butter, 577 lb. milk, heads the senior four-year-old class and Englewood Beauty Pontiac with 647.1 lb. milk, 27.94 lb. butter, the class of junior four-year-olds. The older heifer is owned by Clinton E. Hamner, Norwich, Ont., and the younger by Dr. H. A. Clark, Brockville, Ont. A Sweet herd representative leads the senior three-year-old class in the form of Johanna Mercena Wayne, 562.8 lb. milk, 30.07 lb. butter with Eco-Sylv Griselda Model of the Hardy herd second with 539.9 lb. milk, 28.99 lb. butter.

Fred Row of Currie's Crossing, Ont., has the first and second junior three-year-olds, Rose Bonheur De Kol making 462.3 lb. milk, 25.49 lb. butter and Calamity Comet, 532 lb. milk, 24.98 lb. butter. John J. Innes of Stratford, Ont., owned

BELLE KORNDYKE DIXIE

A beautiful, polled, show heifer in my herd. Her dam produced 15,000 lb. milk in ten months on twice a day milking and freshened again before the year ended.

Such choice animals are bred to KING PONTIAC ORMSBY PIETJE a son of King Pontiac Alcartra Pietje from a daughter of Ormsby Korndyke Lad.

A. CONRAD SLIFER,
Lewisburg, R. D. 3, Union Co., Pa.
Herd has passed second successive Clean Test.

A Place to Find

high-class, heavy producing and healthy Holsteins. Our senior sire is Grand Champion Segis 2d, a double grandson of King Segis Champion, his dam being the great Belle Segis Champion, a 37 lb. four-year-old. His four nearest dams average 32.61 lb. of butter in seven days.

His daughters are fine individuals, good sized and are heavy producers, milking around 70 to 85 lb. per day with first and second calf.

Our herd containing 120 head are under State and Federal Supervision.
VISITORS ALWAYS WELCOME.

HARRY C. REYNOLDS
SCRANTON, PA.

Herd under the Accredited Plan

the leading senior two-year-old, Home Farm Korndyke, 609.8 lb. milk, 24.93 lb. butter, while Hengerveld Segis Sylvia with 21.95 lb. butter, 336.1 lb. milk heads the junior two-year-old class. She is owned by Joseph Kilgour, Eglinton, Ont.

There were about 95 cows and heifers qualified in the Record of Performance test. Lady Segis Echo, owned at the Eaton Hall Farm, Eversley, Ont., heads the list by the production of 24,376 lb. milk, 1,040 lb. butter in the mature class. Countess Abbeckerk Hiemke, a junior four-year-old, owned by J. Walker Jones, Charlottetown, P. E. I., is the leading four-year-old with 24,586 lb. milk, 1,032.5 lb. butter. Colony Wayne Perfection, owned by the Colony Farm, Essondale, B. C., is the leading two-year-old with 25,320 lb. milk, 952.5 lb. butter. No very large records were made in Subdivision B neither in the year nor in the ten months' divisions and the most creditable ten months' record was made by the two-year-old Rose Wayne Keyes, owned by Bernard Connor, Hagersville, Ont., this being 16,169 lb. milk, 797.50 lb. butter.

MARYLAND COW TESTING

Purebred Holsteins occupy the first three places in the list of Maryland cows tested during April. Six of the state's ten highest producers are registered black and white cows and two others are grade Holsteins, the other two were purebred Jerseys.

The leader was Wayne, owned by Millard Rice, of the Upper Montgomery County Association. She produced 2,268 lb. milk, 90.7 lb. fat. A cow owned by P. B. Cissel of the Howard County Association produced 1,572 lb. milk, 83.3 lb. fat. Jewel, an Essex Farm cow, owned by John M. Dennis & Son of Riderwood, is in third place with 2,472 lb. milk, 81.6 lb. fat. Charles Wertheimer of Frederick has two among the ten highest, one credited with 1,803 lb. milk, 75.7 lb. fat, and the other with 1,986 lb. milk, 71.5 lb. fat.

Purebred Holsteins headed the associations of Baltimore County, Howard County, Upper Montgomery and Northern Montgomery Counties. In the Del Marvia and Frederick Counties they were second and third in both. The Dennis herd has four cows in the first ten in Baltimore County and J. F. Lupo has two while in Frederick County, Chas. Wertheimer has three representatives in the leading ten.

Among the remarks appended to the report are the following: "Feeding trials at some of our Experiment Stations have shown that a ration of corn silage, a good hay such as alfalfa, with oats and corn, will maintain milk and fat production as well as a ration to which a high protein feed has been added.

"There is not a farm in Maryland which cannot raise some or all of the good legume crops, alfalfa, soybeans, cowpeas or scarlet clover. These will cheapen your cost of producing milk. If you haven't any one of these crops it is not too late to plant cowpeas or soybeans and thus insure a winter supply of milk producing feed.

APRIL TESTING IN VIRGINIA

By L. P. EMMERICK

During April there were fourteen active Cow Testing Associations. Thirteen associations reported 5,897 cows on test. Of this total 777 cows produced over 40 lb. butterfat, 226 over 50 lb. butterfat, 53 over 60 lb. butterfat, 17 over 70 lb. butterfat, 5 over 80 lb. butterfat, and 3 over 90 lb. butterfat.

The high cow for the month was Midway Model Artis Pietje 566217, a purebred Holstein cow owned by Oliver Moyer of the Oak-Mulgee Stock Farm, Mattoax, Va., a member of the Southside Virginia Cow Testing Association. The first ten cows all were Holsteins, five being purebred Holsteins and five grade Holsteins.

The high herd for the month was the herd of ten purebred Holsteins owned by H. L. Butler & Sons, of Culpeper, Va., and members of the Culpeper C. T. A. This herd averaged 1,277 lb. milk and 50.3 lb. butterfat. The first two and five of the first ten high herds were Holsteins, four were Guernseys and one a Jersey herd.

The average production of all cows including dry cows was 639 lb. milk and 25.2 lb. butterfat. This is the highest average of any month this year. The Henrico County C. T. A. had the highest average production of any association in both milk and butterfat production. The 580 cows in this association averaged 845 lb. milk and 28.2 lb. butterfat. As there were 70 cows dry during the month the average for the cows in milk was 960 lb. milk and 32.1 lb. butterfat, an exceptionally high average.

There were 77 cows sold during the month as unprofitable. Eight purebred cows and seven purebred bulls were bought.

Chas. A. Buck, tester for the Southside Virginia C. T. A. was the winner for the month in the Va. Cow Testers "Efficiency Contest," with a total of 125 points. J. B. Fink, tester for the Orange C. T. A., was second with 121 points and Sterling Simpson, tester for the Henrico C. T. A. was third with 106 points.

IN THE PENNSYLVANIA ASSOCIATIONS

A registered Holstein owned by J. S. Murphy of Woodbine, Pa., heads the York Valley Association and leads the Pennsylvania milk producers for April by the production of 2,715 lb. milk. Her record of 92.3 lb. fat has to take second place however, as a registered Holstein owned by Charles Chaffee of the Laurel Hill Association is in first place for fat with 99.4 lb. and a grade representative of the same herd is third with 91 lb. A grade Holstein owned by George Livingston and enrolled in the York Valley Association stands second for milk with 2,446 lb. while a purebred Holstein owned by G. W. Strock of Mechanicsburg, is third with 2,400 lb.

The highest ten-cow average in butterfat was 75.1 lb. made by the Cumberland County Association; second honors were won by the York Valley Association with a yield of 72.1 lb. fat and third place goes

to Laurel Hill Association with a yield of 72.0 lb. fat.

April production was reported by 27 Associations in which 7,563 cows were tested; 1,270 cows exceeded 40 lb. fat, 429 exceeded 50 lb., while 1,563 produced more than 1,000 lb. milk and 802 gave more than 1,200 lb.

The Cumberland County Association, of which A. A. Raudabaugh is tester, led in number of cows above 40 lb. fat with 104 and just beat out the Edinboro Association for number over 1,000 lb. milk, Cumberland County being credited with 128 and the Edinboro Association with 127.

TESTING IN LAPEER COUNTY

The ten high producing cows in the Lapeer County Testing Association averaged 2,052.7 lb. milk, 77.19 lb. butterfat during April. Six of these were registered and four were grade Holsteins.

The leader was a grade Holstein owned by the Michigan Home at Lapeer, Mich., with 2,019 lb. milk, 94.89 lb. fat to her credit. Four members of this herd were in the leading ten. Arthur Reek of Imlay City, owned the cow in second place, her production being 2,136 lb. milk, 85.44 lb. fat. Stablemates were in fourth and tenth positions.

The high herd average was carried off by seven grade Holsteins owned by Fred Meier, the figures being 1,163.3 lb. milk, 44.72 lb. fat.

Thirty-one cows in this association produced more than 50 lb. butterfat in the month while fifty exceeded 1,250 lb. milk. The average of all the cows tested was 751.1 lb. milk, 31.12 lb. fat.

Six of the ten leading cows in the North Lapeer Cow Testing Association were black and whites. The leader was a grade Holstein owned by Lyle Sharp with 1,933 lb. milk, 73.5 lb. fat. Mr. Sharp's ten grade and purebred Holsteins made the high herd average, 1,114.3 lb. milk, 37.8 lb. fat. The average for all the cows tested was 685 lb. milk, 25.8 lb. fat.

FIRST THREE ARE PUREBREDS

Johanna Aaggie Homestead, owned by O. K. Iverson of Kalispell, Montana, led the Flathead Testing Association for the month of April. She produced 2,220 lb. milk, 64.4 lb. butterfat. Fobes Abbeckerk Fanny, owned by Joe. Monegan, was second with 1,350 lb. milk, 63.5 lb. fat. Johanna Posch Belle Fayne, owned by W. H. Voelker, Kalispell, was third with 62.5 lb. fat, 2,154 lb. milk, the highest milk production reported. The five highest producers were all registered Holsteins.

The 342 cows tested during April averaged 741 lb. milk, 27.5 lb. fat. Thirty-six of these exceeded 40 lb. fat.

PUREBRED HERD IN FRONT

Twenty-five herds containing 334 cows were tested during the month ending April 24th in the Macomb No. 1 Cooperative Cow Testing Association. Thirty-four cows produced more than 50 lb.

butterfat while seventy-five produced more than 1,250 lb. milk.

William C. Schoof, of Washington, Michigan, owned the herd with the high butterfat production. His fourteen purebred Holsteins averaged 1,458 lb. milk, 47.1 lb. fat.

The leading individual was a grade Holstein owned by Frank Wilcox, her production being 1,773 lb. milk, 90.4 lb. fat.

A NICE MONTH'S RECORD

Seventy-three of the 393 cows tested during April in the Footville-Evansville Rock County, Wisconsin, Testing Association produced more than 40 lb. butterfat. The leader was a registered Holstein, Kantz, owned by George Schumacher, with 2,229 lb. milk, 78 lb. fat. This animal recently completed an A. R. O. record of 512 lb. milk, 27.25 lb. butter. R. A. K. C. Onyx Pontiac was second with 75.1 lb. fat, 2,592 lb. milk, the highest milk production reported. Onyx is in the Schumacher herd, where she recently produced an A. R. O. record of 616 lb. milk, and exactly 29 lb. butter.

PUREBRED HERD IN FRONT

The Holstein herd of Proussais Coman of Phoenix, Arizona, headed the Maricopa County Testing Association for the month of March with an average production of 1,480 lb. milk, 44.9 lb. fat.

Sister, one of the members of the Coman herd was second highest individual with 82.9 lb. fat. A Jersey was first with 83.4 lb. and a grade Holstein third with 75.7 lb.

THE HOLSTEIN COW

By ONE OF OUR READERS

Oh, the Black and White
Is the dairyman's pet,
And this is one reason that's true.
You will not regret,
When the cow is well fed,
For she'll fill up the pail for you.

Yes the Black and White
I love with delight,
It's the only breed I'd choose.
She's a bovine prize,
This cow of large size,
Is the only one for use.

Yes the Black and White
Is always in sight,
Her owner is proud of her, too!
Not only for beauty,
But also for duty,
I love her, don't you?

Of the Black and White
There's a lot to describe,
But I have only time to relate:
There is no other breed,
That pays better for feed,
The world cannot show her mate.

FOR SALE.—Registered Holstein bull ready for service; two yearling heifers; two heifer calves; bull calf. Accredited Herd. MRS. I. T. SHADE, Harris Station, Ohio.

The way to get rid of a bad habit is to let it die of neglect.

AN ACCREDITED HERD FOR SALE

Mr. L. G. Bedor of St. Johnsbury, Vermont, having sold his "Highland Stock Farm," is offering his herd of purebred Holsteins comprised of twenty-five milking females, ten young females, herdsire and four young bulls.

Mr. Bedor's herd has been accredited for five years, has excellent cow testing association records and every animal with the exception of two is under four years old. Mr. Bedor's advertisement appears elsewhere in this issue.

HARVEST FARMS DISPERSAL

Harvest Farms, Mayville, Wis., dispersed their herd of seventy-one purebred Holsteins, May 19th, for the sum of \$16,275, an average of \$229. Twenty bulls, including a number of calves, brought an average of \$238. Twenty females, four years old and over, brought an average of \$291, while seventeen females under two years of age averaged \$156.

The top price was \$900, paid by Spring Brook Farm, Burnett, Wis., for Harvest Matador Segis, a five-year-old son of Matador Segis Walker. The top price for female was \$850 bid by the Milwaukee School of Agriculture for Clothilde Piebe Longfield, 28.32 lb. butter, 609.50 lb. milk in seven days. She is a granddaughter of Canary Paul Fobes Homestead.

The auctioneers were Mack, Haeger and Kelley.

FEED SHORTAGE FORCES SALE

The accredited Holstein-Friesian herd owned by Fred. C. Lehman of Carlisle, Pa., will be dispersed September 23d. Mr. Lehman's alfalfa was so badly winter-killed that he had to plow up all the fields and therefore will have very little hay for next winter's feeding. The herd is on the accredited list and contains a number of splendid producers. One of these is the 30-lb. cow, Ideal Winkje Korndyke, 719 lb. milk in seven days; 2,918.8 lb. milk in thirty days; 15,144.3 lb. milk in 305 days.

A daughter and a granddaughter of this great cow will also be in the sale together with Dutch Corner Fayne Walker, 29.75 lb. butter, 656.5 lb. milk in seven days; 2,854 lb. milk in thirty days; and 16,250.4 lb. milk in three hundred days. There are three daughters, one granddaughter and two grandsons of Dutch Corner Fayne Walker in the herd. Both of these cows are show individuals as their pictures, which appeared some time ago in the BREEDER AND DAIRYMAN, indicate. Their type and individuality has been inherited by their descendants.

IRWIN DISPERSAL SALE

When the John B. Irwin herd was dispersed at Minneapolis, Minn., on May 12th-13th, the sale included consignments from the herds of T. H. Skrei, O. J. Glover, Joy Brothers, C. E. Lewis and Mineral Springs Farm. Despite the weather, there were fifty-seven buyers, they coming from several states and Canada.

The top price was \$1,800 which the Northland Milk and Ice Cream Company paid

HAMMOND'S "CATTLE COMFORT"

Hammond's

"Cattle Comfort"

HAMMOND'S PAINT & SLUG SHOT WORKS, BEACON, NEW YORK

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the hennery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—**CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers

for the proven sire, Sir Ormsby Korndyke Piebe consigned by the Joy Brothers Farm Co. This bull was ten years old and was by Sir Korndyke Hengerveld De Kol 36th from the noted producer Queen Piebe Ormsby Mercedes. Daughters of Sir Ormsby Korndyke Piebe have made good in both long-time and short-time tests. Ormsby Mechthilde Lad, from the Irwin herd, was struck off to U. Umlaudt for \$700.

Two females went over the thousand-dollar mark, both for \$1,200. Belle Hazel-tine Ormsby, former world's champion yearling and a noted show ring prize winner being purchased by the Canadian breeder, W. J. Elgie. She was from the Skrei herd. Mechthilde Colantha Nudine of the Irwin herd, went to Joy Brothers. She had records of over 1,000 lb. butter in a year and 30 lb. in seven days.

The Twin City Pedigree and Service Company, who managed the event, report the following averages:

59 females over 2 years old averaged	\$371.60
26 yearling heifers averaged	226.54
14 heifer calves averaged	177.85
5 bulls over one year old averaged	645.00
20 bull calves averaged	183.75
124 head averaged	\$302.45

EDWARDS ACTS AS BRITISH AUCTIONEER

Dr. C. W. Edwards, the Lieutenant Colonel Edwards who represented the British-Friesian Society at the World's Dairy Congress held at Washington and Syracuse last fall, was the British Society's official auctioneer on May 8th, at Edenbridge, Kent. The occasion was the dispersal of the J. S. Cowling herd with a consignment from the Northdean herd, owned by Mr. G. Holt-Thomas, one of the leading British-Friesian breeders.

Among the animals from the Cowling herd was three that were imported from South Africa two years ago and two descendants of these animals, the younger ones have only South African blood. Steellands Jeltje 6th now nine years old, was purchased by Mr. Holt-Thomas, for 300 guineas or nearly \$1,500. Her bull calf, by a South African bull brought 100 guineas. The South African bull, Haxted Captain, went for 220 guineas and another bull for 150 guineas.

Northdean Meibloem, reserve female champion at Newcastle last year, went for 1,800 guineas and 1,050 guineas was realized for her heifer, Northdean Meibloem 3d. Mainly on account of these two prices, the seventeen animals consigned by Mr. Holt-Thomas averaged around \$1,500 while the twenty-four head of the Cowling herd averaged around \$400.

CHEESE RELISHED BY ANCIENTS

History reveals that the use of cheese is indeed very old. The people of Greece knew this dairy product as early as 1000 to 450 B. C. It was an important commodity in Roman commerce at a very early date, and mention is made of cheese in Roman records from 750 B. C. to 475 A. D. As the Romans conquered the rest of Europe and carried their influence into these sections, the knowledge of the value and use of cheese was spread. The people living in that part of Europe now known as Germany were using cheese in considerable amounts as early as the eighth century. England undoubtedly learned of cheese from the Romans, and the Normans who were the powerful people of this period were large consumers of cheese.

During the Dark Ages cheese was made mostly by the inmates of the monasteries. These people were very influential in popularizing cheese, as they taught others how to make it. By the tenth century cheese was an important item of European commerce, and during 15th century exclusive cheese markets were established in Switzerland. Some of these same markets are in existence to-day and are operated in the same way, practically, as they were in their beginning. One brand of Swiss cheese has been made in one locality and under about the same conditions for over ten centuries.—B. W. Fairbanks, Colorado Agricultural College.

"The secret of health," writes a doctor, "is the eating of Limburger cheese." But the trouble is to keep it a secret.

LEAGUE HAS PORTABLE MILK PLANT

A new kind of milk plant has been designed by Harry A. Sieck, chief engineer of the Dairymen's League. This is in the form of an emergency milk receiving station which is contained in two standard refrigeration cars, each forty feet long. One is a power house and the other the milk handling station. In case a League plant is destroyed by fire, or has a breakdown that puts it out of commission, the portable receiving station can be drawn by a railroad locomotive to the place where the emergency exists. The handling of the milk will go on as though nothing happened.

The plant is in itself a complete receiving station with a capacity of 250 cans, or 10,000 quarts a day.

The power car has facilities for producing its own refrigeration by means of a twelve-ton ammonia plant. It has a ten-horse power high pressure boiler for heating water and generating steam required for washing and sterilizing cans. It contains a 3½ kilowatt, 110 volt, direct current, light and power system. The plant has an electrically driven, compressed air unit for the agitation of milk and for supplying water tanks with pressure.

The power car carries a reasonable amount of fuel oil for the operation of the various power units. It has a full complement of supplies, tools, piping, etc., together with a conveyor system for adopting each operation in its particular location. It also contains space for storing about seventy-five cans.

The emergency plant is so designed that it can hook up with a water or sewerage system, or both, within 500 feet of its location. While many small villages have neither water nor sewerage systems yet most of them have some kind of drainage system through which the waste water can be carried off. The second car is really a milk plant in tabloid form.

A farmer delivers his milk at the door in the middle of the second car. The milk is dumped into the weighing can and weighed. Then the farmer's cans are passed to the washer at the back end of the car where they are washed, sterilized and dried almost before he can drive his rig away from the door. The milk passes from the weighing can to the receiving vat

which has a capacity of 200 gallons. It is then pumped through an internal tube cooler where it is cooled while enroute to a glass lined tank with a 600 gallon capacity. From the tank the milk is run off into forty-quart cans in which it is transported to the city markets.

Letters to the Editor

A BRILLIANT SUGGESTION

EDITOR HOLSTEIN BREEDER AND DAIRYMAN:

Over in Wisconsin there is a cattle owner who is an authority on publicity and advertising in general. He admits it himself. Every man who attends The Holstein-Friesian annual meeting knows him. His latest gem, which is passed on to the public by the agricultural editor of a city daily, is as follows:

"The women of this country spend \$500,000,000 per year for cosmetics. Milk is nature's direct road to health and beauty. Advertise milk and divert this little sum from the manufacturers of artificial beauty to the bank accounts of the dairy farmers." It is beautifully simple. It puts out of business what this gentleman implies is a questionable industry. It adds to the beauty of American womanhood and it makes the dairyman independent. It will also save years of time in the aggregate, for a woman can drink a glass of milk much quicker than she can make up even for an afternoon at home. If this same authority will tell us how to transplant the cigarette habit by a drink milk campaign we will give him another vote of thanks.

IOWA READER.

"Talk is cheap," quoted the Wise Guy. "I notice we always pay more for the lawyer's than the minister's," suggested the Simple Mug.

Milk is a food which furnishes lime, protein, energy, and vitamins.

TIDY ABBEKERK PRINCESS MADALINE

She has two seven-day records both above 30 lb., that average 31.31 lb. butter, 604.8 lb. milk. She is the dam of our junior herdsire and is a daughter of

TIDY ABBEKERK PRINCE

who has two other daughters in this herd which was established in 1901 and is under State and Federal Supervision.

Let us price you something of this type and quality.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman

BOX 110, HARRISBURG, PA.

PROSPECTS FOR STABILIZATION OF MILK PRICES

The committee of fifteen appointed by the various organizations of dairymen supplying milk to New York City met at Utica, N. Y., May 24th, in order to find some means of stabilizing the price paid the dairymen for their product. President Henry Burden called the meeting to order at 2 P. M. All the fifteen members of the committee were present.

They are:

INDEPENDENTS

G. A. PiszczekNewport, N. Y.
F. W. BauderFort Plain, N. Y.
Homer JonesHomer, N. Y.

It was voted to go into executive session. President Burden then presented a resolution passed by Holstein breeders and their friends at Earlville, N. Y., at the time of the Earlville Sale, urging "the committee to formulate such plans as will insure uniform prices by all groups selling milk to distributors."

Mr. Garlock was appointed treasurer of the committee and it was voted that each organization contribute \$25 toward the committee's expenses.

On motion of Mr. Garlock, seconded by Mr. Boshart, it was voted that the *RURAL NEW YORKER*, *AMERICAN AGRICULTURIST*, *DAIRYMEN'S LEAGUE NEWS* and *NON-POOLER* be invited to send representatives to meetings of the committee; that copies of the secretary's minutes be furnished to these papers, and that John J. Dillon and E. R. Eastman be made honorary members of the committee.

After a lengthy discussion as to the relative merits of the different price systems, Secretary Halliday offered the following resolution and moved its adoption:

WHEREAS, the price of milk has reached such a low point that its production cannot be carried on profitably, thus depreciating values of farms, cattle and equipment and causing great hardship and financial distress, and

WHEREAS, this committee representing the various existing groups of dairymen was created to recommend some plan that may save from disaster the dairy interests contributory to the New York milk market, THEREFORE

BE IT RESOLVED, that it is the sense of this committee that all milk be sold by all groups on the same price plan and at present such plan be the so-called multiple price plan, and

BE IT FURTHER RESOLVED, that this committee recommends to the various organizations of dairymen supplying the metropolitan market that said organization offer Class 1 milk of their producers for the month of June, 1924, at \$2.33 per hundred pounds for 3% grade B milk in the 200-210 mile zone with the usual differentials.

The motion was seconded by Mr. Bauder. The roll was called and it passed unanimously. The committee adjourned to meet again at the Hotel Utica, June 7, 1924 at 2 P. M. Standard Time.

The prospect of a uniform price for milk to the various groups of dairymen whose product is sent to New York City or governed by New York City prices is the most encouraging thing that dairymen have heard for many a long day. It is to

be hoped, for their own interests as well as for those of their members, that the leaders of the producers organizations will loyally work for the restoration of peace between the warring groups and for the establishment of uniform prices instead of for power and precedence. The dairy industry has been working against great disadvantages for several years, we hope that this milk price conference is preliminary to the dawn of a brighter day.

CONDITIONS IN THE CANNED MILK MARKETS

Manufacturers of condensed and evaporated milk found no encouraging developments in the markets during May. Demand was limited to domestic outlets, and reports indicated that business generally was considered as unsatisfactory. Opinions differed somewhat as to future prospects, but at the best, there was a continued tendency to take a conservative view as to what the next two or three months may bring. The flush season should now be close at hand, although the cool wet weather has probably had a retarding effect upon this. However, the full influence of the late season can hardly be measured at this time, for production may be increased very materially later as a result of good pastures. The cool weather has been a disappointment to manufacturers who produce bulk goods for the ice cream trade.

Costs have been lowered somewhat as a result of a general lowering of prices paid producers. May prices, as reported, run around 15 to 25¢ per cwt., less than April. On the other hand, selling prices have also suffered some reductions, and there is talk of still further cuts. Lower prices should stimulate consumption although buyers cannot be expected to take hold in an active way until it is evident that bottom has been reached. Lower prices were to be expected, for other dairy products have also been feeling the effect of seasonal influences. During the early part of the year, butter markets offered a fair outlet for surplus condensery milk, but butter markets have been nervous throughout May, with prices following a more or less uncertain course, so that diverting surplus milk into butter seemed to be taking no small chance. Hope is expressed that the new association, formed by condensed milk manufacturers, may, through educational work and otherwise, stimulate a more active domestic demand for canned milk, thus relieving the burdensome surplus which so frequently has featured the situation.

The report of stocks for May 1st, reveals an increase over April 1st of about 11%. In view of the unusual tendency at this period of the year this was to be expected. Total stocks on May 1st amounted to 142,183,000 lb. compared with approximately 126,000,000 lb. last year, also an increase of around 10%. As a matter of interest, the May 1st stocks since 1920 were as follows:

May 1st, 1920	226,381,000 lb.
May 1st, 1921	116,556,000 lb.
May 1st, 1922	145,667,000 lb.
May 1st, 1923	126,529,000 lb.
May 1st, 1924	142,183,000 lb.

In addition to total stocks in manufacturers hands on May 1st, showing an increase over April 1st, there was also an increase in unsold stocks of 22%.

Exports during April dwindled to approximately 6,000,000 lb. of condensed and 9,000,000 lb. of evaporated, almost half of the latter going to Germany. The export situation does not show any promise to producers or manufacturers.

Nearly one million more pounds of condensed milk were exported during April than during the corresponding month of last year and there were more than four million less pounds of evaporated milk sent out the country. The first four months of this year show over twenty-four million pounds of condensed and fifty-eight million evaporated sent to foreign countries as against nearly sixteen million condensed and over forty-five million evaporated in the first four months of last year, as the following table shows:

	Condensed	Evaporated
April, 1924	5,926,442 lb.	9,378,791 lb.
April, 1923	4,743,444 lb.	13,432,971 lb.
Jan.-April (inc.) 1924	24,225,034 lb.	58,243,489 lb.
Jan.-April (inc.) 1923	15,933,317 lb.	45,235,167 lb.

Traverse Echo Sylvia King

Now heads our
herd of producers

His dam produced 33.27 lb. butter in a week, averaging 105.2 lb. milk daily and has two daughters with records above 32 lb. butter.

The seven-day records of his three nearest dams average 33.03 lb. butter, his ten nearest dams average 33.67 lb.

Come and look him over. He is a show bull.

Herd under State and Federal Supervision

NOTED AGRICULTURIST PASSES

Secretary Coburn, who for many years was Secretary of the Kansas State Board of Agriculture died at Topeka, May 12, aged seventy-eight years.

Foster Dwight Coburn was born in Jefferson County, Wisconsin, May 7, 1846. During the Civil War, he served in two Illinois regiments. He was a voluminous writer on agricultural subjects, his most noted works being "Alfalfa" and "Swine Husbandry."

For a number of years he was president of the State Board of Regents of the Kansas State Agricultural College. Secretary Coburn's work in promoting the growing of Alfalfa was not only of great benefit to his adopted state but also was responsible for farmers and ranchers in other western states undertaking to grow this valuable crop.

Mr. Coburn has decided ideas of his own. Something of this can be seen by the titles selected for some of his books—"The Beef Steer and His Sister"; "Cow Culture," "The Plow, Cow and Steer," and "The Helpful Hen."

Some years ago he was offered the position of Federal Secretary of Agriculture and practically every agricultural journal in the country would have endorsed the selection but Mr. Coburn turned down the offer by saying that he believed he could be of better service to his country as Kansas Secretary of Agriculture than he could by accepting the Washington position which would bring before him many problems of which he knew practically nothing.

ON THE WISCONSIN STATION

"New Facts on Farm Science" is the title of the Fortieth Annual report of the Director of the Wisconsin Agricultural Experiment Station. It contains a summary, written in popular language, of the observations of the Wisconsin Experiment Station workers during the past year which was the fortieth year of the Station's history. The Wisconsin Station was founded in 1883, four years before the passage of the Hatch Act, under which Federal support was granted to several states to permit of the establishment of the agricultural experiment stations.

Under the title of "Looking Backward," H. L. Russell has sketched the general features of historical importance especially during the past decade. This article contains more information about the growth of the Wisconsin Station than we have hitherto seen in any one volume. The other contents of the 116 page bulletin are in the form of brief articles. Of particular interest to dairymen are articles entitled "Raising Calves Economically," "Soybean Hay for Milk Production," and "Mineral Metabolism."

Forty-five of the 268 cows tested in the Knox County, Ill., Testing Association during April produced more than 40 lb. butterfat. The leader was a grade Holstein owned by E. V. Moberg with 1,935 lb. milk, 73.5 lb. fat to her credit.

BETTER CARE INSURES LARGER PROFITS

Practically every reader of the BREEDER AND DAIRYMAN keeps hogs and many are breeders of purebred swine. The Department of Agriculture points out that the business could be made more profitable and the cost of pork production lowered by better care of the young pigs which would increase the number of pigs weaned per sow. A study was made of conditions existing on 150 farms situated in the Corn Belt. This showed that 35.62% of the pigs farrowed were lost before weaning. This included 6.56% born dead so that nearly 30% were lost from causes that could, more or less, be prevented. Over 15% of the suckling pigs lost were overlaid.

SUNLIGHT AND BUTTER

A German chemist states that the finest, freshest butter may be injured by even ten minutes exposure to direct sunlight. Such exposure causes the butter to develop a disagreeable flavor.

Writing in a German paper, he urges that butter should be kept in dark rooms lighted only by red, yellow, or gray panes of glass, especial care being taken to avoid transparent glass or even that of a green or blue tone. He likewise condemns the placing of butter in the ordinary glass showcases used in retail stores and suggests that butter dishes for domestic use when made of glass should never be transparent but preferably red, yellow, or gray. It would seem from this that the earthenware crocks and jars so widely employed at an earlier era have a special virtue.

SEATTLE MILK PRODUCERS' PRICES

Milk distributors and milk shippers of Seattle, Wash., have finally reached an agreement over milk prices, the dairymen accepting the schedule proposed by the distributors.

They will receive for milk shipped during March \$2.75 per one hundred pounds and for milk shipped during April and May, \$2.65 while the price for milk shipped during June and the other summer months has been set at \$2.50.

CAN SHE MAKE IT?

British Friesian breeders are looking forward to have one of their favorites make a 30,000 lb. milk record two different years. Datchworth Princess, who last year produced 31,001 lb. milk in 365 days is again in test and is credited with 20,660 lb. milk in 238 days and is still giving well over seventy pounds milk a day. From a distance it looks as though she will have hard work to perform the task set for her.

NO MORE PAYMENTS

The Washington legislature appropriated \$50,000 as indemnity for cattle reacting to the tuberculin test. This sum has been exhausted and Commissioner French has announced that there will not be any more payments until the next meeting of the legislature in 1925.

SUMMER FEEDING SUGGESTIONS

By R. H. OLMSTEAD

The pasture season is welcomed too often as the time when a clear profit can be made on milk and when grain feeding is thought unnecessary.

Grass is a bulky, watery feed containing approximately 75 to 90 per cent water, depending on its maturity. It is rich in mineral matter, medium high in protein but low in energy producing nutrients. The protein and mineral matter in grass are of a high quality which combined with its succulent nature gives it a superior power to stimulate the secretion of milk. Due to its succulent nature it is impossible for a cow to consume enough grass to supply the required nutrients for high milk production. Without additional feed the cow must call on her own reserve to make up the deficiency. This means a loss of flesh which may not show in the milk pail immediately but will result in a lower production during late summer and the following winter. Profits are not made on high production during the pasture season alone but on high yearly production.

Grain feeding to cows on pasture is absolutely essential for high yearly production. Home-grown grains such as corn, oats or barley are sufficient for cows of average milk production. With high production an additional protein feed is necessary. Early pasture or short pasture should be supplemented with a good quality hay, summer silage or soiling crops in addition to one of the following rations:

600 lb. Corn and cob meal 300 lb.
400 lb. Oats or bran 200 lb.

700 lb. Corn and cob meal 600 lb.
200 lb. Gluten 300 lb.
100 lb. C. S. or oil meal 100 lb.

400 lb. Corn and cob meal 200 lb.
100 lb. 24% ready mixed 100 lb.

Hominy or corn meal. 200 lb. Corn meal
Oats 100 lb. Gluten
Bran 100 lb. Bran

Corn and cob meal 300 lb. Corn and cob
meal
Oats or bran 100 lb. Oats or bran
C. S. or oil meal. 100 lb. 24% ready
mixed

Corn and cob meal 20% ready mixed

When first turned on pasture, grain should be fed at the same rate as on dry feed. As the pasture becomes more abundant and mature, grain may be withheld from Jerseys and Guernseys giving less than 20 lb. daily and from Holsteins and Ayrshires giving less than 25 lb. daily. For cows producing more than this feed one pound of grain to each five or six pounds of milk produced daily by Jerseys and Guernseys and one pound of grain to each six or seven pounds of milk produced daily by Holsteins and Ayrshires.

Only a dentist gets paid for looking down in the mouth.

PRODUCTION IN BULL ASSOCIATIONS

Pennsylvania dairymen have formed a number of bull associations and have had a number in operation long enough for the bulls to have producing daughters. At the present time there are 28 active bull associations and 34 active cow testing associations operating in Pennsylvania. The May News Letter lists nine associations where the bulls owned now or formerly owned have daughters in milk. There is a wide range in the percentage of increase of milk production of the daughters over that of their dams. In Mercer County Association the increase is only 4.75% while in Lovejoy Association the increase is more than 50%. There are 110 records compared and the average for the nine associations is 26.64%.

PRODUCTION OF DAUGHTERS OF ASSOCIATION BULLS COMPARED WITH DAMS

Name of Association	No. of Records	% Increase in Milk
Mercer	18	4.75
Susquehanna	11	13.04
Washington	7	23.31
Carroll	17	20.09
Smicksburg	16	24.23
Witson	12	27.75
Marion Center	10	30.29
Campbell	12	45.45
Lovejoy	7	50.88
Summary	110	26.64

DOES WELL UNDER DIFFICULTIES

Fred and Joe Gisler, who live near Rupert, Idaho, have a herd of twenty-four Holstein cows and twenty head of yearling heifers and heifer calves.

From 18 of the cows in milk they are delivering 500 lb. milk to the local cheese factory daily, or an average of nearly 30 lb. to the cow, including that from heifers which have not yet reached the age of their maximum production.

For their milk they are receiving a monthly check amounting to from \$250 to \$300, or over \$3,300 for the year. This income they believe could be increased fully one-third if they had better equipment for the business, such as silos, good barns, and other facilities necessary for the comfort and welfare of their herd.

SELL BULLS ON THE INSTALLMENT PLAN

Grandview Stock Farm, of Seattle, Wash., will sell bulls on the installment plan. Their advertisement says "A little down and a little now and then." These bulls are grandsons of Chimacum Spring Farm King Pontiac and Mr. Ray T. Smith advertises that they have been passed upon by a competent Holstein judge as animals that are fit to show in almost any company.

"With one wave of his hand he can sway the masses."
"Great orator?"
"Nope—Traffic cop."

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

Accredited Herd for Sale

I want to sell my herd of purebred Holsteins as I have sold my farm and am going to Colorado for my health.

I have 35 females, 25 winter milkers. All young—under four years old with the exception of two, that are seven years old. This herd averaged 4% butterfat in two months C. T. A. work.

My herd has been Accredited for five years and they are right in every way. Priced for a quick sale.

G. L. BEDOR

St. Johnsbury Vermont

HILL CREST VIEW FARM

QUEEN LYONS WAYNE DE KOL produced 11,560 lb. milk in 8 months of C. T. A. work. She has official records of 26,30 lb. butter, 542.9 lb. milk in a week, 105.90 lb. butter, 2,326.8 lb. milk in 30 days. **THAT'S OUR KIND.**

Can Spare a Few Females

They are bred to KING ONYX PLEDGE ORMSBY, who has 75% the same breeding as the new junior three year old champion of the 10 months division, Onyx Lilith, 21,387.2 lb. milk, 909.38 lb. butter.

JOHN H. HOWARD

Our Herdsire Dutchland Konigen Hengerveld Lad

is a son of King Segis Pontiac Konigen the noted Field bull; is a grandson of King Segis Pontiac and Colantha Johanna Lad; and a great-grandson of King Segis, King of the Pontiacs, Hengerveld De Kol and the two former World Champion cows, Pontiac Clothilde De Kol 2d and Colantha 4th's Johanna.

Breeding and Production show in every line of his pedigree. His sons and daughters will please you.

O. P. WALKER & SONS

Thompson, Pa., Susquehanna Co.

HOLSTEIN DAIRY IN LOS ANGELES

If you had only twenty acres could you maintain a milking dairy of 135 cows? Mr. E. Ciocca has twenty acres that is part of the City of Los Angeles and he has a dairy of this size although it is only fair to say that he rents 40 acres of near-by alfalfa land and in addition buys large quantities of alfalfa.

The Ciocca meadows are irrigated five times a year and are cut seven times. Water is sometimes supplied by an electric pumping plant and sometimes from the City aqueduct.

Mr. Ciocca has to pay wages that would make an eastern dairyman faint. In addition to feeding his help he pays \$100.00 a month to Italian dairymen who do very little else besides milking a string of thirty cows.

Mr. Ciocca came from northern Italy when he was twenty-two years old, that is thirteen years ago. He worked for wages on a dairy farm a year and then for five years rented a dairy farm between Whittier and El Monte. Then he spent a year in the City where he met and married a domestic science graduate.

The Ciocca buildings are not very expensive with the exception of the silo which is made of cement blocks. It is 50 feet high and 16 feet in diameter.

In addition to corn silage the cows are fed alfalfa hay, corn, oats, barley, bran and cottonseed meal. The cows are of good producing strains, are kept clean and healthy and are periodically inspected by inspectors from the State Department of Agricultural and the Health Department of Los Angeles City.

The time is coming when the land will become too valuable to be kept for dairy purposes. Already two large dairies nearby have been dismantled and the land used for building lots but Mr. Ciocca is making money and at the same time his land is rapidly increasing in value.

RIORDAN SHIPS TO JAPAN

Two more Holstein heifers left Wisconsin for Japan early in May, sold by J. P. Riordan, manager of the Harvest Farms of Mayville, to overseas dairymen. Both heifers are daughters of Harvest Matador Segis who was by Matador Segis Walker from the 33 lb. cow, Piebe Mooie Fayne, she a daughter of Ollie Johanna Sir Fayne. The dam of one heifer is Colantha Johanna Beauty 2d with an official seven day record of 31.78 lb. butter, 612 lb. milk. The dam of the other heifer is Harvest Brightest Agatha Pontiac, a 34.36 lb. daughter of Spring Farm King Agatha Pontiac. This young cow has two seven day records above 32 lb. and is from Pet Douglas 4th Brightest, who herself has two seven day records above the 30 lb. mark.

SHIP TO NEW ZEALAND

Eight purebred Holstein females were shipped May 5th from Spokane, Wash., consigned to the firm of John Court, Ltd., of Auckland, New Zealand. They were sold from Hazelwood Farm, John L. Smith personally handling the deal.

NOTED OKLAHOMA DAIRY HERD

About four years ago a delegation of men interested in the dairy business were sent by the Chambers of Commerce of Tulsa, Collinsville, and Broken Arrow, Oklahoma, to Wisconsin for the purpose of studying dairy methods. There were eight in the party, three of which were practical dairymen actually engaged in milking cows on a commercial scale. Two of these men have since died. The third, the only one of the three dairymen who paid his own expenses on the trip, has been in the dairy business for the past twelve years. His name is W. T. Bynum and the Bynum dairy is reported as making the highest score of all dairies producing milk for the City of Tulsa.

Mr. Bynum is a native of the old Indian Territory and has lived for the past thirty-seven years in the vicinity of Tulsa. Until five years ago he lived on a rented farm. He had operated his present farm of 220 acres about a year before he made his Wisconsin trip. He also examined the dairy farm owned by the University of Illinois at Urbana and then spent a time at the great Lasater Jersey Farm near Falfurrias, Texas.

The Bynum dairy consists of purebred and grade Holsteins with a few Jerseys. The cows are stall-fed the year around, in fact, there are only ten acres of native pasture grass on the Bynum farm.

Since the Tulsa Milking Inspection Department has been established the Bynum dairy has always scored well and for the three months period, covering December 1923, January and February of 1924, this dairy had the highest total score. Mr. Bynum says, "It is easier to sell a high quality of milk at a good price than it is ordinary milk at a low price." Every quart of Bynum milk is guaranteed to be first-class.

COLLEGE YEARLING MILKS HEAVILY

Ohio Maudine Ormsby, bred and owned in the herd of the Ohio State University, has just finished a 30 day official record of 2,223 lb. milk, 96.5 lb. butter as a yearling heifer. This is the state record not only for a yearling but also for a junior two-year-old and only just falls short one pound of being a world's record which is held by Eco-Sylv Mechthilde owned by Abner S. Deysher of Reading, Pa. Eco-Sylv made 2,224 lb. milk as a yearling.

Ohio Maudine Ormsby freshened when less than twenty-two months of age and before she was two years old she had produced over 5,000 lb. milk which in turn is more than the average milk cow in Ohio produces in an entire year. Five generations of University breeding are represented on the maternal side of her pedigree.

"Rastus," he observed, "this cow is in a shockingly unsanitary condition. I suggest that you thoroughly sterilize the udder before each milking."

"Yassah, yassah," replied the old dorky, scratching his head in perplexity, "but I ain't got no odder—dis yheah am de only cow I've got, sah."

HOW ONE MINNESOTA HERD GREW

Clovercrest Dairy Farm is owned by Albert R. Knutson of Pelican Rapids, Minnesota. Mr. Knutson was one of the first men in his community to own a purebred Holstein bull and his name now stands first on the list of those receiving the largest cream checks from the Pelican Rapids creamery.

Mr. Knutson also owns an interest in an adjoining farm, the Pelican Valley Stock Farm, operated by Page & Knutson, breeders of purebred Holstein cattle.

The Knutson herd was started in a small way with grade cows, the first purebred female being purchased in the spring of 1914 and four more in the fall of that year. Last year a descendant of these, Pauline Pietertje Veeman, made 641 lb. butterfat as a six-year-old. One of the old cows produced 600 lb. butter in ten months and last year as a fourteen-year-old produced 440 lb. in less than ten months.

In 1913 the average for a herd of fourteen grade cows was 216.6 lb. butterfat, 5,044 lb. milk. In 1917 the average of the grades and purebreds was 366.6 lb. butterfat, 10,602 lb. milk. In 1920 the herd, all purebreds, averaged 11,645 lb. milk, 418.7 lb. fat.

Mr. Knutson is a great believer in purebred sires and quotes from his own experience. An original scrub cow as a nine-year-old produced 5,705 lb. milk, 214.8 lb. butterfat which cost 20.6 cents, a pound to produce. She was bred to Conrad, a purebred bull from the University Farm. In 1916 their daughter, Flossie, a half-blood Holstein as a six-year-old produced 9,185 lb. milk, 390 lb. butterfat at a cost of 18.7 cents a pound.

Her daughter, Cherry, a three-fourths Holstein as a three-year-old produced 11,923 lb. milk, 428.7 lb. butterfat as a cost of 19.7 cents a pound. Dixie, her daughter, seven-eighths Holstein, a granddaughter of the original cow, produced 81 lb. of butter in thirty days as a three-year-old. She was then sold for \$175.00.

The Knutson herd now numbers about 50 head. During March seventeen were milked of which eleven were two-year-olds and their average for the month was 51 lb. fat.

Page & Knutson captured a long list of prizes at the Otter Tail County Fair in 1923, including grand championship for Holstein females and special prizes for best herd and for best dairy cattle display with eight other first prizes and four second prizes.

Albert Knutson is a graduate of the School of Agriculture. He has acquired his own farm of 280 acres and his interest in the adjoining place from the profits of dairying. He started with a farm of 120 acres of which only half was clear. He borrowed \$1,000 to buy his first cattle in 1913. He keeps records on all the cows, weighs their milk every day and belongs to the local cow testing association.

Professional beggars study human nature for the purpose of taking advantage of its weaknesses.

FROM ORANGES TO HOLSTEINS

Crag View Holstein Farm is the name of the establishment owned by Robert T. Curtis & Son of Exeter, California. Mr. Robert Curtis was brought up in the orange business and was horticultural commissioner for six years. For the past twelve years he has been try to forget oranges and is located in one of the few parts of the Exeter district where oranges are impossible as a commercial possibility.

The Curtis family moved to Exeter in 1912, first of all renting. They gradually grew into pork production then kept cows because they found that young hogs did better when they were fed skimmed milk. The dairy got bigger and bigger until finally it grew into a high-class Holstein breeding establishment with hogs as a side line. There are now about 60 purebred Holsteins while 150 hogs are marketed each year.

The Curtis ranch contains just 50 acres of river bottom land while 150 adjoining acres are rented.

The business is run from a conservative angle. The cows are not crowded for large records. Green feed, either from pasture or silage, is available every day in the year. Most of the time the cattle are in the open.

One sale of purebreds was held about two years ago. The offerings, old and young and both sexes, averaged \$228.00, three or four times as much as grade stock was selling for, while it cost no more to raise purebreds than it did the grades.

Practically all of the work is done by the two members of the firm. Milking machines, used for the past three years, help materially. The younger Curtis runs the machine while the older member of the family separates the milk, and feeds the calves and hogs. Very little hay is put up as the cows have alfalfa or other pasture most of the year.

HAS A SHOW BULL

Thomas J. Owens, Firloch Farm, Kirkland, Washington, has sold the young Holstein sire, Firloch Sir Pietertje Bracelet, to Dan Keane of Seattle to head his young herd of purebred Holsteins. This young bull is sired by Sir Hollywood Veeman Segis, and out of Eva Pietertje Artis, record 878 lb. butter in one year.

Mr. Keane is so well pleased with this youngster that he has declared his intentions of showing him at the Northwest Washington Fair at Burlington, in August, and that if he stands in the money he will continue on through other fairs in western Washington.

TO CAN GOATS' MILK

A company that will handle canned condensed goat milk has been organized in California. It is incorporated for one-half million dollars and will be located at some point south of Los Angeles in a section where there are many herds of milk goats.

This move will get even with the goats for consuming so many old tin cans.

CONCRETE FAILURES DUE TO LACK OF WATER

Some years ago considerable attention was attracted by a toy which provided means by which a boy could make his own building blocks out of portland cement mortar, but for some reason many of these blocks were not a success. The reason was finally discovered. "We put the blocks on the radiator to dry and as soon as they were dry they crumbled all up."

This serves to illustrate how far most people fail to realize the definite distinction between the hardening of lime mortar and the setting of portland cement. The first is accomplished by dehydration or drying out. The second takes place through a crystallization, requiring the presence of water until the process is complete.

The failure to understand this distinction has been responsible for many concrete failures. Sometimes the fault is not the result of ignorance of the action of cement but of failure to appreciate the extreme evaporating powers of hot sun and dry air. Concrete work in desert areas has given considerable trouble from this abuse. The water evaporates before the concrete is thoroughly cured, with the result that much of it disintegrates while other portions are of extremely low strength. It is of no small interest in this connection to note that it has been found by experiment that the application of water to concrete, which is weak because of this cause, may be measurably strengthened by a subsequent period of thorough saturation, even though several years have elapsed since the concrete was poured. But this example is an extreme one. The same faults have occurred to a minor degree in humid climates. Concrete must be protected against evaporation of the water of crystallization until the process of curing is thoroughly completed.

NEW COUNTY CLUB FORMED

A. O. Page of Olympia, Wash., was elected president of the recently formed Thurston County Holstein Breeders Club. F. C. Baker, of Olympia, is vice-president and M. L. Page, of Little Rock, secretary. The board of directors consist of these three officers together with Ed. Cross and John Hegloff of Oakville.

In the program of this year's activities are the stimulation of interest in purebred sires, the promoting and managing of calf clubs, and the encouraging of participation in cow testing association work.

GAIN IN DAIRY PRODUCTS

Dairy products in the United States gained \$481,000,000 in value last year over 1922. These are the figures sent out by the Department of Agriculture in its monthly report. Dairy products produced in this country during 1923 totaled \$2,566,000,000. This is an approximate gain of 2.3 per cent during the year. This gain was due partly to increased production, but mostly to higher prices received.

FARMERS COOPERATIVE ASSOCIATIONS

More than two billion dollars of business was done by farmer business organizations in 1923, according to estimates made by the United States Department of Agriculture. The estimates are based upon reports from 6,639 organizations, which did a total business of \$1,200,000,000. Reports have been received from 8,313 associations and additional reports are yet to come in from approximately 2,000 organizations.

Of the 8,313 organizations reporting, approximately ninety per cent were primarily engaged in selling farm products, and about ten per cent in the collective purchasing of farm supplies. Grain marketing organizations comprised more than thirty per cent of the associations; dairy products twenty-two per cent; livestock fourteen per cent and fruits and vegetables eleven per cent.

The 1,841 organizations handling dairy products did a total business of three hundred million dollars while the 1,182 livestock shipping organizations are estimated to have handled two hundred twenty million dollars worth of livestock.

ROAD MAP OF WESTERN PARKS

A map of the western United States showing the National Park-to-Park highway has just been printed by the Department of the Interior and is available for free distribution to motorists planning a tour of the national parks next summer. The map shows, besides the park-to-park highway and other main automobile roads, the location of the national parks and national monuments, Indian reservations, government reclamation projects, national forests and military reservations. The National Park-to-Park highway is about 6,000 miles in length and links together in a great circle tour Rocky Mountain, Yellowstone, Glacier, Mount Rainier, Crater Lake, Lassen Volcanic, Yosemite, General Grant, Sequoia, Zion, Grand Canyon and Mesa Verde national parks. It is termed the "master scenic highway of America." A profile of the route, showing the altitudes throughout its entire length, is printed at the bottom of the map. The National Highways association, it is announced, generously contributed funds for the printing of the map.

PRICES GOING UP

Wives are being quoted at new prices. Time was when a husky male member of the alleged human race could buy a proper helpmate for a few strings of beads but not any more. A California husband recently proposed to sell his wife for \$500,000. The deal went wrong and when the wife heard of it she promptly began suit for divorce. It is not known whether the trade was arranged without her knowledge or whether she was dissatisfied with the price.

Some meat is good for everyone,
And fruit promotes the health;
Bread is called the staff of life,
But milk is life itself.

HIGH PRODUCTION AND DAIRY PROFITS

By L. P. EMMERICK

Among dairy farmers it is a mistaken notion that when prices are low the remedy is to take less pains and to feed only small amounts of low priced feed. Whatever the price, it is the farmer that makes the highest average production who is the most prosperous. The truth is, the lower the prices of milk or butterfat, the greater the need of high efficiency in producing it. When prices are high, even scrub cows, mediocre yields, and inefficient methods, are profitable, but such cows, yields and methods are always unprofitable when prices are low. Therefore, the more discouraging the prices of the product, the greater the necessity for good dairying.

A recent tabulation and study of Cow Testing Association records in one Virginia Cow Testing Association showed the feed cost of producing 100 lb. milk to vary from over \$4.00 per hundred in the lowest producing group to \$.86 per hundred in the highest producing groups. In another association the feed cost of producing 100 lb. milk varied from \$3.60 per hundred in the lowest producing group to \$1.27 in the highest producing groups. In the latter association, it was also found that it required 223 lb. silage, 68.4 lb. hay and 55.8 lb. grain to produce 100 lb. milk in the lowest producing groups, while in the highest producing groups it only required 43 lb. silage, 14.5 lb. hay and 32.5 lb. grain. It is evident that an exceptionally high price would be necessary to make money from the lowest producing groups, while the highest producing groups would return a good profit at a fairly low price.

In three years time the Cow Testing Association operating in Fairfax County, Virginia, increased the average yield from about 6,000 lb. milk and less than 250 lb. butterfat to more than 8,000 lb. milk and 324 lb. butterfat. This is an example of what intelligent effort can accomplish.

The surest way to cut production costs is by increasing the yields of our animals. The farmer who disregards this principle cannot continue to farm profitably when prices for farm products go down.

From An Accredited Herd

BULL CALF—born Dec. 26, 1923, more white than black, straight and right in every way. Price \$50.

Dam—Maple Grove Pontiac Betti, she by King Pontiac Jupiter, a son of King of the Pontiacs from a daughter of Hengerveld De Kol.

HEIFER—born Dec. 1, 1923. Nicely marked well grown and a beauty. Price \$65.

Their sire is **MAPLE GROVE YBMA GLISTA** whose sire is from Glista Dinah, a 31-lb. daughter of a 34-lb. cow. His dam produced 27 lb. butter, 641 lb. milk in 7 days in this herd.

Maple Grove Stock Farm
F. Jones, Mgr.,
Centerville, Pennsylvania, R. 4.

FEEDING THE DAIRY CALF

This is the fifth and last of a series of articles on feeding dairy calves prepared by experts of the Pennsylvania State College. The preceding articles appeared in our issues of March 22d, April 8th, April 22d, and May 22d.

In the first four of the series the raising of the dairy calves to six months of age was discussed. A calf properly raised to this age has passed the first milestone towards a good dairy cow. The second milestone, "feeding the dairy calf from six months to freshening" is as important as the first.

During the summer months heifers are kept on pasture. If the grass is good no supplementary feed will be required. However, when the pasture becomes short, heifers should have some hay and grain. It is well to have a hay rack in the pasture and fill it every few days allowing the heifers to eat hay at will. Enough grain should be fed to keep the heifers thrifty and growing well. A good grain mixture for heifers on pasture is as follows:

Corn Meal	500 lb.
Oats	200 lb.
Bran	200 lb.
Oil Meal	100 lb.

In one of the late summer issues the winter feeding of the dairy heifer from six months of age to freshening will be discussed.

MORE BACTERIA-LESS PRICE

A Seattle milk plant is offering prizes to producers who deliver milk with the lowest bacterial count and this has led to a keen rivalry among the dairymen. A surprise scoring contest was held in Seattle a short time ago. The average score was 92 as compared with 88.2 in April, 1923, and the improvement in the quality is shown by the fact that the dairy which scored lowest this year would, had they had the same score last year, have been in first place.

The average dairy consumption per capita in Seattle is about one pint and the milk supply is divided about as follows: pasteurized, 84.33%; raw, 14.5%; and certified, 1.17%.

A surprise milk scoring contest was also held in Everett, Wash., where there were nineteen distributors. Eighty per cent of the city milk is pasteurized and 25% is sold raw, the average score for all the dairies this year was 93.5 which is one and one-half points better than the score a year ago. Everett has a population of approximately 30,000 and has always had a milk supply of high quality.

STATE ACCREDITED HERD

The herd of 109 grade Holsteins owned by the Maine State Hospital at Augusta, has been placed on the accredited list having passed two successive tuberculin tests a year apart without finding a reactor or suspicious animal.

The management feel highly elated over the announcement as in 1906 the herd was tested and nearly one hundred head were found infected while there was another heavy loss in 1916.

THE OFFSPRING OF

King Alcartra Rag Apple Posch inherit the splendid conformation of their sire who for three successive years won the Grand Championship at the Susquehanna County Fair, the greatest Holstein show of the Keystone State. Let me price something good to you. Herd ACCREDITED.

YEAR RECORDS ON FARM OF WISCONSIN'S GOVERNOR

Near Boscobel in the northwestern part of Grant County, Wisconsin, is the Austin-Blaine farm. The owners of this farm are the Hon. John J. Blaine, Governor of Wisconsin and Henry E. Austin who resides on the place and does the active managing.

Governor Blaine is keenly interested in his Holstein herd and he and Lieutenant Governor Geo. F. Comings, who is also a Holstein breeder and a member of the National Association, often tease one another about the production of their animals. At the present time the Governor is feeling real good over three records recently completed at his establishment.

Beulah Mutual De Kol whose picture appeared in THE BREEDER AND DAIRYMAN issue November 8, 1923, completed a year record of 755.73 lb. butter, 17,558.4 lb. milk. Calamity Mechthilde De Kol also shown in the November 8th issue made a year record of 839.04 lb. butter, 20,696.7 lb. milk. Mollie Cornucopia Westkote as a two-year-old produced 523.55 lb. butter, 12,604 lb. milk. In his write-up of this herd J. H. Lewis commended the individuality of all three of these animals and said that Mollie Cornucopia Westkote was a blue ribbon winner at the Boscobel Fair.

The herd is also enrolled in the Fennimore-Boscobel Cow Testing Association and is, we understand, operated rather as a dairy farm than as an establishment for the breeding of fancy stock.

MORTON GETS WELL-BRED BULL

Edward Morton of Dormont, Pa., recently purchased a very handsome young bull from Maple Grove Stock Farm at Centerville, Pa. This fellow was born June 13, 1923. His dam was Maple Grove Mercedes Hesselte, a good young daughter of King Pontiac Jupiter with the nice official record of 421.1 lb. milk, 16.86 lb. butter. King Pontiac Jupiter was by King of the Pontiacs from one of the many good daughters of the great Hengerveld De Kol, thus possessing a combination of blood lines that are found in many of the best daughters of the leading A. R. O. sire of the breed.

The sire of Mr. Morton's young herd bull is Maple Grove Ybma Glista. His dam, Maple Grove Spofford Princess, has an A. R. O. record of 641.3 lb. milk, and over 27 lb. butter while his sire Model Daniel Glista was by the well-known show bull, Model King Segis Koningen, and his dam is Glista Dinah, who recently completed an official record as an eleven-year-old of 31.26 lb. butter, 502.7 lb. milk in seven days in the Cornell University herd, the average test of her milk being 4.9%. She is the highest record daughter of Glista Coreva, 593.1 lb. milk, 34.08 lb. butter, the third highest record cow ever developed in the University herd.

"I ain't never fell for no woman, no where, no time."
"Niggah, you may not 'a' fell, but you sho' has done some slippin' an' slidin'."

DOINGS IN THE IDAHO UNIVERSITY HERD

Big records continued to be made by the animals in the Holstein herd owned by the University of Idaho. Idaho Violet Daisy De Kol as a five-year-old produced 23,324.3 lb. milk, 1,025.04 lb. butter. She started her year by producing 613.7 lb. of milk, 26.2 lb. butter in seven days, her best day's milk being 90.4 lb. These records are remarkable when it is considered that they were made with only three-quarters.

Daisy is the second calf of Idaho Violet Posch Ormsby, the great cow of the University herd with three year records above 1,000 lb. butter, and the largest being 1,259.26 lb.

Daisy is the fifth cow in the University herd to make over 1,000 lb. of butter in a year. She weighed 1,785 lb. the day her test was closed. This cow as well as her sire and dam was bred on the University farm.

On page 221 of the March 22d issue we mentioned that Theo. Koster had purchased a half interest from the University of Idaho in the bull, Idaho Matador Foremost. At that time we said that Ida U Segis Colantha, the dam of this bull, had to her credit over 20,000 lb. of milk and 637 lb. of fat in 300 days as a junior three-year-old. She finished the full year with a record of 23,636.5 lb. milk, 735.62 lb. butter or 918.28 lb. butter. By the completion of this record she becomes the highest junior three-year-old of any breed in the State of Idaho, displacing her stablemate, Idaho Segis Lily.

In the two years Ida U Segis Colantha has been milking she has taken ten State records, counting both milk and fat production. She is very persistent. In her first lactation period during which she produced 18,919.7 lb. milk, 751.81 lb. butter, her highest milk production in any one day was only 66.7 lb. and during the second year while making her production of well on to 20,000 lb., her high day was 89 lb.

Ida U Segis Colantha is a daughter of King Segis Matador Walker. Her dam is a daughter of Alaska Yukon Colantha, one of the foundation cows of the University herd.

FIRE TAKES HOLSTEIN HERD

The registered Holstein dairy of 23 head owned by the Indian Agency School at Fort Hall, Idaho, was destroyed in a midnight blaze April 22d. The loss is in the neighborhood of \$10,000.

The basement of the barn was built of concrete while the upper floor was of wooden construction. Here the fire started. Although two streams of water were going on the blaze within two minutes after the fire gong sounded, the boys at the school were unable to check the flames and the rescue of the animals, which were kept in the basement, was impossible.

"What were the movies like?"
"Wonderful,—a lot of love scenes mixed up with war."
"Gee, that sounds like a marriage."

If You Want Fresh Cows, Springers, Heifers or Young Bulls

BRED IN THE PURPLE, you can secure them in Susquehanna and Wyoming Counties, Pennsylvania, from the following breeders and dairymen whose establishments are within easy driving distance of Tunkhannock, Thompson, or Montrose. You are invited to inspect these herds and make your own selection.

Daughters of King Rag Apple Plum Copia

are being bred to King Sylvia Korn-dyke Tweede, our junior herd bull. His sire, Woodmont Echo Sylvia Champion was first prize three-year-old bull at the 1922 N. Y. State Fair, and he is the son of Butter Boy Empress, grand champion at the 1921 N. Y. State Fair. The dam of King Sylvia Korndyke Tweede is Wynola Korndyke Pontiac Lass, she made 20 lb. butter and 515 lb. milk in seven days as a junior two-year-old. Her sire, King Tweede Spring Farm, is getting a long list of high record daughters headed by a 32 lb. four-year-old. We expect great results from this cross of breeding. Our herd is under State and Federal Supervision and our last test was clean.

Whitman A. Follett
North Norwich
Homer N. Lathrop Sherburne
Ward D. Loomis Bainbridge

"My wife," observed Henry Kleeven, "is one in a million. She gits up in the mornin', milks seven cows, and gits breakfast fer ten hardworkin' hungry men before six o'clock."

"She must be a very robust woman," said the stranger from the city.

"That's the funny part. She's sickly and delicate-like. If that woman was only strong I don't know the work she couldn't do."

Just for Fun**BRAN**

Bran, bran, bran!
It's higher than the wheat;
The shuck has beat the kernel
And the bone has beat the meat.

Bran, bran, bran!
Our hats are off to you—
We bare our heads in honor
To the straw on which you grew.

Bran, bran, bran!
The system is complete
That gives the place of honor
To the shavings from the wheat.

Bran, bran, bran!
A relish for the kings,
While wheat is but a ration
For the cows, the pigs and things.

Bran, bran, bran!
Gee-Whillikens and Whizz!
A quart of milk is cheaper
Than a bottleful of "fizz."

Bran, bran, bran!
The wheat is "out o' luck"
When ev'ry juicy kernel,
Is cheaper than the shuck.

The science class had been studying the wind all week—its power, effects, etc.—until the subject had been pretty well exhausted.

To stimulate interest, the teacher said, in her most enthusiastic manner: "Children, we were going to Baton Rouge to witness the football game yesterday. As the train approached one of the stations something came softly in and kissed me on the cheek. What do you think it was?"

A pretty girl in the rear shouted: "I know! It was the conductor, because when he took my ticket, he told me I was a very pretty girl and kissed me, too."

Willie was under orders never to go in swimming. And mother meant to see that he obeyed. So one day she became suspicious.

"Willie, your clothes are wet," she said. "You have been in the water again."

"Yes, mother; I went in to save Charlie Jones."

"My noble darling! Did you jump in after him?"

"No, mother. I jumped in first so as to be there when he fell in."

A child of two years, with bright eyes and a roguish mind, began suddenly to giggle in church one Sunday morning. Noticing the child watching the back of a nodding deacon's head, the mother inquired into the cause of such merriment.

"Oh, mamma," laughed the child, "dat man's head is peekin' out at me through a hole in his hair."

MAGIC!

The magician was performing in a room adjoining a gunpowder factory. A sailor and his parrot were thoroughly enjoying the show. "Now that's a fine trick," said the sailor, lighting his pipe. "I wonder what he'll do next?"

The sailor then threw away his match. A minute later there was no sailor, no factory, no room, nor village. On a steeple a mile away the parrot, with one feather remaining, said: "Now that's a fine trick. I wonder what he'll do next?"

NO OPPOSITION

Mose (applying alone): "Ah wants to get a marriage license."

Clerk: "Where's the bride-elect?"

Mose: "What you'll mean bride-elect? Dey wan't no 'lection a-tall. De lady done app'inted herself to de office at mah own personal request."

As Dr. L. M. Thompson of Montrose, Pa., passed down Market St., Harrisburg, during Farm Products Show Week, he was stopped by a pretty young woman.

"Would you like to help the Working Girls' Home?"

"Certainly," said the obliging Doctor, "but I haven't much time to-day. How far away do you live?"

A gentleman was promenading the street with a little boy at his side when the little fellow cried out, "Oh, pa, there goes an editor!"

"Hush, hush," said the father, "don't make sport of the poor man—God only knows what you may come to yet."—*The Illustrated Tasmanian Mail.*

"I hear you've had a fight with the Brown boy. Didn't I tell you I'd punish you if you fought again?" asked the father sternly. The son looked up nonchalantly. "Dad, you'd better take a look at what I did to that Brown kid before you start anything," warned the youthful warrior.—*Everybody's Magazine.*

"Ma, do cows and bees go to Heaven?"

"Mercy, child, what a question! Why?"

"Cause if they don't, the milk and honey the preacher said was up there must be canned stuff."

We have all heard that experience is the best teacher. If we estimate value from cost, it is certainly the best teacher in existence. The only reason why it is the best is because being so costly, its lessons are more liable to be remembered.

A happy person about is like a fragrant bouquet, or sweet music, or a refreshing breeze, or a welcome light. A grouch is like a three days' rain.

EXTRA! EXTRA!! SPECIAL!!!

Do you have any bull calves that you wish to dispose of and have no market for?

Have you sold surplus stock that have not brought the Right prices, and want to find a PAYING market for what you now have?

Do you want to place your farm and herd on the MAP?

If you can answer YES to the above questions, let us tell you about our 3 1/2 inch space SPECIAL.

This SPECIAL NOT ONLY CARRIES YOUR ADVERTISEMENT, but also has additional inducements.

It is UNIQUE in that it is the only offer of its kind made by any magazine.

It is a REAL BARGAIN. Because why? BECAUSE IT BRINGS RESULTS.

Write us at once for information about this unusual offer. We know you will be more than repaid for the effort.

And address your letter to:

Cows from an Accredited Herd

As I do not have enough pasture for all my stock, I can spare a few foundation cows, bred to a son of the famous World's Record Heifer

CLARA CLOTHILDE LYONS

639.8 lb. milk in 7 days
2,658.4 lb. milk in 30 days
4,872.8 lb. milk in 60 days
7,183.0 lb. milk in 90 days

20,771.2 lb. milk, 723.40 lb. butter in 305 days as a two-year-old.

Herd Accredited

FRED B. KEENEY

Wyoming Co.

Laceyville, Pa.

AAGGIE MAY FAYNE DE KOL

In just 100 days she has produced 6,325 lb. milk as a five-year-old.

Others in the herd just as good. They are bred to SUSQUEHANNA JUDGE SEGIS LEORALINE, whose four nearest dams have 7-day records averaging 29.75 lb. butter.

Can spare a few that will produce for you.

Herd under State and Federal Supervision and **CLEAN**.

MURRAY A. MILLER

Sunny Lawn Stock Farm

R. D. 3

MILTON, PA.

The Oldest Herd in Northumberland Co.

Just a few Accredited members of the

EVERBREEZE HERD

They are bred to

KING HENGERVELD HARTJE

whose daughters are not only choice individuals but also wonderful producers. One produced 960.6 lb. butter, 26,233 lb. milk in TEN months, World's milk record at time of making.

GEORGE LIGHTBODY

Lackawanna County

Dalton, Penna.

CARAPATHA BELLE

Just one of the members of WYOWANNA HERD—The First Accredited Herd in Lackawanna County and still on the Accredited List. Members of this herd have produced over 10,000 lb. milk in a C.T.A. year on two milkings daily. They are bred to BLACRES BAPTISTE ORMSBY, whose three nearest dams average 33 lb. butter, 615.7 lb. milk in a week.

Can spare a few nice heifers.

WM. M. LAW ACCREDITED HOLSTEIN HERD DISPERSAL

With consignments from the Herds of

F. W. Hudson and Wm. Hicks, Sandusky, N. Y.

WEDNESDAY, JULY 2, 1924, 10 A. M.

A SALE OF HEALTHY HOLSTEINS of record breeding and pronounced producing ability.

DAUGHTERS of dams with records of 18 lb. at 2 years up to 30 lb. at full age.

NINE DAUGHTERS of Segis Farmstead De Kol—one of the quality grandsons of King Segis.

EIGHT DAUGHTERS and one son of Blacres Allworthy Ormsby (dam and granddam averaging over 30½ lb.) who is a splendidly bred grandson of Ormsby Korndyke Lad.

Cows that are milking heavily, HEIFERS bred to highly pedigreed bulls, CALVES that are extra promising—ALL AGES at your own price.

Six months' time will be given on approved notes.

SALE WILL BE HELD on the Wm. M. Law Farm on State Road one mile east of Sandusky. Lunch will be served.

Auctioneer—Col. Glenn R. Mead. In the Box—Jack Houck

WM. M. LAW :: Sandusky, N. Y.

TIDY ABBEKERK PRINCESS MADALINE

She has two seven-day records both above 30 lb., that average 31.31 lb. butter, 604.8 lb. milk. She is the dam of our junior herdsire and is a daughter of

TIDY ABBEKERK PRINCE

who has two other daughters in this herd which was established in 1901 and is under State and Federal Supervision.

Let us price you something of this type and quality.

HOMER N. LATHROP

Chenango Co.

Sherburne, N. Y.

HORNLESS HOLSTEINS

KEYSTONE BEAUTY PLUM JOHANNA

25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old, a world's record in class for more than six years and still the world's record for strictly official test. The year before, as a junior three-year-old, she made 22,496.6 lb. milk, 1,108.89 lb. butter in a year. Neither of these records have ever been equalled by any other heifer in her state. She is still on the job.

Let us price you a Hornless Bull.

The Lenkerbrook Dairy Herd

Leaders for Health, Type and Production

IT is fitting that Holstein-Friesians should lead in health as well as production, and when the two first accredited herd certificates were issued to herds in Dauphin County, Pennsylvania, it was not to be wondered at that they were to Holstein herds. It is true that these herds each contain a few purebred Guernseys but purebred Holsteins are in the majority. The two certificates of which we speak were issued to Wm. D. Lenker and to Dr. Jesse L. Lenker of Harrisburg, Pa. These two brothers are associated in business under the firm name of Lenkerbrook Dairy Farms. Part of the milk produced on Lenkerbrook Dairy Farms is sold in the city of Harrisburg as certified milk at a retail price of 28c a quart. About 550 lb. daily are disposed of in this way. It is needless to say that every possible precaution is taken to insure the quality, purity and cleanliness of the product. The practical care of "Bill" Lenker and the scientific skill and knowledge of the Doctor are combined in the production of a product of the highest possible quality. The cattle are kept scrupulously clean while the dairy house and utensils are kept under lock and key when they are not actually in use.

Wm. D. Lenker and his family live on the farm. Mr.

BONALEVO QUALITY WALKER INEZ
Bonny likes to be petted.

Lenker was educated in the public schools of Dauphin County and has always been a farmer. Besides being a Holstein breeder, he keeps purebred White Holland turkeys, white guineas and White Wyandotte fowls. "Bill" has seven children, three girls and four boys. The oldest boy, John, just won fifth place in individual cow testing at State College, the competition being open to the entire state. The twins, David and Jesse, are real little farmers, and are never so happy as when fussing around

DR. JESSE L. LENKER
Physician; Holstein and Guernsey breeder and all-around good fellow.

stock. The writer is unable to tell them apart, but strange to say, their parents never have any such difficulty.

Dr. Jesse L. Lenker received his preliminary education in the public schools of Dauphin County and then took courses at Millersville Normal School and the Medical College of the University of Maryland, graduating in 1907. In 1913 he took a post-graduate course at Harvard, studying internal medicine in which he specializes. The Doctor served in the United States army, joining in 1917, and was in the Medical Officers' Reserve Corps for five years.

Doctor Lenker is a busy man. He has a large Harrisburg practice and is visiting physician at the Harrisburg Hospital. He is an enthusiastic dairyman and cattle breeder and knows as

much about Guernseys as he does Holsteins. Dr. Lenker now has more purebred Guernseys than he has purebred Holsteins, having recently purchased the entire Fetterhoff herd. He is a great advocate of Holstein milk for babies and persons in delicate health, and has publicly stated on more than one occasion that he finds Holstein milk of the greatest value for young stock, human and bovine, and his purebred calves, Holstein and Guernseys alike, receive Holstein milk because of its superior digestibility. The Doctor's favorite recreation is attending a Holstein gathering or a public sale. He is treasurer of the Dauphin County Holstein Club and is prominent in a number of civic, medical and fraternal organizations. Dr. and Mrs. Lenker have three children, one boy and two girls. When this trio visit their seven cousins on the farm there are some lively times.

The herd is headed by King Mead Segis Pontiac, now six years old. He is a fine, vigorous, handsome bull, dark in color and full of energy. He is not at all cross

KING MEAD SEGIS PONTIAC
A bull of size, substance and quality.

but it is so difficult to have him stand still that no picture doing his type and individuality justice has ever yet been taken. Mr. Lenker has to look after his farm and certified milk business and says that he does not have time to teach his herdsires to stand and pose.

King Mead Segis Pontiac is from Mead Vernon Pontiac, 26.52 lb. butter, 539.50 lb. milk in seven days. Her dam is Mead Vernon 2d and her sire is King Champion Jannek, a son of King Pontiac Champion and Jannek Albina De Kol 4th, one of the many good daughters of Aaggie Cornucopia Johanna Lad. King Pontiac

LOOKING THEM OVER

The twins, David and Jesse Lenker with "Poley"—Colantha Napol Pontiac. Maybe Poley is trying to figure out which is which.

Jannek has around sixty daughters in the Advanced Registry, two of which produced over 700 lb. milk in a week and over 31 lb. butter. Mead Vernon Pontiac has 75% the same breeding as Melina Vernon De Kol 4th, 700.3 lb. milk, 31.60 lb. butter in seven days.

King Mead Segis Pontiac was sired by King Korn-dyke Segis Inka, a son of King Korn-dyke Hengerveld Ormsby from K. S. P. Segis Inka, she by King Segis Pontiac from K. P. Segis Inka, a daughter of King of the Pontiacs and the great foundation cow, Segis Inka,

JOHN LENKER AND QUEEN MAY DE KOL SPOFFORD

granddam of King Segis. King Korn-dyke Segis Inka is brother to Ormsby Korn-dyke and is by a brother to Sir Pietertje Ormsby Mercedes. There are many large records in the pedigree of this bull and any amount of records made by his near relatives.

There are a number of handsome cows at Lenkerbrook Dairy Farms. One you would be sure to notice is Queen May De Kol Spofford. She is of Calamity, Spofford, Burke and Korn-dyke breeding, is a large, handsome cow of great capacity, and is a real every-day worker. Even if you are not a cattle judge you

cannot fail to be impressed with the size, quality and apparent capacity of this "Queen of the Dairy."

Two young cows of this dairy that are bound to attract your attention are the full sisters, Colantha Napol Pontiac and Lenkerbrook Colantha Meg. Their birth dates are exactly a year apart. They are sired by Colantha Brookside Pontiac from a daughter of Prince Segis Johanna Korndyke, are both light colored, handsome cows, large producers and are hornless. Dr. Lenker purchased their dam, Napol Meg Johanna, from the veteran breeder, George E. Stevenson, and at the

WM. D. LENKER AND LENKERBROOK COLANTHA MEG

time Mr. Stevenson told the Doctor that he could depend upon always getting hornless calves from this young cow. Not only were the offspring of Napol Meg Johanna hornless but this characteristic has been transmitted to the next generation despite the fact that the females have always been mated with horned bulls.

Colantha Napol Pontiac formed one of the Holstein exhibits at the 1924 Pennsylvania Farm Products Show staged at Harrisburg last January. Her individuality and splendid udder as well as the type of her young calf exhibited with her, attracted much attention.

Another high-class member of this herd is Bonalevo

LOADING UP

Bill tends to loading the certified milk wagon.

Quality Walker Inez. She is a daughter of King Quality and is from Bonalevo Walker Paul De Kol, a daughter of Admiral Walker Pietertje with a seven-day official record of 31.31 lb. butter, 542.3 lb. milk. In the herd of Director Chapin, sisters and other near relatives of this cow have made splendid records both in official and long-time test.

Before the Lenkerbrook herd started to produce certified milk, a number of nice records were made, but since that time Bill Lenker says he has too much to attend to without milking three and four times a day with

a test supervisor. Running two purebred herds and the certified milk business is about enough for one man to look after.

The Guernsey herd which now numbers over forty head, is headed by Brookdale May King, whose dam has a year record of 764.78 lb. butter, 15,621 lb. milk, a state record for the breed. The younger bull is Majors Master of Guernseydale Farm, a son of Langwater Major. Both are high-class individuals.

All the Lenker farms grow good crops. The Doctor is particularly proud of his 38-acre alfalfa patch which has been judged by state specialists as the best they have

seen this year. Last fall Bill Lenker had more corn that he was unable to get into the silo than some dairymen grow, for the farming districts of Dauphin County are blessed with fertile soil and a long-growing season and, when well manured, the land produces heavy crops of superior quality.

Should you visit the Capital City of Pennsylvania, it would pay you to spend a few hours at Lenkerbrook. You may have just as good cattle and just as good a farm but, you may be able to learn how to market milk from a purebred dairy at a price somewhere near commensurate with its quality and food value.

Wisconsin to Have 500 Cow Testing Associations by 1930

By J. H. Lewis

THROUGH the efforts and planning of active workers connected with the Wisconsin College of Agriculture and the Wisconsin Dairyman's Association, and county agricultural agents throughout the state, a plan of campaign has been drafted and approved which has for its slogan, "500 Cow Testing Associations in Wisconsin by 1930."

An ideal, a goal, some definite aim and purpose usually affords the incentive to do big things, and while the figure set is high, still it is not out of the realms of possibility to accomplish this ambition. Five hundred testers at work, in five hundred cow testing associations will be then putting yearly records of economical production on 230,000 cows owned by 13,000 dairy farmers. This will place 12% of Wisconsin cows on test. Denmark has 25% of her cows in cow testing association work.

There are at this time 165 cow testing associations in operation in Wisconsin, putting the test on 75,000 cows, owned by 4,450 dairy farmers. This represents only 3.8% of the dairy cows of the state on yearly test. The average Wisconsin cow will be producing nearer to 6,000 lb. milk and 225 lb. butterfat in 1930 instead of 5,000 lb. milk containing less than 190 lb. fat. The average C. T. A. cow would yield over 300 instead of only 270 lb. butterfat during an association year. Out of state buyers will find it easier to locate a carload of good association record cows in a township and will not be gallivanting all over the county to select a few good cows from good herds.

Over 13,000 registered sires will be in use in C. T. A. members herds in 1930. At least 20% of the dairy farmers will have purebred herds, while to-day only 7% of all the herds tested are registered. More sires from dams of known production will be heading herds because it will be easier to select them from good herds where practical farm records are kept. More of the farmers will see the necessity of knowing which are the profitable cows. They will not be guessing at a cow's record.

Without the county agricultural agents there would now be half as many associations operating as we now have. With increased help on the part of agricultural agents a larger number of associations will be organized

and supervised by them. In Grant County, where the writer lives, we had two cow testing associations two years ago. To-day we have eight, with prospects for two more shortly, and mainly due to the cooperation of county agents with the State Dairyman's Association.

In addition to the campaign just starting, men of vision are recommending a special school for training cow testers. They point out this very need now, and in the list of prospects offered for efficient men they point to the type of short course graduates at the College of Agriculture. Also the Dairyman's Association is asking for additional strength. This is needed where cows are finishing up on year's work and where the local tester is liable to be a few pounds ahead of his scale in order that a top cow may be put across for a new record. The State Dairymen's Association may be relied on to step in at the proper time and put an honest-to-God record where it belongs.

The movement to strengthen Wisconsin farms through soil amendments is gaining great impetus. In Grant County 18 portable limestone grinders are at work turning out stupendous quantities of crushed limestone, and the experience of farmers with alfalfa may be so well demonstrated that by 1930 practically every member of a cow testing association will be growing alfalfa hay in 1930. This will aid him in producing butterfat at a lower cost. The calf clubs will be doubled in number, as the banks up and down state are now giving their attention to this branch of dairy farming. The scrub bull and the tubercular cow will be a thing of the past and the people of the state of Wisconsin will have more healthy cattle and a more prosperous atmosphere in which to labor.

In any and every avenue of life, the ability to blend and bring nature's forms and forces under the dominion of law, and render all her operations subservient to the actual wants of men and women is the worthiest triumph of the most transcendent genius.

Why not send an account of your club picnic or field day to the HOLSTEIN BREEDER AND DAIRYMAN? If your club secretary is too busy to attend to it, do it yourself. Let the other fellows know that you are alive.

American Holsteins in China

CATTLE breeders in various parts of the United States donated, in the fall of 1920, a number of purebreds to establish a dairy herd to be owned by the Baptist College at Kaifeng, province of Honan, China.

Soon after the animals arrived in their far east home, one of the cattle scourges of that country killed practically all of them, the only purebred Holstein left being Bell Farm Dorothy, No. 483860, a daughter of Rag Apple Korndyke 8th, and De Kol Mable Queen Lilith who is credited with an official record of 64.31 lb. milk, 30.59 lb. butter in seven days as a junior four-year-old.

This heifer was donated by Mr. John A. Bell, Jr., of the Bell Farm, Coraopolis, Pennsylvania. At the time she was shipped she was carrying calf by King Mabel Segis Korndyke. After she arrived in China, she dropped a male calf, March 24, 1921, which was named Kaifeng King Segis Korndyke and registered as No. 353760 in the Holstein-Friesian herd book. This young bull was sired by a son of King Pontiac Hengerveld Fayne, former herdsire at the Coldstream Dairy Farm, Lexington, Ky., a son of King of the Pontiacs and Segis Hengerveld Fayne Johanna, a cow of such exquisite type that at one time it was suggested to use her as a "True Type" model.

The dam of King Mable Segis Korndyke was the famous Bell Farm cow, Mable Segis Korndyke, the first cow under full age to be credited with making a 40 lb. official seven-day butter record.

In a letter received from W. Eugene Sallee, president of the Kaifeng Baptist College, he says that the young

MR. AND MRS. W. EUGENE SALLEE
They are the leaders at the Kaifeng Baptist College, Kaifeng, China.

bull is more white than black and beautifully marked with a level top line. He is a fine large animal and full of pep.

Before the fall term the college advertised for 90 new students and at the time of the entrance examination it was found that more than 400 had registered for this examination, boys coming from all over the province. More than 300 had to be turned down.

BELL FARM DOROTHY

The biggest milk producer in the Kaifeng Baptist College herd.

In her far eastern home, Bell Farm Dorothy far surpassed the native cows. In June, as a junior three-year-

old, she produced 1,132 lb. milk the third month after freshening. Her best day's milk during May was 46 lb. and during June 42.2 lb., while in the six months from June 1st to May 30th inclusive she produced 5,963 lb. milk. Her second lactation period started April 17th, when she dropped a heifer calf sired by the purebred Jersey bull, Gamboge's Thornbury Noble.

In making his report, President Sallee apologizes to both dairy breeds and their owners, but says that owing to the loss of the other Holsteins this was the best they could do.

The next freshening of Dorothy was by her own son, Kaifeng King Segis Korndyke.

The work of the Baptist College is very successful. They built a recitation building 171 ft. long with two wings on the east and west 73

ft. wide. On the north side, opposite the main entrance, is an Assembly Hall 45x60 ft. with a reinforced concrete gallery. There is a high, well-lighted basement under the whole building, two main floors, and a fine dormitory space in the attic. There are three reinforced concrete stairways. All of the classrooms are well lighted. The building is substantially built of red brick and covered with red tiles. The roof has the well-known Chinese curves and harmonizes well with the surrounding landscape.

Before the fall term the college advertised for 90 new students and at the time of the entrance examination it was found that more than 400 had registered for this examination, boys coming from all over the province. More than 300 had to be turned down.

KAIFENG KING SEGIS KORNDYKE

Holstein herdsire of the Kaifeng Baptist College herd.

When Mr. Sallee wrote, he said there were 270 boys in the Boarding Department and 75 in the Day School. In Honan province there are 97 districts, or as we would say in America, counties. The boys in the school came from 65 counties of Honan province and from

seven other provinces, so that the work of the teachers will reach many communities.

Among the faculty are two former pupils of Dr. H. L. Hargrove, who were taught by him in a Government school. Mr. Sallee says, "After graduation here, Li Chuin Pang went to the National University in Peking, where he graduated. He then became Dean of the First Middle School in the city, where he was drawing a salary of \$118.00 a month. This he gave up and came to work with us for \$50.00 a month. He is now Dean of our school and is making good every way. The second is Howson Lee, who after finishing in Kaifeng graduated from Shanghai College and then spent two years in America. He received his M.A. from Baylor University and took some special work in Peabody College. Then we have two of our own graduates who are equally fine in spirit, though not so highly trained. Any one of these four young men could easily make three or four times as much as they get with us but they have chosen to work with us because they believe it offers them a larger opportunity to serve the Lord and their country."

In the autumn of 1922, the Honorable Jacob Gould Schurman, former president of Cornell University, visited the Kaifeng Baptist College and the Associated Girls' School, and was very favorably impressed with the work done, as well as the institution itself. He afterwards wrote, "The plant of the Kaifeng Baptist College is extensive, modern, and well adapted to its purposes."

"In addition to the ordinary established course of instruction the college is endeavoring to promote agricultural education, including a dairy department with dairy cattle of high breed. In this respect it is joining in a movement in which other mission schools and colleges have already taken part; and it is a movement which deserves every encouragement."

"The missionaries came first to China to engage in evangelistic work. They soon saw the advantage of establishing schools, as well as churches. Later they took on medical work and established hospitals. Now they are beginning instruction and demonstration in scientific agriculture. And as more than eighty per cent of the Chinese people are farmers it can be readily understood that this is a phase of education of immense practical interest and value. Chinese farmers have not an inkling, I will not say of scientific agriculture, but of the improved methods which have come into practice in the West. Schools like the Kaifeng institution which instruct them in these methods meet, therefore, a very practical need of the people."

"I earnestly wish the Kaifeng Baptist College the success it so richly deserves. I was greatly impressed with the hold the President and also Mrs. Sallee had on the Chinese community at Kaifeng. They are doing a very important work — and doing it most successfully."

Milk Baths for Beauty

THE EMPRESS ELIZABETH of Austria was reported to be one of the most beautiful women living during the latter part of the last century in the Austrian Empire. It was reported that she used to bathe in milk to preserve her wonderful complexion but

some doubts have been cast upon this statement. In the *Jersey Bulletin* of May 21st, George Cecil, who writes foreign articles for that magazine says, "There is in a village near Warsaw an old dairyman who possesses a document which proves that the Empress, when traveling in Poland, at least took one milk bath. The paymaster of the Royal lady's suite paid for twelve gallons of milk, the account being marked 'for bathing purposes,' another line reading, 'for the use of Her Imperial Majesty.' The bill is not dated; but the proud possessor of the souvenir declares that he remembers his father supplying the milk. 'All the village had to go short for three days,' remarked the veteran to a wandering scribe in search of 'copy.' 'But forty years ago Royalty was of some account; one willingly put up with its curious fancies.'"

The article referred to its from "The Polish Dairy Farmer's Customs." Speaking of the dairy restaurants found in the rural communities, Mr. Coburn says, "Sometimes the dairy-restaurant is at a distance from the town. Picturesquely situated in a grove of trees, and shut off from the dusty road by a tall hedge, in which the creeping roses bloom, it attracts countless people of leisure, who make their way there in the late afternoon, some, bent on turning the summer evening to account, take supper in the enclosure, eggs, cream cheese, crusty bread and rich yellow butter replacing a meat dish. Milk is the only tippie; but they who sup on this simple fare are none the worse for abstaining from something more fortifying. Many, in fact, are ordered by the doctor to give the above-mentioned change of diet a trial, and, incidentally, to drink as much milk as possible. To hear is to obey, for the Pole has implicit faith in the medical fraternity. As to the proprietor, he looks upon the doctor as his guardian angel. And well he may."

Work of the American Dairy Federation

ON May 29th, President Coolidge signed the bill establishing a Dairy Bureau. This measure had been passed by the Senate on May 27th. At the suggestion of Mr. M. D. Munn and by direction of E. M. Bailey, chairman of the American Dairy Federation Executive Committee, the matter of requesting the appointment of Dr. C. W. Larson as chief of the Dairy Bureau was submitted to the members of the Executive Committee by wire on May 26th. Every member answered in the affirmative and a letter setting forth the request was presented personally to Secretary Wallace on May 31st.

The Federation requested the Federal Reserve Board to publish a brief review of financial conditions in the dairy industry, and this appears in the May issue of the *Federal Reserve Bulletin* and is as follows:

"A seasonal expansion in the production of butter and cheese began in March and the total output was greater than in March a year ago. Distribution, on the other hand, as indicated by receipts at five principal consuming centers, declined and was in smaller volume than last March. As a result of smaller receipts than in February, cold storage holdings were reduced to the lowest levels since July, 1923. Although a decline in

the stocks in March is a seasonal occurrence, it is significant that supplies were considerably heavier on April 1st than a year ago. Prices of butter have declined continuously since the beginning of the year, and quotations for 93 score butter at New York reached a low point of 36.5 cents on April 18th as compared with 47.5 cents a month earlier. Receipts of milk in the New York market increased in March and amounted to 3,124,000 cans, an increase of 14% over February and 6% over March a year ago.

"The Department of Agriculture reports that the dairy industry has expanded to a point where gross domestic production exceeds gross domestic consumption, and evidences of a continuation in the expansion are reflected in the gradual increase in the number of dairy cattle, which totaled 24,765,000 head on January 1, 1924, the largest number in the history of the country.

Dairymen's League Redeeming Certificate Indebtedness

THE Dairymen's League Coöperative Association, Inc., is paying off some of its certificates of indebtedness, the directors voting an appropriation of a quarter million dollars for the purchase of redeeming certificates maturing in 1927, Series A. The total amount of this series is \$4,307,060.24 for deductions made in 1921-1922, the first year of the pooling plan. These deductions were made from members' milk checks and are really loans to the Association for the purpose of providing funds for working capital and for purchasing or building milk plants.

The Association will pay 95c on the dollar for the certificates plus accrued interest to July 1, 1924, and the purchase dates range from July 1st to 31st. Only certificates bearing series numbers ending with a cipher will be redeemed. This is not a forced redemption as holders can, if they wish, keep their certificates until maturity. All directors, county presidents and membership auditors have signed an agreement not to offer their certificates for sale.

The milk plants and equipment owned by the Dairymen's League originally cost the association \$9,333,125.78; depreciation has been charged off until the association book valuation of these plants is now \$5,717,490.76. The cash on hand and the inventories of goods show sufficient resources to pay 53.3% of all certificates of indebtedness issued, without selling or pledging any of the association's plants, and this after deducting all liabilities.

The action of the Dairymen's League Coöperative Association, in starting to repay some of its certificate indebtedness, will go quite a way towards creating or restoring confidence in the league. In many parts of the league territory, dairymen have borrowed from the banks, using the certificates for collateral security until the banks in self-defense have refused to take any more of them, classing them as "frozen securities." Some holders of certificates need the money badly; others, whose certificates are redeemable under the plan, will prefer to hold them to maturity and obtain the full par value. The redemption will lessen the indebtedness the league was scheduled to repay in 1927, and as long as the working capital remains sufficient in every way, the action of the league directors is to be commended.

Donated Heifers Make Records

AMONG official records made recently in the herd at the Pennsylvania State College, are two that are of particular interest to Pennsylvania dairymen. In December, 1922, twenty-six head of purebred dairy cattle were presented to the college by individual dairymen and breed associations in various parts of the state. One of these animals was given by the Central Pennsylvania Breeders' Association which is composed of Holstein breeders and dairymen living within a short distance of Williamsport, Pa.

This heifer was Central Pennsylvania Breeders' Choice. She was born September 9, 1919, and is a

CENTRAL PENNSYLVANIA BREEDERS CHOICE
As a four-year-old she produced 90 lb. milk a day; 532.5 lb. milk, 20.3 lb. butter in seven days in the Pennsylvania State College herd. Her picture was taken when, as a three-year-old, she was presented to the college by the Central Pennsylvania Breeders' Association.

daughter of Flanders King Pontiac Netherland and De Kol Artis Abbekerk Drosky. Tested as a four-year-old, she recently made a seven-day record of 532.5 lb. milk, 23.9 lb. butter, her highest day's milk being 90 lb.

Another four-year-old tested at the same time was Pollyanna Segis De Kol, a daughter of King Segis Longfield Lenore and Maplecrest Polly De Kol. She was donated to the college when a three-year-old by a fourteen-year-old girl, Mary Josephine McCracken, of Wakefield Stock Farm, Brookville, Pa. Pollyanna gave 82 lb. milk in a day and made a seven-day official record of 554.4 lb. milk, 26.4 lb. butter.

Drink Milk and Reduce Taxation

HOW the Illinois Chamber of Commerce can help to reduce taxes by putting on "drink-more-milk" campaigns was the message of a letter written to that body by A. D. Lynch of the Illinois Agricultural Association. Mr. Lynch quotes a survey of 50,000 school children in Los Angeles which indicates that the children who drink milk liberally completed the eight grades of school work when they were two years younger than did the children who do not drink milk. It is figured that this amounts to a difference of about \$150 in the cost of schooling each child, which, of course, is paid from general tax receipts. We propose a new slogan to be adopted by all friends of the dairy industry as well as everyone who wishes to lower the cost of taxation, "Lower Taxes by Drinking Milk."

A Unique Establishment

A LIMITED membership in the National Association is held by the Charles Wright Company of Fergus Falls, Minn., but few breeders of Holsteins, outside of Minnesota, know anything about this company.

Charles R. Wright owns around 6,000 acres of land near Fergus Falls. This is divided into nine units and is operated by tenants under a standard system or plan. On each unit or farm, a definite plan of crop rotation is followed and the farming equipment is the same on each farm. This saves first cost, as lower prices are quoted upon a number and also simplifies repairs or replacements.

With one exception, dairying is a strong feature on all the Wright farms and purebred Holstein-Friesians are the stock kept. The tenants are half-owners of all the stock, and this extends even to the poultry.

After considerable study and experimentation, a plan was developed whereby any house required can be started as a four-room structure, then, as need arises, enlarged to six, eight or even ten rooms. Yet it will be a well proportioned house from start to finish, we are informed, and will not be of stereotyped appearance as the design can be slightly varied while the main essentials remain.

Some of the tenants have been on the Wright farms for twenty years, while others have acquired money enough of their own, to purchase farms and have then moved away, but one man who owns a place of his own is still occupying one of the farms in the Wright community.

The Centenary of Portland Cement

LAST year there were about 550,000,000 bags of cement manufactured in the United States, and of this tremendous amount approximately one-fifth was used in this country, yet Portland cement, as we now know it was first made in 1824, one hundred years ago by an Englishman named Aspdin. The concrete made by Aspdin looked so much like stone quarried near Portland on the south coast of England that his product was called Portland cement.

There is no guess work to-day in the manufacture of cement. Chemists carefully test the ingredients that enter into its manufacture and the materials are so proportioned as to make a product as reliable as the steel with which we make our great bridges.

A form of cement has been used for more than 2,000 years. The volcanic ash around Mt. Vesuvius, Italy, has similar properties as those possessed by Portland cement and more than twenty centuries ago, concrete was made from this ash. Some of the products still stand to-day.

Professor L. J. Smith, head of the Agricultural Engineering Department of Washington State College, says: "Permanent road building has been given a great impetus by the use of Portland cement. It is as important as steel in our building program and lasts longer. It has no equal in building and construction, but it requires a certain amount of steel in building to give the reinforcement that engineers specify to insure complete permanency.

"On the farm it means mouse and rat proof bins and granaries; fireproof barns; stable floors that can be easily and completely cleaned. It means driveways and walks of a permanent nature; water tanks and reservoirs; silos, vats and containers that contain. Its uses on the farm are so multitudinous that all of them cannot be enumerated.

"On the farm, boys and men can make forms in which to pour Portland cement, and it does not require a highly skilled artisan to make these forms or to mix Portland cement for concrete construction. Farmers have grown into the use of cement so gradually and so persistently that its use is no longer an art, but a fundamental in agricultural economics.

"The hundredth centennial of its discovery marks 100 years of progress, and nowhere has it meant more in the march of progress than on the farm."

Increase in Milk Production and Consumption

MILK production last year was seven billion pounds more than in 1922, according to reports to the United States Department of Agriculture. Production is placed at 109,736,062,000 pounds as compared with 102,562,221,000 pounds in 1922.

Consumption of milk for household purposes reached 50,440,000,000 pounds as compared with 46,672,560,000 pounds in 1922. There was manufactured 1,774,881,000 pounds of condensed and evaporated milk as compared with 1,431,349,000 pounds in 1922. The output of creamery butter was 1,252,214,000 pounds compared with 1,153,515,000 pounds the preceding year, and the total production of cheese of all kinds was 394,697,000 pounds compared with 369,980,000 pounds in 1922.

Consumption of butter on a per capita basis was 17 pounds per person last year as compared with 16½ pounds in 1922; consumption of cheese was 3.91 pounds per person compared with 3.74 pounds; condensed and evaporated milk 13.25 pounds compared with 12.69 pounds, and ice cream 2.66 gallons compared with 2.43 gallons in 1922.

Dried casein production more than doubled during the year, being 14,548,000 pounds compared with 6,927,000 pounds in 1922.

Items making up the total milk production for the two years are given in the subjoined table:

	1923 Pounds	1922 Pounds
Creamery butter	1,252,214,000	1,153,515,000
Farm butter	610,000,000	625,000,000
Cheese (all kinds)	398,947,000	374,980,000
Condensed and evaporated milk	1,774,881,000	1,431,349,000
Powdered milk	6,560,000	5,599,000
Powdered cream	328,000	118,000
Malted milk	15,331,000	13,659,000
Sterilized milk	80,000	330,000
Milk chocolate	149,500,000	100,000,000
Ice cream (gallons)	294,900,000	263,520,000
Milk for household use	50,440,000,000	46,672,560,000
Milk fed to calves	4,174,000,000	4,335,000,000
Milk wasted	3,292,000,000	3,076,860,000
Total (equivalent of whole milk)	109,736,062,000	102,562,221,000

One of the most discouraging things about poverty is that it lasts a long time.

Training Agricultural Leaders

THAT agricultural college education has the effect of making the student disinclined to go back and work on the farm, is a statement you will hear frequently in the country districts. While this may be true of students that graduate it is not so much in evidence among students who take special courses of one year or two years' duration.

The Iowa State College has a two-year agricultural course and Professor J. C. Cunningham, who is the head of this department, say that less than 1% of the students enrolled in the course since it was established have failed to return to the farm, and this means more than 2,000.

A recent survey shows that over 62% of the graduates of the two-year agricultural course are active in their different farm organizations.

The two-year course at Ames was established about thirteen years ago. Students taking this course have come with a background of actual experience and a foreground of desire for better preparation for efficient farm management. Besides taking an active part in the existing college agricultural organizations, they have maintained an organization particularly their own which has helped to train them to be more useful in their own communities.

Professor Cunningham says that kaleidoscopic changes have taken place during the last four years in the farming situation in this country. Five years ago the income of the American farmer was something over fourteen billions of dollars in cash. In the following

year this was cut to seven billions. This figure has been slowly advancing since that time but it not yet back to its pre-war level.

Moreover, the purchasing price of the money received is not equal to what it was in 1914. The department of agriculture has estimated that the purchasing power of a farm dollar expressed in terms of other commodities is something as follows: overalls, 61 cents; coal, 61 cents; axes, 58 cents, and so on.

While many remedies are suggested ranging from governmental purchase to enormous revolving loans, many keen economic students insist that the growth must take place from within. Coöperative marketing has, in some instances, been successful, usually in the case of special crops grown in restricted localities. Such a huge problem as is involved in marketing milk, wheat, corn or livestock, can be solved only by years of patient educational work and even then, if success is achieved, it will probably grow from small, local beginnings.

Men, who have had actual experience in running farms and have had college training, are found among those active in such organizations and such individuals are often men who have taken special college courses in agriculture.

The farmer usually has a little spare time after haying and harvesting and before silo filling. This time is often utilized by taking trips to Holstein farms and getting a line on the stock kept there. A small ad. in the BREEDER AND DAIRYMAN may induce many possible customers to visit your establishment.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman
BOX 110, HARRISBURG, PA.

FOR \$1.00

You can read *The Duroc Journal* for a year and learn about the farmers' favorite hog, the Duroc-Jersey. For efficient pork production, the Duroc-Jerseys lead, and for disseminating knowledge pertaining to this great breed of swine

THE DUROC JOURNAL

leads. The whole organization behind *The Duroc Journal* have had years of experience with the raising, breeding, showing, and selling of pure bred Durocs and in *The Duroc Journal* you are assured of real breed paper service.

Eighteen issues a year of *The Duroc Journal* are published and every issue is chock-full of news and advice beneficial to the hog man.

Breeding Racks are a Necessity

A BREEDING crate or rack should be found on every good dairy farm. Without one it is almost impossible to retain a herdsire in active service over a number of years.

The Agricultural Engineering Division of the University of California designed and prepared a detailed blue print drawing of one of the best racks of which we know. This rack is designed to accommodate any size cow. The stanchion is constructed to move forward or backward on the horizontal 2x4 pieces of the frame and is held at the desired place by bolts through these horizontal 2x4's and the vertical 2x4's of the stanchion. A supply of gravel and loose dirt at the rear of the rack will also be found convenient in overcoming the difficulty with large and small cows.

Since the breeding rack is constructed for the use of large and heavy bulls, it should be made of sound material solidly put together in order to withstand the strain. All braces and uprights should be cut to fit and firmly secured with bolts where possible or 20-penny common wire nails. The 2x12 sleepers should be solidly secured to 3x6 mud sills or bolted to a concrete foundation. One by 2-inch cleats are spaced 8 inches apart on the 2x12-inch inclined plank and a 2x4 placed along the outer edge to prevent the bull from slipping. If the rack is not located to that it can be tied firmly to a building or fence, it is recommended that heavy posts be set in the ground on either side of the frame forward of the stanchion to give horizontal bracing.

The breeding rack is generally located where it is exposed to the weather. If so, it will be found advisable to paint all timbers with one or two coats of pure, raw linseed oil. This will tend to prevent checking and twisting of timbers.

The bill of material calls for rough lumber but tightly fitting joints, and a neater appearing rack may be obtained by having all lumber surfaced one side and one edge.

The materials as listed below are necessary for the construction of such a breeding rack.

Mud Sill—2 pieces, 2x6-inch by 4 feet, Merchantable Rough Redwood.

Sleepers—2 pieces, 2x12-inch by 10 feet, Oregon Pine No. 1 Common Rough.

Incline—2 pieces, 2x12-inch by 10 feet, Oregon Pine No. 1 Common Rough.

Cross Ties—1 piece, 2x4-inch by 12 feet, Oregon Pine No. 1 Common Rough.

Support and Braces, Sleeper to Incline—1 piece 2x12-inch, 14 feet; 2 pieces 2x4-inch, 12 feet; 2 pieces 2x6-inch, 10 feet, Oregon Pine No. 1 Common Rough.

Guard Rail and Cleats on Incline—1 piece, 2x4-inch, 12 feet; 1 piece, 1x2-inch, 14 feet, Oregon Pine N. 1 Common Rough.

Stanchion—1 piece 2x4-inch, 6 feet; 1 piece 2x4-inch, 14 feet, Oregon Pine No. 1 Common Rough.

Bolts—4 1/2x7-inch machine bolts; 6 1/2x5-inch machine bolts.

Nails—2 lb. 8d common wire nails; 4 lb. 20d common wire nails.

One gallon linseed oil.

The blue print drawing may be obtained by writing the Agricultural Extension Division, University of California, Berkeley, California, and asking for blue print plan B-6-2.

Boy Tests Show Heifer

Clare Force of Sand Creek, Mich., a member of the Lenawee County Boys' Calf Club, recently entered his Holstein heifer in a seven-day test. Mr. Force raised this heifer and when she started test she was 3 years and 2 months old. She was credited with the production of 505.6 lb. milk, 25.23 lb. butter, her average test being 3.99%. This heifer two different years has won second prize in the annual competition at the Lenawee Fair.

Are you planning to show your stock at your local fair? If not, why not? If you have good stock, it is good advertising.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

June 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Drifting Backwards

WE are printing below the number of registrations and transfer certificates issued each year by the Holstein-Friesian Association for the past twenty-four years as taken from the herd books and pamphlet reports. These figures show that the number of registration certificates issued yearly by the Association is not keeping up with the natural increase of the breed and that the number of transfer certificates issued for the past year is 40,157 less than were issued in the year 1919-1920. Since the year 1919-1920 the number of transfer certificates has steadily decreased each year.

Year	Transfers	Registrations
1899-1900	4,380	4,746
1900-1901	4,638	5,108
1901-1902	5,644	5,990
1902-1903	7,159	6,841
1903-1904	9,042	8,044
1904-1905	10,505	9,773
1905-1906	13,171	11,823
1906-1907	16,465	14,650
1907-1908	20,141	16,534
1908-1909	22,680	19,591
1909-1910	30,978	26,176
1910-1911	37,701	32,889
1911-1912	37,375	37,535
1912-1913	49,825	43,315
1913-1914	63,807	48,086
1914-1915	66,776	67,680
1915-1916	68,766	72,665
1916-1917	75,884	73,847
1917-1918	91,528	88,279
1918-1919	97,392	99,887
1919-1920	131,823	114,503
1920-1921	128,615	127,850
1921 (Eight Months)	60,364	65,808
1922	91,830	113,772
1923	91,666	115,132

It is interesting to note that there has been a steady increase in the number of registrations each year and

this increase taken one year after another was ever increasing up until 1920-1921. From the years 1910 to 1915 the average increase in registration certificates issued was 7,955 and for the next five years' period, from 1915 to 1920, the average increase was 11,037 per year. As the purebred Holstein industry continues to develop it is natural to expect that the number of registration certificates issued each year by the Secretary would steadily increase and if such a condition did not prevail it indicates that "Race Suicide" is creeping into the purebred cattle industry or that the breeders and owners of purebred cattle are not registering their animals to maintain the purity of the blood.

The average yearly increase in number of registrations for the years 1915 to 1920 was 11,037 each year. By taking this as a basis on which to estimate the average yearly increase in registrations it is possible to estimate the number of registration certificates that the Association should have issued during the years 1921, 1922 and 1923 and by using these estimate figures we can determine approximately to what extent the Association is failing to perform the service for which it was originally intended, namely to register and transfer Holstein-Friesian cattle to maintain the purity of the blood.

The number of registration certificates issued for the year 1920-1921, in accordance with the above report, was 127,850. If we add to this number the average yearly increase in registration certificates for the previous five years it will give us the estimated number of certificates that should have been issued for the year 1921-1922 of 138,887.

During the year 1921-1922 the Association changed its official year to conform with the calendar year, and, therefore, the record for the year 1921 covers an eight months' period, from May 1st to December 31st. To estimate the number of registrations that should have been issued during this time we would take two-thirds of the full year or two-thirds of 138,887 which gives us the estimated number of registrations which should have been issued for the eight months' period or 92,591.

The next full year or 1922 the Association should have registered 127,850 animals, the same as 1920-1921, plus two-thirds of the average increase or 7,358 to cover the eight months' period and plus the average increase or 11,037, or the total registration for the year 1922 should have been 146,245 animals. In 1923 the Association should have registered 146,245 plus the average increase, or the total registrations for the year 1923 should have been 157,282 animals.

If we compare the estimate number of registration certificates that should have been issued with the number that actually were issued we find the following. During the eight months' period in 1921 the Association issued 65,808 registration certificates. During this period they should have issued 92,591 or a shortage of 26,783. In the year 1922 the estimate number of certificates that the Association should have issued was 146,245. They issued 113,772 or a shortage of 32,473 certificates. During the last year, 1923, the Association should have issued 157,282 certificates. They issued 115,132 or a shortage of 42,150.

During the two year period of 1922-1923 and eight

months of 1921 the Association fell short by 101,406 certificates of coming up to what they should have recorded had they taken care of the natural increase of the breed as compiled or estimated from the Association's previous record up until 1920-1921.

When we consider that less than 3% of the total number of dairy cattle in the United States are purebred, it would seem that something is radically wrong when the Holstein-Friesian Association, that was organized primarily to register and transfer Holstein-Friesian cattle to maintain the purity of the blood, is not keeping up with the natural growth and development of the breed.

If we study the number of transfer certificates issued by the Secretary each year for the twenty-four year period from 1900 to 1924 we find there has been an increase in the number of certificates issued each year up until and including 1920. Since 1920 and including the past year, 1923, there has been a decrease in the number of transfer certificates issued each full year.

From the year 1900 until 1920 the number of transfers issued each year, with a few exceptional years, exceeded by several thousands the number of registrations. Such a condition indicates prosperity.

Since 1920-1921 the number of certificates of registry have exceeded the number of transfers, which would indicate that the breeders were unable to dispose of their surplus cattle and were over-stocked.

The Secretary's report for 1923 gives the number of registrations as 115,132 and the number of transfer certificates issued as 91,666 or, in a single year, the breeders have accumulated a surplus of 23,466 cattle while in the year 1918-1919 they registered 90,887 and transferred 97,392 or the breeders were able to dispose of all their increase and 6,505 additional animals. During this time the fee for transferring cattle was 25 cents.

In 1919-1920, 114,503 animals were registered and 131,823 transfer certificates were issued. During that year the breeders were able to dispose of all of their increase and 17,320 additional animals.

For the five year period up to and including 1920 the average yearly increase in the number of transfer certificates issued by the Secretary of the Holstein-Friesian Association, as shown in the table above, was 13,009.

By adding this average increase to the number of transfer certificates issued during the year 1919-1920, the probable number of certificates that the Association should have issued for the year 1920-1921 should have been 144,832. If we take two-thirds of this total number to represent the eight months' period when the official year was changed to conform with the calendar year and add to it two-thirds of the average increase of the previous five years our result would be 105,227 which represents the number of certificates the Association should have issued during the eight months' period ending December 31, 1921.

To determine the estimate number of transfer certificates which the Association should have issued for the year 1922 we would add two-thirds of the average increase to cover the eight months' period, the total average yearly increase of 13,009 to 114,832, the estimate number of transfers issued for the year 1920-1921, and it would give us 166,513 which would be the esti-

maie number of transfers that the Association should have issued for the year 1922.

By adding the average increase of 13,009 to the estimate number of transfers that should have been issued in 1922 it will give us the estimated number of transfers that should have been issued in 1923 or 179,522.

Let us compare the estimate number of transfer certificates that the Association should have issued had it kept abreast with the natural increase of the breed.

The estimate number of transfer certificates which the Association should have issued during the eight months' period in 1921, was 105,227. The actual number of transfers issued during this eight months' period was 60,364, making a difference in the number that was issued as compared with the number that should have been issued of 44,863.

The estimate number of transfer certificates which the Association should have issued for the year 1922 was 166,513. The actual number of certificates issued, according to the Secretary's report, is 91,830, or a difference between the number of transfer certificates issued and the estimate number of certificates that should have been issued of 74,683.

The estimate number of transfer certificates that the Association should have issued for 1923 was 179,522. The actual number of certificates issued, as given by the Secretary's report, is 91,666 or a difference of 87,856.

The above estimates show that the Association's business, as estimated from its previous records, is not keeping up with the natural growth and development of the breed and that only a little more than half of the natural increase is being recorded by the Association.

Such a condition is positive proof that the Holstein-Friesian Association as a purebred registry Association is drifting backwards. If we consult the records showing the number of transfer and registration certificates issued each year for the past twenty-four years we find that we have to go back nearly seven years, to the year 1917, to find the number of transfer certificates issued for a twelve months' period that is as low as the number issued in the last year, 1923. In the year 1917, 91,528 certificates were issued, last year 91,666 were issued.

In studying the above records and making the comparisons and deductions we find that the Association's business began to melt away about the time that the true purpose of the organization that took over the management of the Association at the Philadelphia meeting in 1919 became fully realized and generally known.

The increasing of the transfer fee, the taking of money from the reserve fund and depriving the breeders of a direct voice in the management of the Association, is being reflected directly on the amount of business that the Association is now doing.

One essential to an interesting conversation, speech or lecture is something to say.

Whatever is done for posterity there will remain considerable for posterity to do for itself.

CLUB ACTIVITIES

MINNESOTA BREEDERS ANNUAL

On May 23d at Rochester, Minn., the Minnesota Holstein Breeders' Association held its annual meeting. Rochester, famous for its great hospital, was liberally decorated in honor of the Holstein breed and the visiting cattlemen.

Addresses were given by A. J. Glover, editor of *Hoard's Dairyman*; Earl J. Cooper, boys' and girls' calf club leader for the National Association; L. V. Wilson, dairy specialist of the Minnesota Agricultural College; and W. A. Sperry, an Owatonna attorney. President E. T. Winship was the chairman.

The banquet was held at the State Hospital. Among the entertainment features was a scrub bull trial in which the actors were Rochester local talent; a two-reel cow testing movie was also shown. It was decided to hold the 1925 annual meeting and sale of the Association at Glencoe, McLeod County, Minnesota.

The sale was held the following day on the Olmsted County Fair Grounds and the fifty-two head consigned brought \$9,480, an average of \$182.30. Further details will be found in the sale report columns.

BREEDERS ENJOY OUTING AT MILTON

Favored with a splendid day, about one hundred people interested in Holsteins and the dairy industry gathered on the Murray A. Miller Farm at Milton, Pa., June 17th, for the field day of the Northumberland County Holstein Breeders' Association.

The morning was spent in inspection of the purebred Holstein herd which Mr. Miller has built up from two original females. After a basket lunch, Prof. E. B. Fitts, head of the Agricultural Extension Division at State College, selected a number of animals and gave a lecture on type. Then a group of four cows were judged by those present; first, they were ranked for production and estimates given of the amount they produced during the past year and then were judged for type. The winner in the production competition was Mr. Schooley, of Watertown. First prize in the type judging went to G. H. Truckell, of Harrisburg, with Paul Albright, of Milton, second. The prizes were large "True Type" pictures mounted on cloth. The first cow for type was also leader for production. The party then adjourned to the commodious porch of the farmstead.

Mr. Truckell talked on the value of purebred sires. He gave a brief report of the Richmond convention, and spoke of the work of the State Federation, of which he is secretary. The Northumberland County Club, voted, early in June, to affiliate with the Federation.

Prof. Fitts said that milk really came from the soil. The cow was the machine that manufactured it from the crops. In order to insure profit on the farm the best machines possible should be used and purebreds had been developed for dairy purposes. Cows manufacture more milk from legume crops than they do from non-legumes, and it would pay the farmer-dairyman to study his soil and find the crops best adapted to it. He congratulated the Northumberland County Club upon their enterprise and upon the fact that they had decided to start right because, in order for an owner to be elected for membership, the herd must be operated on the accredited herd plan. Professor Fitts' talk was full of instruction pleasingly told.

Mr. Jolly, a local banker, closed the entertainment with a few remarks based upon his experiences when a boy on the farm, and expressed the willingness of himself and the bank with which he was connected to work for the interests of the entire farming community in that section.

The event was managed by County Agent Fry and Assistant County Agent Myers, while Ole P. Van Kirk, of Milton, was master of ceremonies. Mr. Van Kirk is the president of the Northumberland County Association, which consists of twenty-three members.

WATERLOO DAIRY CATTLE CONGRESS

The dates of the Dairy Cattle Congress are Sept. 22d-28th. Waterloo is located on three main lines, the Illinois Central; Chicago, Rock Island & Pacific; and the Chicago & Great Western. The Waterloo, Cedar Fall and Northern R. R. connects the fairgrounds with the Chicago & Northwestern and the Chicago, Milwaukee & St. Paul, the junction being Cedar Rapids.

J. P. Eves is again superintendent and E. S. Estel secretary. Holstein day is Thursday, September 24th, and the awards will be placed by R. E. Haeger. More than \$18,000 is offered for competition in the five great dairy breed divisions, and ten cash prizes are to be won in each of the 23 classes provided for each breed. A total of \$1,200 will be offered in the heifer calf classes for juniors, and valuable prizes will be awarded in the herdsman's contest, which was originated at this popular Iowa show ten years ago.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO

A Profitable Business— Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

A LITTLE MORE ABOUT THE RICHMOND CONVENTION

There were a number of familiar faces missing from the meeting. On account of age the distance was too great for E. A. Powell to make the journey from Syracuse. E. A. Stuart, of Seattle, Wash., head of the Carnation Milk Farms, was absent on account of illness. W. S. Moscrip, of Lake Elmo, Minn., was engaged in a law suit. Judge F. M. Peasley, of Cheshire, Conn., was also absent, being detained by business occasioned by his elevation to the bench of the Connecticut Supreme Court. Colonel G. Watson French, of Davenport, Ia., also was absent, as was ex-president J. M. Kelley, Baraboo, Wis.

JOSEPH A. TURNER
Of Hollins, Va. Toastmaster at the banquet.

Had Mr. Kelley been present there would have been more "fire works" in the milk marketing plan discussion.

As reported last week, there were about 200 in attendance at the banquet. Quite a difference from the banquet at Syracuse in 1921, when there were more than 1,000. At that banquet, the attendance was so much greater than the expectations that the viands proved insufficient for the whole crowd. We must concede that there was nothing lacking in this respect at Richmond.

Among the guests of honor at the Hotel Jefferson was the purebred Holstein, Prilly Hartog 2d, champion milk producer of the southern states. She has a year record of 24,755.2 lb. milk, 1,034.7 lb. butter. During 1923, she was enrolled in the Culpeper County Cow Testing Association, in which she was credited with the production of 15,028.7 lb. milk, 660.2 lb. butter. Prilly Hartog 2d is owned by H. L. Butler & Sons, Finella Farms, Culpeper, Va.

The officers of the Virginia Holstein-Friesian Association first planned to have a stall erected for this cow in the lobby of the Jefferson, but the management offered several objections and finally a pen was erected for her in an annex facing on the street. Quite a number of the townspeople as well as many visitors paid their respects to this cow during the time she was on exhibition.

The attendance at the meetings, banquet and sale are not up to the crowds that used to attend in the "proxy" days. Maybe, when the delegates can collect their railroad expenses, more will come from distant states and friends will come with them. Let's hope there will be more dairymen and less lawyers, even if we don't hear so many oratorical flights, there may be more actual business done.

Two of the busiest men in the city of Richmond were Secretary Crabill, of the Virginia Holstein-Friesian Association, and Mr. Kirby, agricultural agent for the Richmond Chamber of Commerce. The task of arranging the details of the sale and many other tasks fell to these two gentlemen and they know a lot more about a national cattle sale than they did a year ago.

In considering places for the conventions two widely different aims are present. First, there is the missionary spirit. It is felt that if the association holds its meeting or convention in places on the Holstein frontier such as Richmond, Kansas City, or Des Moines, there will be an extension of breed activities and a growth in the breed in that territory. The other view is that the sale held in connection with the meeting should, by bringing out high record cattle and resulting in long prices and a high average, show the value of purebred Holsteins. History shows that high price sales are held in communities like St. Paul, Cleveland and Syracuse, where there are a large number of Holsteins. It is amusing to hear the two different views advocated by the same person when a few minutes thought would show that they are two totally different ideas and do not go together.

By means of articles, news reports and even cartoons the papers of Richmond did full justice to the convention doings. A number of business firms in their advertisements noticed the gathering of Holstein owners and this was particularly true of the milk dealers.

No man enjoyed himself more during the week than "Joe" Turner, of Hollins College. "Joe" was toastmaster at the banquet and kept something going every day he was in town, despite the fact that it was close to commencement at the college of which he is business manager. Mr. Turner believes

ABOVE 12,000 LB. C.T.A.

Two members of our herd produced over 12,000 lb. milk in a year of Cow Testing Association work. Each returned well over \$100 profit above feed cost.

Calves from such cows and sired by KING ALCARTRA RAG APPLE POSCH—Grand Champion three successive years at the Susquehanna County Fair, are bound to prove profitable investments for you, especially when they come from an Accredited Herd which has never housed a reactor.

Herd under State and Federal Supervision

that the principal value of a Holstein is the ability to earn a profit in the herds of plain breeders and dairymen. The Holins herd is accredited and Mr. Turner made no secret of the fact that he regarded health in cattle as the first and greatest essential.

Sadie, the noted grade Holstein, owned by Ben Middleton, of Herndon, Va., was on exhibition in the cattle barn at the fair grounds. Sadie was enrolled in the Fairfax County Cow Testing Association No. 1, and her record for the full lactation period was 23,257 lb. milk, 915.9 lb. butterfat, or 1,144.9

SADIE, CHAMPION GRADE COW OF THE SOUTH
She produced 23,245 lb. milk, 1,144.9 lb. butter in a year.
Owned by Ben M. Middleton, Herndon, Virginia.

butter. During the cow test year, in which she was dry part of the time, she is credited with 21,689 lb. milk, 847.5 lb. butterfat. During her second association year she produced 18,490 lb. milk, 729.6 lb. fat, so that in twenty-four consecutive months she produced over 40,000 lb. milk and nearly a ton of butter.

Grade A Holstein milk on the banquet tables was supplied by the Virginia Dairy Company. Besides these particulars, the cap bore the legend, "pasteurized every day." The quality and particularly the flavor of this milk received many commendations from the banqueters, and Prof. Wing, in his speech, paid it a well deserved tribute.

The oft expressed views of the BREEDER AND DAIRYMAN on the Association's advertising of Holstein cattle and Holstein milk in the breed journals received an unexpected endorsement in the speech of Waldo S. Kellogg, Derby, Conn., who truthfully said that such advertising did not reach the milk consum-

ing public, and intimated that it was a waste of money. W. R. Roach, of Hart, Mich., practically exploded a dynamite bomb when he told the Wisconsin delegates who were advocating the milk marketing plan that they had very little scientific data to back up their claims. His suggestion that Dr. McCullom and other scientists should be called upon to prove by experimental demonstrations that Holstein milk is an unrivaled food is worthy of more than a passing thought. When handlers of so many other breeds select Holstein nurse cows to raise their calves they are well aware of what they are doing, and do it because they believe such a course pays in the added growth and vigor of the baby animals.

WHY THE DAIRY CATTLE CONGRESS LOCATED AT WATERLOO

Hugh G. Van Pelt, who is well known by many Holstein breeders, tells an interesting story of how the Dairy Cattle Congress came to make its home at Waterloo, Iowa.

It was the intention of the men who started this Congress to locate it at Des Moines and a committee went to Des Moines to sign the contract. Everything was progressing finely until the Secretary of the Commercial Club told them that he was sorry but the Coliseum had been contracted for by the State Grocers' Association for the week that had been selected and was also engaged for other weeks around that date. Arguments went backwards and forwards without any hope of satisfactory results until Wilbur W. Marsh, the noted breeder of purebred Guernseys, said: "We'll take this show to Waterloo and hold it in the biggest Coliseum in Iowa without a post in it." When asked to name the place he said, "The Chautauqua Coliseum. We'll put the show in it and make these Des Moines suckers wish they had thrown their cracker boxes in the street."

This was done and, despite a succession of years when show week encountered unfavorable weather the exhibition was eventually made a success and is now one of the greatest dairy shows in America. Now every year "Des Moines suckers wish they had thrown their cracker boxes into the street," says Mr. Van Pelt.

The Waterloo Dairy Congress is an example of a great dairy cattle show in what was practically a beef cattle territory. The greatest show animals of the various dairy breeds are seen here. Last year the grand champion Holstein female was the Jefferson County Asylum two-year-old Madam Artis Wayne Denver, by common consent the best female Holstein seen on the show circuit last fall. The grand champion Holstein male was Johanna Rag Apple Pabst, a two-year-old that would challenge any bull shown last year when he was properly fitted and shown. The Dairy Cattle Congress has the advantage over the National Dairy Show of having its own grounds. Indeed, some students of the show ring believe that, if it was held two

or three weeks later and made the final event of the show season, the National Dairy Show could from the cattle standpoint, be dispensed with altogether, for, with the present arrangements, with the National held on a state ground on which a big state show has been held a few weeks previously, both the state fair and the National itself suffer from the division of attendance. A real National Dairy Show should bring together the greatest cattle shown at the big state fairs and should be the final competition that year between champions of the North, South, East and West instead of, as in several recent years, being largely confined to exhibits from near-by states.

STATE HERDS AND THE NATIONAL DAIRY SHOW

At a recent meeting, the Executive Committee of the National Dairy Association revised the classification for State Herds at the National Dairy Show. The new specification calls for eight animals instead of ten as heretofore. The animals now required to make up a herd are as follows: One bull, two years or over; one bull, under two years old; one yearling heifer; three cows, three years old or over; one heifer, two years old and under three, and one heifer calf.

Another change is that one exhibitor can now be represented by three animals in a state herd instead of two as heretofore. Five herds are required to make up the class.

Holsteins will be judged at Milwaukee, Wednesday, October 1st, and the judges scheduled are W. S. Moscrip, St. Elmo, Minn., and T. E. Elder, Mt. Hermon, Mass.

On the opening day, September 27th, will be held the College Students' Contest in judging dairy cattle. On the following Monday, September 29th, will be staged the College Students' Contest in judging dairy products and the Boys' and Girls' Cattle Judging Contest.

SHEFFIELD FARM PRODUCERS PRICES FOR JUNE

Action endorsing the action of the committee representing the five groups of milk producers in Utica, New York, on May 24th, was taken at the regular meeting of milk producers which ship milk to the Sheffield Farms Company at a meeting in New York City, May 27th. Representatives of the sixteen routes were present as well as a number of visitors and the usual representatives of the Sheffield Farms Company, Inc.

President C. F. Boshart, appointed as a committee of four to meet representatives of the Dairymen's League, Eastern States Producers, Non-Poolers, and Independents for the purpose of determining a definite price for milk sold for other purposes than retail. This committee consisted of Secretary C. W. Halliday, North Chatham; Hugh Adair, Delhi; W. L. Fay, Burke; and D. W. Tyler, Roxbury, N. Y.

This same committee had a special meeting with representa-

tives of the Sheffield Farms Company milk committee on June 2d, at which was also President Boshart and Treasurer Fred E. Mather. The committee blamed the Dairymen's League Co-operative Association for cutting the price of class 1 milk from the figure decided upon at Utica, \$2.33 to \$1.86. The officers of the League announced that the price was made May 21st, three days before the meeting at which the committee agreed to recommend the price of \$2.33. The Dairymen's League committee said that they did not know that the League price had been fixed.

The price of the Sheffield Farms for class 1 milk was then fixed at \$1.86 per 100 lb.; for class 2 milk for making market cream, \$1.70 per 100 lb. of 3% milk, or class 3, \$1.55, while the price for class 4 milk will be determined according to market conditions. These prices are for milk shipped from the 201-210 milk zone and subject to the usual freight and butterfat differentials. They are also subject to revision through a conference should market conditions require.

The committee of fifteen representatives of the five different groups of producers will hold another meeting at Utica July 7th and it is to be hoped that at that time the representatives of the League as well as the other representatives will be in a position to reach an agreement on milk prices that will be more satisfactory to the dairymen and at the same time their organizations be in a position to take care of any surplus production.

SELL THE PRODUCT FOR WHAT IT IS

It is very evident at the Richmond Convention that the majority of the delegates present believe that it is possible to successfully market the product of Holstein dairies as Holstein milk without any fancy name. Several of those who apparently favored the White Nectar plan told how they themselves have been successful in selling the product of their dairies as Holstein milk.

The Memphis Hotel Company operates three hotels at Memphis, Tenn., as well as a large farm at Horn Lake, Mississippi, fourteen miles distant. On this farm they keep a large herd of Hampshire hogs which supply sausage, bacon and ham to their hotels, particularly the Gayoso.

More sausage is made than the hotel can use, so during the winter the entire output of Gayoso Farm, as it is called, is sold to the Piggly-Wiggly stores. The sausage is put up in one-pound cartons on which is printed a picture of a Hampshire hog and the statement that the sausage is made from purebred Hampshires. So great is the demand that the Piggly-Wiggly stores want the Gayoso Farm to furnish them with 70,000 pounds of this sausage as next winter's supply. Would there be any greater demand for Hampshire sausage if it was merchandized under a fancy name?

SPOTTED COWS and SPOTTED SOWS

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

SHOWS LIKELY TO BE POSTPONED

Owing to the prevalence of foot and mouth disease in parts of California, managers of Pacific Coast fairs and shows are considering the advisability of not holding their events this summer and fall. They fear contagion may be carried by persons who have, during their travels, come in contact with infected material.

A dairy show was proposed at Pocatello, Idaho, during June, and it was expected that it was to be one of the greatest ever held in Idaho. The Kraft Cheese Company has selected Pocatello as the place of its main western factory and distributing plant, and this has stimulated the local dairy industry. It was proposed to form a state-wide dairymen's association during the time of the show was staged, or if it was not possible to do this, to form a southeastern Idaho Association. Idaho has a rigid quarantine against California cattle and products and it looks very likely that many of the summer fairs and shows scheduled for 1924 will not be held.

TUESDAY EVENING AT THE RICHMOND CONVENTION

About 200 attended the Dairy Rally held at 7 p. m. Tuesday evening in the Auditorium of the Jefferson Hotel, Richmond. Old songs were thrown upon a screen and most of those present joined in the singing, which was led by Earl Cooper, National Association Calf Club Leader. Mr. Cooper has a splendid voice.

Frank S. Walker, of Woodberry Forest, Va., president of the Virginia Holstein-Friesian Club, was chairman. The first speaker was Dr. C. W. Larson, Chief of the United States Dairy Division.

Dr. Larson quoted many figures and tables, and his talk was full of information. Among other things he said that the value of purebred dairy cattle must be based on the profitability of dairying. It may be affected by sentiment or by wrong reasoning on the part of dairymen. While the number of dairy cattle in the United States increased during 1923, the increase did not keep pace with the increase in population. Contrary to the opinion of many dairymen the amount of dairy products imported into this country was not very large in proportion to home production, but the amount imported disturbed the industry and the price realized for the product.

Much more cheese was consumed in this country than was made, and the amount imported was about one-fifth of the amount produced here. Per capita consumption of dairy products has been increasing and those engaged in the dairy industry should work to increase dairy consumption.

Much could be done in improving the cow in the general dairy, for the average cow in the United States is decidedly poorer than the average cow in other great dairy producing

countries, competitors of this country in the world dairy markets.

By means of charts showing the comparative production of nine thousand purebred and grade cows enrolled in cow testing association work, Dr. Larson demonstrated that the average earning ability of the purebred was from \$125 to \$150 more than the average earning ability of cows not purebreds. This is based on an average price of \$2 per one hundred pounds for milk and an average milking period of five years. As there are approximately 30 million dairy cattle in the United States and less than one per cent of these are purebred, there is an unlimited field for expansion.

Dean H. E. Van Norman, one of the greatest American dairy specialists, said that milk brought to the United States farmer, at his farm door, more money than did his crops of corn, wheat and potatoes added together. The American farmer is an individualist. There are several reasons for this; probably the chief one was early conditions in this country; the pioneer farmer had gone alone into the wilderness to clear a home for himself and family. He had carried a gun in one hand and an ax in the other and had learned to depend upon himself. Most industries are groups of men working together under one head, and Dr. Van Norman cited the steel group and the various railroad companies. He intimated that farmers should associate together for mutual benefit.

Prices corrected the supply and production of dairy products. When wheat and beef were low, farmers, especially in the western states, turned to dairying. If dairy products sold low and beef and wheat went high, he changed over, and his changing had its effect on the production and also on the price obtained by the man who always followed dairying.

The individual dairymen cannot make the price higher for the goods he sells, but he can cut cost of production, and Mr. Van Norman cited the instance of Henry Ford first lowering the price of his cars and then decreasing the cost of production.

Mr. D. D. Aitken was the last speaker, and he said that 85% of the population of this country just made a living and died without leaving property, while 75% of the old people in this country did not have means of their own and were dependent upon others for a means of livelihood. The degree of success in life was largely up to the individual. Mr. Aitken closed with a few words on the breed in which he said that registration certificates did not really add to the value of cattle, "the registration papers mean the machine ought to be good."

Holstein movies closed the evening's entertainment.

Farm work in Pennsylvania is from ten days to two weeks late in the southern counties, three weeks late in the middle belt, and a month behind the schedule in the north tier counties.

THE MILK PRICE STABILIZATION COMMITTEE

The committee which is attempting to stabilize the selling price of milk in New York State met at Utica, June 2d. The entire committee were in attendance as well as honorary members John J. Dillon and E. R. Eastman.

Treasurer M. B. Garlock submitted a report showing that \$110 had been received from the groups to be applied towards committee expenses and that of this \$84.40 remained on hand.

The questions before the committee were, consideration of the amount and disposal of surplus milk, the organization of producers unorganized at present and the desirability or formation of a single selling unit. No definite action was taken on any of them.

A resolution offered by C. F. Boshart and seconded by W. S. Rhodes would have set the price of Class 1 milk at \$2.33 per one hundred pounds after June 16th, but after an extended discussion the following resolution proposed by John J. Dillon of the *Rural New Yorker* was adopted:

Resolved, That it is the sentiment of this Committee that the price of Class 1 milk on and after June 16th be substantially increased and that the representatives of the Dairymen's League be requested to present this view to the executive committee of the League and to notify the other members of the committee if it succeeds in establishing an increased price for the last half of the month of June.

On roll call the three representatives of the Dairymen's League voted against the resolution and the other members of the committee voted for it, Mr. Jones, of Homer, N. Y., not voting.

Letters were received from the Bennington County, Vt., Co-operative Creamery Co. and from the Cortland County, N. Y., Farm Bureau pledging support and urging action.

It was voted that each of the groups be permitted to invite to the next meeting of the committee, interested persons from each of the Independent Co-operatives, the Eastern States units, or others. Representatives of the agricultural and milk producers' journals, and the state press were present at this meeting.

On motion of Mr. Boshart, and seconded by Secretary Halliday, it was voted that meetings of the committee should be open to all who desire to attend. The next meeting will be held at the Hotel Utica, Utica, Saturday, June 28th, at 10:30 a. m., standard time.

CALIFORNIA THREE-YEAR-OLD ABOVE 1,000 LB. FAT

I am pleased to announce that the Holstein-Friesian cow Helm Tehee Fayne Veeman, 547146, has just closed a long-time test, and is credited with 29,344.6 lb. milk containing 1,003.91 lb.

fat in 365 days, thus showing an average of 3.42 per cent fat in the milk. She freshened at the age of 3 years, 6 months, 28 days. Her sire is Sir Veeman Korndyke Pontiac, 156051; her dam is Frenesta Creole Tehee Fayne, 225620. She was bred and is now owned by Mr. F. M. Helm, Fresno, Cal. At the age of 2 years, 6 months, 23 days, her best seven-day official production shows 405.3 lb. milk containing 18.549 lb. fat; while in 30 days she is credited with 1,890.6 lb. milk, 75.704 lb. fat. Continued on long-time test she is credited with 17,406.3 lb. milk containing 627.29 lb. fat in 305 days, carrying a calf 211 days of the time. For the lactation period just completed, her best seven-day official production, made 46 days from freshening, shows 663.1 lb. milk containing 24.355 lb. fat, and her best thirty-day official production made 6 days from freshening, shows 1,915.1 lb. milk containing 92.185 lb. fat. In addition to a thirty-day strictly official test, she had twelve other test periods consisting of one eight-day test and eleven two-day tests, of which two were retests. Nine different supervisors were employed in the conduct of the test. Her 365-day production of 1,003.91 lb. fat, equivalent to 1,254.88 lb. butter on the 80 per cent basis, gives her eighty-third place among cows producing above 1,000 lb. fat, she being the eighty-first cow to gain the honor of producing more than 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, Supt. A. R.

June 3, 1924.

WORK

Let me but do my work from day to day
In field or forest, at desk or loom,
In roaring market place or tranquil room
Let me but find it in my heart to say,
When vagrant wishes beckon me astray,
"This is my work, my blessing, not my doom,
Of all who live, I am the one by whom
This can best be done in the right way."

Then shall I see it not too great, nor small,
To suit my spirit and to prove my powers:
Then shall I cheerful greet the laboring hours
And cheerful turn, when the long shadows fall
At eventide, to pray and love and rest
Because I know for me my work is best.

—Henry Van Dyke.

Pennsylvania farmers received increased prices for certain crops during 1923 than during the preceding year. Lower prices were paid for other farm products. Increases were noted for corn, oats, buckwheat, tobacco, potatoes, and hay. Decreases occurred for wheat, rye, eggs, butter, milk, and wool.

Accredited Herd for Sale

I want to sell my herd of purebred Holsteins as I have sold my farm and am going to Colorado for my health.

I have 35 females, 25 winter milkers. All young—under four years old with the exception of two, that are seven years old. This herd averaged 4% butterfat in two months C. T. A. work.

My herd has been Accredited for five years and they are right in every way. Priced for a quick sale.

LAST CALL

Wm. M. Law Dispersal at Sandusky, N. Y., July 2d. E. M. Hastings, Mgr.

FIRST COUNT-PIEBE SALE

On May 17th, at St. Paul, Minn., was staged the first annual Count-Piebe sale at Arden Farms. The average was \$320.25 for sixty-one head.

9 females over three years averaged	\$608.33
10 two-year-old heifers averaged	308.50
21 yearling heifers averaged	275.71
6 heifer calves averaged	211.66
8 bulls over one year averaged	312.50
7 bulls under one year averaged	202.14

The top price was \$2,100, which C. E. Griffith of Big Cabin, Okla., paid for Princess Abbekerk Ormsby Piebe, a three-year-old daughter of Piebe Laura Ollie Homestead King. Her dam, a 33-lb. cow, Princess Abbekerk Ormsby, had recently completed a year record of 1,047 lb. butter. She was by Sir Ormsby Hengerveld Korndyke from Tidy Abbekerk Princess Gisella, the highest record daughter of Tidy Abbekerk Prince. Mr. Griffith paid \$1,000 for Netherland Piebe Pontiac Segis, by Piebe Laura Ollie Homestead King from a 20-lb. junior three-year-old daughter of King Segis Pontiac Count. She was a very showy heifer and had recently closed a year record of over 21,000 lb. milk and more than 800 lb. butter as a two-year-old. Mr. Griffith also bought a number of other good ones at satisfactory prices. As the above price table shows, the females far outsold the bulls.

DUTCHLAND FARMS SALE

Buyers from seventeen different states as well as from Japan attended the Dutchland Farms dispersal sale held at Brockton, Mass., May 29th and 30th. Excluding a few blemished cows and young calves, the average of \$502 was realized for 148 head, the total being \$74,350. There were fifty-nine different buyers.

The top price was \$5,000 paid for the yearling bull Dutchland Pietertje Sir Fayne, a son of Dutchland Konigen and Kolrain Finderne Bess. He was purchased by John E. Post of Durand, Mich. The second highest animal was the July calf, Dutchland Creamelle Denver King, a son of Dutchland Konigen and Dutchland Creamelle Lady Denver, a twice 30-lb. cow with a 1,100-lb. year record, now running in her fourth long-time test. The eleven nearest dams of this young bull averaged better than 1,200 lb. butter and 27,000 lb. milk. He was struck off for \$4,200 to Mr. Joseph J. Jermyn of Scranton, Pa., owner of Dennington Stock Farm. Mr. Jermyn is one of the plaintiffs joined with Mr. George E. Stevenson in the litigation against the acting directors of the National Association.

Kolrain Finderne Bess, holder of the highest record ever made in strictly official test, was retained on behalf of Mr. Fred Field for \$3,000.

YOUNG STOCK FOR SALE AT DAIRYMEN'S PRICES
HARRY C. REYNOLDS, SCRANTON, PA.

Herd under Accredited Plan

Dutchland Creamelle Lady Denver, mentioned above, was second highest priced female, going to Stillwood Farm, Niles, Ohio, for \$2,100.

W. H. Marble of Easton, Mass., took ten head, including three above \$1,000 each. J. B. Whitley, Detroit, Mich., purchased ten head, as did Mountain View Farm, Germantown, Md. Charles L. Craig, of New York City, also took ten. Three dairymen-breeders of Otsego County, Mr. F. H. White, Richfield Springs, N. Y.; R. Y. Walrath, E. Springfield, and D. O. Rathburn, Cooperstown, N. Y., formed a syndicate to purchase Dutchland Sir Colantha Pietertje, a full brother to the herdsire, Dutchland Konigen, paying \$1,475 for this two-year-old son of Dutchland Pietertje Vale.

Five heifers were sold for export to Japan at an average price of \$865. The veteran New York State breeder, Gerrit S. Miller, Peterboro, was the purchaser of two head, including Dutchland Creamelle Emperor Paul, a son of Dutchland Creamelle Korndyke Lad and Dutchland Colantha Alice, a daughter of Colantha Johanna Lad. This bull was struck off for \$600 to Mr. Miller, who has been breeding purebred Holsteins since 1869. Mr. Miller is the oldest Holstein breeder in America. He purchased a heifer calf in this sale and it is said that this is the first animal ever purchased for him since his original importations.

Neither Mr. Field nor Mr. Upton have entirely discontinued the breeding of purebred Holsteins. They have a herd of some seventy head located at Bridgewater, Mass.

MINNESOTA SIXTH ANNUAL STATE SALE

Unseasonable weather had its effect upon the sixth annual Holstein sale held in Rochester, Minn., May 24th, on the Olmsted County Fair Grounds.

While the sale was in progress the news came that one of the leading banks of the district had closed its doors together with rumors that others were affected. Men who had intended to purchase refrained, awaiting developments, yet the fifty-two head sold averaged \$182.30. The six bulls averaged \$196.66; females of all ages averaged \$180.43. The grand total was \$9,480.

The consignors included: John Lynard, Owatonna; Nels Parson, Northfield; W. T. Chapin & Sons, West Concord; Hagbarth Bue, Northfield; Wasem & Delzer, Dodge Center; C. A. Lunde, Zumbrota; Grahamholm Farms, Rochester; Gleason & Vermilyea, Austin; Dr. H. P. Fischer, Shakopee; Mineral Springs Stock Farm, Savage; C. E. Overstrud, Northfield; Wm. Schmidt & Sons, St. Peter; Guy Adams, Owatonna; Ashton K. Smith & Co., Cedar; F. H. Bauer, Delano; Northland Milk and Ice Cream Co., Anoka; George F. Hannay, Amboy; H. E. Salsberry, Amboy; Echoland Farms, White Bear; J. C. Larson, Byron; J. E. Murphy, Minneapolis; Wright Parkins, Emery Station; Neilson & Winship, Owatonna; A. A. Huseby and A. S. Slinde, Adams, all of Minnesota, and the animals remained in the state.

Animals bringing \$250 or more together with the names and addresses of their purchasers are shown in the following list:

Grahamholm Orleans, State Hospital, Rochester	\$455
Kappijne Johanna Konigen, State Hospital	345
Lady Ormsby of Grahamholm, A. Searles & Son, Rochester	300
Edenvale Nellie Ormsby 2d, B. Horden, St. James	295
Highland Ormsby Piebe, Maywood Farm, Rochester	400
Oakwood Piebe Allie, Dr. H. P. Fischer, Shakopee	310
Inka Superior Segis Pontiac, male, Arnold R. Martig, West Concord	260
Molly Yeslet De Kol 2d, H. C. Chadwick	255

ACCREDITED HERD SALE IN WESTERN NEW YORK

Holstein breeders of western New York are bound to be interested in the sale of accredited Holsteins which will be staged at Sandusky, N. Y., on Wednesday, July 2d, starting at 10 a. m. Besides the entire herd of Wm. M. Law, there will be consignments of cattle from the herds of F. W. Hudson and Wm. Hicks.

Included in the sale will be nine daughters of Segis Farmstead De Kol, whose dam is a good record daughter of Paladin Burke and whose sire was King Aaggie Segis, also the sire of the 46 lb. four-year-old, Fancher Farm Maxie. King Aaggie Segis was by King Segis from Segis Aaggie De Kol Beets, whose record of over 32 lb. butter in seven days was world's record in the mature class at time of making.

There are eight daughters and one son of Blacres Allworthy Ormsby, whose

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 425.)

dam has a seven-day butter record of 28.15 lb., and whose sire was Cornucopia Ormsby Lad, that wonderful transmitting son of Ormsby Korndyke Lad and the 33 lb. cow, Ada Cornucopia Posch. The daughters and granddaughters of Cornucopia Ormsby Lad as well as his sisters have made records that stamp this great strain as being one of the best producing families of the breed.

The dam and sire's dam of B. Acres Allworthy Ormsby have seven-day records that average 30.67 lb. butter.

Many of the cows that are in this sale are milking heavily. The heifers are from dams with splendid official records, ranging from 18 lb. at two years of age to 30 lb. at maturity. These heifers are bred to bulls with splendid pedigrees.

This sale should receive the attention of men in the market for purebred Holsteins. Not only because the herds are accredited but also because the owners have decided to allow six months time in which the purchasers can pay for the animals, or we might say six months in which the older animals could help to pay for themselves by their production at the milk pail.

The sale will be held on the Wm. M. Law Farm located on a state road one mile east of Sandusky, New York. Sandusky is in the northeastern corner of Cattaraugus County and is very close to the boundary lines of Erie, Wyoming and Allegany Counties. Requests for cattle or for further information should be addressed to Wm. M. Law, Sandusky, N. Y. Hastings manages the sale, with Mead as auctioneer, and Jack Houck as pedigree man.

THE SALE AT RICHMOND

We regret that we are unable to give a full report of the Richmond National sale. The BREEDER AND DAIRYMAN representative was unable to stay until the close and was promised a report by Mr. Crabill, secretary of the Virginia State Club. There is an almost unbelievable amount of work connected with such a sale, and we assume that Messrs. Crabill and Kirby have been unable to attend to it as yet.

The first day 67 animals besides two small calves were sold. Of the 69 head, 48 remained in Virginia, one went to West Virginia, four to North and four to South Carolina, four were struck off to New York State bidders, four to Pennsylvania, two were to go to the District of Columbia, two to Massachusetts and one to Indiana. Mr. V. M. Montgomery, of Spartanburg, S. C., bid off the two highest priced females, paying an even \$1,000 for Star Segis Pontiac Superior, first prize four-year-old at the 1923 National Dairy Show. She was consigned by the Minnesota Holstein Company. Mankato Stella Ormsby Bess, a big, nice daughter of King Colantha Ormsby Bess, consigned by Marlow and Randall, went to Mr. Montgomery for \$830. The day's average was \$313, considering the offerings as 67 lots.

Over the phone we learn that the average for the 148 head was \$260. Virginia was by far the largest buying state, taking 109 of the number, while 26 others went south of the Mason and Dixon line.

EXAMINATION FOR VETERINARIANS

A written examination for graduate veterinarians will be held Friday afternoon, June 27th, in Harrisburg, Pittsburgh and Philadelphia, Pa. The questions will be submitted by the United States Department of Animal Industry and will pertain to tuberculosis and the tuberculin tests and will probably be the last examination given on this subject during 1924.

The Accredited Plan, for establishing tuberculosis-free herds, provides that be-

fore graduate veterinarians are eligible to retest accredited herds or herds in the process of accreditation, they are required to pass an examination conducted by proper Federal and State officials.

The shades of night were falling fast when through a thriving city passed a youth who bore 'mid snow and ice a banner with the proud device, "Excelsior."

It seems that he had something good, a new and wholesome breakfast food. They read the banner that he bore; now half the town is calling for "Excelsior."

HAMMOND'S "CATTLE COMFORT"

"Cattle Comfort"

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—**CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers

Cow Testing Association Reports

PUREBREDS LEAD IN C. T. A. WORK

There are only 11 herds in the Goodville Cow Testing Association which operates in the territory around Goodville, Pennsylvania, but what is lacking in number is made up in quality. The

TUTS

16,809 lb. milk, 646.6 lb. butterfat in a year. Owned by Mast Stoltzfus, Morgantown, Pa.

latest test month was from May 15th to June 15th, reports the test supervisor, Luke W. Martin. Of the 112 cows in milk, 26 made over 40 lb. of fat and 8 exceeded 50 lb., while 22 cows produced more than 1,200 lb. of milk.

The leader is the purebred Holstein "Tuts" of the Mast Stoltzfus herd with 1,839 lb. milk, 69.9 lb. fat. Pearl, a grade Holstein in the same herd, is second with 1,415 lb. milk, 63.7 lb. fat. Erma, a pure-

Owner's Name	Cow's Name	Breed	Milk	Fat

Jason M. Eby	Beauty	" "	12,829	439.6

bred of the same herd, is in fourth place with 1,604 lb. milk, 61 lb. fat, and two other members of this herd, one a purebred and one a grade, are among the first ten with productions of 55.4 lb. fat and 54.2 lb. fat, respectively. Ira N. Eby owns Jessie, a purebred Holstein in third place with 1,760 lb. milk, 61.6 lb. fat, while a grade member of this herd is eighth with 53.5 lb. fat.

The first year's work of the Goodville Association shows 8 cows that each made over 450 lb. of fat; 2 that made between 500 and 600 lb., and 2 that exceeded 600 lb. The four highest cows were all purebred Holsteins, and three of them are from the Mast Stoltzfus herd. In first place is the well-known "Tuts" with 16,809 lb. milk, 646.6 lb. fat, but the highest milk producer is "Doratea," owned by M. V. Brubaker, with 17,983 lb. milk, 546.4 lb. fat. The ten highest producers are herewith listed. All are black and white cows.

There are 21 cows that each produced over 400 lb. of butterfat during the year, reports the tester, Luke W. Martin, of Goodville, Pennsylvania. In addition he says that three cows each gave over 16,000 lb. and 17 exceeded 12,000 lb., while the 10,000-lb. mark was exceeded by 58 different animals. This is one of the greatest year's work that ever came un-

der our notice. The average production of the cows enrolled in the Goodville Association was 7,956 lb. milk, 283.4 lb. butterfat.

The cows enrolled in the Association produced during the year 2,605,572 lb. milk, 92,823.8 lb. butterfat. The herd

DORATEA SOMERSET LILITH DE KOI, 17,983 lb. milk, 546.4 lb. butterfat in a year. Owned by M. V. Brubaker, New Holland, Pa.

leading for both milk and butterfat production is that owned by Mast Stoltzfus of Morgantown, and this herd averaged 11,724 lb. milk, 405.6 lb. butterfat.

IN THE NEW YORK ASSOCIATIONS

A grade Holstein, owned by Wm. Casbaker of Boonville, N. Y., and enrolled in the Boonville Testing Association, was the highest producer in the New York State Dairy Improvement Associations for the month of March. She is credited with the production of 103.6 lb. fat, 3,047.3 lb. milk. Lady Baroness, a purebred member of the herd of Laurel Stock Farm at Goshen, and enrolled in the Blooming Grove Association, is second with 94.3 lb. fat, 2,591 lb. milk. Another member of this herd is in fourth place with 84.4 lb. fat, 2,482 lb. milk. An eight-year-old purebred, owned by J. B. Har-

freshening before she was two years old, she produced 7,697 lb. milk, 255.88 lb. butter fat in C. T. A. work and then, freshening again as a two-year-old, produced 8,932 lb. milk 253 lb. butterfat. Cows of this quality are bred to BLANCHES BAPTISTE ORMSBY whose six nearest tested dams averaged 32 1/4 lb. butter, 615.7 lb. milk. Accredited Herd—Anything you want.

B. J. GARDNER

Factoryville, Lackawanna Co., Pa.

beck of Black Creek, stands in third place with 90.2 lb. fat, 2,579 lb. milk, while Evelyn, a grade Holstein owned by Wheeler Bros., Belvale, Orange County, is fifth with 83.7 lb. fat, 1,860 lb. milk.

The preliminary reports for April show a purebred Holstein owned by R. W. Chamberlain and enrolled in the Western Allegheny Association is in the lead with 111 lb. fat, 2,775 lb. milk.

B. E. Mullaney, who is in charge of the Western Allegheny Association, reports that the J. B. Harbeck herd finished a year's work. This dairy of twenty-four cows which includes 7 two-year-olds, 7 three-year-olds, and 4 four-year-olds, had an average of 11,402 lb. milk, 394 lb. fat. The high cow, Mutual Friend Aaggie Johanna, produced 16,439 lb. milk, 552.5 lb. fat as a four-year-old. The value of her product above cost of feed was \$197.42. The cost of the milk she produced was 91 cents per hundred pounds, while the cost of a pound of butterfat was 27 cents.

FIRST FOUR ARE PUREBRED HOLSTEINS

Rigtje is the abbreviation Tester Yonkman uses to designate the purebred Holstein that led the Rudolph Cow Testing Association for its third year of operation. This cow is owned by William Piltz of Rudolph, Wisconsin. Rigtje produced during the recently ended Cow Testing Association year 15,666 lb. milk, 510.5 lb. fat.

The average production for the 347 cows that finished the year was 8,026 lb. milk, 284.3 lb. fat. The average cost of feed was estimated at \$61.32 and the fat produced at \$151.33 so that for every dollar expended for feed, \$2.47 was returned in the products. The average cost of 100 lb. milk was 76 cents and for one pound of fat 21 cents.

The high herd was also owned by William Piltz and consisted of registered Holsteins. Their average production was 11,000 lb. milk, 383.1 lb. fat. A grade Holstein herd was second while Charles Imig's herd of registered Holsteins was third with 11,266 lb. milk, 369.5 lb. fat. Grade Holstein herds occupied the next two places on the list.

While the Piltz cow was first, members of the Imig herd occupied the next three places, one producing 15,096 lb. milk, 478.9 lb. fat, her sister being credited with 13,582 lb. milk, 454.9 lb. fat and the third member of the herd with 13,715 lb. milk, 433.3 lb. fat.

Mr. Yonkman adds to the value of the report by saying that every member of the Association heads his herd with a purebred bull.

SOUTH CAROLINA TESTING

Cedardale Alice Korndyke Posch, a seven-year-old purebred Holstein owned by V. M. Montgomery of Spartanburg, leads all cows tested in South Carolina during May by the production of 2,213 lb. milk, 93.9 lb. fat. She is only .6 lb. of fat ahead of her stablemate, O. K. L. Aaggie, with 1,708 lb. milk, 93.3 lb. fat. Sigsbee Farm Copia Colantha, owned by J. T. Willard of Spartanburg, is third

with 1,994 lb. milk, 79.8 lb. fat in the month as a junior three-year-old. The only other Holstein among the ten leading producers is Mildred Korndyke Cornucopia of the Montgomery herd, with 1,866 lb. milk, 66.3 lb. fat.

Clemson State College and Kai Schwensen of Spartanburg have several representatives in the honor roll. During the month 40 purebred Holsteins were on test, of which 31 achieved the honor roll. O. K. L. Aaggie as a junior four-year-old made a seven-day official record of 385.9 lb. milk, 26.35 lb. butter.

NICE RECORD AT LATHROP FARM

North Star Neeltje Johanna No. 681311, a senior two-year-old at Lathrop Farm, Montrose, Pa., has recently completed a seven-day record of 24.75 lb. butter, 421.5 lb. milk, her average test being 4.69% fat.

She was bred in the Moscrip herd and was purchased by Dr. L. M. Thompson, manager of the Lathrop establishment, at the third Brentwood Sale, March, 1923.

North Star Neeltje Johanna is a daughter of Johanna Bonheur Champion, the well-known show bull and sire of North Star Herd. He was by Colantha Johanna Champion from Johanna Bonheur, a good record daughter of Sarcastic Lad and Johanna De Kol 2d.

The heifer's dam is North Star Neeltje Oak, a daughter of Bessie Fobes Oak Homestead, with seven-day records of 32.17 lb. butter, 551.5 lb. milk as a senior four-year-old. Tested as a senior two-year-old, she produced in 289 days, 13,870.2 lb. milk, 596.38 lb. butter.

KILDEE TO GO UP IN THE AIR

Prof. H. H. Kildee, head of the Animal Husbandry Department at Ames, is scheduled to take an aeroplane trip next fall. Mr. Kildee has been selected to judge Guernseys at the National Dairy Show at Milwaukee and also Duroc hogs at the National Swine Show. These great expositions are held the same week and the schedule for Prof. Kildee is to work at both places on the same day. Arrangements have been made for him to judge at the National Dairy Show at Milwaukee in the forenoon and then at the lunch hour to take a trip in an aeroplane to Peoria, Ill., and there judge in the afternoon.

PUREBRED SHEEP PRICES STEADY

Prices of purebred sheep were steady last year, reports the United States Department of Agriculture. They ranged from \$17 per head for ewes over two years old, to \$42 for rams of the same age. The 1923 prices were very similar to the prices realized during 1922. The top price received for a ram was \$800, and for an ewe \$155.

The numbers of animals reported were: 4,265 ram lambs, 10,567 rams over 1 and under 2 years of age; 1,863 rams over 2 years of age, 998 ewe lambs under 1 year of age, 3,080 ewes over 1 and under 2 years, and 6,447 ewes over 2 years.

FAITHFUL OFFICER PASSES ON

Holstein breeders all over the country regret the sudden death of Wing R. Smith, for twenty-eight years treasurer of the Holstein-Friesian Association of America. Mr. Smith seemed remarkably well at Richmond, was passing out badges to the delegates and members and greeting visitors as well as old acquaintances. On Friday morning, June 6th, he and Mr. Ward Stevens left with Mr. Faintoute in his car planning to travel through Washington, Baltimore and Philadelphia. He spent a few hours with one of his daughters in her home near New York City and from there took the train to Syracuse. During his journey he had an attack of acute indigestion and died in his berth before a doctor could be obtained, June 8th.

Wing R. Smith was born March 9, 1850, and so was 74 years old. He succeeded his own father as treasurer of

WING R. SMITH

For twenty-eight years treasurer of the Holstein-Friesian Association of America

the National Association. As a member of the firms of Smiths and Powell and Smith, Powell & Lamb, he was instrumental in importing between five and six hundred Holsteins in the early eighties. Mr. Smith made several trips to Holland and one of the cows he selected was the famous Clothilde, foundation animal of one of the most noted strains of the breed.

"Uncle" Wing, as he was called by the younger members of the Association, was always ready to do his part in any organization for the benefit of civic or breed conditions. For many years he was treasurer of the New York State Holstein Club and at the time of his death held that position in the New York State Breeders' Association. He was a trustee of the Syracuse Savings Bank and treasurer of the Farmers' and Traders' Life Insurance Co. He took a course at Cornell, was a member of the Cornell Club of Syracuse and was also a member of the Kappa Alpha fraternity. He is survived by his widow and three married daughters.

If Mr. Smith ever had an enemy, we have never known who he was. A man

of sterling and unswerving honesty, unassuming in manner and appearance, always willing to oblige if he could do so even to the detriment of his own business, Wing R. Smith's life was full of service. Many will miss him.

As far as we know, no successor for the position of treasurer of the National Association has ever been considered. In the report of the General Welfare Committee, one of the additions to the by-laws provided that, in the event of the death, resignation or incapacity of the treasurer, his duties and responsibilities should be discharged by the chairman of the Finance Committee until the vacancy was filled by the Board of Directors. Therefore, Director Noyes will perform the treasurer's duties until a successor is appointed.

FEED RATION SUGGESTED

In the May New Letter issued from the New York State College of Agriculture at Cornell University, G. W. Tailby, Jr., Supervisor of the New York Dairy Improvement Association, says that wheat feeds and hominy are the cheapest sources of digestible nutrients, while cottonseed meal and linseed oil meals are cheapest sources of protein to secure the necessary balance.

Based on this condition of affairs, the Animal Husbandry specialists are suggesting the following mixture. The grains used should be selected primarily in accordance with the quality of the roughage to be fed. Cost, variety, bulk, etc., must be kept in mind. In view of the low price for milk, this inexpensive mixture, even though relatively low in protein, should meet general needs at this season.

200 standard middlings	cost	\$2.54
400 bran or oats	"	5.10
200 hominy or corn	"	3.60
100 cottonseed	"	2.45
100 oil meal	"	2.10

1,000 lb.	"	\$15.79
1 ton	"	31.58

Digestible crude protein, 15.5%.

Total digestible nutrients, 1,416 lb.

For cows on pasture well advanced in lactation feed, the above mixture at the rate of 1 lb. of grain to 5 or 6 lb. milk. Those to be carried over as full milkers should receive more. Those desiring a somewhat richer mixture should substitute 100 lb. cottonseed meal for 100 lb. hominy.

FARMING WITHOUT HORSES

It is said that there is an Iowa farm of 200 acres that is absolutely horseless. It is owned by J. F. Deems and is near Burlington. Four tractors are doing the work of the farm, practically all of which is under cultivation. Ray Murphy, who is in charge, says that he is satisfied that tractors are more economical than horses, for one tractor in use fourteen hours plowed nineteen acres, while a neighbor used two teams four days in plowing twenty acres.

This Is the Kind We Raise!

Herd under State and Federal Supervision.

ERIE SOILS AND CROPS SPECIAL

The "Soils and Crops Special" which the Erie Railroad Company ran over their lines in the northwestern part of Pennsylvania, reached quite a number of farmers. The largest attendance was at Cochran, where it is estimated that 600 were present, of which 120 farmers working 12,487 acres registered. They handed in forty-five soil samples to be tested. At Edinboro, there were 350 in attendance and 65 farmers operating 7,932 acres registered. The daily registration was 56, and the average registration per station where the special train stopped was thirty-eight.

The "Special" consisted of one car with exhibits of soils and crops. This contained a laboratory for testing samples of soils brought in by farmers. Any one could bring in samples which were tested to ascertain the amount of lime or limestone needed to grow clover or alfalfa. The farmer was requested to dig holes 7 inches deep in ten or fifteen places in his field and to remove a thin slice from the side of each hole. After drying and pulverizing the samples they were to be mixed thoroughly and then a baking powder can or similar receptacle was to be filled and this was for the use of the chemist who did the test work.

Another car was equipped for the showing of moving pictures. The cars were decorated with pictures of high-class Pennsylvania cattle, some of the Holstein pictures being furnished by the BREEDER AND DAIRYMAN. The train was in charge of H. B. Rogers, Jamestown, N. Y., agricultural agent for the Erie Railroad.

ACCREDITED AND PROFITABLE

In 1916 G. L. Bedor of St. Johnsbury, Vt., started breeding purebred Holstein cattle. To obtain his foundation stock he borrowed the entire amount, \$3,500, and in four years, from the receipts of his dairy and the sale of surplus young stock, he paid his indebtedness. He has also been able to buy and pay for two cars at a total price of \$2,200.

The cream was taken to the local creamery and the skim milk was fed to the young calves which were well grown, Mr. Bedor realizing that there is always a good demand for well grown animals.

Three years ago ten cows were sold to the Connecticut State Hospital at an average price of \$225. The dairy has always made a good showing in the Caledonia Cow Testing Association, and in thirty days of March of this year, this purebred Holstein dairy had eleven heifers that averaged 41.6 lb. butterfat, the highest of the eleven producing 55.5 lb. fat and the lowest 31.3 lb. fat, showing uniform large production. This showing is all the more meritorious as the dairy was young, there being two four-year-olds and two three-year-olds in the eleven, the rest being two-year-old heifers.

Owing to ill health Mr. Bedor is planning to go to Colorado and has already sold his farm so that he is compelled to dispose of his purebred herd. This herd has been on the accredited list for the

past five years. There are thirty-five females, the herdsire and six young bull calves. There are only two cows that are seven years old, the remainder are four-year-olds and under. The average fat test of this herd for the past two months in cow testing association work is 4%. Mr. Bedor says that if his health was good, he would stay in the business and this herd would not be in the market.

Among the herd at Highland Stock Farm are a number of daughters of King Gem Clorinda Pontiac. This bull inherits the blood of King of the Pontiacs from both his sire and dam, his sire being a grandson and his dam, an own daughter of the only double century sire. The dam as a junior three-year-old has a seven-day record of 16.96 lb. butter, and during the making of this record she averaged nearly 53 lb. milk a day. She is full sister to K P Gem, 31.82 lb. butter as a three-year-old, 19,675.3 lb. milk, 948.05 lb. butter in her first lactation period, freshening when thirty months old.

King Gem Clorinda Pontiac was sired by It Pontiac Lady Clorinda, whose dam, K P Lady Clorinda, has a seven-day record of 23.57 lb. butter as a four-year-old, averaging 71 lb. milk a day while on test. It Pontiac Lady Clorinda was sired by It, the well-known son of King Korndyke Hengerveld Ormsby and Pontiac Clothilde De Kol 2d, 37.21 lb. butter in seven days, the first cow to make over 1,000 lb. butterfat in year test. She was the first cow to make a 30-lb. seven-day record at three successive freshenings.

Mr. Bedor's herd is of blood lines noted for large and persistent production. Better still, it is a herd that has demonstrated its quality in cow testing association work and, as it has been accredited for the past five years, it is one that should interest anyone in need of purebred stock now that the owner is forced to place his herd on the market.

From An Accredited Herd

BULL CALF—born Dec. 26, 1923, more white than black, straight and right in every way. Price \$50.

Dam—Maple Grove Pontiac Betti, she by King Pontiac Jupiter, a son of King of the Pontiacs from a daughter of Hengerveld De Kol.

HEIFER—born Dec. 1, 1923. Nicely marked well grown and a beauty. Price \$65.

Their sire is **MAPLE GROVE YBMA GLISTA** whose sire is from Glista Dinah, a 31-lb. daughter of a 34-lb. cow. His dam produced 27 lb. butter, 641 lb. milk in 7 days in this herd.

Young Man—Can your sister—er—cook?
Little Brother—I think she's going to. I heard her tell mamma that if that fish came here again tonight she was going to make it hot for him.

FAIRVIEW PONTIAC BEETS KORNDYKE

There are few living sons of Pontiac Korndyke. One of the greatest is Fairview Pontiac Beets Korndyke, the senior herdsire at the Wellington Stock Farm, Wellington, Ohio. This bull is now past twelve years old, being born February 10, 1912. He has been used only in a small herd and at the present time only has 59 officially tested daughters, but they have made records that show he is one of the best transmitting sires of the great Korndyke family.

Eight different daughters of Fairview Pontiac Beets Korndyke have made over 30 lb. butter in official test and four have made 30-lb. records two years. He has 26 daughters that have exceeded 25 lb. butter in a week, and 50 over 20 lb., in fact, all of his daughters ever tested, with the exception of eight, have 20-lb. seven-day butter records, and these eight were tested as heifers. His 59 tested daughters, including one yearling, eleven two-year-olds, ten three-year-olds, and ten four-year-olds, have seven-day official records that average 24.28 lb. butter, and 502.6 lb. milk, with an average test of 3.88 per cent fat. This means an average daily milk production of over 70 lb. with an average test of very close to 4%.

He has sired twelve two-year-olds with records of over 20 lb., two three-year-olds with records of over 26 lb., three four-year-olds with records of over 30 lb., four five-year-olds, two six-year-olds with records of over 30 lb., and two seven-year-olds with records of over 32 lb.

Taking all the records ever made by these fifty-nine daughters we find he has sired as follows: Thirty two-year-olds with seven-day records that average: Butter 18.45, milk 368.7, per cent 4.02; 16 three-year-olds: Butter 21.46, milk 465.0, per cent 3.69; 16 four-year-olds: Butter 24.94, milk 514.3, per cent 3.88; 34 mature cows: Butter 27.14, milk 570.2, per cent 3.81.

In semi-official work the showing made by daughters of this bull is even more remarkable. He now has 19 that have been tested for a year and these 19 averaged 21,860.5 lb. milk, 955.75 lb. butter with an average fat test of 3.58%. He has nine daughters that have exceeded 1,000 lb. butter in a year, two of them being 1,200-lb. cows; the records of the nine averaging 1,113.80 lb. butter, and 24,193.1 lb. milk. The entire list of nineteen daughters include a two-year-old, two three-year-olds, and four four-year-olds.

The nine 1,000-lb. daughters are:

	Milk	Butter
1. Wellington Vashti Korndyke (6)	25,294.0	1,239.38
2. Lady Alice Pontiac Korndyke (4)	24,729.1	1,203.44
3. Johanna Korndyke Bess (5)	26,054.6	1,185.38
4. Model Fayne Pontiac (8)	26,849.5	1,111.34
5. Dell Lyons Model Korndyke (5)	23,978.6	1,096.90
6. Model Ormsby Korndyke (7)	24,226.9	1,096.27
7. Wellington Otley Korndyke (6)	21,564.8	1,048.68
8. Wellington Duchess Pontiac Belle (4)	21,954.5	1,038.86
9. Korndyke Duchess Ripple (5)	23,086.1	1,013.92

None of the daughters of this bull started on yearly work until May, 1919. His first granddaughter to be tested for 365 days is the senior two-year-old Stark Fayne De Kol, 536,999, who holds the Ohio State record for that age with butter 993.41, milk 22,741.1. Other granddaughters have made splendid records both in short and long-time test work.

Fairview Pontiac Beets Korndyke was bred and raised in the Dollar herd at Heuvelton, New York. His sire was Pontiac Korndyke; his dam was Fairview Beets Korndyke, who was by Pontiac Korndyke from Winana Beets De Kol. Fairview Beets Korndyke has a seven-day record made as a junior four-year-old of 531 lb. milk, 27.02 lb. butter. Winana Beets De Kol was a daughter of Paul Beets De Kol, and has records of 599.6 lb. milk, 20.71 lb. butter. This cow has three tested daughters all above the 20-lb. mark, and was regarded as one of the great producing and transmitting cows of her time.

In his pedigree, Fairview Pontiac Beets Korndyke combines strains of breeding noted for great production and it is very evident that this producing capacity has been transmitted to his offspring. It is almost needless to add that his owners, A. R. and G. B. Wagner, owners of Wellington Stock Farm, regard him as the greatest producing sire in Ohio as well as the greatest living son of old Pontiac Korndyke.

THE SITUATION IN CALIFORNIA

The California foot and mouth situation continues to improve. There were only a few cases of infection lately and these have all been confined to two infected areas. So confident are the authorities in charge that the issuing of daily bulletins announcing new outbreaks has been suspended. Occasional cases may yet be discovered; in fact, this is the history of other outbreaks in this country. But there seems little likelihood of the trouble again gaining the upper hand.

Upon the discovery of the trouble last February, the California Breeders' Sales and Pedigree Company announced a complete suspension of its sale service. So reassuring is the present condition that Secretary Hughes announces that the company will resume business in the northern part of the state. But removal of cattle, either public or private, will be made strictly subject to the approval of the United States and the California Departments of Agriculture, and subject to such rules and regulations as are made by those bodies in the interests of public safety.

TO AID THE COMMUNITY

E. G. Roth, county agent of Crow Wing County, Minn., recently purchased eighteen purebred bulls from the dairy community around Chequamegon, Wis. A sum of money for this purpose was placed at his disposal by business men and civic organizations of Brainerd, Minn., in order to aid the farmers of Crow Wing County.

Practically all the bulls were from record dams. Mr. Roth was assisted by the county agents of Ashland, Bayfield and Douglas Counties and by A. O. Collentine, of the Wisconsin College of Agriculture. A twenty-five per cent reduction in freight rates was received from the Northern Pacific Railway. The entire lot was shipped to Brainerd for distribution to Crow Wing bull clubs. A big celebration greeted the bulls upon their arrival at Brainerd.

ROBERTS HAS A NEW HERDSIRE

Maredor Radium Artis It Mercedes is the name of a new herdsire recently purchased by Mr. B. C. Roberts of Meshoppen, Pa. He is a very fine individual, largely white in color, and is from the accredited herd of Dr. E. Hogg of Wilkes-Barre and Lehman, Pennsylvania.

Mr. Roberts' new herdsire is by Radium, grand champion male at the 1921 New York State Fair. He was by Sir Lyons Segis and from May Echo Verbelle, 660 lb. milk, 29.89 lb. butter in seven days, a daughter of May Echo, 31.34 lb. butter in seven days, 1,042 lb. butter in a year.

May Echo Verbelle is, by many good students of breed history, regarded as being the best transmitting cow of the May Echo family. She has four tested daughters and three sons with tested daughters. One of her daughters is the famous May Echo Sylvia, the only cow that was ever credited with producing over 1,000 lb. milk in a week. One of her sons, May Echo Champion, was the sire of Agassiz Segis May Echo, 30,886 lb. milk, 1,681.25 lb. butter in a year. Many other members of this family have made large short-time and long-time records.

The dam of Maredor Radium Artis It Mercedes is Onondaga Artis It Mercedes, a cow that made practically 26 lb. butter in a week and is from Onondaga Mercedes, 29.24 lb. butter in seven days as a junior four-year-old. Her sire was a son of "It," who was by King Korndyke Hengerveld Ormsby and from Pontiac Clothilde De Kol 2d, the first cow to make a 37-lb. butter record or to produce over 1,000 lb. butterfat in a year or to make a 30-lb. seven-day butter record at three successive freshenings.

Mr. Roberts' herd has been on the accredited list for a number of years. It is strong in Korndyke, Concordia and Creamelle blood. The addition of the new herdsire will introduce other strains of breeding noted for show quality as well as production, for Maredor Radium Artis It Mercedes has gone to a good home.

NICE VIRGINIA RECORD

Miniborya Farm and its representatives were in the limelight at the Richmond Convention. The farm is located near Drewry's Bluff, Va. On March 15th of this year, one member of the herd, Lane-dale Tweede Lady De Kol, finished a year's test, making 20,216.5 lb. milk, 872.04 lb. butter with an average test of 3.4% fat. The herd is owned by J. Scott Parrish, who is president of the Richmond Chamber of Commerce, and the cow was in the care of John W. Coover.

Willie: I wonder if dad thinks that calf is gon' to die?

Mother: Why, Willie?

Willie: Well, he said I could have it to start a herd.

It is foolish to blame all our weaknesses on our heredity.

FAMOUS IDAHO COW DEAD

Idaho Violet Posch Ormsby, famous cow of the Idaho University herd, is dead. Just before she passed away, she gave birth to a bull calf which was saved but it was found impossible to save the mother.

Old Violet would have been twelve years old next September. During her lifetime she produced 134,654 lb. milk, her average daily production being 51 lb. milk and 2.42 lb. butter for the seven years she had been actually in milk. In addition, she gave birth to four sons and three daughters, all of which are living.

Idaho Violet Posch Ormsby was easily the most noted cow of her state. Her highest record was 26,812.5 lb. milk, 1,259.26 lb. butter. Only last summer she was the guest of honor at a luncheon for distinguished Idaho citizens, the guests including the president of the University of Idaho, the dean of the college of agriculture, representatives of the Moscow Chamber of Commerce, and the leading dairymen of the state.

Her individuality, production, and the fact that these qualities were transmitted to her offspring helped to give her her nation-wide reputation.

Violet was grand champion at the 1922 Western Royal Livestock Show and one of her daughters, Idaho Favorite, was grand champion at the Spokane Interstate Fair the same year. Her sons have also won high honors at high class fairs. Among other things claimed for her by Prof. F. W. Atkeson, in whose charge she was, are the following:

"Highest record living cow (at the time of her death) for butterfat production owned by a state institution in the United States.

"Fourth highest butterfat record ever made by a cow owned by a state institution.

"The only cow in the United States owned by a state institution with three or more records over 1,000 lb. butter.

"Eighth in the United States and ninth in the world among cows that had produced three or more records over 1,000 lb. butter.

"Second in Idaho in her class for seven-day production in the mature cow class.

"State record for all breeds and ages for yearly fat production.

"Champion in the show ring, and had two sons and two daughters that were show ring winners.

"Three advanced registry daughters and one advanced registry son."

MARATHON BREEDERS AID NATIONAL

The breeders of Marathon County, Wisconsin, are planning to be well represented at the National Dairy Show which will be staged at Milwaukee, September 27th to October 4th. The Holstein breeders have voted \$100 to stage a Holstein calf club exhibition and the Guernsey breeders followed their example and it is expected that the breeders of Brown Swiss and Ayrshire cattle will make similar appropriations.

PENN STATE SCHOOL OF AGRICULTURE

The magnitude of the School of Agriculture at Penn State College is not known to many outside its immediate vicinity. Few are aware that farms aggregating 1,886 acres are operated, and on these farms are located twenty-seven houses and farm structures.

United States Agricultural experts have said that no other school of agriculture in this country has a better land equipment adjacent to its campus for instruction and research in agriculture.

There are in pasture 323 acres, while 825 acres are tilled under the management of the college farm superintendent. The crop acreage is divided as follows:

Corn	221	acres
Oats	118	"
Wheat	220	"
Grass	204	"
Potatoes	28	"
Alfalfa	20	"
Soy beans	14	"

Total 825 "

Last year there were at the college school of agriculture 636 students taking the four-year-course, 203 taking the two-year course, and 110 students taking the winter course. There are 88 professors and instructors headed by Dean R. L. Watts.

USE POISON IN FIGHT AGAINST DISEASE

In the work of preventing the spread of foot and mouth disease in California, representatives of the United States Biological Survey have cooperated with the California State Board of Agriculture by inaugurating an extensive poison campaign against coyotes and bobcats. There are considerable numbers of both animals in the immediate vicinity of the infected areas in Contra Costa County. Here most of the emergency work is concentrated. Hunters were brought from various points and a line of poisoned bait was placed around the entire east side of

the infected area and at a safe distance from it. Men were stationed at intervals along this line and it was almost impossible for coyotes to drift either way without picking up some of the poisoned bait.

Another poison line was established several miles east. Many dead coyotes and bobcats were found along both lines. Undoubtedly many others were killed but not located. Stray cats and dogs were also found killed.

Intensive work within the infected area resulted in getting owners to confine their own dogs. The men who attend to this phase of the work do not leave the area. The men on coyote work do not go into the infected area but the plans include a final clean up of coyotes and bobcats after the several infected ranches have been disinfected. On many of the ranches far from town it has been customary to leave unburied animals that died from accident or unknown causes. The coyotes soon pick the bones and therefore act as scavengers. The present trouble has taught many ranchers to adopt more sanitary methods and it is expected that when the present trouble is over and normal conditions resumed their sway that the bodies of animals dying in the pastures will be buried or burned at the earliest possible moment.

HOMEMADE MINERAL MIXTURE

Cows pastured on acid soil or fed roughage grown on such land seem to require more mineral matter than is carried by their feed, and this is especially true if they are heavy milkers. A homemade mineral mixture consists of equal parts of sifted wood ashes, air slaked lime and salt. This is fed in the grain at the rate of three or four pounds to each one hundred pounds of grain mixture. In addition cattle should always have free access to common salt.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

SHORT-LIVED DAIRY MACHINERY

That the average period of usefulness of a cow in the dairy is considerably less than eight years is the deduction of the United States Department of Agriculture, derived from a study which shows that the average dairy cow throughout the country is sold to the butcher when she is ten years old. As this does not take into consideration cows that die from disease or accidents and as the bovine female is two years old before she comes into profit, it is easy to see that the machine operated by the dairy farmer is short lived and that for at least one-fifth of the time he owns her the dairy cow is an item of expense instead of a producer of profit. This period of loss should be charged against the period of profit and makes it all the more important that the dairyman raises and keeps only good cows.

HOLSTEINS FOR RETAIL MILK BUSINESS

Emil Kraklow operates a large retail milk business in Davenport, Iowa, and owns a big milking herd. The demand for his goods increased so much that he recently purchased a full carload of choice Holstein grades around Mansfield, Wis., being assisted in his selection by County Agent R. A. Peterson.

BUY BULL IN PARTNERSHIP

The firms of Hartshorn Bros. and Wilson & Fory of Newark, Ohio, have in partnership purchased a high-class young bull from E. E. Ellett & Son of Beloit, Ohio. He is a son of King Aaggie Ona and of Aaggie Cornucopia of Sunnyside, 25,127.5 lb. milk, 1,093.46 lb. butter in a year, one of the best members of the famous Aaggies of Sunnyside strain.

A woman walked into a store and said to the clerk, "I want a small, narrow comb, about so long, for a slightly bald man with celluloid teeth."

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

Waldron Farm and Herd

Where a Woman is Boss and Runs the Whole Show

WHEN a woman deliberately picks out running a farm for a vocation, she generally makes a success. We use the word "deliberately" advisedly, for this presupposes an acquaintance with farm life and conditions, a taste for the work, and a knowledge of both how and why the various farm operations are performed. This story is about a woman who is a successful owner and tenant farmer, a "dairy woman" and a breeder of purebred Holstein-Friesians.

Within a mile of the pleasant country village of South Otselic is Waldron Farm, operated by Mrs. Maud Dwight. Chenango County is one of the greatest dairy counties of New York State and also one of the leading Holstein counties. These two things go to-

George Baker. Later on she purchased A & G Idaline Burke, a granddaughter of De Kol Burke, as well as Wild Pledge, a daughter of Sir Rag Apple Korndyke from John Frost and then a little later purchased from the same breeder, Molly Wood Pontiac Korndyke, a granddaughter of King of the Pontiacs. A few good females have been purchased since that time. One, Spot Farm Echo Model, a daughter of Radium, grand champion show bull at the 1921 New York State Fair, is one of the best cows now in the herd. A former member of the herd, Bonanza Korndyke of Sunny Side, a granddaughter of Korndyke Queen De Kol's Prince, averaged 90 lb. milk a day for 120 days during four different lactation periods. In addition she was a very handsome animal, a real show cow.

One of the first herdsires at Waldron Farm was Judge Lyons Walker, a son of Judge Lyons and Colantha Walker, 26.80 lb. daughter of the 30.54 lb. cow, Gelsche Walker, whose dam, Mary Walker Pietertje is a 31.81 lb. daughter of the 32.92 lb. cow, Buttercup Clothilde Pietertje. Only three daughters

YOUNGER MEMBERS OF WALDRON HERD

Nearly all are daughters of King Sylvia Pontiac Pietje.

gether. South Otselic is situated in a great dairy district, which is the home of many black and white dairy herds.

The homestead at Waldron Farm is very similar to that of many other New York farmhouses. Facing it is a spacious and well kept lawn shaded by a row of sugar maples. Large beds of hardy flowers add attractiveness. The barns are well back of the house. The cow barn is one hundred feet long by forty feet wide. Both horse and cow barns are well kept and well painted. There is an absence of litter, machinery, or debris of any kind around the house and barns and we have never seen an establishment, large or small, supported by a big bankroll or from the proceeds of the dairy, that can excel the Waldron Farm homestead in this respect. If we are allowed to coin the word "farm keeper," we can confidently assert that Mrs. Dwight stands A No. 1 on this score and we have no hesitation in awarding her the grand champion rosette for the condition of her dooryard and barnyards.

Mrs. Dwight started in the purebred Holstein business by purchasing a few foundation animals from

A PAIR THAT WOULD GRACE ANY HERD

of this bull have been tested, one for a year as a junior two-year-old in which she produced 15,318.3 lb. milk, 568.55 lb. butter and another for ten months, also as a junior two-year-old, and she produced 14,713.2 lb. milk, 568.50 lb. butter.

The last three bulls Mrs. Dwight has purchased to use as herdsires were all Canadian bred. King Sylvia Pontiac Pietje, the present senior herdsire, came from Avondale Farms, the Hardy establishment. This bull is a son of Champion Echo Sylvia Pontiac, the best known son of the famous May Echo Sylvia. The dam of King Sylvia Pontiac Pietje is May Echo Pontiac 2d. She has official records made as a junior four-year-old of 26.23 lb. butter, 659.8 lb. milk in seven days; 109.29

lb. butter, 2,548.8 lb. milk in thirty days. Her sire was Woodcrest Sir Clyde. Her dam, May Echo Pontiac was a daughter of King Pontiac Artis Canada and May Echo Sylvia. While May Echo Pontiac has no official records, she possessed the producing and transmitting ability characteristic of the May Echo family, and she has three tested daughters, one of which made 27.46 lb. butter in seven days as a junior three-year-old and another 18.38 lb. butter in seven days when only twenty-four months old. These are in addition to the 26.23 lb. junior four-year-old.

King Sylvia Pontiac Pietje was born November 25, 1919. As far as we know, he has only one daughter in milk and she is in the Waldron herd. She is of true

A YEARLING DAUGHTER OF KING SYLVIA PONTIAC PIETJE

dairy type, carries a well balanced udder with well placed teats, is a beautiful individual and we are told she is starting out in great shape.

King Sylvia Pontiac Pietje is a very handsome bull, largely white in color, straight on the back, deep bodied, stands well on all four legs and is an active, vigorous fellow. As the present herd contains many of his daughters, Mrs. Dwight does not intend to retain him should a suitable purchaser come along.

THE MILKING DAUGHTER OF KING SYLVIA PONTIAC PIETJE

As a junior sire Mrs. Dwight selected Calamity Segis King De Kol. His sire was De Kol Plus Raymondale, a son of De Kol Plus Segis Dixie, 33,464.7 lb. milk, 1,686.64 lb. butter in a year, 3,125.99 lb. butter in two years with an average yearly milk production of over 33,000 lb. The dam of the Calamity bull was Raymondale Calamity Segis, a granddaughter of the famous Korndyke Queen De Kol 6th, 37.26 lb. butter, 781.5 lb. milk in seven days, a cow that three different years exceeded 31 lb. butter and 700 lb. milk in a week. Raymondale Calamity Segis is from the 25.94 lb. junior four-year-old, Calamity Kate Pontiac, who is by the

same sire as the former world's champion junior two-year-old, Het Loo Pietertje, the first junior two-year-old to produce a 30 lb. seven day butter record.

Some time ago, Mrs. Dwight decided to dispose of Calamity Segis De Kol and he now heads one of the leading Wisconsin herds. In his place she acquired King Dixie Keyes. This young bull, besides being a show animal and possessing individuality of a high order, is splendidly bred. His six nearest dams have official seven day records that average 28.98 lb. butter, 638 lb. milk. His sire was by a son of the 36 lb. producer and show cow Lulu Keyes and his dam was Sylvia Tensen Echo, 27.57 lb. butter, 729.5 lb. milk in seven days, 110.20 lb. butter, 2,682.6 lb. milk in thirty days as a junior three-year-old. She is a daughter of Champion Echo Sylvia Pontiac and is from the 29.12 lb. cow Alice Tensen who besides averaging better than 80 lb. milk a day during the week of her test, is the dam of Alice Tensen Canary, 625.5 lb. milk, 30.22 lb. butter in seven days as a senior four-year-old.

The dam of King Dixie Keyes is Dixie Korndyke Keyes, 19.02 lb. butter in a week as a senior two-year-old. This test was made six weeks after freshening and she averaged 55 lb. milk a day during the week. She is by King Korndyke Sadie Keyes, son of Lulu

A PRODUCER AND A SHOW COW
There are others in the Waldron Herd of her type.

Keyes, 36.05 lb. butter, 785.4 lb. milk in seven days, dam of one good A. R. O. daughter and four sons with tested daughters. Lulu Keyes was one of the greatest cows ever developed by a Canadian Holstein breeder.

Dixie Korndyke Keyes is from Princess Dixie de Annandale 2d, 26.09 lb. butter, 574.3 lb. milk in a week, dam of four tested daughters while her dam was the record cow, Princess Dixie de Annandale who has five tested daughters, four of which made over 24 lb. butter in a week while one of her sons, Sir Segis Dixie, sired De Kol Plus Segis Dixie, champion yearly record cow of both the American and Canadian Herd Books.

The Waldron Farm herd shows evidences of good care and plenty of feed. The young stock are well grown. They inherit the individuality, type and conformation of King Sylvia Pontiac Pietje and indicate that they will develop into big producing cows. Mrs. Dwight attends to the feeding of the young animals and superintends the care and feeding of the older ones and in farming circles it is well known that a woman is a better caretaker than a man for she will take the time to fuss with the young growing things.

Mrs. Dwight is a native of Chenango County. Her

father was a teacher and mathematician and Mrs. Dwight inherits his teaching ability and for a time presided in a little Red School House. She has two sons Paul, now nearing his majority, is a student at the Central City Business School at Syracuse, N. Y., while her younger son, Ward, has just graduated from the South Otselic high school. Mrs. Dwight is a tenant of the Waldron Farm and has been for the past half dozen years but she also has a farm of her own further back among the hills. Waldron herd consists of over sixty purebred Holsteins. So you can see that this lady is running quite a business. The herd is regularly tested for tuberculosis under the accredited herd plan

and the last test was clean, without a reactor or suspicious animal. The next test is expected to place the Waldron herd on the accredited list.

South Otselic is not on the railroad but it is within easy driving distance of Sherburne which is reached by the D. L. & W. Railroad and the Ontario and Western R. R. The farm is about eight miles from Cincinnati also on the D. L. & W. R. R. It is operated as a business institution, pure and simple, the cattle are kept for dairy purposes and the milk is shipped. You are more likely to find the owner around the barn than you are in the house so, when you visit Waldron Stock Farm, bear this in mind.

Federal Dairy Bureau Established

ON July 2, Secretary Wallace announced the establishment of a Bureau of Dairying in the United States Department of Agriculture. Dr. C. W. Larson, who has been chief of the Dairy Division in the Bureau of Animal Industry, will be chief of the new bureau, as forecasted some time ago in these pages. As the act of Congress approved by President Coolidge, on May 29 creating the bureau provides that the Secretary of Agriculture may transfer to the Bureau of Dairying such activities of the Department as are primarily related to the dairy industry, all of the dairy work heretofore carried on by the Bureau of Animal Industry has been transferred to the new bureau as well as about 150 employees of the Dairy Division. Appropriations for the new fiscal year for carrying on dairy work amount to approximately \$400,000.

Secretary Wallace says that the need of the dairy industry is for better information on the fundamentals underlying all its branches and that such information comes largely from research. Better methods of feeding and care are needed to enable dairymen to produce milk more economically. There is great necessity for better sanitary conditions and for improved methods of utilizing by-products.

Dr. Larson is well known to the farming and dairy interests in all parts of the country, having been engaged in branches of this work for the past twenty years. He was born in Mitchell County, Iowa, in 1881 and was raised on a stock farm there. He graduated from the Iowa State College of Agriculture in 1906 and for a short time was connected with creamery and cheese factor work in Wisconsin and Minnesota. In 1907 he became a member of the faculty of Pennsylvania State College and in 1913 he was made Professor in Charge of the Department of Dairy Husbandry. In 1916 he received the degree of Doctor of Philosophy from Columbia University and was appointed Assistant Professor of Agriculture and Agricultural Economics at that university. In 1917 he joined the staff of the United States Department of Agriculture and since 1921 has been chief of the Dairy Division of the Bureau of Animal Industry.

Dr. Larson was for a number of years secretary of the Official Dairy Instructors' Association, and also secretary of the Pennsylvania Dairy Union. He was a delegate to the International Dairy Congress at Stock-

holm in 1911 and spent some time studying agricultural conditions in Europe. He is the author of "Milk Production Cost Accounts, Principles and Methods," and of many other papers and bulletins on dairying. He is joint author with Putney of the textbook "Dairy Cattle Feeding and Management." During the war he was sent to Europe under the Army and the American Red Cross as head of a commission to establish dairies at base hospitals in France, and later was commissioned to study the devastated areas with a view to the rehabilitation of the livestock and dairy industries. Dr. Larson announces that the plans for the new bureau are largely a continuation of the work done by him and his associates during the past few years. He believes that many of the fundamental problems of the dairy industry are yet to be solved.

Among the important lines of work which will be continued are the statistical study of cow testing associations, and studies of the underlying principles of breeding to insure, if possible, the same uniformity in the transmission of high milk and butterfat producing capacity in dairy cattle as is being secured with other characteristics by breeders of flowers, fruits, and grain. Special stress will be laid on the study of nutrition of dairy cattle, in which field considerable progress has been made in the last few years. A nutrition barn and laboratory have recently been completed at the Beltsville farm near Washington. Herd management problems also are being studied at this farm, as well as experiments with silage, types of barns, and many other problems.

The market milk investigations, which will be continued by the bureau, will deal largely with dairy sanitation and milk plant management. The purpose is to save losses in unsalable or low grade milk and to effect economies in the preparation of fluid milk and cream for delivery. Work will be done on bacteriological and physical changes in milk and cream and studies will be conducted on labor requirements and the efficiency of dairy machinery.

The investigations in the manufacture of dairy products will be carried on, as heretofore, at the creamery in Grove City, Pennsylvania, which is managed under the direction of the Bureau of Dairying, and also at the bureau laboratories in Washington. The Grove City creamery provides facilities for putting into practice on a commercial scale methods which have been worked

out in the laboratory. Here work will continue on the problems of sweet cream butter, Swiss cheese, ice cream, condensed milk, milk powder, and by-products. It is not planned to enlarge the laboratories in the immediate future, but according to Dr. Larson, they will be worked to full capacity in the attempt to solve the important problems of the industry.

Progress in Pennsylvania

NEARLY half a million head of cattle have been tested for tuberculosis by the Pennsylvania Bureau of Animal Industry since the service was started, twenty-seven years ago. During the first five months of 1924, tuberculin tests have been applied to 97,000 cows in 11,776 different herds.

About 15,000 herds are now awaiting initial tests. This condition of affairs shows that Pennsylvania dairymen are realizing the importance of having healthy herds. Dairymen in the great cattle district of Bradford and Susquehanna Counties are working for area testing and in many townships 90% or more of the cattle owners have signed up to have their cattle tested under the accredited herd plan. Committees have been appointed consisting of leading dairymen. These men visit their neighbors in the various townships and try to persuade them to join the movement. We are glad to say that owners of purebred Holsteins are very active in this movement and during the past few days, we have learned of a dozen or more purebred Holstein owners who are going around getting signers and in a number of cases these men report that the owners are signing up one hundred per cent. Northern Pennsylvania cattle are already noted for production and profit earning ability, and are rapidly earning an equal reputation for health with resulting profit to their owners.

Cultured Buttermilk

By B. E. GOODALE

TO make a good Cultured Buttermilk, it is essential to have a clean vigorous Starter to begin with. A Starter is simply clean whole milk or skimmed milk that has been inoculated with a Lactic Ferment Culture and the result is a smooth, clean, curdled product that is full of a particular kind of bacteria that produces flavors and odors that are the most desirable. These bacteria should be so virile that all other undesirable types will be killed off, thus leaving a very desirable flavored product.

The Lactic Ferment Culture mentioned above is a pure culture of these desirable bacteria which we want to get in our Starter. These cultures may be purchased in various forms, usually in sealed glass bottles.

The first step in making your Starter is to pasteurize fresh skimmed milk or whole milk at a temperature of 170 to 190 degrees F., maintaining this temperature for at least 40 minutes. Cool quickly to 80 degrees F. and add the Lactic Ferment Culture—the whole contents of the bottle. Close the bottle and shake several times during the first half hour. Let stand undisturbed until coagulated which should be in 15 to 20 hours, if an even temperature of about 75 degrees has been maintained during this period.

If, however, the milk has not curdled within such a time on account of an unavoidable fall in temperature, set the bottle or bottles into water of a temperature of 80 F. (not warmer) and be careful not to shake the bottle at this stage. When curdled set in cold water or on ice until needed, still being careful not to shake the bottle. This is the first propagation which is now called the Mother Starter.

The second and following propagations are carried on as follows: Pasteurize sweet skimmed milk as directed above. Cool milk for second propagation to 73° F. and for subsequent propagation to 70° F. Add the Starter of the previous propagation thoroughly stirred, at the rate of from 5 to 10 parts to 100 parts of milk or 1½ to 3 oz. of starter to 1 quart of milk. This should be coagulated in 10 to 14 hours. When coagulated, cool without breaking up the curd and keep cool until it is to be used. Then shake vigorously until it is of a cream consistency. In this way prepare a fresh batch of Starter every day.

It is a good plan to set a fresh Lactic Ferment Powder every 10 days or two weeks, or as often as it is found necessary, on account of contamination of the starter on hand. Do not break the seal of the bottle until you are ready to use it and then use it all at once. Do not use any package that has been opened or cracked. Sterilize all utensils used in handling the Starter by thorough scouring, boiling and steaming and by using lime water freely for rinsing.

Many careful dairymen, recognizing that the quality of the final product, whether butter or cheese or commercial buttermilk, depends upon the starter, always keep two Mother Starters running at the same time selecting the superior one and renewing frequently by setting a new culture as soon as one is the least off flavor.

For handling Starter, glassware is the best. Porcelain or enameled steelware with flushed seams and straight sides, give good satisfaction and so does aluminum. Copper is not safe, even if heavily tinned, because after a while the tin may wear off. Acid milk in contact with copper or iron may produce undesirable flavors and even poisons.

A small, heavily built wooden box for a waterbath, furnished with a small steam pipe to supply steam and a water pipe or hose for cooling, a homemade "fireless cooker," small aluminum stirrers and dippers, and a correct thermometer, complete the outfit for preparing the Starter.

All of the above is quite essential if one is to produce a good cultured buttermilk.

When you once have a good starter, the rest is very simple. To know how much starter to use, you must experiment to find out the strength of your starter. Sometimes 2% of a virile starter is sufficient to add to your skimmed milk and sometimes 10% is needed. A common sense way to do it would be to take the amount of skimmed milk you desire to make into cultured buttermilk and add a good strong dose of the Starter. Allow your milk to set at about 70° F. and when it becomes as thick as you want it, cool it so low it will cease "working" and that will be below 50° F. The time it will take to reach sufficient thickness will be determined by your local conditions.

Your market demands will determine how thick your

buttermilk should be and practice will soon teach you how much starter to add each day to fit the demands of your trade.

After you have curdled your product to the desired thickness and have cooled to 50° F. or lower, you should churn as you would cream, in any type of ordinary butter churn, for a few minutes until the milk is perfectly smooth. The resulting product should have a smooth velvety consistency. One should be careful not to churn the buttermilk too fast, as it may cause a foamy buttermilk, which does not keep well. If you are going to bottle your product, cool to about 45° F. and bottle in sterilized bottles. Always keep cool for delivery.

Some people desire Bulgarian Cultured Buttermilk. There is absolutely no difference in any detail in its manufacture. This type of buttermilk contains a slightly different organism which gives it a little different flavor which some people prefer. If anyone prefers this type of buttermilk, just purchase *Bulgarian Culture* and proceed exactly as had been outlined for the Lactic Ferment Culture.

Straw to Sell for as Much as Grain

By J. H. LEWIS

IN this day and age of scientific research new wonders are certain to be unfolded, and many things once regarded as valueless will come to be a daily necessity with a certain source of revenue attached. There is an old Turkish proverb, which runs: "Keep a thing seven years and you will have use for it." Now it probably never occurred to any Western farmer that straw, defined by Webster as a "mere trifle," would some day be a valuable farm commodity, and that two tons of it would sell for as much cash as the grain itself would bring, but a human genius has worked the problem out and it is no longer a figment of the mind or the vaporings of an idle dreamer but a concrete reality.

In 1912, an Iowa man was compelled to remain over night at a farmer's home. Inclement weather made it necessary to provide some heat for the farm home and the owner fed sheafs of twisted straw into the stove. The stranger detected gases and after awhile there was an explosion which blew one of the lids off the stove. It set him to thinking and he began experimenting. Now after more than ten years a plant representing an investment of \$100,000 is turning out various products of commercial value and of daily necessity.

The old straw stack is now used in manufacturing vegetable gas, carbon, oils and paint products. One ton of straw produces 640 pounds of carbon, 10 gallons of vegetable tar, 40 gallons of fluid and approximately 12,600 cubic feet of gas. The gas furnishes the heat used in distilling the straw, lights and heats the plant and runs the machinery used in the development of the products, so the process of distillation and manufacturing is an endless chain.

Though the skill of this genius, straw is now bringing the farmer a revenue of \$8.50 per ton, or an average of about \$17.00 per acre. This in reality ranges close to the cash value of the grain itself.

A brief word picture of the process would not be out of order,

First, there is a large retort, about 20 x 20 feet, in which are several large tubular retorts in the dome above the fire. Into these retorts the straw is forced by powerful machinery and is subjected to an intensive heat, from 1,200 to 1,400 degrees Fahrenheit, a process of destructive distillation. After the straw is forced through the retort the carbon and oils are conveyed into separate tanks.

The products go through chemical processes, and various products are recovered. First there is a spray which is very efficient in destroying all kinds of livestock pests. The straw which is grown by the farmer goes back to the farmer to protect his animals against pests. This means more sanitary conditions; more milk, better hogs, better poultry, better horses, through the destruction of the pests which breed disease and rob the stockmen of profits. So efficacious is this remedy that it is being used on fox farms where the high priced pelts are treated with no harm to the pelt nor to the skins of the animals. Straw has at last become the foundation of a great industry, and science and skill has placed an entirely new interpretation on Webster's definition of the word straw.

The old straw stack which years ago performed the dignified service of filling bed ticks and as bedding for animals kept in barns is at last in a fair way to become quite popular over all the United States. From straw, the Iowa man is making a line of paints that supercedes those made from minerals and he obtains this paint in several colors. A careful examination of these paints made by the writer shows that they cling tenaciously to the material and that bending painted sheets of tin, or sheet iron fails to leave any wrinkles in the paint nor did the paint crack or peel. From the same carbons the inventor is making autoflex primer, varnish remover, black enamel paints and auto top dressing. Radical changes are coming in the paint industry of this country for factories will be built near the great centers of straw production in order that economical production will enable the makers to compete with brands of paint made at present. It is even possible that what is now a by-product of the grain-growing industry may become the main source of income.

Last year the Metropolitan Life Insurance Company used in its home office 3,649 quarts of cream, 357,065 quarts of milk, 16,920 quarts of evaporated milk and 91,246 quarts of ice cream. It served dairy products to its employees at regular hours.

Holland has been having a lot of trouble with foot and mouth disease. For the week ending May 3, no less than 1,537 cases were reported officially.

A well planned and equipped barn saves time and labor for the farmer, and provides comfortable quarters for the cows, while the poorly planned barn is a daily source of annoyance and of wasted time and energy. It is important, then, that the dairymen become familiar with the best principles of barn construction and the most satisfactory types of equipment, before building or remodeling their barns.

Tuberculosis War Does Not Lower Demand for Dairy Products

MANY friends of the dairy industry occasionally express the opinion that the tuberculosis agitation has a detrimental effect upon the consumption of dairy products. This view is not borne out by a study recently made by dairy and veterinary specialists connected with the United States Department of Agriculture. These specialists have charted the relationship between the slaughter of tuberculosis cattle, the total dairy cows in the United States and the per capita consumption of milk for the past six years.

During the year 1918, there were 6,544 head of cattle killed as tubercular while in 1923, the number was 107,321; approximately 95% of the cattle killed for this reason were dairy cows. During this six year period, the total number of dairy cows in the country showed an increase of 1,127,000 head while the annual per capita milk consumption increased from 172 quarts to 212 quarts.

The number of cattle slaughtered in the campaign for tuberculosis eradication is very small when compared with the total number of animals, being less than one-half of one percent of the dairy cows in the United States. While the tuberculosis eradication work has been going on actively, the dairy cows in the country have increased more than a million head. During the six year period, the total population of the United States has increased almost seven million and besides this, there has been an increase of 40 quarts in the annual per capita consumption of milk.

It is very evident that tuberculosis eradication and the widespread discussion caused by the work and its effects has had no detrimental effect on the consumption of dairy products. Testing for tuberculosis works for better products as well as more economical production and there is reason to believe that such testing has had a stabilizing effect in communities that have been made free from this disease.

Equal Treatment

WHETHER one believes in the high tariff, low tariff, tariff for revenue only, or no tariff at all, one broad principle should be recognized—that American Agriculture is on an American standard of living and of costs, whether in beef, pork, wheat, milk, butter or cheese products and that whenever and wherever foreign products come in competition, these agricultural industries demand and must have the same kind and quality of protection that other American industries have. Agriculture and other industries must stand or fall together. There is neither politics, sectionalism or partizanship in this principle.

The New York Milk Market

AS forecast in the speech made by John D. Miller, vice president and general counsel of the Dairy-men's League Coöperative Association, Inc., at the annual meeting of the League at Utica, June 19, the representatives of the League walked out of the third session of the Committee of Fifteen when that committee met at Utica, June 30. The occasion was

the introduction by G. A. Piszczek of Newport, N. Y., of a resolution aiming to fix a price of \$2.33 per 100 pounds class one milk, this to take effect on July 12.

Charles H. Tuck, one of the League representatives, had previously introduced a series of resolutions, one of which provided that the Committee request the New York State College of Agriculture and the New York State Department of Agriculture to make, under the direction of Dr. George F. Warren, of Cornell University, a thorough survey of the needs of the New York milk market and the production of the so-called metropolitan milkshed to the end that the basic facts as to surplus, grades, and supply and demand be made available. A second resolution stipulated that the findings of this survey be made public through the medium of the Master of the New York State Grange and the President of the New York Farm Bureau Association. Another resolution proposed by Mr. Tuck provided that each group represented in the Committee of Fifteen submit to the college and the state department a statement setting forth the amount of business, form of organization, methods of sale, and during each of the past three years, the total membership representation of each group.

It is not the present purpose of the BREEDER AND DAIRYMAN to comment editorially upon the actions of the various groups represented in the Committee of Fifteen. No one regrets more than ourselves the unsettled state of the metropolitan milk market. The chaotic condition of this market affects the dairymen more than it affects anyone else and many of the readers of this journal are mainly dependent for a livelihood on the proceeds of their dairies shipped to this market. Anyone who takes an auto trip through the territory from which comes the milk for New York City, particularly if he travels the country roads instead of the state highways, can see for himself by the number of empty farmhouses and unworked farms, that the dairy farmers are not prospering. An owner of purebred Holsteins who is also a staunch League member said to the editors of this journal a few days ago, that it was hard enough for him to get along, what must it be for the man who owns only native cattle or poor grades? The party in question owns a big producing herd of purebred Holsteins and practically every one of his seventy head was raised on his farm.

To paraphrase the words of one of our greatest presidents, "It is a condition, not a theory" that confronts the eastern dairy producers. A remedy is needed more than a survey. Just what is that remedy is puzzling the minds of many men who are not allied in any way with the various groups of dairy producers. The sooner the remedy is found and applied, the better for all concerned.

What is the difference between a successful business man and a failure? One difference is that trade depression and hardships stiffen the backs of good business men, whether these be merchants, manufacturers, or farmers. The man who is easily put down and out by the slumps in trade,—well, he's just down and out—that's all. The man who stays on the job through thick and thin, is the chap who made famous that old saying—"Keeping everlastingly at it brings success."

Over a Ton of Butter in a Year

MELBA 15th of Darbalara, the phenomenal Australian Milking Shorthorn, has finished her year record and is officially credited with the production of 32,522 lb. milk, 1,614 lb. butterfat. This is equivalent to 2,017.50 lb. butter computed on the 80% basis. She was milked three times daily during the entire year.

The May 8 issue of the BREEDER AND DAIRYMAN carried the announcement that Melba had, in 300 days, exceeded the 365 days butterfat production of De Kol Plus Segis Dixie.

As a four-year-old, Melba 15th of Darbalara produced 21,635 lb. milk, 954 lb. butterfat in 365 days on two milkings a day. As far as we know this is still the world's official record for a year's production on twice a day milking, all ages and breeds included.

After her next freshening, Melba was milked three times a day. After a severe attack of milk fever, she straightened around and went on producing at a tremendous rate. Late in her lactation period, she again was sick but recovered and in the full year made 29,423 lb. milk, 1,656 lb. butter. At that time she became the world's champion over all breeds as her record exceeded that of Bella Pontiac, 1,587.50 lb. butter. About two weeks later, Agassiz Segis May Echo completed her record of 1,681.25 lb. butter and became the world's champion. She was beaten by De Kol Plus Segis Dixie and now Melba 15th of Darbalara regains the championship.

Melba's record of 1,656 lb. butter was completed in January, 1923. She went dry in April, 1923 and freshened again in June of the same year. It is reported that when dried off in April she weighed 1,680 lb. while when she freshened on June 9, she weighed 2,128 lb. Evidently this great cow has the ability to transmute her feed into either milk or flesh. Her caretaker, A. T. Cole, says that this gain in weight was made on pasture alone without any grain feed whatever.

The Melba family are descended from Bates Short-horns imported into Australia from England. They were developed for five generations by Mr. A. T. Cole. The Scottish-Australian Investment Company purchased the ranch and Mr. Cole became the manager of the herd and ranch which is located at Gundagai, New South Wales. A great deal of interest has been taken in this great cow not only by the adherents of the Shorthorn breed but also by many who believe that a good cow is able to rapidly put on flesh when dry as well as produce heavily when milking. Mr. Cole was asked to give a description of this animal and the following is in his own words:

"Melba 15th of Darbalara is just as outstanding on the flesh producing side as she is on the milk producing side. She is an outstanding dual purpose animal, having great size, a massive frame, great length and depth of flank, an exceptionally deep, broad thigh, a lovely head of medium size, with large extended nostrils, a full, mild, fearless eye, and the loose, soft mellow skin of a heavy producer and ready fatterer. With all her size there is no coarseness about her in any respect. Her bone is fine and she is full of quality. When dry, she fattens rapidly on pasture, without hand feed of

any kind, and increased from April 1923, to June 9th, 1923, while dry, from 1,680 lb. to 2,128 lb. without hand feed."

Marathon County Adopts Official Slogan

"THE Dairy Cow, the Gold Mine of Marathon County" has been chosen as the slogan of the dairy industry in Marathon County, Wis. The Wausau *Record-Herald* organized a slogan contest which extended over two months. Many proposed slogans were sent in and the one above, written by Edward Ano of Birnamwood, was selected by the judges as the best and most expressive.

The chosen slogan will be adopted as the official motto of the county. It expresses in a few terse terms, the belief which prevails over the entire United States as to what is the foundation of the welfare and prosperity of the great state of which Marathon County forms a part. Wisconsin bases her chief claim to greatness upon her dairy cows and the dairy products produced within her borders. It is just and fitting, therefore, that at least one Wisconsin county formally recognizes where the credit is due and places that credit where it belongs.

Testers in Demand

DURING the past month new testers have been assigned to nine Pennsylvania C. T. A. associations and fourteen other associations will need testers within the next three months. There are at present five men at State College preparing themselves to do cow testing association work. As the authorities expect a large demand for testers in September, they will put on a testers' Short Course from August 11 to 16 inclusive. This is an opportunity for farm trained boys to secure a good paying position with lots of opportunity for advancement.

The training a tester gets in his journeys around his patrons' establishments, the knowledge he gains of cattle and dairy conditions, good and bad, is invaluable training. Here is one occupation where there are more positions than there are men to fill them. Intelligence, tact and willingness to work are necessary for success as it is in every other worthwhile occupation.

The Californian Situation

WHILE there has been two or three new cases of Foot and Mouth disease in California during the past few weeks they have all been in previously infected territory and, with one exception, they are all in the great dairy district around Los Angeles. Reports from veterinarians and state authorities are very optimistic.

Dr. John R. Mohler, chief of the Federal Bureau of Animal Industry, is now in California superintending the work of the force under his jurisdiction.

"Agriculture and all engaged in it must have absolute equality of treatment with all other industries."

CLUB ACTIVITIES

HOLSTEINS FOR NORTH DAKOTA

About forty-five head of high grade Holstein females and two registered sires have been placed in the Makoti and Van Hook communities through the activities of the Northwestern Mutual Dairy Loan Association of Minot, N. D.

The cows were shipped from the southeastern part of Wisconsin and were sold at an average price of \$150 each. Heifers ranged in price from \$100 to \$125.

R. A. Johnson, a banker of Makoti, and Mr. Levinson of the Northwestern Dairy Cattle Company of St. Paul, stated that another carload of cows could be sold around Makoti which has at present two cream stations and also a cooperative cream association. Butterfat is bringing around 35 cents a pound.

BARRON CLUB CHANGES NAME

The breed association or club in Barron County, Wis. is now to be officially known as the Barron County Holstein Breeders Cooperative Association. Action making this change effective was taken at the annual meeting held at Almena June 10.

The annual reports show the association to be flourishing. The sum of \$100 was voted to the Barron County Advancement Association for show herd purposes. As the \$50 appropriated for calf club work last year had not been spent, it was again voted to use that sum for calf club purposes and the committee was continued in office. The Association plans to attend the National Dairy Show, next fall in Milwaukee, in a body.

A community basket dinner was held at noon with coffee, ice cream as well as Holstein milk and cream furnished by the club. Mrs. C. E. Hatch and Prof. A. O. Collentine as well as several Barron County men gave short talks.

AROUND MILWAUKEE, TOO

The city of Milwaukee has an ordinance which forbids the sale, in that city, of any milk unless produced by tuberculin tested cows. That this ordinance was not enforced because milk from tested cows had not been in sufficient volume to supply the demand was the startling statement made by Arthur Knilans of Janesville, Wis., in a speech to the farmers

at the Court House at Elkhorn, June 6. Mr. Knilans is endeavoring to promote area test work in Wisconsin. To illustrate his talk, he showed the movie film, "Out of the Shadows." He claimed there was more tuberculosis among residents of the country than there was among those of the city, due to the fact that milk sold in the city, was first pasteurized.

The mass meeting was called by President George Hull of the Walworth County Farm Bureau and Ben Bachhuber of the Walworth County Holstein Association and was well attended.

A committee was appointed to endeavor to get enough signatures so that Walworth County can be tested on the Area Plan.

LEGUMES AND HOLTEINS BUILD IOWA FARMS

Alfalfa Tour Day was held recently around Lamoni, Iowa, and four farms were visited. On the Liberty Home farm, alfalfa, growing on ground that had been limed, was an average height of eighteen inches. Manager Derry expects to cut three tons per acre and every ton can be sold in Lamoni at \$25.

On the Lars Leetun farm, west of Lamoni, there were fields of alfalfa and timothy growing side by side. The land was practically the same as far as fertility was concerned and had received a good application of barnyard manure and acid phosphate. The alfalfa stood 24 inches high on the average while the timothy was a scant six inches high. Both Mr. Derry and Leetun had built up the farm to a high state of production by judicious handling of high producing Holstein cows. Crop rotation, barnyard manure, limestone and acid phosphate told the story.

Another stop was made at the J. E. Anderson farm where the new seeding of last fall was a partial failure. Limestone and acid phosphate had been added at the time of seeding but the soil is lacking in humus.

The next stop was the farm of J. G. Gillaspay where the work of preparing the seed bed had been done by Mr. Gillaspay's two sons, Dale and Donald. That they did well was attested by the crop of alfalfa standing twenty inches high and as thick as could be.

The last stop was made at the J. R. Mann farm where the

soil was being prepared for alfalfa seeding. Here a number of different samples of soil were taken and Mr. Mann told how he was preparing his seed bed. At all these meetings, Prof. Dyas of Iowa State College talked on the growing of legumes and especially alfalfa and answered many questions. There were about 50 in attendance.

FIRST PENNSYLVANIA PUREBRED SIRE CAMPAIGN

Twenty-one purebred bulls were placed at the head of Bucks County, Pennsylvania, herds during the recent Better Sires Campaign put on in that County. According to breeds they were as follows, one Ayrshire, ten Guernseys, and ten Holsteins.

The campaign was initiated by the County Holstein Association and the drive was under the direction of County Agent P. H. Sprenkle, but the Granges, Farmers' Clubs, the Agricultural Committee of the County Bankers Association, the Farm Bureau, the County Guernsey Breeders Association, the Holstein Association, and several leading Ayrshire and Jersey breeders, all cooperated in putting on the Campaign. This was the first County Better Sires Campaign put on in Pennsylvania.

Several weeks before the Campaign started newspaper articles were published in practically all of the weekly and daily papers in the County. Posters were also printed and distributed. The Creameries and Banks cooperated by sending out notices and letters announcing the Campaign and calling the importance of it to the attention of their patrons. Following this publicity, meetings were held in the leading dairy communities in the County. Twelve meetings were conducted with a total attendance of seven hundred and twenty-five. Most of the meetings were held in cooperation with the Granges and Farmers' Clubs.

At the meetings S. J. Brownell, Dairy Specialist of the Pennsylvania State College, talked on the importance of higher production per cow as well as good dairy management. Allen N. Crissey, Field Man for the Extension Department of the National Holstein Association, by means of charts, pointed out the increase in production gained by the use of a good sire as has been demonstrated in many breeding experiments.

Cards were passed out at the meetings in order to find out who were good prospects. The next day these prospects were followed up by breeders and field men and an effort made to place a better sire.

During the Campaign, William F. Fretz of Pipersville bought at the Upland sale, Upland's Good Gift, a son of Langwater Cavalier, to head his Guernsey herd. Gross and Hunsberger, Holstein breeders bought Brentwood Pietertje Prospect 419562 from Brentwood Farms, Abington, as their herdsire. Brentwood Pietertje Prospect is by Brentwood Prospect, a son of Tillie Alcartra 2nd. H. G. Rosenberger bought a son of the Ayrshire sire Penshurst Rising Star. All of the bulls placed were purebred and come from dams with either Advanced Registry or Cow Testing Association Records.

COUNTY FARM COW MAKES BIG RECORD

I am pleased to announce that the Holstein-Friesian cow Chesney Freda Lothian 353270 has just closed a long-time test and is credited with 26,478.2 lb. milk containing 1,036.96 lb. fat in 365 days, thus showing an average of 3.92 per cent fat in the milk. She freshened at the age of 6 years, 6 months, 26 days. Her sire is Lothian Korndyke De Kol Pietertje 96633; her dam is Pauline De Kol Segis Hengerveld 267821. She was bred by Mr. T. D. Morley, West Mentor, Ohio, and is now owned by the County of Essex, Cedar Grove, N. J. At the age of 3 years, 4 months, 10 days, she is credited with 495.5 lb. milk containing 17.834 lb. fat in seven days, and during that lactation period she is credited in semi-official test with 18,138.4 lb. milk containing 667.67 lb. fat in 365 days. For the lactation period just closed, her best seven days' official production, made 23 days from freshening, shows 680.6 lb. milk containing 21.810 lb. fat. For this same lactation in another 7-day test, made 16 days from freshening, she is credited with 640.6 lb. milk containing 20.858 lb. fat. During the year she had thirteen official test periods, of which two were not less than seven days in length, and one was a

constant watch verification test 2 days in length. Nine different supervisors were employed in the conduct of the test. Her 365 day fat production of 1,036.96 lb. equivalent to 1,296.20 lb. butter on the 80 per cent basis, gives her 46th place among cows producing above 1,000 lb. fat, she being the 82nd cow to gain the honor of producing more than 1,000 lb. fat in 365 days.

June 16, 1924.

MALCOLM H. GARDNER, Supt. A. R.

CALIFORNIA COW MAKES 30,000 LB. IN YEAR

I am pleased to announce that the Holstein-Friesian cow Stratford Pledge De Kol 291083 has just closed a long-time test and is credited with 30,459.1 lb. milk containing 1,046.63 lb. fat in 365 days, thus showing an average of 3.44 per cent fat in the milk. She freshened at the age of 7 years, 10 months, 20 days. Her sire is Sir Segis Hengerveld De Kol 76980; her dam is Copa de Oro Pledge 127378. She was bred by Mr. T. J. Gilkerson, Lemoore, Calif., and is now owned by Mr. F. M. Helm, Fresno, Calif. At the age of 6 years, 6 months, 11 days she is credited with 633.2 lb. milk containing 20.693 lb. fat in 7 days and during that lactation she is credited in semi-official test with 25,513.8 lb. milk containing 859.08 lb. fat in 365 days. For the lactation period just closed her best seven days' official production show 558.1 lb. milk containing 21.098 lb. fat. During the year she had fourteen test periods, of which two were not less than seven days in length, and one was a retest. Eight different supervisors were employed in the conduct of the test. Her 365 day fat production of 1,046.63 lb. equivalent to 1,308.28 lb. butter on the 80 per cent basis, gives her 42nd place among cows producing above 1,000 lb. fat, she being the 83rd cow to gain the honor of producing more than 1,000 lb. fat in 365 days.

Delavan, Wis., June 20, 1924.

Man's inhumanity to man we scan

In court's of law, and note the roar of it.

And yet man's inhumanity to man

Makes countless lawyers mourn for more of it.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman

BOX 110, HARRISBURG, PA.

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

Full Information Free—Write Today for Sample Copy.

This Journal keeps you posted on the care and feeding of the hog. Much valuable information, worth many times your investment.

COMBINE THE COW and SOW as the real MORTGAGE lifter.

Advertising rates on economy basis. Don't miss a single copy of this interesting Journal.

Subscription 1 year, 50c; 3 years, \$1.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

July 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Sound Business Policies vs. Wasteful Extravagance

WE have previously criticised the policies pursued by the Extension Department of the Holstein-Friesian Association, contending that the various projects that were being undertaken and carried out by the Extension Department were an extravagant waste of the Association's funds and that no good to the industry or to the breeders could possibly result from the enormous expenditure.

The purpose of the Extension Department, we assume, is to establish a favorable impression among dairymen generally towards the breed with a view of creating a market for purebred Holstein cattle. From our observation the desired results are not being accomplished.

If the Extension Department is carried on for the purpose of benefiting the breeders through creating a market and increasing the sales then it is not a question as to what is being done by the Extension Department but rather the results that are being accomplished.

By referring to the report of the Director of Extension we find a fourteen page pamphlet, telling of the millions of pamphlets, periodicals and advertisements that have been prepared and circulated by the Extension Department. In the summary of the report is some twenty-seven different projects that were indulged in to a greater or less degree by the Extension Department. The report of the Extension director might give the breeders some idea as to the various items entering into the \$202,387.69 that was expended for extension service but it tells them nothing in the way of results that were accomplished.

To find out just what the Extension Department accomplished we will have to refer to the report of the

Secretary, which will give us the number of transfers issued during the year. If we compare the number of transfers issued during the year 1923 with the number of transfers issued during the year 1922, we find that our Extension Department has accomplished nothing in the way of results, in fact, the Association transferred less cattle during 1923 than they did during the year 1922 or they transferred 91,830 in 1922 and 91,666 in 1923.

The Association's records show that there has been a continual dropping off in the number of transfer certificates issued by the Association since the Extension Department was established in Chicago and Mr. Fred Koenig placed in charge of the work.

From the Association's financial statement for the year 1923 we deduce that the expense of carrying on the Association's work exceeded the Association's income by \$60,819.55. Notwithstanding this fact the management at the Richmond Convention saw fit to appropriate \$50,000 to carry on the Extension Department work for the remainder of the year ending December 31, 1924.

We will leave it to our readers to determine whether the Association is being managed in accordance with SOUND BUSINESS POLICIES or whether it is pursuing a course of WASTEFUL EXTRAVAGANCE.

No doubt the question will be asked, "why the management should want to continue the Extension Department after it had been so clearly demonstrated that it was an utter failure as far as being beneficial to the industry or to the breeders?"

We will not attempt to answer this question but will refer our readers to Section 16 in the petition in the action brought by Mr. Stevenson and forty-six other breeders against the Association for the purpose of checking extravagance and restoring the Association's management to its members to whom it rightfully belongs.

"Your petitioners further show that up to and on or about June, 1919, the fees to be paid the Secretary of the Association on the sale and transfer of any animal, for a transfer certificate was the sum of twenty-five cents, and that under the careful and prudent management of the Secretary and Superintendent of Advanced Official Registry, the surplus fund of the Association had grown to upwards of \$340,000; that at that time, the fees for such transfer were increased to one dollar, which at once became a grievous and oppressive burden upon the small farmer or practical dairyman. That previous to and at the annual meeting at Syracuse, New York, in June, 1921, a determined effort among the entire membership was made against such excessive fee, with the result that by an overwhelming majority by membership and proxy vote, such fee was reduced to fifty cents. That thereafter and on or about the month of June, 1922, at the Kansas City meeting, for the purpose of creating a so-called extension service, and entrenching and perpetuating themselves in the management and control of the affairs of the Association, the then board of directors by and through a vote of the delegates present again raised such transfer fees to one dollar and a half.

"Your petitioners further allege upon information and belief that over twenty thousand members of the

Association are plain, everyday practical farmers, who live on their own farms, do a part, if not all of the actual labor thereon. That there are some of the members of the Association who are men of great wealth, prominent politically and socially in business enterprises and circles, and it is from this class of the membership that the present board of directors and some of the officers are made up. That by and through the so-called extension service, state associations in several of the states were formed, each of which associations have been placed in charge of a man who for a paid salary has looked after such extension service, and managed the same in such a manner, as to safeguard and protect the interests of the said Board of Directors, in a political way, to the end that their management and control has been perpetuated and entrenched. That because of the great expense attendant upon such extension service, or propaganda, it became not only necessary to increase such transfer from fifty cents to one dollar and a half, but also the same coterie of gentlemen farmers composed of wealthy politicians and business men who are owners of Holstein Friesian cattle merely because of a hobby or fad, and not because it was necessary for their livelihood, from their viewpoint of self preservation, decided that it was necessary to encroach upon the surplus funds of the Association, which on the first day of June, 1923, amounted to \$459,749.54 and they served notice upon the secretary and he, as in duty bound, served notice upon the membership, that a motion would be made at the annual meeting in Cleveland, to take \$93,000 out of such surplus fund, and expend it in said so-called extension service, with the result that \$47,000 or more was actually taken from said surplus fund, and was devoted to the ostensible purpose of benefiting the breed through the so-called extension service. That through the operation of the so-called extension service a certain portion of said one dollar and fifty cents transfer fees and the accumulations therefrom, namely, fifty cents on each transfer, are made payable to organizations formed in various states for the purpose of the so-called extension service, with the result that a half-dozen of the states which have greater membership than others received a very large proportion or one-third of such fees, which are again used in an effort to perpetuate this same coterie of gentlemen farmers, in their control of the association. Your petitioners allege that no benefit whatever accrues to any member of the association from this so-called extension service, except these few 'Gentlemen Farmers, politicians and business men,' above noted."

A Market For Buttermilk

OUR editorial in the May 22d issue pointing out that a profitable way of utilizing surplus milk was to manufacture it into cultured buttermilk and similar products, evidently struck a responsive chord judging from the number of requests we have had for information upon this subject. Therefore the BREEDER AND DAIRYMAN plans a series of articles on the manufacture of this by-product, realizing that any way of utilizing surplus milk during the flush season works for the betterment of the producer not only because of an increased price for their product but also

because any amount used in this way keeps just that amount from helping to flood an already over-stocked market.

The word cultured as applied to buttermilk seems rather amusing. Culture, especially when spelled with an initial "K" fell into rather bad reputation when William Hohenzollern attempted to force his idea of culture upon an unwilling and reluctant world, a world that protested not only vigorously but also victoriously. But cultured also means cultivated and it is in this sense that it is applied to the manufactured product marketed under the name of cultured buttermilk. This product is cultivated or manufactured and although we prefer our buttermilk fresh from the churn, we are not at all adverse to a cool glass of the manufactured product when no other is available and the large amounts disposed of in many of the large cities, particularly in the south, indicate that the manufacturing and marketing of artificial buttermilk is one that will bear investigation by milk producers who are able to reach a retail market with this product.

Electric Service for Farmers

ELECTRICITY and electric appliances are justly considered among the greatest boons of the present age, yet dwellers in rural communities often feel that they are discriminated against by the companies or corporations supplying electricity for light and power. The city householder makes a trip to the office of the electric light and power company, signs an application for service, sometimes makes a small deposit which is returned to him plus interest when the contract is terminated, and in the course of a day or so, a meter is put in and his family is enabled to use the "juice" for lighting purposes, and to run electric washing machines, vacuum cleaners, electric irons, etc.

It is far different with the man on the farm. When he needs service, the representatives of the corporation begin to talk of expense. Generally they ask that the farmer pay the cost of the poles and lines connecting his house with the main or branch line. In addition they sometimes demand that he buy a transformer. The actual cost of these transformers, we are informed, range from \$25 to \$50. The farmer is asked to pay anywhere from \$25 to \$150. Sometimes the companies demand that two meters be installed, one for power and one for light for which different rates are charged. Everything seems to be figured at the highest cost and the customer is expected to pay the cost before he gets any service.

Perhaps the most exasperating cases are where a corporation has invoked the aid of the law in condemnation proceedings and obtained the right to set poles or towers across the farms and then turned around and refused service to the owner of the farm over which the wires go or, if they will condescend to give service, they ask a price apparently out of reason.

As far as we know, no ruling has ever been made by a public service commission as to rates and charges for rural service. The companies apparently wish to avoid any such ruling and in some instances have been known, where the farmer was an influential man and threatened to carry the matter further, to grant con-

cessions that they do not grant to the general rural public rather than to bring the matter to a show down.

In many states sentiment is rapidly crystallizing on this question in the farming communities. Farm women see electric labor saving devices used and advertised and seek to have their own labors lightened. The farm labor shortage has taught the farmer and dairyman to seek easier ways of getting work done than by manual labor and the giant of electricity is desired as a helper. Apparently the electric light and power companies are missing a big opportunity when they fail to cater to a rapidly growing demand for their service.

Milk to Prolong Life

UNDER the title "All About Milk," the Metropolitan Life Insurance Company has sent out a 32-page pamphlet written by Dr. Milton J. Rosenau, Professor of Preventive Medicine and Hygiene, Harvard University. This booklet is for the use of the policy holders of this great insurance company. It calls attention to the value of milk as food, making the message more interesting and striking by means of pictures and diagrams. It gives the consumer information on the care of milk and if its teachings are followed, there will be less complaints as to the quality and cleanliness.

This great insurance company is not putting out the booklet because of its philanthropy not by any means; it is just plain, cold, everyday business. The better health enjoyed by its policy holders and the longer they live the longer the company receives premiums and the longer it has the handling of the policy holders' money. As the pamphlet says, "A copy should be in every home."

The plan, construction and equipment of a dairy barn should receive careful consideration and study in order that the building may best serve its purpose, and also to avoid as far as possible having to make expensive alterations which otherwise might become desirable or necessary.

Moscip Wins Damage Suit

DID you ever hear of a farmer having a summer home? While we knew that the time of Wm. S. Moscip was pretty well taken up by his duties as judge at fairs, with work as director of the National Holstein-Friesian Association, and chairman of the true type committee on the side, we thought that he spent the rest of his time on his farm at Lake Elmo, Minn. We learn, however, that he has a summer home near Leech Lake, Minn. This summer home is in a well wooded country and a lot of timber was stolen from this estate. Mr. Moscip considered that he was damaged to the amount of \$30,000 and he sued the timber company for this amount. In the Ramsey County Court, he was recently awarded the sum of \$3,808.85 as compensation for the damage.

Oleo Production

STATEMENTS have been made by a number of periodicals that the consumption of oleomargarine was materially increasing. These statements are not borne out by the stamp sales of the Bureau of Internal Revenue for May compared with the corresponding month of last year. During May, 1923, the amount of colored oleo produced was 679,998 lb. and the amount of uncolored oleo was 17,774,500 lb. Stamp sales for May, 1924, were for 760,506 lb. colored oleo and for 16,732,600 lb. uncolored oleo.

Fields Has Not Quit

FRIENDS of Mr. Fred F. Fields will be pleased to learn that despite the dispersement of the Dutchland Farm herd he is not out of the Holstein business. A farm at West Bridgewater, Massachusetts, is being maintained where a herd of upwards of 70 animals are being kept under the Bang System. Mr. Fields has not resigned as a director of the Holstein-Friesian Association of America.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

ANNUAL MEETING OF THE DAIRYMEN'S LEAGUE

With nearly 700 delegates in attendance representing the membership of over 65,000, the fifth annual meeting of the Dairymen's League Cooperative Association, Inc. was held at the State Armory, Utica, New York, June 19. Spectators, nearly all farmers, brought the total attendance to well over 2,000.

The fiscal year of the association ended March 31, 1924, and also the third year of the pooling plan. President Slocum announced that the gross sales for the year amounted to \$75,132,468.64 and that during the year 3,095,000,000 lb. milk were handled. This is a decrease in amount from last year when 3,734,000,000 lb. were handled but a slightly better price was realized. Among the gains were:

Increase of 20 cents per 100 lb. milk in the average gross pool price (\$2.10).

Increase of 18 cents in the average net pool price (\$2.01).

Increase of 22½ cents in the average cash distribution to members (\$1.917).

Decrease of \$.0419 in average deductions for certificates of indebtedness (\$.0957).

Decrease of \$.0079 per 100 pounds in administrative charges (\$.0616).

"The average gross pool price for all grade B milk at the base zone, 201 to 210 miles from New York City, and testing 3 percent butterfat, sold by the League during the past year was \$2.10. This was twenty cents per hundred higher than the price for the fiscal year which ended March 31, 1923.

"The average net pool price which includes certificates of indebtedness was \$2.01 per hundred pounds as compared with \$1.83 for the previous year. The average cash distribution deduction per hundred pounds for certificates of indebtedness was \$1.917 as compared with \$1.692 a year ago. The average was \$.0957 as against \$.1376 last year, or a little over four cents less. The average total administrative charges are \$.0616 as against \$.0695 a year ago or nearly one per cent per hundred pounds less." It would follow that the average deduction for all League purposes last year including that for certificates of indebtedness was 15.73 cents per 100 lb. while for the year ending March 31, 1923, the average deduction was 20.71 cents.

President Slocum said that "Greater production throughout the world is responsible for the decrease in all classes other than Class 1.

"There is no mystery about this so-called spread between the pool and the average classified price. It is the price League farmers are paying to build their business and to protect the markets this great organization serves. All dairymen are paying the penalty because of the desperate effort of the few to evade their fair share of the costs of handling their supplies."

The financial strength of the organization is shown by the following from the annual report of the treasurer, Chester Young; Cash in bank, \$3,057,375.84; plants and equipment after charging off depreciation and mortgages, \$5,872,690.83; other assets, \$8,994,057.22. The current assets are more than double the current liabilities. The excess of the current assets over current liabilities are sufficient to pay 52 per cent of all the outstanding certificates of indebtedness without considering the real estate values which have been more than conservatively depreciated.

Mr. John A. McSparran, Master of the Pennsylvania State Grange, urged the national organization of farmers in a forty-five minute speech.

Dr. George F. Warren of the Department of Agricultural Economics and Farm Management, Cornell University, in a fifteen-minute talk outlined the course in cooperative marketing at the New York State College of Agriculture, for which the Legislature at its last session appropriated \$45,000.

At the afternoon session John D. Miller, vice president and general counsel of the association, explained the League's attitude towards the Committee of Fifteen which is composed of representatives of five groups of milk producers. He said that this committee consisted of three poolers and twelve non-poolers while the individual membership of the League largely exceeded the number of all the others combined. The committee was to concentrate its thought and efforts on the formation of a marketing plan. But instead it voted to raise the price of class 1 milk. "This," he said, "was unlawful and unworkable." "Either the Committee of Fifteen did not know that this proposed act was unlawful or they did. If they did not know it they were meddling with problems which they did not understand. If they did know it, their purpose was to put the Dairymen's League in a hole, because the League as the greatest cooperative association that participated in the illegal transaction, would be the first attacked by the legal representatives of the state and federal governments. The Dairymen's League will not be a party, directly or indirectly, to any agreement with any concern that is marketing milk in New York City in competition with the League, to raise the price of milk." He hoped that if the Committee of Fifteen at its next meeting June 28, again convert themselves into a price fixing committee, the three League members in whom he had every confidence, would immediately withdraw.

Resolutions were adopted expressing sorrow over the death of Albert Manning, one of the founders of the League and its secretary for many years.

The delegates, by resolution, pledged themselves to support the League in its efforts to save them money and to increase the quality of goods; commended the directors and officers for their work during the year; and approved the policy of marketing as much milk as possible in fluid form. State Fair

Willow Brook Herd

now has for junior herd sire

King Ormsby Endercamp

a son of the great sire

King of the Ormsbys

and

Vandercamp Segis Aaggie Jewel

29.37 lb. butter in 7 days; over 900 lb. butter and 21,000 lb. milk in a year.

high class purebred Holsteins of any age you wish from this ACCREDITED HERD at reasonable prices.

Our cows and heifers are bred to BLACRES BAPTISTE ORMSBY whose six nearest tested dams average 32.14 lb. butter, 615.7 lb. milk.

B. J. GARDNER

Factoryville, Lackawanna Co., Pa.

Commissioner George R. Fitts was chairman of the Resolution Committee.

The new board of directors met at the Hotel Utica on June 20 and elected officers for the year 1924-1925 as follows; President, G. W. Slocum, Milton, Pa.; vice-president, J. D. Miller, Susquehanna, Pa.; second vice-president, John D. Smith, Walton, N. Y.; Secretary, J. A. Coulter, Woodville, N. Y.; Treasurer, Chester Young, Napanock, N. Y.; Executive Committee, Paul Smith, Newark Valley, N. Y.; W. U. Rixford, Wellsville, N. Y.; Fred H. Sexauer, Auburn, N. Y., and J. A. Coulter, Woodville, N. Y. President Slocum is ex-officio a member of the Committee and acts as chairman. The directors also reappointed J. D. Miller general counsel, Bradley Fuller, associate counsel, and named Miss Priscilla E. Rowe of Otisville, N. Y. as assistant to the secretary.

The directors of the league set aside \$180,000 for the purchase of certificates of indebtedness series A, maturing 1927. This is in addition to the sinking fund appropriation of \$250,000. The time limit for the purchase has been extended to August 10, 1924.

The Dairymen's League Coöperative Association's gross pool price for 3 percent milk at the 201-210 milk freight zone for May is \$1.485 per 100 lb., with deductions of \$.085 for expenses and \$.10 for certificates of indebtedness. The net pool price, therefore, is \$1.40 and the cash distribution is \$1.30.

LEAGUE SETS JULY PRICES

The Dairymen's League prices as recommended for July milk will be the same as in June. These are per 100 pounds of milk (3% butterfat) at the 201-210 milk freight zone:

Class 1 (fluid) milk	1.86
Class 2-A (Cream) \$1.70 plus skim milk value	
Class 2-B (Plain condensed and ice cream)	1.85
Class 2-C (Soft cheeses)	1.85
Class 3 (Evaporated, sweetened condensed and milk powder and hard cheeses, other than American)	1.55

STRICTLY OFFICIAL TEST

I am pleased to announce that the Holstein-Friesian cow Dutchland Creamelle Cornucopia 446981 has closed a strictly official long-time test, and is credited with 27,690.8 lb. milk containing 1,027.33 lb. fat in 365 days, thus showing an average of 3.71 percent fat in the milk. She freshened at the age of 5 years, 8 months, 3 days. Her sire is Dutchland Creamelle Korndyke Lad 112174; her dam is Dutchland Cornucopia Hengerveld 2d 173136. She was bred and is now owned by F. F. Field Holstein Trustees, Brockton, Mass. At the age

of 2-9-27 she is credited with 20,794 lb. fat in 7 days, and 80,198 lb. fat in 30 days. During this same lactation she is credited with 16,937.7 lb. milk containing 651.2 lb. fat in 305 days, carrying a calf 175 days of the time. At the age of 3-11-19 she is credited with 21,743 lb. fat in 7 days, and 89,129 lb. fat in 30 days. Being continued in test during the year, she showed a production of 22,797 lb. milk containing 887.73 lb. fat. For the lactation period just closed, her best seven days' official production is 24,025 lb. fat; while in 30 days she is credited with 100,706 lb. fat; in 60 days, with 199,226 lb. fat; in 90 days, with 288,493 lb. fat; and in 120 days, with 382,985 lb. fat. Ten different supervisors were employed in the conduct of the test. Her 365-day fat production of 1,027.33 lb. lb. equivalent to 1,284.16 lb. butter on the 80 per cent basis, gives Dutchland Creamelle Cornucopia 6th place among cows with strictly official long-time tests and 57th place among all cows making official or semi-official tests with productions above 1,000 lb. fat, she being 84th cow to gain the honor of producing more than 1,000 lb. fat in 365 days.

June 27, 1924

MALCOLM H. GARDNER, Supt. A. R. Delavan, Wis.

KILL THE FLIES

Fly time will soon be here, the season when the winged scourges take their toll with resulting discomfort to man and beast to say nothing of the losses at the milk pail.

Fly sprays of some description should be used in every cattle barn. There are a number of good commercial sprays on the market. Some prefer to use a homemade spray.

Nearly every state experiment station has, at some time or other, prepared a spray mixture. The Pennsylvania State College of Agriculture recommends the following:

One and one-half quarts any coal tar dip, 1½ quarts fish oil, 1 pint oil of tar, 1 quart coal oil, ½ pint oil of pennyroyal.

Mix in ten gallons of luke warm soft water in which a bar of laundry soap has been dissolved. Spray twice a day, in the morning and after milking and in the afternoon when cows are brought in for silage or green feed.

The following is a spray mixture recommended by the Iowa station which is very efficient and yet cheap:

Four and one-half quarts coal tar dip, 4½ quarts fish oil, 3 quarts coal oil, 3 quarts whale oil, 1½ quarts oil of tar, 3 lb. laundry soap.

Dissolve the soap in water and add the other ingredients, mixing thoroughly. Bring the whole up to 30 gallons by adding luke warm soft water. This spray will not injure the coats of the animals as many sprays do.

The following is the Wisconsin receipt:

Two gallons kerosene, 1 quart pine tar, ½ pint crude carbolic acid, 1 quart fish oil.

Cow Testing Association Reports

TESTING IN LAWRENCE COUNTY

Purebred Holsteins occupy the three leading places for fat production during April in the Volant Cow Testing Association which operates in part of Lawrence County, Pa. Tester Paul J. Stonebraker reports that nineteen herds containing 226 cows were tested, of which fifty-four produced over 40 lb. fat and fifteen over 50 lb., while thirty-three exceeded 1,200 lb. milk.

W. C. McMillin & Son owned the animals standing in first and third places, one making 1,830 lb. milk, 62.2 lb. fat and the other 1,947 lb. milk, 60.4 lb. fat. Between them in the list stands a purebred of the C. M. Hartzel herd, she being credited with 1,740 lb. milk, 60.9 lb. fat. The nine leading producers were all black and whites, there being five purebred and three grade Holsteins in the number. The leading herd consisted of purebred and grade Holsteins owned at the Piedmont Farm. These sixteen cows averaged 1,231 lb. milk, 44.7 lb. fat, while the fifteen purebred Holsteins owned by W. C. McMillin & Son averaged 1,162 lb. milk, 40.1 lb. fat. During the past year the McMillin herd averaged 11,186 lb. milk, 389 lb. butterfat and the figures show that the average number of cows in this herd on test was 12.33 monthly. The high cow in this herd is Lady Hamilton Superb, 12,760 lb. milk, 479.3 lb. fat and her stablemate, Lady Rizpah Korndyke, is credited with 13,509 lb. milk, 446.3 lb. fat as a six-year-old.

Members of the herd owned by H. A. Freed, of Racine, stood first and second in the Westfield Association which also operates in Lawrence County. Tester H. Russell Smith reports that twenty-six

herds containing 265 cows were tested during April and of this number twenty-two produced more than 40 lb. butterfat, five over 50 lb. while six exceeded 1,200 lb. milk.

Jewel, of the Freed herd, led with 1,620 lb. milk, 58.3 lb. fat, while Sue, a three-year-old, produced 1,720 lb. milk, 53.3 lb. fat. H. W. Dubbs has two purebred Holsteins in the list of the ten high producers, Brightie being credited with 1,416 lb. milk, 48.1 lb. fat and Liberty with 1,326 lb. milk, 46.4 lb. fat. Both these purebreds were four-year-olds.

PUREBREDS FIRST AND THIRD

Christine Liscomb P. A. Posch, a registered Holstein owned by Bertha Howser, of Creston, Montana, led the Flathead Cow Testing Association for the month of May. She is credited with 2,480 lb. milk and 86.6 lb. butterfat, the highest production ever made in the Flathead Association. Speckle, a grade Holstein, owned by Winfield Scott, of Whitefish, was second with 2,000 lb. milk, 66 lb. fat. Fobes Abbekerk Segis, a purebred Holstein, was third with 65.7 lb. fat. She is owned by Joe Monegan, of Whitefish.

There were 348 cows tested during the month and twenty-six of these produced more than 50 lb. butterfat. The average for all the cows tested was 854 lb. milk, 31.5 lb. butterfat.

NEW COLORADO ASSOCIATION

A new cow testing association was organized in Mesa County, Colo., on June 1st. Twenty-six herds, several of which are purebred, Holsteins and Jerseys, will be enrolled for the first year. C. A. Boyd, a graduate of the Colorado Agricultural College, will be tester.

SOUTH DAKOTA TESTING

Brookings Topsy, a purebred Holstein owned by Gage & Kurtz, heads the list of cows enrolled in the testing associations of South Dakota, during May. Her production was 2,002.6 lb. milk, 90.12 lb. fat. Her net income was \$22.48 after deducting a feed bill of \$10.86 for a daily ration which consisted of two pounds dried beet pulp, three pounds alfalfa hay, fourteen pounds corn silage, eight pounds prairie hay, and eighteen pounds of grain mixture consisting of oats, corn, wheat middlings, cottonseed meal and oil meal. The report does not say whether or not this cow had pasture in addition.

Purebred Holsteins took second and third places, a Homestead cow owned by the Sioux Falls Penitentiary being credited with 2,145.2 lb. milk, 81.52 lb. fat and Topsy, owned by Crothers & Son, of Badger, having 1,790 lb. milk, 80.55 lb. fat to her credit. Grade Holsteins had three of the other six associations and the Chester Association is headed by Lady Belle, a purebred, owned by Stier & Sor, of Madison, she producing 1,717.4 lb. milk, 58.39 lb. fat.

Gage & Kurtz had the highest producing herd, their fifteen purebred Holsteins averaging 1,498 lb. milk, 49.80 lb. fat. The twenty-two purebreds at the Penitentiary averaged 1,186.4 lb. milk, 42.07 lb. fat, while twelve purebreds owned by A. J. Brandriet and enrolled in the Watertown Association, averaged 961.8 lb. milk, 33.77 lb. fat.

One seldom thinks of Herefords as dairy animals although those who know the breed know that a few of these cows are good milkers. A grade Hereford owned by E. S. Johnson and enrolled in the Hamlin Association is tenth on the

Thompson, R. No. 1. Pa.

ABOVE 12,000 LB. C.T.A.

Two members of our herd produced over 12,000 lb. milk in a year of Cow Testing Association work. Each returned well over \$100 profit above feed cost.

Calves from such cows and sired by KING ALCARTRA RAG APPLE POSCH—Grand Champion three successive years at the Susquehanna County Fair, are bound to prove profitable investments for you, especially when they come from an Accredited Herd which has never housed a reactor.

A. R. BUSH
Montrose Pennsylvania

list of individual producers, having a total of 1,215.2 lb. milk, 51.04 lb. fat and the eleven-cow dairy of Mr. Johnson heads the Hamlin Association with an average of 825.8 lb. milk, 33.40 lb. fat, an average test of 4.05%.

The average price of butterfat paid the producer was 35.65c per pound.

In the nine associations there were 1,917 cows belonging to 218 herds tested during May, while last year there were 1,384 cows in 104 herds tested.

The Brown County Association plans to hold a dairy show at the Tri-State Fair Grounds, June 30th to July 5th. There are classes for both purebreds and grades with a silver cup for first prize in each class.

HOLSTEIN COWS SHINE IN ILLINOIS

If an advertisement depicting the producing capacity of Holstein herds were needed, it could be compiled from the May report of the Illinois Cow Testing Associations. Nine of the herds in the leading ten consisted of black and white cows and the other one, standing in second place, was composed of grade Guernseys and Holsteins.

The average of three herds during the month was above 50 lb. fat and two of these consisted of purebred Holstein establishments and the other was the mixed herd already mentioned. The leading establishment consisted of fourteen purebreds owned by C. E. Warford & Son and their average production was 1,470 lb. milk, 56 lb. fat. John Block, of Joe Daviess Association, No. 1, owned the second aggregation consisting of seventeen head and their average was 1,344 lb. milk, 50.7 lb. fat. There were only one-half dozen purebreds owned by W. H. Gardner but they averaged 1,318 lb. milk, 50.4 lb. fat.

Of the ten leading cows seven were purebred Holsteins and one a grade. C. W. Warford & Son owned the leader, she being credited with 2,762 lb. milk, 102.2 lb. fat. H. M. Wood, Delavan, has three in the list, his animals taking second, third and tenth places. One cow made 2,750 lb. milk, 96.3 lb. fat; another 2,336 lb. milk, 94.1 lb. fat; and the other 2,460 lb. milk, 79.7 lb. fat. J. H. Burr owned the purebreds in fourth and seventh places, one of the Burr cows producing 2,533 lb. milk, 91.1 lb. fat and the other 2,846 lb. milk, 85.3 lb. fat.

Fourteen associations report their high producers. In five the leaders were purebred Holsteins; in four they were grade Holsteins; in two, grade Guernseys; in two, grade Jerseys, while in the Lake County Association a purebred Brown Swiss, of the Hawthorn Farm herd, was the leader.

TESTER'S ASSOCIATION FORMED

Recently a conference of testers active in the Pennsylvania Cow Testing Associations was held at State College and as a result the Pennsylvania Association of Testers was formed with A. A. Raudabaugh, of New Kingston, Pa., as president; John Smeltzer, Orangeville, Pa.,

vice-president, and C. R. Gearhart, of Dairy Extension, State College, Pa., as secretary-treasurer.

The object of the association is to develop a higher initiative among the testers, to give more uniformity to the work, and to improve the records to such an extent that in the future they may be recognized by the various breed associations. In several of the dairy breed associations many members advocate breed recognition of C. T. A. records.

The association is composed of active testers and ex-testers who agree to support and improve the C. T. A. work in Pennsylvania and who are acceptable to the membership committee. A membership card will be sent to all testers who found it impossible to attend the conference which will give them an opportunity to become members. There will be a state-wide meeting every year and four sectional meetings during each year to further the interests of C. T. A. work.

The numerous discussions which were held at the conference were enjoyed by everybody present and the value received from them was well worth the trip. One of the biggest benefits derived was that of testers meeting fellow-testers, which gave them an opportunity to exchange ideas.

THE STATE LEADER AT HOME

Fourteen purebred Holsteins owned by C. E. Warford & Sons led the Kane County Testing Association, No. 2, during May. Their average production was 1,470 lb. milk, 56 lb. fat. Walcows Lady Ormsby, a six-year-old member of this herd, was high individual with 2,762 lb. milk, 102.2 lb. fat to her credit. An eight-year-old stablemate was second with 1,832 lb. milk, 82 lb. fat. Walcows Lady Ormsby led the Illinois Cow Testing Associations for the month of May.

The 544 cows tested during the month averaged 903 lb. milk, 32.5 lb. fat. There were 127 on the honor roll while thirty-four produced more than 50 lb. fat.

KUHL SIGNS AGAIN

Leo Kuhl and Son, whose herd of purebred Holsteins took first place over all the herds enrolled in the 164 testing associations of Wisconsin evidently think that cow testing association work pays for they have enrolled again in the Hazel Green Association which has just been reorganized with twenty-six members. No work was done in this association during the month of May.

BULL CALF—Born April 12, 1924.

BUELLO FARM, Sherburne, N. Y.

Don't try to fool the world; it has had a great deal more experience than you've had.

CHAMPION OF PENNSYLVANIA BURNT

Pennsylvania's most famous cow, Keystone Beauty Plum Johanna is no more. The noted hornless champion was burned to death about the middle of April. She was temporarily sojourning at the farm of Frank F. Resseguie at South Gibson, Pa. From some unknown cause the barn took fire during the night and Keystone Beauty Plum Johanna together with several other cows were lost in the conflagration.

Keystone Beauty Plum Johanna was bred and raised in the herd of C. A. Pratt of Le Raysville, Pa. As a heifer, she and several other members of her family passed into the possession of George E. Stevenson, of Scranton and Clarks Summit, Pa. Mr. Stevenson was associated with several of his sons in

KEYSTONE BEAUTY PLUM JOHANNA
25,787.5 lb. milk, 1,294.71 lb. butter
in a year as a senior four-year-old
in strictly official test.

business and they were endeavoring to develop a strain of hornless Holsteins, Mr. Stevenson believing that horns were superfluous and that the food and energy used to grow horns could better be used for other and more profitable purposes.

Keystone Beauty Plum Johanna with her sisters and their dam, Cornucopia Plum Johanna, were naturally hornless. In addition they were dairy cows of remarkable quality, although it is only fair to say that it was for their hornlessness rather than their producing capacity that they were selected as members of the Origin herd. It was only a short time however, before the demonstrated production of this family and especially of our heroine, made the Stevenson establishment world famous.

As a junior three-year-old, Keystone Beauty Plum Johanna produced 27.05 lb. butter, 568 lb. milk in seven days of official test and 2,399.1 lb. milk, 110.5 lb. butter in thirty days' test. For the seven days her milk averaged 3.81% fat and the average for thirty days was 3.70%.

The Holstein-Friesian Association of America was giving prizes for production at that time and Keystone Beauty Plum Johanna ranked fourth that year in the 30 day and seventeenth in the 7 day test. She was continued on long time test and given a seven days' record at least 3 months after freshening and at that time, in seven days, she produced 422.8 lb. milk, 22.4 lb. butter, her average test being 4.25%. For this she ranked first for milk and second for fat in the eight month's division. For the full year, she

was credited with 22,496.6 lb. milk, 1,108.8 lb. butter with an average test of 3.94% ranking second for fat production in the junior three-year-old class. Her year record was and still is, the highest record ever made in year test by a Pennsylvania junior three-year-old.

Keystone Beauty Plum Johanna freshened again at the age of 4 years, ten months, and twenty days. She was placed in official test in which she was kept the entire year. She made her highest week's production forty-one days after freshening and at that time, in seven days produced 665.5 lb. milk, 32.88 lb. butter and made a thirty day record of 2,733.4 lb. milk, 133.22 lb. butter. She again ranked high in the association prize list taking fourth place for fat and sixth for milk for her seven day totals as well as third for fat and fifth for milk in the 30 days' test. In the tests begun eight months after freshening, she produced 497.1 lb. milk, 24.92 lb. butter in seven days, standing first in her class and division for fat and second for milk. For the full year she was credited with 25,787.5 lb. milk, 1,294.71 lb. butter, again standing first for fat and second for milk. At the time she completed this record, Keystone Beauty Plum Johanna had the

CORNUCOPIA PLUM JOHANNA
1,056.78 lb. butter in a year. Dam of
Keystone Beauty Plum Johanna.

largest record of any cow of any age or breed officially tested for the full year and although seven years have gone by since this record was closed, only a few mature cows tested officially for the full year have ever exceeded her butter record and it has never been exceeded in strict official work by any other animal under full age.

Few cows have ever surpassed, in two years of consecutive testing, the aggregate production of the two years this great cow was tested and, at the time she closed her second test, she held the world's record over all ages and breeds for a cow tested two consecutive years. She still holds the palm in her native state for one year's production both as a junior three-year-old and as a senior four-year-old as well as for any age and for two consecutive years of test work.

While in point of record Keystone Beauty Plum Johanna was the greatest member of the family, she was not the only one of outstanding excellence. Her own dam, tested as an old cow, made 1,056.78 lb. butter in a year, averaging well over 4%. She has five tested daughters several of which were tested as heifers and at least one with an imperfect udder yet the year records

of the five daughters and their dam average 18,723.1 lb. milk, 918.35 lb. butter with a 4% fat test, a showing which at the time of making, was not equalled by any other bovine family.

Keystone Plum Johanna, full sister of Keystone Beauty Plum Johanna, tested as a five-year-old produced 571.2 lb. milk, 29.35 lb. butter in seven days; 2,378.4 lb. milk, 117.05 lb. butter in 30 days and 22,190.7 lb. milk, 1,052.96 lb. butter in a year.

Cornucopia Plum Johanna, Keystone Beauty Plum Johanna and their descendants were high class individuals. They were of medium size, in fact, could be classed as rather small cows compared with some of the great milkers that originated in California, Minnesota and other western points.

The sire of Keystone Beauty Plum Johanna, and her full sister, Keystone Plum Johanna, was King Beauty Pietertje De Kol, who for some time headed the C. A. Pratt herd. He has a number of daughters, tested as heifers, that made good records. We are indebted to that good dairymen, A. Conrad Sliker of Lewisburg, Pa., for a photograph of this sire and we believe that it is the first time this bull has ever been shown to the public in the pages of a journal of national circulation. As the picture which was an amateur snapshot shows, he was a bull of splendid individuality and when it is considered that Cornucopia Plum Johanna was herself a cow of type and symmetrical conformation it is no wonder that their joint offspring were animals that could be exhibited with perfect confidence in the best of company.

KING BEAUTY PIETERTJE DE KOL
Sire of Keystone Beauty Plum Johanna

It is too early yet to tell if this family will make any great impression on the breed or whether their characteristics will be lost in the general flood. In Pennsylvania, at least, they have made a great impression for in many herds in the center and northern part of Pennsylvania you can easily pick out the animals carrying Keystone blood for, besides being hornless they are of medium size, are well marked, carry a well hung and well placed udder and are among the best producers in the herd. Production, and symmetrical conformation as well as hornlessness, are dominant characteristics in this family. Poor cows are rarely found in animals of this hornless strain even though they possess only a small percentage of the blood of the foundation animals.

THE SALE AT RICHMOND

Advocates of consignment sales held in connection with the annual meetings or conventions of the Holstein-Friesian Association of America have always claimed that such sales are somewhat in the nature of extension work as they attract new buyers who thereby lay the foundation of new herds. Those who hold such opinions have every reason to be gratified with the result of the sale held at Richmond, June 5 and 6, for no less than 129 of the 148 animals sold went to the states of Virginia and the Carolinas, Virginia taking 109, North Carolina 4, and South Carolina 6 head, while six others were divided among District of Columbia, Maryland and West Virginia. Buyers from Indiana, Massachusetts, Michigan, New Jersey, New York and Pennsylvania took the remainder.

The sale total was \$38,200, an average of \$260 for the 148 head. As reported by Mr. Emmerick, Assistant Dairy Husbandman at the Virginia State College, members of the Virginia Cow Testing Associations took a large number and they will therefore have an opportunity to test out the profit earning capacity of animals of the so-called fashionable strains of breeding. If these animals are greater profit earners than the animals already enrolled in the Virginia Cow Testing Associations, it will undoubtedly lead to much business for the consignors to the Richmond sale; if the animals do not make good in competition with older milkers in the herds to which they now belong, it will be the fault of the animals themselves and those who sent them to Richmond. "A satisfied customer is the best advertisement."

The top price for bulls was \$675 which Ben Middleton of Herndon, Va., owner of the noted grade cow, Sadie, paid for Sir Bess Ormsby Fobes 16th consigned from the Hollyhock Farms, at Dousman, Wis. The second highest price for bulls was \$600 which H. J. Hardesty, Berryville, Va., paid for Berks King Champion, consigned by Abner S. Deysher of Reading, Pa. This young bull was in fine shape and a number of good judges said he was the best individual male consigned. He is the son of Eco-Sylv Mechthilde, whose work as a yearling, two-year-old, and three-year-old heifer, stamps her as a remarkable producer. The Deysher consignment topped the sale for average, the two animals consigned bringing \$1,230, an average of \$615.

The first day's sale showed the two highest prices for females, Star Segis Pontiac Superior going to V. M. Montgomery of Spartanburg, S. C. for \$1,000 and another Minnesota animal, Mankato Stella Ormsby Bess, going to the same party for \$830.

Pennsylvania consigned 23 head which averaged \$280; New York, 26 head with an average of \$246; Wisconsin led for high average, the nine head from the Badger State averaging \$426.

THE ERICKSON DISPERSAL

More than 2,000 were in attendance each day at Waupaca, Wis., June 12 and 13 when the John Erickson Holstein herd was dispersed. Eighty-six head including old cows, young calves and a few blemished females were sold for a total of \$97,860 or an average of \$1,138. Twenty-six animals each brought \$1,000 or more. The lowest price was \$200 and only two head went at that figure. Buyers came from fifteen states and from Canada, Japan, and Peru.

The twenty-six daughters of Sir Pietertje Ormsby Mercedes 37th averaged \$1,180 while the thirty-two daughters of Marathon Bess Burke averaged \$793. The top price was \$6,800 for Wisconsin Fobes 6th. She was purchased by Winterthur Farms. Her full sister, Wisconsin Fobes 5th went for \$6,500 to Murphy Farms,

Green Bay, Wis. and Mr. Murphy took Governor Fobes, a son of this cow for \$3,200. Hollyhock Farms, Dousman, Wis., the Gustav Pabst establishment, obtained Princess Della 3d for \$5,000, the third highest price. John E. Lambert of Detroit, Mich., took the world's champion yearling heifer, Daisy Aaggie Ormsby 3d, for \$4,300. J. B. Jones also of Detroit, Mich., paid \$3,600 for Queen Olathe Bess Ormsby with a 1,252 lb. year record made as a three-year-old. Hotchkiss Bros. of Fairview, Pa., took Admiral Ormsby Pride for \$2,850, his dam Wisconsin Pride 2d going to Hollyhock Farms for \$3,050. The six-year-old sire Marathon Bess Burke went to S. E. Chaffee of Sunnyside, Wash., for \$1,550.

The sale was managed by O. G. Clark of West Salem, Wis., who also acted as auctioneer together with Mack, Haeger and Wood. Roberto Risso of Lima, Peru, took twelve head at an average price of \$505.83 while a Japanese buyer, A. Miyawaki took three for \$2,100, \$1,600 and \$1,150 respectively. Owing to lack of space we are listing only those animals bringing \$500 or more with names and addresses of their purchasers.

HAMMOND'S "CATTLE COMFORT"

Hammond's

**"Cattle Comfort"**

HAMMOND'S PAINT & SLUG SHOT WORKS, BEACON, NEW YORK

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to many dogs it affords relief and effects a cure.

Directions—**CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers

COW TESTING ASSOCIATION MEMBERS HEAVY BUYERS AT RICHMOND

By L. P. EMMERICK

At the recent annual National Holstein Sale held at Richmond the largest group of buyers were the members of the Virginia Cow Testing Associations. Seventeen members in eight of the fourteen associations in the state purchased a total of forty-eight animals. They paid a total purchase price of \$13,140, or an average of \$274.00 per head. The cow testing association members were especially strong buyers of good young stock, which were desired for foundation purposes. Fifteen head purchased were yearlings or under, thirteen head were two-year-olds, and four were three-year-olds. Even with this preponderance of young stock the average purchase price was better than the sales average which seems to indicate that they were after the best. That cow testing association members are realizing the value of having good sires is shown by the fact that the three highest price bulls, as well as eight of the total of twenty sold in the sale, were purchased by members of Virginia cow testing associations. Mr. Ben Middleton, of Herndon, Va., a member of the Fairfax County No. 1 C. T. A. paid \$675.00 for Sir Bess Ormsby Fobes 19th, a fourteen-months-old youngster. He is a fine individual, one of the richest bred bulls of the herd, and his eight nearest dams' records average over 25,000 lbs. of milk and almost 1,200 lbs. of butter. Besides purchasing this fine bull Mr. Middleton and his son purchased four yearling heifers. It is hoped that this will be the foundation of a herd of purebreds that will better the records and reputation made by his fine herds of grades the past few years.

The second highest priced bull was purchased by H. J. Hardesty, of Berryville, Va. Mr. Hardesty is a member of the Northern Valley C. T. A. and has one of the highest producing herds of purebred Holsteins in the state. He purchased Berks King Champion, a yearling bull for \$600.00. He is a finely bred young bull, with great production back of him, his six nearest dams averaging 33.99 lb. of butter in seven days and his thirteen nearest dams averaging 33.09. He has very excellent type and conformation and should make a great show bull.

Mr. A. E. McMurdo, of Charlottesville, Va., a member of the Albemarle C. T. A., purchased Sir Ollie Ormsby Watson, the third highest priced bull, for \$575.00. This fine show bull was consigned by Carnation Milk Farms. He is a son of a National Grand Champion, out of a show cow and is a brother to the all-American show bull of 1923. Mr. Nelson C. Beck, another member of this association purchased a fine herdsire in Mankato Ormsby Ruby Lad for \$300.00. Members of this association also bought another good bull and five good females.

Mr. F. O. Dorey, H. W. Gills, J. A. Loving, J. S. Parrish and the Westbrook Sanatorium, members of the Henrico C. T. A., purchased nineteen of the best females in the sale and one excellent young bull.

It was very gratifying to see so much of this excellent stock stay in Virginia, especially with cow testing association members where there will be an opportunity to measure the improvement that this stock will bring about in these herds. Several other of the Virginia buyers will probably also soon take up the cow testing Association work.

DAM OF BULL CLOSES RECORD

King Piebe of York 14th is the handsome young herdsire owned by W. S. Grimm of Red Lion, York County, Pa. The sire of King Piebe of York 14th is by Piebe Laura Ollie Homestead King and is from a daughter of King Segis Pontiac Count and so is related to many animals that have made tremendous records both in long time and short time tests.

The dam of King Piebe of York 14th is Jessie Maida Ruth. She has been on year test and Superintendent Gardner just announced that she produced 946.05

lb. butter, 24,103.1 lb. milk. He has credited her with seven day records of 29.78 lb. butter, 742.6 lb. milk and for thirty days with 122.65 lb. butter, 3,118.6 lb. milk.

The dam and sire's dam of King Piebe of York 14th have year records that average over 989 lb. butter and well over 22,300 lb. milk despite the fact that the sire's dam was tested as a junior three-year-old.

In addition, he is a very handsome animal and in the Grimm herd, which is noted for production and individuality, he is bound to make good.

Come and See
Maredor Radium
Artis It Mercedes

who now heads my Accredited Herd.

He is a son of RADIUM, Grand Champion at the 1921 New York State Fair, one of the best bulls of the May Echo family.

His dam and granddam are both good record cows of choice individuality.

He is good in every way. Look him over.

COLLEGE CONFERS DEGREE ON
SUPT. GARDNER

Beloit College honored itself as well as Malcolm H. Gardner, Superintendent of Advanced Registry, when at its commencement exercises this year, the authorities of that institution conferred upon him the Bachelor of Arts degree. Mr. Gardner was studying at Beloit and had almost completed his course when ill health forced him, in 1878, to discontinue his college work.

As many of our readers know, Mr. Gardner did not discontinue studying and even to-day, nearly fifty years after he left college, he plans and pursues

MALCOLM H. GARDNER
Beloit College Conferred the B. A. degree on Mr. Gardner during this year's commencement exercises.

systematic courses of reading. The authorities of the college which is situated at Beloit, Wis., state that, since leaving their jurisdiction, Mr. Gardner has gone far beyond the B. A. degree requirements.

Mr. Gardner is now in the twentieth year of his work as Superintendent of Advanced Registry, being first elected by the members on Thursday, June 8, 1905 at a meeting held in the City Hall, Syracuse, N. Y.

From An Accredited Herd

BULL CALF—born Dec. 26, 1923, more white than black, straight and right in every way. Price \$50.

Dam—Maple Grove Pontiac Betti, she by King Pontiac Jupiter, a son of King of the Pontiacs from a daughter of Hengerveld De Kol.

HEIFER—born Dec. 1, 1923. Nicely marked well grown and a beauty. Price \$65.

Their sire is MAPLE GROVE YBMA GLISTA whose sire is from Glista Dinah, a 31-lb. daughter of a 34-lb. cow. His dam produced 27 lb. butter, 641 lb. milk in 7 days in this herd.

OFFER RADIO COURSE BY MAIL

The University of Arkansas is offering correspondence courses in Radio Communication, confining its work largely to receivers, their theory, construction and operation.

The aerial at the university was placed on top of the Engineer's Hall. This aerial is five-wire inverted L type with a five-wire insulated counterpois thirty-five feet below the aerial. The studio is a room 20x25 feet, with ten-foot ceiling, especially constructed to prevent echoes, reflect sounds and shut out exterior noises. The walls and ceiling are covered with burlap laid on in folds, over which is draped soft curtaining material, leaving a dead air space between.

The transmitter or microphone is placed on an adjusted stand and the speech amplifier on a desk with the batteries in a case beneath. These were made by the aid of the instructors in the electrical engineering department, Loy E. Bar-on, W. H. McKinley and C. V. Bullen.

The station has an energy output in the aerial of 100 watts, the power being supplied by a motor generator set delivering current at 1,000 to 1,500 volts. The wave length is 263 meters. The station has been able to reach points in Canada, Maine, Florida, New Mexico and Wyoming. This station uses the signature KFMQ.

CANNED MILK ASSOCIATION
FORMED

Recently, in Chicago, a bunch of men representing almost all of the evaporated milk manufacturers in this country, met and organized the Evaporated Milk Association. They have elected as president, Herbert C. Hooks, who during the war, was a member of the committee representing the milk industry in the food administration. The association plans to start a campaign of education featuring the wholesomeness of evaporated milk to the housewives of America.

While it is true that canned milk competes with fluid milk for the favor of the consumer, yet it is milk and is produced on the dairy farms and the more milk used in any form, the better off will be both consumer and producer. Canned milk has little place on the farm, but for the camper and for the traveler, at home and abroad, it is almost indispensable. For the city housewife a few cans of evaporated milk in the cupboard is a great convenience should unexpected company arrive for a meal.

BULL KILLED BY LIGHTNING

A prize Holstein bull owned by Henry Forrester, of Barstow, Ill., was instantly killed when the animal was struck by lightning June 8th. He was in the barnyard at the time. None of the other animals were seriously injured.

A woman always wants the last word, not to mention about 99 per cent of the preceding conversation.

CURTIS BUY GOOD HERDSIRE

Tobe Echo Sylvia Korndyke, a well bred young bull which has been in service in the Everbreeze Herd, Dalton, Pa., has just been sold by George Lightbody to Arthur H. Curtis & Son, of Waymart, Wayne Co., Pa.

Tobe Echo Sylvia Korndyke is a young bull of splendid individuality and breeding. His sire, Woodmont Echo Sylvia Champion, was first prize three-year-old bull at the New York State Fair, 1922, and was a grandson of Champion Echo Sylvia Pontiac and from Butter Boy

TOBE ECHO SYLVIA KORNDYKE
Now heads the herd of A. H. Curtis & Son, Waymart, Penna.

Empress, 600 lb. milk in a week and over 30 lb. butter in seven days. This cow is of remarkable type. Shown in the New York State Fair in 1921, she was first prize A. R. O. cow as well as being awarded the senior and grand championships.

Tobe Echo Sylvia Korndyke is a son of Segis Tobe Korndyke, a daughter of Tobe Rag Apple Korndyke with good official and ten-months records. She has at least two tested daughters, one of which made over 28 lb. butter in seven days as a junior three-year-old. Her dam is a daughter of King Segis Hengerveld De Kol Burke, with a 25 lb. seven-day record and a record of over 500 lb. butter in ten months.

The cows and sires whose names appear in the pedigree of Tobe Echo Sylvia Korndyke are not only noted for production and transmitting ability but also have an enviable reputation for type and symmetry. The animals themselves as well as many of their sons and daughters have been exhibited at high class fairs and won high honors. It is, therefore, only to be expected that their superior qualities would be transmitted to Tobe Echo Sylvia Korndyke.

Mr. Lightbody's herd is accredited and therefore Curtis & Son are to be congratulated upon their judgment in selecting Tobe Echo Sylvia Korndyke to head their own high class Holstein herd.

WORKING WAY THROUGH COLLEGE

During the recently ended college year, 1,122 students out of a total of 1,870 attending the Kansas State College of Agriculture paid part of their expenses by work done outside of study hours.

Beware the restive bull that scorns

All human arts, e'en jiu jitsu.

And motor cars likewise have horns—

That's not what hurts you when they hit you.

SUMMER DAIRY PROBLEMS

The busy farming season, hot weather, flies, and short pastures are conditions that must be met by the dairymen during the summer months. During the busy farming season there is a tendency to neglect the cows. Regular milking periods should be adhered to as closely as possible, as any marked change in the regular management of dairy cattle usually results in decreased milk and butterfat production. It is not advisable to allow the dairy herd to run down in flesh. Too often this happens in late summer. The cows freshen in thin condition and will not produce as well or as efficiently as cows that freshen in good flesh.

There are many dairymen who feed silage or grain, or both, and they say it pays. It will pay even more next winter. The following grain mixture may be fed at the rate of one pound to every three and one-half to five pounds of milk produced a day, depending on the amount of milk produced and the condition of the cow: Corn or barley, 5 parts; oats or bran, 2 parts; oil meal, 1 part.

Flies are responsible, in a large measure, for low milk yields in summer and thin cattle in the fall. Cows should be protected from them as much as possible. One of the best means of eliminating the fly evil is to keep the cows stabled during the heat of the day in cool, darkened barns. Windows can be darkened by nailing building paper over them. Gunny sacks may be hung in the doorway in such a manner that flies will be brushed from the cows' backs as they enter the barn. Manure should not be allowed to accumulate around the stables as it is an ideal breeding place for flies. Powdered borax sifted over the manure will aid in their control.

Some fly repellent mixtures are effective for a short time. A homemade spray may be prepared as follows: Dissolve one-half pound of soap in a gallon of soft water heated to the boiling point, and with it combine two gallons of kerosene. Churn vigorously and add six gallons of water.

C. S. RHODE,
Assistant Professor in Dairying,
University of Illinois.

FARM BUREAU BANKRUPT

The Spokane Farm Bureau Corporation, on June 14th, filed a voluntary petition in bankruptcy in Federal Court. The petition gives the debts of the bureau as \$10,557 and the assets as \$3,968, without any claim of exemption.

The Spokane Farm Bureau Corporation was organized a few years ago as a local branch of the American Farm Bureau.

They were talking about women friends. "Do you see Emma often?" one inquired.

"O, yes, quite frequently," the other replied.

"Is she happily married?"

"Is she? I'll say she is. Why, that girl is so happily married she has to go to the theatre for a good cry."

MILLER IS ACTIVE

S. R. Miller, of Chambersburg, Penna., whose retirement from the postal service after thirty-three years' work was announced in a recent issue of the BREEDER AND DAIRYMAN, is bending all his energies to building up his Holstein business with the result that things are moving in the Cumberland Valley. Mr. Ira Barr, of Greencastle, purchased a real good purebred cow from Thornwood Stock Farm, as Mr. Miller's establishment is called. Clinton Lehman, of Chambersburg, R. 1, and Ira Eshelman, Chambersburg, R. 2, together purchased a very fine son of Balsam Valdessa Veeman Pontiac, a proven sire whose daughters are making good. He was by Finderne Valdessa King Fayne, a son of King Hengerveld Aaggie Fayne and the 32-lb. cow, Valdessa Ormsby De Kol, whose dam, Valdessa Scott 2d, was the first cow in the world to make over 40 lb. butter in seven-day official test. The dam of Balsam Valdessa Veeman Pontiac is Mooie Veeman Pontiac. As a junior four-year-old, she made 31.76 lb. butter in seven days, averaging better than 75 lb. milk a day; as a five-year-old she raised her record to 36.64 lb. butter, averaging over 77 lb. milk a day. She is by Mooie Fayne De Kol, a son of the former world's champion Grace Fayne 2nd's Homestead and was from Vida Veeman Pontiac, a 27-lb. daughter of Sir Korndyke Pontiac Artis.

Another transaction that is of interest was the sale of seven head of females, three fine young cows and four young heifers to Wm. T. Lupton. This group will make a foundation for a herd which Mr. Lupton will place on his good farm near Martinsburg, W. Va.

The herd at Thornwood Stock Farm is on the accredited list and this will help materially in interstate transactions. Mr. Miller tells us that over 90% of the farmers in Guilford and Washington Townships have signed up to have their herds tested under the accredited herd system and that it is their intention to try to clean up the whole of Franklin County.

COCOA BY-PRODUCTS AS FEEDS

An additional protein feed, new to the majority of cattle feeders, is reported by R. H. Olmstead, of the Pennsylvania State College. We have no personal knowledge of cocoa cake meal but see no reason why it should not be given a trial on a small scale if dairymen have the opportunity to buy it at a reasonable price. In Mr. Olmstead's letter of June 1st, he says:

Cocoa cake meal, a by-product in the manufacture of chocolate, is being put on the market as a protein supplement in dairy feeding. In the manufacture of chocolate, extra cocoa butter is needed. This is extracted from the cocoa beans by pressure which leaves a cake too low in fat to be used as breakfast cocoa. In analysis cocoa cake meal averages:

Protein, 22 to 23%; fat, 12 to 20%; carbohydrates, 45 to 48%; fiber, 7 to 8%.

Practically no work has been done with this feed to compare its value as a

protein supplement with other feeds. The College Dairy Department, however, is now engaged in some experimental work along this line. We know that this feed must be used with care. It should probably not form over 10 or 12 per cent of the ration because it is rather unpalatable in larger amounts. Certain feed manufacturers are using it in their feed mixtures. We see no reason why it should not form a good protein supplement if used in limited quantities. The Hershey Chocolate Company is offering cocoa cake meal in carload lots at \$10.00 to \$12.00 per ton. Before ordering any large amount we suggest that it be tried out in limited quantities.

Ground cocoa shells are also a by-product in the manufacture of chocolate. They are used mostly as a fertilizer but we understand that they are also being offered as a dairy feed. The average analysis of cocoa shells are:

Protein, 13.9; fat, 4.91; nitrogen free extract, 55.61; fiber, 12.65.

The protein is only 4 to 12 per cent digestible and they cannot be recommended as having much value as a dairy feed. In Chemical Abstracts, Vol. 13, Page 3244, cocoa shells are reported as being dangerously toxic, but at the Massachusetts Experiment Station they were fed in amounts as high as five pounds with no apparent dangerous results. In the Pennsylvania feeding stuffs law, cocoa shells are considered as an adulterant unless the fiber remains below 11 per cent in the feed mixture.

MINERAL FEED EXPERIMENTS

Approximately five hundred white rats are being used at the Ames Agricultural College in an endeavor to find out the correct proportionate amount or the constituents of a simple mineral mixture to add to cattle feeds in order to secure the best results.

These delicate feed tests are now under way in charge of A. R. Lamb, chief of nutrition, who is working in conjunction with J. M. Evvard of the Animal Husbandry Experiment Station. Mr. Lamb conducts his laboratory nutrition work in the Chemistry building where over 300 new wire cages have been installed.

WHAT BECOMES OF THE MILK

Dr. E. V. McCollum, of Baltimore, Maryland, the greatest authority in the world on vitamins, is responsible for the statement that during the year 1923 there was about 100,000,000,000 lb. of milk produced on American farms.

This was used as follows:

45.6%	consumed as bottled milk.
36.2%	consumed as butter.
3.7%	consumed as milk products.
3.4%	consumed as ice cream.
3.6%	consumed as cheese.
4.3%	consumed by calves and pigs.
.03%	consumed as powder.
3.0%	wasted.

"What nationality are you?"

"I have a little Scotch in me."

"Yes, I smelt it as you came in."

A HERD OF WORKING HOLSTEINS

When, on June 17th, the Northumberland County Holstein Breeder's Association held its field day on the Murray A. Miller Farm at Milton, Pa., they looked over a herd of working Holsteins with remarkable records. Mr. Miller keeps a record of all the milk his animals produce. The visitors had an opportunity to judge a selected quartet for type and for production. Prof. E. B. Fitts, of Pennsylvania State College, was the official judge and he placed at the head of

Topsy Lilith De Kol is credited with a little over 12,000; Ruby Jennie Lilith De Kol went over 14,000 lb.; Jane Lilith Johanna with first calf, made over 13,981 lb.; Fayne Pontiac Pet Lady, 11,520 lb. with her first calf; May Fayne Queen De Kol, 12,914 lb., a surprising showing for this heifer had calves on her six weeks. These records are made on two milkings daily.

The Miller farm faces on the Susquehanna Trail where thousands of cars pass daily. Mr. Miller thought it would be a good advertisement for the breed as

IN THE SHADY ORCHARD AT SUNNY LAWN FARM.

Here the Northumberland County Holstein Breeders inspected this herd June 17, 1924.

the list for type the cow Aaggie May Fayne De Kol, and it is interesting to learn that she also led for production.

Last year, with her third calf, she produced 15,876 lb. milk, quite a showing for a cow in the herd of a working dairyman where profit rather than large production is the main issue but other members in this herd produced nearly as much. Bess May Lily De Kol produced 12,974.9 lb. milk in the year; Pearl

well as for his herd to have the true type pictures painted on the silo where everyone could see them. The painter was not able to get to the farm until Field Day and it would take a large book to record the comments and criticisms voiced by the visitors. The painter, of course, was not finished when the day ended, so some time in the near future, we hope to show how the barn now looks to passersby.

PEDIGREE BARGAINS DURING SUMMER MONTHS

Managers of pedigree offices have many troubles. One of the chief of these is to keep their office force busy during the off season or summer months. During the fall, winter and spring there is usually no lack of business and nearly every owner of purebreds needs his pedigrees for immediate use at the time he places his order. There are few sales staged during the summer months and therefore no sale catalogs are compiled.

In an effort to keep their clerks employed and, at the same time, lessen the rush during the busy season, the Wisconsin Livestock Advertising Company announces low rates for pedigrees ordered during June and July. These "pedigree bargains" are real attractive, whether the chart is typed in two colors or whether duplicator pedigrees are ordered in lots of twenty-five or fifty.

This enterprising Wisconsin pedigree

concern are also offering a pedigree correction service. For the low sum of one dollar, they will supply a four-generation, two-color pedigree for use in a large herd register as well as a small copy for a pocket herd book, and then six months later they will bring the large pedigree up to date. One of the objections urged against having a herd pedigree is that, if the animals are from the so-called "fashionable" lines of breeding in which records are made frequently, the pedigrees rapidly go out of date. In order that the herd owner have the latest information to show prospective buyers, the Wisconsin Livestock Advertising Company inaugurated this pedigree correction service which we believe will be found to be a boon to busy cattlemen.

City Boy—"I suppose you hatch all these chickens yourself?"
Farmer Boy—"Nope, we've got hens here to do that."

COWS DON'T GET ENOUGH LIME

By ELMER O. FIPPEN.

Ten thousand pounds of milk per year per cow is not an unusually high yield, yet it is more than twice the average production in the United States. In this amount of milk there are twelve pounds of calcium which, added to the thirty-five pounds of assimilated calcium and the undigested calcium in the food, makes the total annual requirement of a cow producing 10,000 pounds of milk and a calf amount to upward of 100 pounds of calcium.

I have calculated the amount of calcium in forty pounds per day for a year of two balanced rations published in reliable textbooks dealing with animal feeding. One of these contain seventy-five pounds of calcium and the other only thirty-two pounds per year, or shortages of about twenty to sixty pounds respectively. In view of these facts it is not surprising that the milk flow is limited on the average, to much less than the 10,000 pounds standard mentioned.

ROYAL JOHANNA KORNDYKE

Royal Johanna Korndyke is a Holstein bull whose daughters are making quite a reputation as producers in the New York State Dairy Improvement Association, as several of them have produced over 15,000 lb. milk in a year as two-

ROYAL JOHANNA KORNDYKE
Owned jointly by R. W. Chamberlain, Canadea, N. Y., and J. B. Harbeck & Son, Black Creek, N. Y.

year-olds and three-year-olds. This bull has fifteen milking daughters in the herd of J. B. Harbeck & Sons of Black Creek, N. Y., and the Harbeck herd consisting of twenty-four cows averaged 11,402 lb. milk last year in cow testing association work. The Harbecks own Royal Johanna Korndyke jointly with R. W. Chamberlain, Canadea, N. Y., and cows in this herd have made nice official and long time records.

Royal Johanna Korndyke is a son of Colantha Johanna Lad 8th who, until his death recently, was senior sire of the Bonalevo herd, Batavia, N. Y. The daughters of Colantha Johanna Lad 8th are noted for tremendous milk production and the management of this farm report that this bull has twelve daughters with ten months records averaging 771.15 lb. butter, 18,924.5 lb. milk and the average age of these daughters at time of commencing their record was three years and one month.

In the pedigree of Royal Johanna Korndyke the blood of Colantha Johanna Lad 8th is intensified for his dam,

Butter Girl Johanna Korndyke, is a daughter of that great sire. Tested as a senior two-year-old she is credited with 602.8 lb. milk, 24.33 lb. butter in seven days. She has two full sisters with large records.

Butter Girl Johanna, tested as a junior four-year-old produced 588.4 lb. milk, 32.55 lb. butter in seven days, 2,905.9 lb. 125.32 lb. butter in thirty days. This is not her largest milk record as the Blue Book credits her as a senior two-year-old, with production of 674.8 lb. milk, 26.89 lb. butter in a week, 2,804.5 lb. milk, 111.59 lb. butter in thirty days but during this test, in seven consecutive days, she actually produced over 699 lb. milk which was a world's record for a senior two-year-old for several years.

Butter Girl May Johanna also tested as a junior four-year-old, produced 659.8 lb. milk, 26.63 lb. butter in a week, averaging over 90 lb. milk a day for thirty days and in the full year produced 20,823.8 lb. milk, 955.47 lb. butter.

The dam of these three full sisters is May Butter Girl De Kol, a daughter of Keller Butter Boy De Kol, with a seven day record made as a seven-year-old, of 690.8 lb. milk, 30.92 lb. butter.

LAMB PRODUCERS HAVE THEIR TROUBLES

The number of lambs in the areas that furnish the bulk of the market supplies during July and August is larger than last year according to a statement of the United States Department of Agriculture. Range and pasture conditions early in June, however, were such that there is considerable uncertainty as to whether there will be a normal market movement during this period. If these conditions improve to near to the average by the first of July, the market movement in July and August will probably be somewhat larger than last year. If they continue poor throughout the summer, the market movement during these months will be smaller unless actual lack of feed results in forced marketings.

Drought in the far western states have made feed conditions very unfavorable. The early grass soon dried up, the intermediate range made very poor growth and in some localities, there was and is a shortage of stock water.

Rains in Idaho, early in June, will help the situation materially and, with average weather conditions for the next two months, the shipments from this district may equal those of last year. There has also been drought in California. The situation there is serious. It is estimated that there are nearly 200,000 head of sheep and lambs not fit for slaughter for which there is no feed in sight and which cannot be shipped out of the state because of the quarantine.

General rains since June 1st in the dry areas west of the Mississippi and warmer weather over the entire corn belt will improve pastures materially and with more favorable conditions, lambs may reach their normal size by the middle of July.

The Three Nearest Dams

of "THE POTENTATE"

have official seven-day records that average

38.83 lb. Butter
612.9 lb. Milk

Our herd of 85 females are under State and Federal Supervision and are Tuberculosis Free. IF YOU NEED COWS, HEIFERS, OR A BULL CALF, WE CAN FILL YOUR ORDER ANYTIME.

OF INTEREST TO THE BOYS

In our boyhood days we were always interested in the story of Tom Sawyer, particularly where "he pushed his head and shoulders through a small hole and saw the broad Mississippi rolling by." Tom and his companion had been lost for three days in a cave. The hole through which he emerged is now believed to be on the property owned by the Atlas Portland Cement Co., of Hannibal, Missouri.

This town was made famous by the doings of Tom Sawyer, Huckleberry Finn and his associates, who were the boyhood recollections of Mark Twain, whose own youthful days were spent in that city on the banks of the Mississippi. The home Mark Twain occupied is still there, a modest white clapboard house with a small bronze plaque on its street side, stating that the house was the boyhood home of Mark Twain, and that the plaque had been set there by his father. Rising just beyond it is Cardiff Hill, the location of many of the pranks of the boys of Mark Twain's vigorous, virile imagination. One can still plunge in the "swimmin' hole," but the covered bridge has been neglected and is sorely in need of repairs.

More permanent and interesting still is the cave which became the haunt of the boys in their daredevil games of playing "Injin," and banditry. The entrance is in the side of a hill before which is a picturesque picnic ground, and so wide has been the knowledge of these underground passages through reading of Mark Twain's characters that the cave is constantly a mecca of visitors from all over the United States. A guide is always at hand and a small fee is charged for being conducted through the caves. It is worth while to hear the guide tell of the incidents in the lives of Mark Twain's "boys" which took place in the windings of these limestone passages.

No better description of them could be had than in "The Adventures of Tom Sawyer" itself. A picnic had been arranged and a ferryboat hired for the occasion. After luncheon, somebody shouted: "Who's ready for the cave?"

"Everybody was," writes Mark Twain. "Bundles of candles were procured, and straightway there was a general scamper up the hill. The mouth of the cave was up in the hillside—an opening shaped like a letter A. Its massive oaken door stood unbarred. Within was a small chamber, chilly as an iceberg, and walled by Nature with solid limestone that was dewy with a cold sweat. It was romantic and mysterious to stand here in the deep gloom and look out upon the green valley shining in the sun. But the impressiveness of the situation quickly wore off, and the romping began again. The moment a candle was lighted there was a general rush upon the owner of it; a struggle and a gallant defense followed, but the candle was soon knocked down or blown out, and then there was a glad clamor of laughter and a new chase. But all things have an end. By and by the procession went filing down the steep descent of the main avenue, the flickering rank of lights dimly revealing the lofty walls of rock almost to their point

of junction sixty feet overhead. This main avenue was not more than eight or ten feet wide. Every few steps other lofty and still narrower crevices branched from it on either hand—for McDougal's cave was but a vast labyrinth of crooked aisles that ran into each other and out again and led nowhere. It was said that one might wander days and nights together through its intricate tangle of rifts and chasms, and never find the end of the cave; and that he might go down and down, and still down, into the earth, and it was just the same—labyrinth underneath labyrinth, and no end to any of them. No man 'knew' the cave. That was an impossible thing. Most of the young men knew a portion of it, and it was not customary to venture much beyond this known portion. Tom Sawyer knew as much of the cave as any one."

It is the presence of the limestone, which is the major raw material in the manufacture of Portland Cement, that caused the Atlas Portland Cement Company to locate its large modern plant at Hannibal, where the Tom Sawyer caves run under its property at various points.

DISTRIBUTING DAIRY BULLS

The Cloverland Dairy Special made a trip through the upper peninsula of Michigan as part of the program to put dairy farms in this section on a 100% purebred bull basis. Within two weeks fifteen bulls, eight Guernseys and seven Holsteins were sold. They came from Waukesha County, Wis. The question naturally suggests itself, "Why not from Michigan herds?" Where was Hays and Norton?

PINE RIDGE HERD is headed by KING RELIANCE LOCKHART VEEMAN whose dam

PEARL LOCKHART RELIANCE holds the World's Record for a senior four-year-old in Sub-Division B—by the production of 882.10 lb. butter in 365 days.

Despite the fact that she averaged 4.43% fat, her milk record of 15,837.7 is the second highest ever reported for age in that division.

Then she is a show cow—a first prize winner at the New York State Fair.

DAN E. ANDERSON
Chenango Co., R. D. 3, Norwich, N. Y.

HOLSTEINS COMING TO PENNSYLVANIA

S. R. Miller and John B. Keller, of Chambersburg, Pa., made a little trip up into New York State and purchased a carload of purebreds at the Silas Godfrey sale, held at Pennellsville, N. Y.

Although Pennsylvania stands third on the list of Holstein states it is one of the best buying states in the Union and Pennsylvania dairymen have, during the past year, purchased a large number of animals from other states, particularly from New York, Michigan and Wisconsin. This is all the more surprising as in some parts of Pennsylvania, particularly in Susquehanna County, one can travel many miles in the summer and not see any other cows except those black and white in color. Evidently Pennsylvania dairymen made their choice and cling to the profit making breed.

STARTED SLOWLY

Some eleven years ago a so-called National Institute of Dairying was started near Reading, England. It had a very humble start, for the government sent two men down from London, setting aside an income of less than \$10,000 to pay for expenses and for salaries and to defray the expenses of building, equipment, etc.

The British Dairy Farmers' Association and the Reading College of Agriculture both cooperated in support; otherwise the National Institute of Dairying would have gone under. Today it is the foremost center of dairy research in England. The English Guernsey Society recently presented six purebred Guernsey heifers to this institute.

THE VALUE OF MANURE

Iowa Homestead: He who arranges his farming business with the idea of returning the greatest possible amount of plant food to the soil which his crops annually remove therefrom is likely to be the most successful farmer in his neighborhood. A farming business should be so arranged as to enable a man to produce at least two tons of manure a year per acre of grain crops grown. If this is done, the fertility of the soil will be maintained in excellent condition and if that amount of manure is supplemented with some acid phosphate, the fertility of the soil will not only be fully maintained, but in most cases will be increased from year to year.

HEIFERS FOR SOUTH DAKOTA

Nearly a hundred yearling Holstein heifers (grades), with a few two-year-olds, were recently shipped from Barron County, Wisconsin, consigned to F. H. Austin, of Watertown, South Dakota. Mr. Austin is connected with a line of six banks and is placing these heifers with the farmer patrons of these banks.

H. L. Stevens, of Amery, Wis., handled the transaction and, for the past four seasons has purchased between four and five hundred head of Holstein heifers in Polk County for Mr. Austin. This is his first big purchase in Barron County.

HILL CREST VIEW FARM

KING LYONS WAYNE DE KOL produced 11,560 lb. milk in 8 months of C. T. A. work. She has official records of 26.30 lb. butter, 542.9 lb. milk in a week, 105.90 lb. butter, 2,326.8 lb. milk in 30 days. **THAT'S OUR KIND.**

Can Spare a Few Females

They are bred to **KING ONYX PLEDGE ORMSBY**, who has 75% the same breeding as the new junior three year old champion of the 10 months division. Onyx Lilt, 21,387.2 lb. milk, 909.38 lb. butter.

JOHN H. HOWARD
Wyalusing R. D. 2 Bradford Co., Pa.

FOR ONLY \$100

Bull Calf, nicely marked, nearly ready for service. Dam is a 21 lb. two-year-old.

NETHERLAND RACHEL DE KOL 2d

Sire is **IDYLLWILDE KORNDYKE DIONAGEN** whose dam, granddam and granddam's dam are all above the 30 lb. mark. Like his son, he is a handsome fellow with a deep barrel, straight back and square rump. We are proud of the type and producing capacity of our stock.

A. E. ROBINSON
Susquehanna Co. Montrose, Pa.

JESSIE MAIDA RUTH

is a show cow and a producer.

She has records of
Butter 29.78 lb.; Milk 742.6 lb. 7 Days
Butter 122.05 lb.; Milk 3,118.6 lb. 30 Days
Butter 946.05 lb.; Milk 24,103.1 lb. 365 Days

She is the dam of our herdsire

KING PIEBE OF YORK 14th.

WM. S. GRIMM
York Co., R. D. 1 RED LION, PA.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

Purple!

His dam, a 30-lb. cow, made a world's record for year production as a three-year-old—his two nearest dams average 30.59 lb. butter, 586.85 lb. milk in 7 day official test.

In his pedigree occur the names of the first 30-lb. cow, the first 30-lb. three-year-old, the first 34-lb. cow, the first 37-lb. cow—a mother and daughter that each produced over 100 lb. milk in a day, and the first cow to produce more than a thousand pounds of butterfat in a year, yet I am selling his sons and daughters at very reasonable prices.

FOR SALE

An Accredited Herd at an Attractive Price

TEN well-bred young cows, including two daughters and three granddaughters of **Napol Sir Keystone Beauty**, the son of the great Keystone Beauty Plum Johanna that formerly headed the Peter Small herd and now heads Iowana herd.

Part of this bunch is bred to freshen this fall, the remainder to freshen in the spring.

Herd is headed by a son of **King Ormsby Ideal** from a 17-lb two-year-old daughter of King Korndyke Sadie Vale.

No reactor has ever been found in this herd.

CLARENCE H. TITUS

Tunkhannock R.D.2 Wyoming Co., Pa.

HOLSTEINS

Hornless Holsteins have all the desirable qualities and characteristics of the breed you know and love so well.

PLUS HORNLESSNESS

Horns are superfluous in domesticated cattle, and the energy necessary to grow them can be turned more profitably to the processes of growth and production.

Sounds reasonable, doesn't it?

Willow Brook Stock Farm

An Accredited Herd in a Little Known Holstein Territory

IN the northeastern corner of Susquehanna County, quite a little off the beaten track usually followed by those in search of cattle or merely inspecting herds, there are a number of high class Holstein establishments, the majority of which are on the accredited list. One of the best of these herds is that owned by A. L. Bowell & Son, who get their mail from Thompson, Pa., a station on the Erie and D. & H. Railroads, about 25 miles from Montrose, the County seat.

Mr. Bowell, the senior member of the firm, started in the purebred Holstein business away back in 1906. At that time he purchased a purebred heifer calf from

Mr. Bowell was ambitious to learn all he could about the Holstein industry, and when Inez Monk 3d was a nine-year-old, he tried to give her an official record. She was put into test without any preliminary fitting no less than sixty-six days after she freshened and at the end of the supervisor's visit, she had an official seven day record of 20.85 lb. butter, 451 lb. milk. To-day Mr. Bowell knows that if Inez had had any preliminary fitting and had been given proper feed and care, she could have easily made over 30 lb. butter in a week. The Bowell herd contains two daughters of Inez Monk 3d; one is Inez Walker Korndyke Copia and she has an official record made as a senior four-year-old of 584.2 lb. milk, 23.45 lb. butter. The other is Inez Walker Korndyke 571.1 lb. milk, 23.53 lb. butter in seven days. She is the dam of Creamelle Korndyke Konigen, the present herdsire.

In 1914 Flora Lorna Clothilde, then four years old, was added to the herd. She cost just \$100. She was very thin at the time of her purchase and did not produce heavily the first year but as she rounded into condition she began to show her true dairy capacity.

LEADERS AT WILLOW BROOK STOCK FARM
Creamelle Korndyke Konigen and A. L. Bowell.

Walter Cruttenden, of Mansfield, Pa. To-day the Bowell herd contains nearly sixty head and only three of these are not of Bowell breeding.

The Bowell establishment is called Willow Brook Stock Farms. It contains about one hundred and twenty-five acres and is located in Ararat township. The farm house is nearly 2,000 feet above the sea level. Standing in the dooryard, beautiful views can be seen in all directions and the air has the clearness and purity characteristic of such altitudes.

When the Bowells first purchased Willow Brook Stock Farms, they decided upon dairy farming and bought a grade herd. The senior member of the firm is a natural judge of dairy cattle and his stock soon earned a reputation as producers but the owner thought it was possible to do better. In 1912, he purchased a number of grade cows in which was included the purebred Holstein-Friesian Inez Monk 3d, No. 82683. A short time afterward he sold the grades for more than the original purchase price so that he always figures that Inez Monk 3d did not really cost him anything.

A SNAPSHOT OF THE WILLOW BROOK DAIRY

In 1917, she was enrolled in cow testing association work and that year produced 16,521 lb. milk and made a profit over feed cost of \$221.68. That year she was third highest cow in all the Susquehanna County cow testing associations. As an investment, Flora was a profit maker. She dropped two heifer calves, one of which her owner sold when it was two weeks old for \$60., the other was kept until it was two years old and then sold for \$200 while Flora brought \$250 when she was nine years old.

Another good cow owned by the Bowells was Regal Katie Mercedes De Kol, No. 243960. In 1917 she produced 11,612 lb. milk and made a profit of \$260.12.

She was the highest cow for profit enrolled that year in cow testing association work in Susquehanna County. She was given an official test 76 days after freshening and made a 21 lb. seven day butter record. On the 90th day after she was fresh, she produced 74 lb. milk from three quarters.

Good bulls have always been used. Early in the history of the herd, Mr. Bowell was able to take his cows to Walker Korndyke Copia, a son of Walker Korndyke Segis and Korndyke Butter Girl Copia, 401.9 lb. milk, 24.41 lb. butter in seven days as a junior two-year-old, world's record in class at time of making. She was by Korndyke Butter Boy and from Copia Hengerveld 3d, a 27.52 lb. senior three-year-old whose thirty day record of 107.45 lb. butter was also world's record in class at time of making. These two cows were high class individuals and won several prizes at large New York State shows and exhibitions. Walker Korndyke Segis, who has a number of high record daughters, was a son of King Segis and the noted Lillian Walker 3d.

Another sire used was Sir Johanna Piebe Plum. This bull was naturally hornless and came from the establishment of George E. Stevenson, his sire being a son of Keystone Plum Johanna, 22,190.7 lb. milk, 1,052.96 lb. butter in a year, full sister to the famous Keystone Beauty Plum Johanna, former world champion senior four-year-old.

A number of cows were bred to King Pontiac Alcartra Pietje, undoubtedly the most famous bull ever in northern Pennsylvania. The work of his daughters in the test barn and in the general dairy and the splendid showing made by his offspring at many fairs, is well known to all interested in this line of breeding. To do justice to this strain would require an entire article. His breeding is familiar to nearly everyone but we will just say here that he was by King Segis Pontiac Alcartra from Fairmont Zerna Segis Pietje, 35.61 lb. butter in seven days as a junior four-year-old, world's record in class at time of making.

For some time Dutchland Korndyke Creamelle Boy was in service in this herd. His five nearest dams have year records averaging 1,094.68 lb. butter, 26,372.18 lb. milk. He was a son of King Segis Pontiac Konigen and his dam, Dutchland Creamelle Colantha Vale, has a year record of 881.21 lb. butter. She is a daughter of Dutchland Creamelle Korndyke Lad, the well known Dutchland Farms herdsire and her dam, Dutchland Colantha Vale has a number of large records. As a mature cow, she has seven day records of 30.42 lb. butter, 736.6 lb. milk and a year record of 1,082.37 lb. butter, 27,625 lb. milk. As a junior two-year-old she is credited with the production of 22,750.2 lb. milk in a year, world's record in class at time of making. She was a daughter of Colantha Johanna Lad and her dam was Creamelle Vale, 29,591.4 lb. milk in a year, a world's record at time of making, a daughter of De Kol Creamelle, reported to be the first cow that ever averaged 100 lb. milk a day for one hundred days.

The present herdsire, Creamelle Korndyke Konigen, is a son of Dutchland Konigen Creamelle Boy and his dam is Inez Walker Korndyke, the daughter of Walker Korndyke Copia and Inez Monk 3d, mentioned as having an official record of 571.1 lb. milk, 23.53 lb.

butter. The splendid individuality and the producing capacity of this great cow are among the reasons Mr. Bowell selected her son to head his herd and that he himself is a high class bull is evidenced by his picture which, while it indicates a fine animal, does not fully do him justice. His chest, barrel and rump are especially good and he is also very strong back of the shoulders. His calves are very much like him. A glance at his pedigree shows that he is backed by producers, many of them famous animals. His six nearest dams have official seven day butter records averaging 26.76 lb. with a daily milk average of 84 lb. The seventh dam never had an opportunity to make an official record but she has three daughters that have each made over 20 lb. butter in seven days. Transmitting ability is evidenced in every line.

A glance over the calves shows that the individuality of Inez Walker Korndyke is being transmitted, through her son, to her granddaughters, while their length and depth of body and the udder and teat placing show promise that they in turn will make great cows.

Desirous of obtaining the best possible herdsire, the Bowells with their neighbors, O. P. Walker & Sons and E. R. Gelatt & Son, purchased from Winterthur Farms the well bred young bull, King Ormsby Endercamp, a son of King of the Ormsbys and Vandercamp Segis Aaggie Jewel. As a senior three-year-old this young cow produced 15,391.7 lb. milk, 648.71 lb. butter in a year. As a five-year-old she is credited with 29.37 lb. butter, 533.6 lb. milk in seven days and 904.32 lb. butter, 21,110.5 lb. milk in a year. She is a cow of good type and conformation. Her sire was Judge Segis and her dam was Aaggie Jewel Segis, 23.36 lb. butter in seven days as a senior three-year-old, a daughter of Woodcrest Aaggie Jewel Son and from Queen Segis 3d, a granddaughter of King Segis.

King Ormsby Endercamp has the length and breadth and type you would expect in a son of King of the Ormsbys and a grandson of Judge Segis. His pedigree includes the names of many famous animals. He is a grandson of the great sires Judge Segis and Sir Pietertje Ormsby Mercedes and also a grandson of the noted Spring Brook Bess Burke 2d, a cow that four different years made over 1,000 lb. butter in a year and over 30 lb. butter in seven days. The dam of King Ormsby Endercamp is a granddaughter of King Segis and also traces to this sire through her dam, while among her ancestors are a number of other great sires, including Judge Hengerveld De Kol, Homestead Girl De Kol's Sarcastic Lad; and Pietje 22d's Woodcrest Lad.

The seven nearest dams of King Ormsby Endercamp have seven day official records that average 30 lb. butter while the records of his dam and sire's dam average 33.80 lb. butter in a week and 1,097.61 lb. butter in a year. The three herds he now heads consist of well-bred producers and he will have a great opportunity to show his value as a sire.

The herd is kept to produce and if a cow does not show a good profit over the cost of feed and care, she goes to the butcher. Mr. Bowell said that when he first began to farm for himself, he kept two things in mind—the cows must pay for the farm and must also afford the family a little more than an ordinary living. In 1922,

twenty head, more than half of them heifers in their first or second lactation periods, produced 214,450 lb. milk or an average of 10,211 lb. per cow on twice a day milking. The creamery slips show a total of 186,800 lb. delivered to the shipping station. The remainder was fed to the calves and consumed by the family, for milk is on the table at every meal as it should be in every dairyman's home.

At the present time, the milk produced is delivered every morning to Ararat which is two and one-half miles away. Bowell & Son are members of the Dairy-men's League and the Farm Bureau. "A. L." himself is one of the township's assessors and a justice of the peace.

Freece, the junior member of the firm, is now twenty-three years of age. His parents' ambition was to give their son a real education so he studied at the Harford Vocational School from which he graduated;

THREE DAUGHTERS OF CREAMELLE KORNDYKE KONIGEN
Snapped in the calf pasture.

then, in 1919, he entered the Agricultural College at Penn State from which he graduated in 1923. Since graduating he has remained on the farm.

The Willow Brook Stock Farms are very fertile and grow plenty of roughage for the herd. The pastures supply lots of feed and are well watered. A large spring furnishes plenty of pure water for the house and buildings.

The Bowells are believers in the use of machinery to lighten labor. An Empire milking machine is used. Mr. Bowell is local agent for this make of milking machine and is very enthusiastic as his own machine had been in use ten years on the twenty-fourth of last February and had never missed a milking since it was first installed while, during the season of 1918-19, sixteen cows were milked four times a day for seven months. It is no wonder that the family are all enthusiastic over the Empire and that they are instrumental in placing a large number in their community.

The Bowell barn is large and roomy, but not fancy, you can see its duplicate on many Pennsylvania farms. The floors are of concrete construction. A water tank is built right in the barn. The buildings are protected by lightning rods. The manure is drawn out every day directly from the stables to the fields. As mentioned before, machinery is used to lighten labor and so the farm equipment includes a tractor, hay loader and silage cutter while a "Dodge" makes business

journeys seem shorter and at the same time aids in giving pleasure to the family.

While a few official records have been made at this establishment, animals from this herd have gone into other hands and, in official work, demonstrated their capacity. The first junior three-year-old of Susquehanna County, the first 30 lb. cow bred in that county and the first Susquehanna County cow to produce 100 lb. milk in a day were products of this herd. Every precaution has been taken to insure the health of the herd which became fully accredited in June 1922.

Sheffield Farms Company Advance Milk Prices

PRODUCERS who supply milk to the Sheffield Farms Company will receive for their June milk a basic price of not less than \$1.73 per 100 lb. is the pleasing announcement made by Secretary C. W. Halliday. This is an advance of at least three cents per 100 lb. over the May price. He was led to make this announcement by an estimate of the Sheffield Farms Company as to the amount of milk in each classification for the month of June. This estimate will be checked by an Auditing Committee at the close of the month and if the selling price warrants it, the producers' price may be slightly higher.

Mr. Halliday is to be the permanent member of a Committee of two whose duty will be to audit the Sheffield Company's books each month in order to determine the quantity of milk sold in each classification and the net price to be paid the producers. The other member of the committee is to be a group member who is to be changed monthly.

The further announcement was made that for the month of July, the price of class 1 or fluid milk will be advanced not less than 47 cents per 100 lb. or to \$2.33. This advance is conditional on the other groups making a similar advance as advocated at recent meetings of the Committee of Fifteen which has been holding sessions at Utica in an endeavor to stabilize prices in New York milk market. As the Dairy-men's League representatives, acting under the advice of their counsel and vice president, John D. Miller, refused to be a party to a price fixing compact, this advance will not be made, for Secretary Halliday, in his communication to the producers, says that if similar price advances are not made by any of the groups represented or the Committee of Fifteen do not make a similar advance, the Sheffield price will have to be adjusted to meet existing market conditions.

The regular meeting of the group members supplying the Sheffield Farms Company was held in New York City, June 25. Representatives from each of the sixteen groups were present as well as visitors from five groups and five representatives of the Sheffield Company.

More than a thousand people witnessed a Scrub Bull Trial at Waynesboro, Pa., the evening of June 18th. Has your club discussed the advisability of such an entertainment to be held in your district? The BREEDER AND DAIRYMAN will be pleased to answer any questions on how to conduct such a trial.

Horse Shoe Pitching or Barnyard Golf

AT most out door gatherings of dairymen you will see a horseshoe pitching game in progress and sometimes several of them. So universal is the custom that the game is often called "Barnyard Golf."

As is the case with all games, disputes occasionally arise. The following are the so-called standard rules, so if you and your friends are addicted to this sport, cut them out and paste them where they can be consulted should the occasion arise.

SECTION I

1. The standard distance shall be 40 feet between the pegs.
2. The ground shall be as level as possible. In indoor pitching, contestants will pitch into boxes, the boxes not to exceed 6 inches in height.
3. The pitcher's box shall extend 3 feet on either side, to the rear and in front of peg. The ground therein shall consist of clay, except in those states that have a sandy soil; if clay, it shall be well dampened and dug up to a depth of 6 inches; if sand, it shall be well dampened and tramped down. A contestant, when pitching, may stand anywhere inside the pitcher's box. Any pitcher delivering a shoe outside the pitcher's box shall forfeit that pitch.
4. The pegs shall be of iron, 1 inch in diameter, perpendicular, extending 8 inches above the ground and inclined 1 inch toward the opposite peg.

SECTION II

1. At the beginning of the game the contestants shall toss a coin for first pitch, the winner to have his choice of first or follow.
2. At the beginning of the second game the loser of the preceding game shall have first pitch.

SECTION III

1. The shoes to be used must not exceed $7\frac{1}{2}$ inches in length or 7 inches in width. No toe or heel calks shall be over $\frac{3}{4}$ -inch in length. No opening between the heel calks shall exceed $3\frac{1}{2}$ inches, inside measurement. No shoe shall exceed 2 pounds and 8 ounces ($2\frac{1}{2}$ pounds) in weight.

SECTION IV

1. In four handed games, partners shall have the right to coach.
2. Those not in the game are forbidden to coach, molest, or in any way interfere with a pitcher.

SECTION V

1. No contestant shall walk across to the other peg and examine the position of the shoes before making either his first or final pitch. All contestants must pitch from the pitching box into the opposite pitching box, or forfeit a point to his opponent.

SECTION VI

1. Wrapping the fingers with tape is allowed.

SECTION VII

1. A regulation game shall consist of 50 points, and

the contestant first scoring this number shall be declared the winner.

2. The most points a contestant can score in a single game is 50. A pitcher gets credit for only the necessary points required to bring his total up to 50, but all ringers are credited to him.

3. In all national tournaments regulation 50-point games shall be pitched. Each contestant shall pitch other contestants three consecutive games. The contestant winning the greatest number of games shall be declared the winner.

4. A shoe that does not remain within 8 inches of the peg shall not be counted.

5. The closest shoe to the peg shall score 1 point. If both shoes are closer than either of an opponent's, they shall score 2 points.

6. A ringer shall score 3 points. To be a ringer, a shoe must encircle the peg far enough to allow a straight rule to touch both calks, and clear the peg.

7. Two ringers is the highest score a pitcher can make and shall count 6 points.

8. All equals shall be counted as ties. That is, if both contestants have one shoe each equal distance from the peg, or against it, or ringers, they are tied, and the next closest shoe counts.

9. If one contestant should have two ringers, and the other one, the pitcher having the two ringers shall score 3 points.

10. In case of a tie on all four shoes, such as four ringers, or four shoes each 1 inch from the peg no score shall be recorded, and the contestant who pitched the last shall be awarded the lead.

11. Calipers should be used for all necessary measurements.

12. In case of any dispute or where the rules do not specifically cover a disputed point, the referee or committee in charge shall have full jurisdiction.

Warning to Cooperative Associations

COOPERATIVE Farm Associations have, in some instances, made contracts with fertilizer manufacturers without ascertaining whether the brands of fertilizer had been registered with the state authorities in which the cooperative association did business. Most agricultural states have laws requiring brands of fertilizer sold in that state to be registered with the state authorities. This legislation was made necessary by inferior fertilizers being placed on the market and is a regulation made in the interest of farmers. Those in charge of cooperative associations should ascertain, when they place contracts either with manufacturers of feeds or fertilizers, that the brands are registered with the state authorities otherwise the agents are liable to get into trouble and both agents and the associations are liable to be heavily fined.

Have a Little Bossy in Your Home

If one hundred orders are received, the model true type cow will be reproduced one-sixteenth life size. The present model is one-fourth life size. The small model will be of white metal and painted white and black. It will cost you \$15 to own one of these true type miniature models.

Legal Decison Affecting Cooperative Associations

BEFORE the Circuit Court of Frederick County, Maryland, on July 7th, the Maryland and Virginia Milk Producers' Association won a case against S. I. Linton, a member of the association and W. A. Simpson, a Washington wholesale milk dealer, that is of importance to all dairymen who have agreed to market the product of their dairies through a cooperative association.

Mr. Linton claimed: First, that the contract he signed was procured by fraud; second, that it was beyond the scope of the powers of the association in its papers of incorporation; third, that it was without mutuality and consideration; fourth, that it was a mere contract of agency and was subject to a right or revocation and such right had been exercised; fifth, that it was inequitable, unreasonable and against public policy. The jurisdiction of the Court to entertain the suit also was questioned.

The Court held that the charge of fraud was not sustained by the testimony. That the charter of the association showed that it should have no capital stock and that its object was "to secure better results in marketing" the dairy products of its members. This was a lawful purpose for which a corporation may be legally formed under the General Corporation Law of Maryland.

When the members executed their identical contract with the association, such members virtually agreed with each other as to their rights and responsibilities in their common venture. They entered into mutual agreement with knowledge that their association would have to face competitive conditions against which it could not hope to succeed without the continuance of the support they pledged.

On the defendant's contention that the agreement sought to be enforced lacks the legal element of mutuality because it permitted the association to reject the members' dairy products if determined to be unsatisfactory according to its arbitrary judgment, the Court construed its terms differently, holding that if the products were of such quality, delivered at such hours and produced under such sanitary conditions as may be required by the rules and regulations of the association, and the Washington Board of Health and those in effect where the milk was produced and was to be marketed, the association had no option to reject a member's products when offered for delivery. Having contracted to market his milk for a specified period, in consideration of his agreement to sell only through its agency, the association could not rightfully refuse to accept his milk for sale of produced, protected and delivered in conformity with the conditions which the contract prescribed.

While holding that the contract authorized the association to recover liquidated damages from a member in default, and to sue for the specific performance of the contract, the Court held that there was nothing in its terms to prevent resort by the members to any appropriate form of action in the event of a breach by the association of its contractual duty.

In the opinion of the Court "the contract was based

upon mutual and adequate considerations. It is the mutuality of interest and benefit in such an organization that constitutes the fundamental consideration upon which the similar contracts of its members are founded."

In addition, the Court held that the evidence failed to prove that the members of the Milk Producers' Association were receiving less for their milk than they would have obtained if their cooperative efforts were abandoned. It appeared from the evidence that the cost of maintaining the organization and marketing the product of those members was very low but that there was a loss in the disposition of an abnormal surplus of milk which reduces the amount of sale funds for distribution.

The Court also held that it had jurisdiction in the case and that a sufficient answer to the contention that the contract was against public policy, as being in restraint of trade, is found in the many decisions to the contrary and in the Congressional Act of 1922 and the Maryland Act of the same year providing for the incorporation of cooperative associations. The policies of such cooperative associations were were not to create a monopoly and increase prices but to secure for the producer a larger and fairer proportion of the market value of their product.

The demurrer to the bill of complaint was overruled. The defendant, S. I. Linton, was ordered to perform the contract mentioned in the bill of complaint, an injunction was granted against both defendants and W. A. Simpson was ordered to pay the cost of the suit. Decision was reserved on the question of payment of liquidated damages.

Dairy Products Go into Cold Storage

THE movement of dairy products into cold storage was unusually heavy during the month of June. On July 1, there were 74,446,000 lb. creamery butter in storage, while on the first of June there was only 22,348,000 lb. On July 1, 1923, there were 62,768,000 lb. The average for the last five years on July 1 was 66,971,000 lb.

The movement of cheese into storage is equally significant. The amount on July 1, 1924 was 45,517,000 lb. while on June 1, only 27,172,000 was in storage. The figures on July 1, 1923, were 36,834,000 lb. and the five year average is less than thirty-four and one-half million. These figures are for American cheese only. This type constitutes about three-fourths of the cheese placed in storage in this country. The same movement is found in other makes although to a less degree.

Not a Rapid Increase

THE statement that the average herd takes ten years to double itself has been doubted by some of our readers although the source of the information was said to be the files of the secretary's office. The British Friesian Society recently reported the result of their annual cattle census. The report shows that at the end of the year there were 2,634 purebred black and white males and 23,146 purebred females in the British Isles or a total of 25,780. The increase in the year was just over 2,000 or 8%.

THE SCRUB BULL TRIAL AT WAYNESBORO, PA., JUNE 18

Pennsylvania's First Scrub Bull Trial

A. SCRUBICUS BULL was formally tried and sentenced to death in the Court of Bovine Justice, held at Waynesboro, Pa., June 18. In the evidence it was brought out that the prisoner's first name was Adam, the second syllable being accented, and that he was a damage to the community, a destroyer of wealth, and a robber who preyed upon his owner. Despite the skillful pleading of his legal counsel, former State Senator John W. Hoke, and the representations of his owner and a member of other witnesses summoned in his behalf, the jury returned a verdict of guilty. Judge Watson R. Davison pronounced the sentence and it was carried out by Sheriff Ankerbrand immediately, the animal being shot.

The state was represented by District Attorney C. H. Clipper, who summoned as witnesses for the prosecution, Professor E. B. Fitts, Professor of Agricultural Extension Work at State College, A. R. Dawson of the Department of Agriculture, Washington, D. C., G. H. Truckell, Harrisburg, and Benjamin F. Welty, a local breeder of purebred Guernseys. The witnesses for the defense were County Agent J. H. Knode, E. S. Grimm, Geo. D. Buedeke, an owner of purebred Guernseys and Shred Cressler. Mr. Buedeke's evidence was to the fact that the bull was a labor saver and should be encouraged because his daughters did not give enough milk to bother with.

The judge instructed the jury to return a verdict

of guilty whether they thought the bull was guilty or innocent and that the fact that one of the jurymen was claimed to be related to the prisoner had nothing to do with the case because he personally had had so much trouble with his relatives that he never held spite against any of them. He instructed the jury to pay no attention whatever to the attorney for the prosecution nor the attorney for the defense, but to take their instructions from the judge.

Court was formally opened by Daniel Croft, official crier at the Chambersburg Courts, while Prothonotary W. S. Kolb was clerk. The jury were business men and farmers of Waynesboro and the community surrounding it.

The trial was staged under the auspices of the Waynesboro Advertising Club and the Franklin County Farm Bureau. The men who had most to do with the staging of the trial was Alfred W. Chilton, Secretary of the Waynesboro Chamber of Commerce, County Agent Knode, and Assistant County Agent Pharo. The Waynesboro band played at the opening of the court, played several pieces while the trial was in progress and a dirge while the animal was being sentenced and the sentence carried out. It was estimated that more than 1,000 attended the trial which was held on the Waynesboro ball ground, and staged on a platform in front of the grandstand.

DISTRICT ATTORNEY C. H. CLIPPER SUMMING UP THE CASE FOR THE PROSECUTION.

Despite a large amount of fun, the lesson of the superior earning capacity of the purebred animal over the scrub was brought out in an interesting manner. The animal selected for trial was a genuine scrub in every way and in contrast to him were a number of purebreds from the Welty herd. It was impossible to see the different animals side by side without realizing the superiority of the registered stock and the evidence of the witnesses pointed out the advisability of discarding scrub stock and breeding only improved cattle and giving them good care and feed.

The Waynesboro Chamber of Commerce believes that the staging of the trial will forcibly bring home the question of improved stock to the members of their community living either in town or in the country. This is the first Scrub Bull Trial that has been ever held in the state of Pennsylvania and on that account there was a great deal of interest taken in it by the agricultural authorities at State College and at Washington.

Waynesboro is situated in Franklin County, Pa., among the Blue Ridge Mountains, very close to the Mason and Dixon Line. It has an elevation of 1,500 feet above the sea level and is only seventy-five miles from Washington, D. C., and, although it contains a number of factories, it is somewhat of a summer resort, many Washington and Philadelphia residents having summer homes located in the near neighborhood. A number of summer visitors attended the trial which was given a large amount of publicity by the Waynesboro papers, the *Record-Herald* and particularly the *Waynesboro Press*, which daily carried preliminary announcements and reports of the proceedings on its front page.

A few real good animals exhibited at your local fair will be better advertising for you and your herd than it would if you were to try to fill all the classes and take all the prize money. From an advertising standpoint it is quality and not number that counts.

Baseball Team Named Holsteins

HOLSTEINS is the name which designates the baseball team which represents the city of Malad, Idaho, in the Utah-Idaho league. This is quite a change from the Cubs, Bisons, Giants, Robins, and other titles chosen to designate baseball teams.

There is a reason for the Malad team choosing this name. Malad is the center of a great dairy region. At a recent black and white day celebration, there were 135 purebred Holstein-Friesian animals placed on exhibition.

The adoption of the name, Holstein, by the team is a stroke of good business for while the Holstein cattle are building up the prosperity of the Malad section, the Holstein team is gaining games on the base ball diamond and advertising their city and the cattle which help to make it prosperous.

Watch Illinois

A STATE wide purebred bull campaign is being planned in Illinois. Those back of the movement promise the most ambitious movement of this kind that the dairy world has ever known. Every breed organization in the state is back of the move.

The Extension Service report says that 75 billboards advertising Holsteins and Holstein milk have been sold through their efforts. The men and organizations erecting the billboards paid for them but we would like to know how much extra it cost the Association for the work of the Extension Service and the advertising they placed on this work in the breed and agricultural journals?

Economy and Keep Within Our Income was the gist of the talks made by the Association Directors at Richmond. Evidently they are reading *THE HOLSTEIN BREEDER AND DAIRYMAN* and learning what the little fellow thinks about the Association's expenditures exceeding its income during 1923.

Montrose Centennial and the Dairy Industry

MONTROSE, Susquehanna County, Pa., on July 2-6 celebrated its one hundredth anniversary, it being just one hundred years since the borough was incorporated. Former inhabitants with their friends came many miles to take part in the celebration. Montrose is said to have been named by a Dr. Rose,

THE FLOAT REPRESENTING THE 1924 dairy industry in the Montrose Centennial parade.

who chose his own name and prefixed the word Mont, meaning high or mountain.

On Thursday July 3, the celebration was in the form of a historical parade which was over three miles long and required more than an hour to pass a given point.

Montrose is one of the greatest Holstein centers of the Keystone State and therefore it was to be expected that the dairy industry and the black and whites would be well represented.

The committee representing Bridgewater Township arranged a couple of floats representing the changes in dairying in a hundred years. This committee consisted of Mrs. Horace Johnson, A. R. Bush, with Charles B. Dayton, as chairman. The two floats made interesting contrasts. As shown on the cover of this issue, the float representing 1824 was drawn by four horses. It carried an ancient churn and a number of other utensils use in days gone by. With her head in an old-fashioned wooden stanchion rode a red cow, emblematic of the common red cow known to our forefathers. The attendants were costumed in the garb of 1824 and everything was done to make the display illustrative of that time.

Immediately behind this float came one representing 1924. It consisted of a truck from that well known Holstein establishment, Lathrop Farms. Its color scheme was checkered black and white. Upon a platform erected over the hood rode the true type models of the Holstein-Friesian Association of America. On the running boards on each side of the truck there was a forty-quart milk can for much of the milk produced in Susquehanna County is shipped in cans of this size to New York City. A purebred Holstein cow from the Lathrop herd rode on the truck, her head fastened in an up-to-date steel stanchion. This cow was evidently right up to the minute for by her side was a milking machine. On the name plate over the stan-

chion was the legend "Miss 1924." Attendants on this float consisted of young women dressed in black and white and boys wearing milking suits. Pages wearing checkerboard black and white vests and caps marched back of the float.

Bridgewater township was represented by fifty in the parade and so won the prize for the largest turnout.

Another exhibit in the parade was a tiller driven automobile, made in the year 1902. It was steered by Sherman Griffing, of Heart Lake, Pa.

Keeping the Boys on the Farm

THREE firms of Holstein breeders located near Thompson, a small village in eastern Susquehanna County, Pa., united in the purchase of the purebred Holstein bull, King Ormsby Endercamp. This young bull is a son of King of the Ormsbys from Vandercamp Segis Aaggie Jewel, a cow that produced 29,37 lb. butter, 533.6 lb. milk in seven days, 904.32 lb. butter, 21,110.5 lb. milk in a year.

It is not our purpose at this time to elaborate on the pedigree of King Ormsby Endercamp. We just want to call attention to the personnel of his owners. The three firms who claim an interest in this young bull are A. L. Howell & Son, E. R. Gelatt & Son, and O. P. Walker & Sons. Notice that in each instance two generations are represented in the name of the firms united in ownership. The younger member of the firm of Howell & Son is Freece, now twenty-three years old, an agricultural graduate of Pennsylvania State College. The younger member of the firm of Gelatt

& Son is Hugh, who spent two years at the Pennsylvania State College but who is now at home, owing to the fact that his father is not in the best of health. The firm of O. P. Walker & Sons consists of four members, Mr. Walker, who came to the farm when he was two years old and has spent sixty-three years thereon, and his three sons, Percy W., Clifford M. and Carl A., the latter a sixteen-year-old high school student.

In the two firms first mentioned the son has gone along in the footsteps of his father. In the case of Walker & Sons, the one who really made the start in the purebred Holstein business was Percy W. His father was quick to see the possibilities in the business not only financially but also because the purebred breeding business interests the younger generation and gives them a feeling that they are doing things a little better than the general run of dairymen. A breeding business of any kind requires careful planning while the building of pedigrees and uniting family strains is always fascinating.

One of the great problems of the American farmer is how to keep his boys on the farm. Here we have three instances where this problem has been successfully solved. The answer in each case is a purebred Holstein dairy and a share in the management of the business and its financial results for the boys.

Laws are for the protection of those who obey them, but so many who violate some of them want the protection of all of them.

A Splendid Opportunity

For Immediate Service

Hillside Pietje Ormsby 410729

Sire: King Pontiac Maple Knoll Ormsby whose daughters are making good. He was by King of the Pontiacs from a 33-lb. sister of Ormsby Korndyke Lad.

Dam: Hillside Lady Saxon, 28.9 lb. butter, 548.7 lb. milk in 7 days as a junior four-year-old. As a junior two-year-old she made state records for both seven- and thirty-day butter production. Her dam, Hillside Saxon, has twice made over 30 lb. butter in a week, and is a 32.29-lb. daughter of Woodcrest Pietje and the 30-lb. cow Hillside Annette.

The three nearest dams of Hillside Pietje Ormsby average 31.45 lb. butter in 7 days with a daily milk average of 80.4 lb.

This bull is now in service in this herd.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

July 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Depression or Extravagance?

IN reviewing the report of the Financial Committee of the National Association as presented at the Annual Convention on June 4, 1924, at Richmond, Virginia, our attention is attracted to this statement:

"In making the program for 1923 the Directors felt that Extension work was very greatly needed and that surplus funds earned and accumulated during good times should, very properly, be used in periods of depression, so long as the financial soundness and integrity of the Association is maintained."

Our attention was particularly attracted to that part of the statement which reads, "Surplus funds earned and accumulated during good times should, very properly, be used in a period of depression."

Is the Holstein-Friesian Association as an Association experiencing a period of depression or are those who are managing its affairs so extravagant in their methods that they are spending the breeders' money faster than it can be collected?

In order for the Association to keep up with the spending capacity of the management, it is proposed that the reserve fund be drawn upon under the pretense that the deficiency in the Association's funds created by extravagance is not due to extravagance but to a period of depression!

Let us investigate a little.

It is inferred that "funds earned and accumulated during good times should, very properly, be used in a period of depression."

Let us go back and study the Association's records and see what was being accomplished or how the Association was being managed during those so-called "Good Times" when the present reserve fund was "earned and accumulated."

Let us go back to the year before the present management assumed control, to the year ending April 30, 1919, and see what the Association's income was; see whether it was experiencing any better times than now; see if the Association was collecting more money than it collected in 1923; see if the Association was registering and transferring any more animals.

Let us compare the cost of managing the Association for the year ending April 30, 1919, with the cost of managing it for the year ending December 31, 1923, and see if the amount of business that the Association is now transacting warrants the increase in managing expenses.

The amount of business transacted by the Holstein-Friesian Association for the year ending April 30, 1919, is as follows:

Total earnings	\$309,048.29
Total operating expenses	256,811.37

Excess of earnings over operating expense	\$52,236.82
Interest on Reserve Fund	8,547.58

Net earnings above expenditures 1919	\$60,784.40
---	-------------

The amount of money expended for Extension service for the year 1919, was \$9,568.40. The transfer fee was 25 cents to members and 50 cents to non-members.

Let us compare the above figures with the Association's records for the year ending December, 1923.

Total operating expenses	\$586,736.22
Total receipts	525,916.67

Net loss	\$60,819.55
----------------	-------------

The Association's income for the year 1923, was \$216,868.38 more than in 1919 due largely to the increased charge for transfers, the cost of managing the Association had increased \$329,924.85 over what it was in 1919.

Let us see to what extent the Association's business was increased in 1923 over 1919 to justify the additional expenditure of \$329,924.85 in the cost of managing.

Was there an increase in the number of transfer certificates issued?

Was there an increase in the number of registration certificates issued?

Was the number of membership applications received increased to the extent that it would require or justify increasing the managing expenses of the Association to the amount of over \$329,000.00?

During the year 1923, the Association transferred 91,665 animals. In 1919 it transferred 97,392 or 5,727 more transfers were issued in the year 1919 than in the year 1923.

The Association issued 90,887 registration certificates in 1919 and 115,132 in the year 1923. In 1919 the Association received 3,198 applications for membership and in the year 1923 it received 1,754 applications for membership or nearly twice as many breeders joined the Association in 1919 as joined it in 1923.

UNDER THE OLD BUSINESS FORM OF GOVERNMENT WITH A TWENTY-FIVE CENT TRANSFER FEE, THE ASSOCIATION FOR THE YEAR 1919 OPERATED AT A PROFIT OF \$60,284.40.

UNDER THE PRESENT POLITICAL FORM OF GOVERNMENT WITH A \$1.50 TRANSFER FEE THE ASSOCIATION WAS OPERATED AT A LOSS OF \$60,819.55.

IS THE DIFFERENCE BETWEEN OPERATING THE ASSOCIATION AT A PROFIT OF \$60,284.40 ON A TWENTY-FIVE CENT TRANSFER FEE IN THE YEAR 1919 AND OPERATING IT AT A LOSS OF \$60,819.55 ON A \$1.50 TRANSFER FEE IN 1923, DUE TO A DEPRESSION IN THE ASSOCIATION'S BUSINESS OR EXTRAVAGANCE IN THE ASSOCIATION'S MANAGEMENT?

NOTE THIS COMPARISON

YEAR ENDING APRIL 30, 1919

Total Association earnings,	\$309,048 29
Total Association operating expenses,	256,811 37

Excess of earnings over operating expenses,	\$52,236 82
Interest on reserve fund,	8,547 58

Net earnings above expenditures,	\$60,784 40
Transfer fee,	25

YEAR ENDING DECEMBER 31, 1923

Total Association operating expenses,	\$586,736 22
Total Association receipts,	525,916 67

Net loss,	\$60,819 55
Transfer fee,	1 50

Increase in operating expenses for year,	329,924 85
--	------------

Number of transfer certificates issued:	
1919,	97,392
1923,	91,665

Decrease,	5,727
Number of new members accepted:	
1919,	3,198
1923,	1,754

Decrease,	1,444
-----------------	-------

Is the Management Serving the Association

or

Is the Association Serving the Management?

What Some Can Get for \$25.00

DID it ever occur to you that, by investing the small sum of \$25.00 for a membership in the Holstein-Friesian Association of America, you would be entitled to a life membership in one of the most popular millionaire clubs in America?

The Holstein-Friesian Association, as a millionaires club, differs from most clubs in that the membership fee is small and there are no annual dues.

The club is financed largely by fees collected from dairymen for registering and transferring purebred cattle. It is not necessary for members of the club to contribute to its support in this way. Some of the officers and men prominent in the club's management do not contribute.

The indirect method of financing the club permits of practically unlimited expenditure. If more funds are needed the fee for transferring cattle is increased. The fee for transferring cattle has been increased 600% in the last five years and it would seem as the various entertaining features are added that it will soon have to be again increased.

Practically every other club of any consequence requires a high initiation fee of \$100.00 or more and annual dues of an equal amount and offers its club members nothing in return other than the use of the club house, the swimming pool, golf links, etc.

While at the present time the Holstein-Friesian Association has no club house, such a project has been under advisement or consideration and suggestions have been offered that it be located at or near Chicago.

Although the Association has no club house, golf links, swimming pool or polo grounds, its form of entertainment is unique in that it affords educational advantages for travel and for visiting the various dairy and agricultural exhibitions throughout the United States. It also affords great possibilities for those who are seeking national prominence and political preferment.

The club features are enjoyed most by the officers and committee members. The board of officers is large and appointment on committees is apparently unlimited, so that always a goodly number of members are placed in a position to get full enjoyment of the club.

At the last meeting of the club it was voted to pay the traveling expenses to the annual convention of at least one member from each state or territory, and one member for each 200 members or a fraction thereof residing in the states. This provides pleasure trips for another 150 members and it is hoped in the near future that every live member of the club will be provided with free transportation to and from the annual convention. At the present time the officers and members of standing committees receive the greatest benefit from the club.

It seemingly has been the practice to call a meeting of the officers or some of the committees at the time of the leading agricultural events that are held throughout the United States, thus enabling the officers and committee men to enjoy attending the convention or exhibition, the Association defraying the expenses.

It is not necessary for the member to pay out one penny that he does not get back. When he gets ready to leave home he may call a taxicab which delivers

him at the station, he buys his railroad ticket and arranges for his pullman reservation, takes his meals in the dining car and, at his destination calls a taxi which takes him to his hotel where he lives in splendor. He may return in like manner and to get his money back, including taxicab hire, railroad fare, pullman service, dining service, telephone calls, hotel room, meals, etc., he makes out an itemized list of his expenditures and sends it to the proper officer of the Association and receives the Association's check in return.

The following forms have been accepted:

Blank date at Blank City, Executive Committee meeting.
 Railroad and extra fare\$50.50
 Hotel and taxi and other expenses 31.00
 Telephone and telegrams 8.94

(Blank Name) for expenses in connection with the trip to Washington, D. C., Philadelphia, Pa., Trenton, New Jersey, etc.

Railroad fare blank city\$118.26
 Railroad fare blank city to blank city 15.28
 Hotel Blank City 16.00
 Hotels in blank city and blank city 6.00
 Taxi 5.50
 Meals 22.20

Total\$183.24

If he does not wish to bother with details it is not necessary for him to go into the matter of itemizing every little expenditure but make out a memorandum like this:

Expenses to blank city, on blank date\$162.55
 Expenses to blank city, on blank date 159.20
 Expenses to blank city, on blank date 145.65
 Expenses to blank city, on blank date 33.85

Total\$501.25

The above represents actual amounts drawn from the Association's treasurer by members to reimburse them for their expenses while on free trips at the Association's expense.

Some of the members, particularly those with a political training, have been fortunate in dropping in to salaried positions and they not only collect their expenses as above mentioned but draw their salary checks on the side.

The scope and possible entertainment offered by the Association is not limited to the bounds of the United States. If a member lends himself readily to the dictates of the club management, he may be given a trip to some foreign land. Club members have been known to go to South America and at present one is over in Scotland.

Breeders and owners of purebred Holstein cattle, although they can not avail themselves of the wonderful privileges for education and travel that the club affords, find it to their advantage to become a member of the Club because, by so doing, their contributions to the Club are reduced 50%.

If you are a *millionaire*, a *politician*, *owner* or *breeder* of purebred Holstein cattle, you should be interested in taking out a membership in this club. *Don't miss it.*

Milk Exports During May

IMPORTS of butter during the month of May are very nearly equal to the amount exported, the imports being 548,748 lb. and the exports 579,658 lb. A year ago nearly three times as much butter was imported during May as was exported during that month, the import figures being 1,176,847 lb. and the amount exported being 446,876. Possibly part of the credit for this state of affairs is due to the rainy weather during the spring which kept pastures growing rapidly.

While condensed milk exports showed an increase, the exports of evaporated milk showed a much greater decrease. The amount of condensed milk shipped out of this country in May was 6,985,602 lb. while for the corresponding month of 1923, the amount was 5,741,117 lb. The exports of evaporated milk was 6,935,305 lb. during May, 1924, while during May the year previous, the amount was 10,401,683 lb. Strange to say the aggregate exports of condensed and evaporated milk during the first five months were each above ten million more than the aggregate amounts exported during the first five months of 1923. Roughly speaking the figures for the 1924 were over thirty-one million condensed and over sixty-five million for evaporated while during the first five months of 1923 the figures were 21,674,434 lb. and 55,636,850 lb. respectively.

The exports of powdered milk were 369,371 lb. during May, 1924, while for May, 1923, the figures were 222,649 lb. During the first five months of the year nearly 150,000 lb. more were exported than during the first five months of 1923.

CLUB ACTIVITIES

GOOD TURNOUT IN OREGON

More than fifty interested in the black and white breed gathered at Oregon City, Oregon, the evening of June 26th and formed a Clackamas County Holstein Association. W. C. Culbertson of Canby was elected president of the organization; F. H. Frentz, Molalla, vice-president; William J. Paeth, Estacada, secretary, and T. L. Seely of Woodburn, treasurer. The executive committee is composed of F. H. Frentz, George DeBok of Willamette, E. J. Moulton of Aurora, T. L. Seely, E. Hunziker, Clackamas, W. C. Culbertson and Wm. J. Paeth.

NEW MICHIGAN COUNTY CLUB

About twenty Holstein breeders met at the high school at Stephenson, Michigan, July 3d and organized the Menominee County Holstein Association. Plans were made to promote the use of purebred bulls, to prepare a Holstein exhibit for the Menominee County Fair and to elect a sales deputy who will endeavor to market surplus cattle owned by association members. Nels Linderth will have charge of the fair exhibits and E. A. Steinbrecher of Swanson will be the breed representative in the Better Bulls campaign. The directors elected were R. P. Detjen of Wilson, E. A. Steinbrecher, A. A. Allgeyer of Wallace and Larson Bros.

CLUB HOLDS EDUCATIONAL CONTESTS

The Cherokee Holstein Breeders' Association held their second cattle judging contest of this year on July 1st at the William Graumann farm at Cherokee, Wis. Four dairy cows were judged. Noel Schelling made the high score with 92 points and was entitled to be judge at the next meeting but he refused so Fred Fricke, who was second with 89 points acted as judge on Sunday afternoon, June 6th, at the W. C. Wurthmann farm. Here two classes were judged, dairy cows and heifers. Mr. Fricke was aided by W. J. Rogan, county agent, in placing the animals.

Further meetings of this kind are planned and it is expected to hold Cherokee Holstein day some time early in August at which bulls will be judged by the members.

BREEDERS UNITE FOR DISCUSSION

Charles Leavell, president of the Lake County Holstein-Friesian Association, was present as a delegate to the Guernsey Breeders' Association held late in June at Pablo, Montana. The

subject for discussion was the outlining of a legislative program to be sponsored by the dairymen of the state in an effort to secure more favorable legislation affecting the dairy-men's interests.

At the meeting an announcement was made that the Indian department would attempt to collect \$1 per head for all livestock allowed to graze upon the unfenced Indian allotments. The question was raised as to their right to do this where there is no herd district. It is contended that the unfenced Indian lands are a menace to adjoining farms because they afford breeding places for grasshoppers and ground squirrels and, if not kept grazed down, would be rank with weeds. A number of breaks in the irrigation canals in that district are said to be caused by the accumulation of weeds blown into the canals from the vacant Indian lands.

PLANNING COUNTY HERD EXHIBITS

A committee of the Fond du Lac County Holstein Breeders' Association have been touring Fond du Lac County inspecting the various Holstein herds for the purpose of selecting a show herd to be exhibited at the county fair in September. If enough real quality Holsteins can be obtained, it is possible that a smaller herd may be exhibited at Milwaukee at the time of the National Dairy Show.

At the recent annual meeting of the association resolutions were passed permitting the committee to take any animal out of any member's barn for this exhibit.

The association committee for the purpose is E. C. Peebles, Fond du Lac, chairman; C. M. Corcoran, Fond du Lac; Clarence Murphy, and S. C. Stanchfield, of Fond du Lac.

SOUTHWESTERNERS INSPECT HOLSTEIN DISTRICTS

About 150 visitors from Missouri, Kansas and Oklahoma consisting of bankers, editors, farmers and business men made a trip early in July through the dairy sections of Wisconsin. On the afternoon of July 8, a number of the members of the Cherokee Association were in Colby and greeted the visitors who stayed for an hour in that city. Among the exhibits were a large number of Holstein calves belonging to the Cherokee and Colby calf clubs.

Huge piles of sandwiches, filled with Colby style federation cheese and a can of cold Guernsey milk greeted the hungry

A Profitable Business—
 Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

and thirsty travelers. The cheese was furnished by the Cherokee Holstein Breeders' Association and the milk by the Guernsey Breeders' Association.

Reid Murray of the Wisconsin Livestock Breeders' Association gave a cow-judging demonstration using five animals; a grade Guernsey, with a C. T. A. record of 514 lb. butterfat; a Brown Swiss with a record of 520 lb.; a purebred Holstein with a large record, owned by Sipple Bros. of Ardmore; and Hertz, the grade Holstein owned by W. C. Wurthmann of Hillandale Farm and adjudged the champion grade cow of Marathon County.

The young members of the Colby Calf Club gave short talks telling what good stock was raised in Marathon and Clark Counties and how they care for their animals.

On July 10, at Waukesha, the tour ended with a banquet in the Methodist Church. This tour covered Jefferson, Dodge, and Waukesha Counties. Among the Holstein establishments inspected were the Carnation Farms, the Gustave and Fred Pabst Farms, and the Jefferson County Farm.

Fourteen years ago this herd was started with twelve purebred Holsteins, today it has one hundred and seventy-five. Superintendent Voigt said that the income from the dairy herd last year was \$19,000. The 1922 income was around \$16,000 while in 1921 the income reached the high mark of \$22,000. Madam Artis Wayne Denver, the undefeated show cow of 1923, was led out for inspection of the visitors.

PLAN TO CORNER THE MARKET

Breeders Associations in Fond du Lac and Washington Counties, Wisconsin, are endeavoring to build up an exclusive market for Wisconsin dairy and beef cattle in northern Mississippi, in what is called the Black Prairie lime soil belt. This district is about twenty by one hundred miles in size and is located in the northeastern part of the state, comprising roughly about one million acres. Unlike most prairie soil, it has an underlying strata of limestone. It is one of the best alfalfa soils in the United States, according to a report of the Federal Bureau of Agriculture.

Breeders organizations have passed resolutions favoring the Mississippi-Wisconsin plan of cooperative cattle marketing and recommendations that Edward Nordman, chief of the Wisconsin department of markets, make a trip of investigation to Mississippi.

A. L. Mordt, commissioner of immigration for Mississippi and representative of the Northeastern Mississippi Prairie Farmers' Cooperative Association, has been in Wisconsin endeavoring to promote the plan and was accompanied by Dr. N. H. Bohree, representative of the Mobile and Ohio Railway.

SOUTHERN FARMERS' CLUBS

The Agricultural Society of South Carolina was founded in 1785 by farmers and planters around Charleston, S. C., and is probably the oldest farmers' organization in America. It is still very active, holding meetings quarterly and twice a year, in January and June, has a dinner. Noted speakers are always secured for the occasion. Another old farmers' organization is the Farmers' Club of Pendleton, S. C., which celebrated its one hundredth anniversary several years ago.

South Carolina planters and farmers evidently believe in such organizations. The Beech Island Club was organized before the Civil War and county agent C. Lee Gowan says that he believes that only one meeting has ever been omitted, and that was during the Civil War on the day a battle was fought in Aiken County. There are five agricultural clubs in Aiken County which meet once a month and have a barbecue at each meeting. These organizations have club houses in which they have an assembly room, dining room and barbecue pit. They meet once a month and have a barbecue at each meeting. Each of these clubs have a secretary; some have presidents; but some have no president or other officer other than the secretary and at each meeting a man is elected to preside.

NEW ENGLAND CLUB CHANGES PRESIDENTS

Owing to his elevation to the Connecticut Supreme Court Bench, Judge Frederick M. Peasley, of Cheshire, Conn., resigned from the presidency of the New England States Holstein-

Friesian Association and his resignation was accepted at a meeting of the Executive Committee held at Springfield, Mass., Friday, June 20.

Thomas E. Elder, of Mt. Hermon, Mass., also National Association director, resigned his position as secretary of the New England States Association. His resignation was also accepted and then Professor Elder was elected president. M. C. Peabody, the New England Field Secretary, was chosen secretary in Mr. Elder's place.

Judge Peasley's place on the Executive Committee was filled by the appointment of Angus P. Thorne, of the City of Bridgeport Farms.

CITY ORGANIZATION SUPPORTS DAIRY INDUSTRY

The Spokane Chamber of Commerce has endorsed unanimously the pure dairy products bill which was passed by the last Washington State Legislature and which is tied up by referendum and is to be voted upon at the coming election.

Considerable influence was brought to bear upon the Chamber of Commerce not to endorse the bill. Several meetings were held at which were present leading heads and officers of the big oleo manufacturing concerns. On the other hand, leaders of the Grange and the Dairymen's Associations presented the dairymen's side of the question and they were sustained by the chairman of the Chamber's land settlement committee, who said that the dairy cow was the essential thing for the settlement of the cut over lands and that in checking up the experiences of settlers on cut over districts, it had been found that success seemed to depend upon dairy cows for in every case where the settlers had failed, the dairy cow had not found a home on the place.

After due deliberation, the Spokane Chamber of Commerce trustees unanimously endorsed the law upon the basis that its defeat would cripple the state's dairy industry. The Washington Pure Dairy Products Bill has been endorsed by the State Grange, Farm Bureau Federation, the State Federation of Farm Women, and a number of Commercial Clubs, and by both the Republican and Democratic State Conventions. The Spokane Central Labor Council was also instrumental in urging the Spokane Chamber of Commerce to endorse the bill.

THE NEW YORK STATE FAIR

Prizes to the amount of \$2,800 are offered in the Holstein classes at the New York State Fair which will be staged at Syracuse, September 8 to 13 inclusive. Six prizes will be given in each Holstein class, the highest amount being, as it should be, for the herd competitions. The winner of the first prize in this class brings the exhibitor \$50; while second prize brings \$40; and third prize \$30. The same applies to the "get of sire" class.

In addition to the regular classes, there is one for advanced registry cows, bred and owned in New York State. For this competition five prizes are given, ranging from \$10 to \$30. Each cow is scored on the basis of 100 for perfect and one point is to be added for each pound of butterfat above fifteen she has produced in seven-day official test under the rules of the National Association. In addition to the regular competition there will be a herdsman competition for neatness, cleanliness of person, animals, show equipment and surroundings. Five prizes are given in this class.

The county exhibits of the New York State Fair are very popular. For Holsteins five prizes will be given; first prize will be \$150; second, \$130; third, \$120; and fourth prize \$100. In fact the fair authorities have gone one step farther and if any county organization shows a full exhibit in these county competitions and does not win a prize, \$100 will be paid toward their expenses. Of the \$2,000 offered for county exhibits, \$150 is donated by the Dairymen's League. A county exhibit consists of ten animals of which not more than four animals must be owned by one individual or firm and all animals must be also entered in the regular classes of the show.

The Holstein-Friesian Association of America offers special prizes amounting to \$250 to the four best county herds of the black and white breed, first prize being \$100 and fourth prize \$25.

DAIRYING NEAR COLUMBIA, MISSOURI

By Mrs. J. A. PAGE

"Men may come and men may go,
But milking goes on forever,"

is a saying characteristic of O. D. Meyers, an up-to-date dairyman who lives two miles east of Columbia, Mo., and operates a black and white dairy. Mr. Meyers came to Columbia a little more than eleven years ago. He purchased a half interest in seven dairy cows. Since that time milk from the Meyers dairy has been delivered to the consumers every day without any exception. Two different times the team ran away with the delivery wagon but the customers got their milk just the same.

Speaking of his herd Mr. Meyers says: "Some of my cows still carry a little Jersey blood but I have bought Holsteins

THE O. D. MEYERS DAIRY
The milk is consumed in Columbia, Missouri.

and used a purebred Holstein sire all the time. I never keep a heifer from an inferior cow, and most of my present herd of fifteen are from the three best cows I ever owned.

"Dairymen talk a great deal about pasteurization and sterilization. I do not believe that pasteurization improves clean raw milk, but I do believe thoroughly in sterilization." This is obvious in the absolute cleanliness of all machinery and in all places connected with the milking, separating and bottling.

The floors of the cow barn and milk house are of concrete. The milk house is built of hollow tile, and contains four rooms—one for the refrigerating plant; one for the boiler that makes live steam used in sterilization; a third is equipped with apparatus for handling the milk; and a fourth contains a feed crusher and grinder.

Mr. Meyers believes in machinery. He says, "It saves time and labor. Being able to do the repairing myself is a great help. I have bought the present equipment gradually and plan to get more. The Monitor five horse power engine that I use

A silver cup donated by the New York State Federation of Farm Bureaus is offered for the best five dairy cows in milk, these may be purebred or grades of any one breed and must be owned by a New York State exhibitor. This cup must be won three times before it becomes the property of the exhibitor, the winner to hold said cup until won again by another exhibitor at a succeeding fair.

Special quarters will be provided for cattle from accredited herds or herds in the process of accreditation. Entries close August 20. E. S. Savage, Professor of Animal Husbandry, Cornell University, is again superintendent of the cattle division.

THE DELAWARE STATE FAIR

The Delaware State Fair will be staged at Wilmington, September 9 to 13 inclusive, with J. Russell Danks, of Wintertur Farms, superintendent of the cattle show. Liberal premiums are given, there being five prizes in each class ranging, in the case of mature animals, from \$45 to \$15 while the herd prizes range from \$45 to \$25. We notice something unusual in the premium list and that is that the highest prize, \$50, is paid for progeny of cow. These can be of either sex and any age and need not necessarily be the property of the exhibitor. In addition to the general classes there are special prizes for the best four cows two years old or over, bred and owned by exhibitor and for senior and junior advanced registry cows, five prizes being paid in each division.

Entries are to be made on printed forms and should be sent to Lewis P. Randall, Secretary and General Manager, Delaware State Fair, Wilmington, Del. All entries must be in on or before August 23d and a stall fee of \$2 per head should accompany all entries.

The Maryland State Fair is staged at Timonium the week previous to the Delaware State Fair so that it will be very easy for exhibitors to show at both events. There is not a great distance between the two fair grounds and arrangements will be made to facilitate transportation and insure the comfort and safety of the exhibits and their caretakers.

The Holstein exhibits at both the Maryland and Delaware State Fairs are usually of a high degree of excellence and as it is possible to win considerable prize money, those planning to exhibit part of their herds this fall, should keep these events in mind.

If a baby boy gets through his second summer safely, he hasn't much to worry about until he approaches the difficulties of the first winter after he is married.

Loves makes the world go round, but it is quite another matter to make both ends meet.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

runs the corn crusher, the milking machine, the cream separator and the bottle brush. I bought the milking machine last fall and consider it very satisfactory. There are two units so I can milk two cows at a time. Now I can handle the machine and milk thirteen cows in forty-five minutes. It used to take me two hours to do it by hand alone.

After milking, the big German silver buckets are taken from the barn to the milk house. A big strainer is fitted with a fresh cotton pad covered with eight thicknesses of sterilized cheese cloth. The milk is poured through this on the wide, ice filled cooler over which it flows into bottles. These are immediately topped with sanitary caps and packed in ice. The milk to be separated is poured through a similar strainer into a cream separator of the same make as the milking machine. The engine is started, the separated milk flows into cans, the cream into bottles which are capped and packed in ice with the milk.

The cream sells at twenty-four cents a pint, whipping or double cream forty cents a pint; whole milk brings twelve cents a quart, forty cents for a gallon. Some of the separated milk goes to boarding houses at fifteen cents a gallon and the balance is fed to hogs. Most of the cows freshen about time school opens and the average dairy milk flow is about 45 gallons.

Mr. Meyers uses a good deal of water in cleaning—he can afford to for he has three wells and a pond. All the utensils are washed, rinsed, sterilized over a jet of live steam and then placed on racks or hooks to dry.

A Ford truck is used for delivery and has been used for the past seven years although it is not quite as handy as horses while doing the actual delivery work in town. The truck carries the name of the owner and the words, "Clean Milk. Fresh from my own cows."

Very little bran is fed as Mr. Meyers believes it is too expensive, food value considered. Corn is grown for silage and fodder as well as for grain. One silo holds 85 tons. This is usually filled from ten acres of corn and lasts six months. It is planned to build another silo this year so that silage can be fed the year around. Corn and oats ground together and cotton seed meal make up the ration.

Clover is sown in the spring for both hay and pasture. Some sown with wheat in the spring of 1922 cut a ton to the acre in 1923.

In May two years ago, the farm house burned. The family camped in a tent during the summer and Mr. Meyers, in spare time, with the help of his neighbors, erected a "Read-i-cut" five-room modern house on a concrete basement. Native stone was used in the building of a big chimney and also in the erection of a large water tower near by.

There are two young people in the Meyers family. Jim, aged twelve, strips the cows and helps put the feed in the troughs. He runs the bottle brush and the engine, too, if necessary. He is general "handy man" about the place but has not yet decided to have "Meyers & Son" printed on the bottle caps. Sue is nine years old. Putting the caps on is her task and she does it quickly and accurately and sometimes helps wash the bottles. Both children go to school.

Mrs. Meyers says she likes the dairy business all right. It keeps all hands on the job but it pays. We know that no business can be run on a paying basis unless someone is on the job continually.

Mr. Meyers prefers to sell milk to boarding houses and clubs because it saves time in delivering. He is proud of the fact that he still has four of his first customers. Three families and a fraternity house have bought milk from him continuously during the eleven years he has been in the dairy business. Mr. Meyers attributes his success to being on the job every day and personally supervising each operation of his business.

FAIRS AND EXPOSITIONS

- Aug. 9-16—Davenport, Iowa., Mississippi Valley Fair and Exposition.
Aug. 15-23—Aurora, Ill., Central States Exposition.

Oct. 27-Nov. 1—Savannah, Ga., Savannah Tri-State Exposition.
Oct. 30-Nov. 9—Shreveport, La., State Fair of Louisiana.

DID YOU KNOW

That the urban population of the country is increasing twice as rapidly as the rural—
That the present rate, in ten years the rural population will be almost stationary or declining, while the urban population will be increasing at the rate of a million and a half a year—
That this is bound to increase the purchasing power of the farmer's dollar—
That the output of our basic industries, outside of agriculture, decreased from ten to twenty per cent during the last decade—
That the cotton manufacturing industry showed a marked decline in production—
That the lumber industry, per unit, dropped from 64,000 to 57,000 feet—
That the oil refining industry slowed down from 7,000 to 5,000 barrels per unit of calculation—
Whereas the farmer, according to the 1920 census, produced nine per cent more than was shown by the census of 1910, as against an increase in the number of producing farmers of only 1½ per cent.—*Exchange.*

Cow Testing Association Reports

PRODUCED BUTTER AT LOW COST

The herd of fifteen purebred Holsteins, owned by C. E. Warford & Sons, of Virgil, Ill., again led the Kane County No. 2 Testing Association for the month of June, they having been the state leaders for the months of April and May. Their average production was 1,518 lb. milk, 47.7 lb. fat. Members of this herd stood in second, third and fourth places with the production of 2,574 lb. milk, 77.2 lb. fat; 2,406 lb. milk, 74.6 lb. fat; and 1,408 lb. milk, 74.6 lb. fat in twenty-two days, respectively.

Eleven grade Holsteins owned by Oliver Pritchard held second place for herd average with 1,135 lb. milk, 41.5 lb. fat while seven black and whites belonging to Maurice Jones was third with an average of 1,179 lb. milk, 37 lb. fat.

Julia, a grade Holstein owned by Mr. Pritchard, was high individual, her production being 1,941 lb. milk, 77.6 lb. fat. She made her record on clover pasture and home grown grain and was milked twice daily. This cow produced 11,537 lb. milk, 460.7 lb. fat in six months.

Thirty-three of the 637 cows tested produced more than 50 lb. butterfat. The average of all the cows was 885 lb. milk, 30.4 lb. fat.

NEW YORK STATE TESTING

The leader of the New York State Dairy Improvement Associations for April is a Holstein, owned by R. W. Chamberlain, of Cananda. She is a five-year-old and is credited with the production of 111 lb. fat, 2,775 lb. milk. A purebred owned by Virgil Peck, of Hilton, was second with 95.7 lb. fat,

2,175 lb. milk. Another purebred owned by George True, of Adams Basin, is third with 94.2 lb. fat, 2,691 lb. milk and another True cow is in fifth position with 86.9 lb. fat, 2,286 lb. milk. The largest milk production is credited to a grade Holstein owned by Wm. Casbaker, Boonville. This is 3,042 lb. milk while she stands fourth for fat with 91.3 lb.

Mr. Tailby has computed the herd averages for the month of March. We notice that the herd of West Bros., of Reber, Essex County, stood in second place, these twenty-five purebred Holsteins averaging 1,262 lb. milk, 40.4 lb. fat. In first place is a herd of eight animals owned by Victor Fulkerson, of Tompkins County, with an average 1,272 lb. milk, 45.6 lb. fat.

The preliminary reports for May production credits a member of the True herd with 2,709.4 lb. milk, 94.8 lb. fat, in the reports received up to the time the bulletin was printed, with a purebred Holstein owned by C. E. Hess, of Phoenix, second. The Hess cow is credited with 2,552 lb. milk, 94.4 lb. fat.

STROCK'S PUREBREDS LEAD

Seventeen purebred Holsteins owned by G. Weir Strock, of Mechanicsburg, Pa., led the Cumberland County Cow Testing Association for the month of June with an average of 1,415.5 lb. milk, 44.7 lb. butterfat reports the test supervisor, A. A. Raudabaugh. The second high herd consisted of nine grade and purebred Holsteins, owned by W. W. Pepper and their average was 1,319.5 lb. milk, 42.9 lb. butterfat.

The high cow was Annie, of the Strock herd and her production was 2,241 lb. milk, 76.2 lb. fat. Spot, a grade Holstein,

owned by A. N. Lehman, was second with 1,626 lb. milk, 71.5 lb. fat. Rosalinda, a registered cow of the Pepper herd, was third with 2,073 lb. milk, 70.5 lb. fat. Ivo V. Otto, L. H. Weary and A. N. Lehman all had purebreds in the ten highest cows which were all black and white. The average for all the cows in the association was 1,867 lb. milk, 64.8 lb. fat and the average test was a trifle over 3.4%.

There were twenty-eight herds, containing 274 cows tested, of which 76 produced over 40 lb. fat; 23 over 50 lb.; while no less than 67 exceeded 1,200 lb. milk.

Mr. Raudabaugh says that the dairymen of this association are noting with much interest the records of their herds at this time as the testing year only runs a few months longer and the herd averages are expected to exceed those of last year, when the average for the entire association was 8,855 lb. milk.

During the months of July and August the production of the Cumberland County cows usually drop off for several reasons one of which is that the ration fed is lower in protein and higher in fat in order to have them in good condition for fall freshening.

FREED'S COWS ARE PRODUCERS

Lady, a purebred Holstein, owned by H. A. Freed, of Racine, Pa., led the Westfield Cow Testing Association for the month of May, reports H. Russell Smith, tester. She produced 1,729 lb. milk, 64 lb. butterfat. Her stablemate, Jewel, also a purebred Holstein, was second with 1,603 lb. milk, 57.1 lb. fat. Mr. Freed had number 10 on the list,

JESSIE MAIDA RUTH

is a show cow and a producer.

She has records of
Butter 29.78 lb.; Milk 742.6 lb. 7 Days
Butter 122.05 lb.; Milk 3,118.6 lb. 30 Days
Butter 946.05 lb.; Milk 24,103.1 lb. 365 Days

She is the dam of our herdsire

Bainbridge R. D. 4, Chenango Co., N. Y.

she being credited with 1,570 lb. milk, 51.8 lb. fat, while George Augustine owned a purebred Holstein that produced 52.6 lb. fat and stood in seventh place. The Freed herd was high with an average of 1,455 lb. milk, 50.5 lb. fat.

The Westfield Association operates in part of Lawrence County, Pa. Of the 266 cows tested, 40 exceeded 40 lb. fat in the month and 11 produced more than 50 lb. while 15 exceeded 1,200 lb. milk.

WISCONSIN TESTING

The high cow for butterfat in the Wheeler Testing Association was owned by Mark Traxler, she being credited with 55.6 lb. fat, 1,050 lb. milk. A stablemate carried off the honors for milk with 1,578 lb. containing 44.3 lb. fat. They are both grade Holsteins.

Seventeen registered and grade Holsteins owned by Escol Rosenkranz, of Brownsville, led the Byron County Testing Association for the month of June, by producing an average of 1,232 lb. milk, 41.5 lb. butterfat.

R. C. McClain owned the leader for butterfat and the second highest milk producer. She was a registered Holstein and was credited with 2,256 lb. milk, 74.4 lb. fat. Second high cow was owned by Ehrhardt & Ehrhardt, she producing 70.4 lb. fat from 1,677 lb. milk. Third on the list was also a registered Holstein, owned by F. H. Boyle, her figures being 70.2 lb. fat from 2,265 lb. milk, the highest milk production reported.

J. W. Lawton & Son, of Viola, had the high producing herd enrolled in the Viola Cow Testing Association reports Alvin Pihl, official tester. Their twenty-three registered Holsteins averaged 1,086 lb. milk, 40.3 lb. fat during June, the butterfat being produced at a cost of 9 cents a pound.

The individual leader was a grade Guernsey with 61.6 lb. fat. She was closely followed by a member of the Lawton herd with 61.2 lb. fat from 1,701 lb. milk, the highest milk production reported.

PUREBRED LEADS IN PORTER COUNTY

Ruth, a purebred Holstein, owned by Dan Haxton, led the Porter County, Indiana, Cow Testing Association for June with a production of 1,710 lb. milk, 94.1 lb. fat. Jerseys were second and third but the other seven members of the leading ten were black and white cows, three of them being purebred Holsteins owned by Herman Homfeld of Valparaiso, one a purebred owned by Lowenstine & Lipke and the other a purebred, Certina, owned by Bartz Bros. All were above 56 lb. butterfat in the month and the ten cows averaged 1,625 lb. milk, 68.3 lb. butterfat.

The Porter County Association has enrolled 380 cows, of which 340 were tested. Of this number 125 exceeded a pound of fat a day; twenty-nine went over 40 lb.; twelve were over 50 lb. and six exceeded 60 lb. The official tester is H. L. Gould.

K. P. A. P. PRILLY

Junior champion at the 1922 Virginia State Fair, the Interstate Fair, Trenton, N. J. and the Susquehanna County Fair, Montrose, Pa.

As a two-year-old she made A.R.O. records of 417.2 lb. milk, 23 lb. butter in a week and 1,741.5 lb. milk, 93 lb. butter in 30 days, despite the fact that she lost half her udder from an accident. She shows the type and quality sired by KING PONTIAC ALCARTRA PIETJE, senior sire at Silverwood.

H. S. BROWN & SONS

OUR ACCREDITED HERD

Established 12 years
is now headed by

KING PLEDGE PONTIAC

whose sire is by Ormsby Lilithe Clothilde, a brother to Ormsby Kornhyke Lad and King Segis Pontiac Count.

His dam, Maple Brook Susie Pontiac, produced \$25.7 lb. milk, 25.18 lb. butter in A.R.O. test as a junior four-year-old and produced 12,367 lb. milk in 11 months C.T.A. work.

Let us sell you a few females bred to this splendid young fellow.

C. W. FISH & SON
R. D. No. 5 Wyalusing, Pa.

How Do You Like Our Herdsire

TRAVERSE ECHO SYLVIA KING

whose dam, a twice 30-lb. cow, produced 33.27 lb. butter, 756.4 lb. milk in seven days, averaged 102 lb. milk daily for 30 days, and has five tested daughters, two over 32 lb. and all over 24 lb.

The fourteen nearest dams of KING averaged 30.175 lb. butter in a week—his individuality speaks for itself.

A. L. BURLINGTON
MERRYALL FARMS
WYALUSING PENNSYLVANIA

GREAT HOLSTEIN HERD IN HARD COAL DISTRICT

Wilkes-Barre is one of the great industrial centers of Pennsylvania which is acknowledged to be the greatest industrial state in the Union, and it was therefore with feelings of surprise that the editors of the Wilkes-Barre Record noted the prominent position of Pennsylvania owned animals in the Association list of records for the testing year 1923-24. In the issue of July 1st, that paper carried a long article on Holstein records, particularly emphasizing the prominent position occupied by the Conyngham establishment at Trucksville and the Central Poor District Farm located at Retreat,

POCONO CONSTANCE PIETJE

36.18 lb. butter, 662.8 lb. milk in 7 days Pennsylvania's highest producer during the past Holstein year.

also in Luzerne County. The Record article is too long to publish here but we will briefly summarize the salient points.

The Association report shows that only nine cows of any age of the United States produced fat equivalent to 147.5 lb. butter in thirty days during the past Holstein testing year and of the nine, four were Pennsylvania animals, two of them being owned at the Hillside and Springbrook Farms located at Trucksville, and owned by J. N. and W. B. Conyngham, of Wilkes-Barre.

In the junior two-year-old class, there were only eleven heifers credited with the production of 2,000 or more pounds milk in thirty days and of these eleven, five are Pennsylvania animals. The Keystone State produced as many mature cows making 118 lb. fat in thirty days as did the remainder of the country and also one-half of the junior two-year-old heifers producing one ton of milk in a month.

The Conyngham herd is represented in the 118 lb. fat mature class by two different animals, Hillside Rhododendron and Pocono Constance Pietje. No other herd in the United States or Canada has more than one animal in this class. The Record says the Conyngham establishment succeeded in doing twice what only six other herds succeeded in doing just once.

The section devoted to milk reports shows that nineteen mature animals averaged 90 lb. milk a day for thirty days, three of these made their records in Pennsylvania and two of the three were made at the Hillside farms. Only three of these nineteen cows averaged better than 4% fat and the two Hillside animals are both in this coveted list, Constance standing highest with 4.4% and Rhododendron next with 4.20%.

During the Holstein year, only thirty-six cows are credited with the production of 35 lb. butter in seven days, three different herds in the United States made two such records each, the Hillside Dairy being one of these three or twice as many as all the other breeders of Pennsylvania combined. The Conyngham representatives are Pocono Constance Pietje and Hillside Rhododendron.

The Record feels gratified because, at the Hillside Farms was developed the youngest senior three-year-old to exceed the 30 lb. mark or to produce over 600 lb. milk in 7 days. This is Aikenside Dottie Pietje Pontiac, officially credited with the production of 609.3 lb. milk, 30.51 lb. butter at three years, six months, four days old. She, too, tested more than 4% fat, her average being 4.01. Three of the twenty-one heifers in this class making 30 lb. butter in seven days are Pennsylvania animals.

The youngest cow to produce 25 lb. butter in seven days is Hillside Pontiac Rose of the Hillside Farms, credited with the production of 474.5 lb. milk, 25.24 lb. butter at the age of two years, one month and twenty-nine days. Her test was 4.26%. There were only eleven junior two-year-olds appearing in the honor list as producing more than one ton of milk in thirty days and Pennsylvania furnishes five of the eleven. J. P. Crozer, of Upland, has one; E. B. Babcock, Gibsonia, one; The Central Poor District of Luzerne County, Retreat, one; Bell Farms, one, and Hillside Farms had one. Only two of the eleven tested more than 4% fat in the thirty days and both were Pennsylvania heifers, Hillside Pontiac Rose had the highest mark with 4.09%.

The records at Hillside and Springbrook Farms are made under the direct supervision of Superintendent D. P. Honeywell, who has received many congratulations on the records of the animals under his charge. Mr. Honeywell has long been recognized as one of the greatest experts in the county. He has been a practical dairyman and breeder all his life. He had the distinction of developing the first cow in his state to make over 35 lb. butter in a week. There are many calls for his services as a judge and as a buyer. When the Susquehanna County Breeders needed outside judges to select the animals to be sold at their annual sale, Mr. Honeywell was one of the three chosen for this important duty. The dairy at Trucksville supplies milk for the City of Wilkes-Barre. This milk passes a rigid inspection, the bacterial count being kept remarkably low and the herd has just been tuberculin tested and has again passed clean.

BULL CALF—Born April 12, 1924.
Nicely marked, a fine individual.
From an Accredited Herd.

Dam, almost 22 lb. as four-year-old, is of Pontiac breeding. Sire—31-lb. son of Sir Aaggie Mead De Kol.

LAW SALE AVERAGES \$140.38

An average of \$140.38 for the 26 head sold in the Wm. M. Law sale at Sandusky, N. Y., on July 2d was regarded by the sellers as very satisfactory, especially in view of the fact that several 1924 calves were included, with two young bulls born in February and March. The highest price, \$300, was paid for a six-year-old cow, Segis Colantha Hark. An excellent attendance and ready bidding testified to the favor in which the Law offerings were held locally. Colonel Glenn R. Mead served as auctioneer, with Jack Houck in the box. Pedigrees were supplied by the E. M. Hastings Company.

BACKUS PEDIGREE CO., MEXICO, N. Y.

GRAND CHAMPION SEGIS 2D

Grand Champion Segis 2d, is the name of the splendidly bred bull owned by Mack Brothers, of Montrose, and their neighbor, DeWitt Griffing, of Heart Lake, Pa. Mr. Griffing is the owner of an accredited herd and, with the exception of three animals including the herd bull, every head of stock he owns was bred and raised on the premises.

Grand Champion Segis 2d, has a remarkable pedigree. His six nearest dams have seven-day records, averaging 32.07 lb. butter while his seven nearest tested dams average 32.8 lb. His sire, Grand Champion Segis was a noted show bull as was his grandsire, King Segis Champion, who was from Aaggie Pauline Sarcastic, 36.35 lb. butter in the week, one of the greatest show cows of her day.

The dam of Grand Champion Segis 2d, is Bell Segis Champion, 37.15 lb. butter

in seven days, 123 lb. butter in thirty days as a senior four-year-old. Her dam, Princess Bell Rodmer has an official record of 26.77 lb. butter, 577.8 lb. milk and she is a daughter of Bell Rodmer, 2d, 25.62 lb. butter, 682.6 lb. milk in a week.

Grand Champion Segis, 2d, is a high class show bull. He has an excess of dairy temperament and only this prevents him being exhibited at great fairs. His offspring are producers and also possess individuality of a high order.

It is not desirable to increase the size of the Griffing herd and as there are a nice bunch of heifers yet to freshen, Mr. Griffing is advertising a bunch of eight animals due to freshen on or about October 1st. Animals of this herd have produced up to 13,000 lb. milk in a year while enrolled in the local cow testing association, evidence enough of their quality and producing capacity.

ROTHENBERGER HERD WINS HONORS

Annie, a purebred Holstein, owned by A. K. Rothenberger, of Center Point, Pa., was the leader of the Montgomery County Cow Testing Association for the month of June, reports Carl A. Sager, Tester. Annie produced 2,232 lb. milk, 71.42 lb. butterfat. She is six years old, freshened April 12th and was also the highest producing cow for the month of May. A grade Holstein owned by Mrs. Howard Bieler, of East Greenville, was second with 1,737 lb. milk, 62.53 lb. fat and Aaggie, a purebred of the Rothenberger herd was third with 2,073 lb. milk, 62.19 lb. fat. Mrs. Bieler owned a four-year-old purebred, Susie, that took fourth place with 1,584 lb. milk, 57.02 lb. fat.

The Rothenberger herd was high for both milk and butterfat. This herd consisted of eighteen purebred Holsteins and their average was 1,266.7 lb. milk, 43.6 lb. fat. Mr. Rothenberger had four cows above 50 lb. fat, one of them being a two-year-old daughter of the leader. The purebred Holstein herd owned by Ursinus College was second for milk with an average of 1,071 lb. and Mrs. Bieler's herd was third for both milk and fat production.

During the month there were 25 herds tested containing 288 cows, of which 38 made over 40 lb. butterfat, 11 more than 50 lb. while there were 33 cows that each gave over 1,200 lb. milk in the thirty days.

KANSAS ALSO CLEANING UP

Leavenworth and Harvey Counties, Kansas, were placed on the list of modified tuberculosis-free areas, June 20th. These two Kansas counties are the first ones in the Corn Belt west of the Mississippi to be pronounced tuberculosis free. By petition of more than 85% of the cattle owners, testing began eighteen months ago.

The third and last tuberculin test showed less than one-tenth of one per cent of the cattle to be affected; this very small percentage meets the Federal requirements for modified accredited area. Due largely to effective organization and the large number of cattle tested, the cost of applying the test averaged only about 10 cents per head. Infection was found on 72 farms, eight of which, however, contained 60 per cent of the total number of tuberculous cattle.

Hogs raised in counties designated as modified tuberculosis-free areas, bring a premium of 10 cents per hundredweight over those raised in other counties. This premium is paid by packers in accordance with an agreement with the United States Department of Agriculture. Mrs. Cora W. Bullard, of Tanganoxie, Kansas, was the first resident in the new modified area to ship hogs that brought the premium. The hogs were bred and fed on Mrs. Bullard's farm.

In summing up these steps in the progress of eradicating tuberculosis in livestock, a Kansas City newspaper gives its support by declaring, "The United States is a long way on the road to total eradication of animal tuberculosis when two Kansas counties go out and in less than

two years rid their confines of the bane of tuberculosis in meat animals, make their milk supply absolutely safe and bring to the swine raisers in the county a premium on their hogs."

HAS SON OF PRODUCER

The herd belonging to the St. Michael's Industrial Home, at White's Ferry, Pa., is now headed by a son of Fairmount Mead Polkadot. This heifer freshened at two years, two months and twenty-three days old, and is officially credited with the production of 477.9 lb. milk, 23.41 lb. butter in seven days, 2,049.2 lb. milk, 96.47 lb. butter in thirty days. She was one of the eleven junior two-year-olds credited by Superintendent Gardner with the production of over a ton of milk in thirty days during the past Holstein year. She ranked ninth for production of fat in the 30-day division in the junior two-year-old class and in the seven-day division she ranked thirty-third in her class for fat and eighteenth for milk. There were 1,143 junior two-year-olds officially tested in the year covered by the report.

Fairmount Mead Polkadot is one of the good heifers in the herd at Retreat, Pa., owned by the Central Poor District of Luzerne County.

YOUR OPPORTUNITY

Four Accredited Yearling Heifers.

One born March, 1923, by our 34-lb. herdsire, Clever Model Glista.

Three, born January, March and June, 1923. All by our 27-lb. son of Model Daniel Glista, whose dam is a 31-lb. daughter of Glista Coreva, 34.08 lb. The three youngest are from A. R. O. dams. All are straight and well grown and of our own breeding for generations.

LOS ANGELES COUNTY FARM HERD KILLED

The great herd of registered and grade Holsteins owned by the Los Angeles County Farm, at Hondo, Calif., was destroyed because of foot and mouth infection, June 19th. About the middle of April infection appeared in a herd within 1,000 feet of one of the County Farm barns and since that time around 4,000 head of cattle have been destroyed within a two-mile radius.

This herd, numbering 314 head at the time it was destroyed, was started with grade Holsteins. Purebred bulls of high quality were placed at the head of the herd, the cattle were well grown and well cared for and were enrolled in cow testing association work and soon the herd stood at the head of the list in the entire United States for average production. A number of purebreds were then purchased and the proportion of purebred animals rapidly increased. Nearly every month the average production of the herd stood high in the list of cows tested under the jurisdiction of the Western Office of the United States Dairy Division.

The most noted cow in the herd was Hollywood Lilith Palmyra Abbecker, whose remarkable records have been reported from time to time in these pages.

Among the herd bulls killed was King Segis De Kol Mead, son of the noted cow, De Kol of Valley Mead and King Segis Pontiac Emperor, a former grand champion at the California State Fair. Another noted bull was King Korndyke Pontiac Mead, son of De Kol of Valley Mead 2d, and King Korndyke Pontiac 20th.

Readers of the BREEDER AND DAIRYMAN will join with its editors in sympathizing with Wm. H. Harriman for the loss of the great herd which was under his charge and on which he has spent so many years and built it up until it became one of the most noted herds in the country.

HERDSIRE COMBINES FAMOUS STRAINS

Another well bred young herdsire was added to the large number already around Sherburne, Chenango County, New York, when Buello Farm and Crystal Spring Farms purchased a very promising young bull whose breeding combines a number of strains noted for tremendous production. He is a grandson of Champion Echo Sylvia Pontiac and his dam is a granddaughter of King of the Pontiacs. Sometime in the near future we plan to tell you more about him and the herds he now heads.

CATTLE GO INTO NEW TERRITORY

The first month's work of the Northwestern Mutual Dairy Loan Association, of Minot, resulted in one hundred head of Holsteins being bought around Minot, N. D. Applications for \$5,700 worth of stock were approved at the first meeting of the association at which such loans were passed upon.

NO HIRED HELP ON THIS FARM

In 1916, Charlie Powell, of Renfrew, Pa., purchased a purebred Holstein cow and two heifers, the first purebred Holstein females in his section of Butler County. The next year he purchased four bred heifers. To-day, despite the fact that a large proportion of the calves dropped in his herd has been males, he has twenty-four purebred females and has sold two.

Mr. Powell is fortunate in that he does not have to hire extra help to work his 140-acre farm. He has six boys, of which two are growing into husky fellows. The three oldest boys are members of calf clubs and each owns a heifer not yet in milk.

A little more than a year ago, R. C. Wiggins was hired by the Butler County National Bank as its agricultural extension agent. He purchased a purebred Holstein bull, whose two nearest dams have year butter records averaging 1,128 lb. This bull is kept on the Powell farm and the Powell herd has the free use of his services in return for his keep. On the farm is a big sign board which states "Holstein Farm, C. A. Powell, Prop.," while the lower portion says "The Butler County National Bank, the Big Bank by the Court House," thus advertising Powell's purebred Holsteins and the institution responsible for the sire on the farm.

Mr. Powell is quite a believer in machinery. He has a tractor, a truck to carry the milk to the shipping station, and has, for the past six years, used a milking machine. Electric lights and running water are in both house and barn. As a cash crop potatoes are grown and marketed in Pittsburgh, and the Powell establishment is an example of an up-to-date high class farm.

NEW HIGH BRITISH RECORD

Findlay Clara, 2d, British Friesian cow, produced 131½ lb. milk on May 20th and during the week ending May 23d, produced 913 lb. milk, thus breaking the British Friesian records for both one day and seven days. Her highest day during the week was 131½ lb. milk and the lowest was 129½ lb., showing how evenly she was producing. During her test she was milked four times daily. The cow was cared for by Max Findlay, son of her owner.

Findlay Clara, 2d, was born February 22, 1914. She had four calves and freshened last time on April 4th of this year. In her first lactation period, she produced 14,000 lb. milk in 363 days, the next year she is credited with 13,550 lb. in 350 days and for the third lactation period she is credited with 34,490 lb. milk in 365 days. This is the second largest year milk record credited to a British Friesian. Her year butter record is 1,371 lb.

FOR SALE—Registered Holstein bull ready for service; one yearling heifer; two heifer calves; bull calf. Accredited Herd. MRS. I. T. SHADE, Harris Station, Ohio.

WHIT FOLLETT IS PLEASED

Under date of June 27th, Malcolm H. Gardner, superintendent of Advanced Registry, sent out a notification card that Dutchland Creamelle Cornucopia, a member of the Field herd, had completed a year of strict test and was credited with the production of 27,690.8 lb. milk and fat equivalent to 1,284.16 lb. butter. She becomes the eighty-fourth cow to produce over 1,000 lb. butterfat in 365 days and ranks fifty-seventh in order of production among all Holstein cows tested for the full year.

The year record of Dutchland Creamelle Cornucopia is of particular interest as Whitman A. Follett, of North Norwich, N. Y., formerly had Dutchland Creamelle Johanna Count, a full brother of Dutchland Creamelle Cornucopia, at the head of his herd and has a large number of young calves and heifers sired by him. This full brother and sister were sired by Dutchland Creamelle Korndyke Lad and their dam was Dutchland Cornucopia Hengerveld 2d, 730.4 lb. milk, 32.85 lb. butter in a week; 2,884.7 lb. milk, 128.24 lb. butter in thirty days. She is a daughter of the noted sire, Colantha Johanna Lad, and was from Dutchland Cornucopia Hengerveld, 611.1 lb. milk, 27.94 lb. butter in seven days as a senior four-year-old, a cow that has three daughters each of which have made over 30 lb. butter in seven days official test. Dutchland Cornucopia Hengerveld was sired by Pieterje Hengerveld's Count De Kol.

Dutchland Creamelle Johanna Count is a brother to Dutchland Creamelle Denver Prince, famous sire of show cattle. One daughter of this bull, Madam Artis Wayne Denver, was judged by common consent of those who were in position to judge as being the greatest cow seen on the show circuit last year. Another half-brother, Dutchland Creamelle Colantha Lad, is the sire of Grahamholm Colantha Pauline Segis, 1,426.75 lb. butter, 34,291.8 lb. milk in a year as a senior four-year-old, world's champion in her class.

This is not the first time the great full sister of the Follett herd sire has made a long time record. As a senior two-year-old, she was tested for ten months and is credited with the production of 814 lb. butter, 16,937.7 lb. milk in that time. She was again tested as a senior three-year-old, this time for 365 days during which she produced 1,109.66 lb. butter, 22,797 lb. milk. Early in the lactation period she is now closing, she produced 30.03 lb. butter, 604.5 lb. milk in seven days; 125.85 lb. butter in thirty days and in 120 days she is credited with 10,765.3 lb. milk, 478.73 lb. butter.

Many students of cattle breeding advise selecting a herd sire from lines of breeding which have already demonstrated that they transmit producing capacity. One noted breeder and judge says that he would, for breeding purposes, sooner have a bull whose dam had a number of big producing daughters than have a bull from a cow that had made a large record herself and whose daughters were not proven producers. Mr. Follett is fortunate in this respect for the full sister of his herd sire has, year after year, made

splendid records, the dam of his bull has large milk and butter records and both granddams of his herd sire have large records and both daughters and granddaughters with large records. The three nearest dams of Dutchland Creamelle Johanna Count have seven-day records that average 30.40 lb. butter, 692.7 lb. milk, or a daily milk average for the three of 98.8 lb.

MORE ABOUT FLY SPRAYS

George W. Tailby, supervisor of the Dairy Improvement Association, of New York State, recommends a simple home prepared fly spray mixture which he says has proven effective. This is 100 parts fish oil; 50 parts oil of tar; one part crude carbolic acid.

As he says, no ration can be wholly effective unless the animals are contented and comfortable. Mid-summer is a trying time. In addition to feeding enough, provide shade and try to control flies. Darkening windows and doors during the day and use of fly sprays will pay in increased production.

The June News Letter suggests as a home-mixed grain ration the following: 200 lb. middlings or mixed feed; 300 lb. bran or oats; 100 lb. hominy or corn; 200 lb. oil meal; 200 lb. gluten feed.

PASSED TEST CLEAN

The Holstein herd owned by the Ransom Home, Pittston, Pa., recently passed the tuberculin test clean. This herd was purchased six years ago and at that time passed a clean test. The herd contains 33 purebreds and supplies all the milk needed for the attendants and inmates of the Ransom home and asylum of which Robert W. Bowen is superintendent.

FOR SALE—High-grade Holstein milkers and springers, car lots or less. Choice lot two-year-old springing heifers. All tuberculin tested. E. E. LEWIS, R. 3, Racine, Wis.

KING ORMSBY ENDERCAMP
heads our ACCREDITED HERD

His sire is the noted King of the Ormsbys.
His dam made 29.37 lb. butter in a week and over 900 lb. butter and 21,000 lb. milk in a year and she is a show cow.

We offer you choice cows and heifers bred to this grand young bull.

A FINE YOUNG HERDSIRE

Hillside Pietje Ormsby is one of the young bulls in service in the Hillside herd. His sire is the senior herdbull, King Pontiac Maple Knoll Ormsby and his dam is Hillside Lady Saxon. This cow, as a junior four-year-old made an official seven-day record of 28.9 lb. butter, 548.7 lb. milk. She will be remembered as the junior two-year-old who formerly held state records for both seven and thirty days butter production. She is credited with 23.73 lb. butter, 495.8 lb. milk in seven days; 96.83 lb. butter, 1,843.1 lb. milk in thirty days. She is a daughter of Hillside Saxon, a twice thirty pound cow, with a seven-day record of 32.29 lb. butter, 628.7 lb. milk while the next year she made 30.17 lb. butter, 663.8 lb. milk. Hillside Saxon is a daughter of Hillside Annette, 30.29 lb. butter, 562.8 lb. milk and was sired by Woodcrest Pietje, the oldest American son of the famous Pietje 22d, the only imported cow that ever made a 30 lb. official seven-day butter record.

The daughters of King Pontiac Maple Knoll Ormsby are making splendid records in a number of herds and are also making good in the general dairy. The sire is a son of King of the Pontiacs from Maple Knoll Helen, 33.16 lb. butter in a week, a cow that two different years exceeded the 30 lb. mark. She is by King Korndyke Hengerveld Ormsby and is therefore a sister to the famous Ormsby Korndyke Lad.

Hillside Pietje Ormsby is now being used on the herd at Hillside and Springbrook Farms, showing the opinion Superintendent Dallas P. Honeywell has of him. He is backed by big producers in every line of his pedigree and is a desirable individual and comes from a herd that has just passed another clean test.

NEW BULL FOR POOR FARM

The Holstein herd owned by the Dodge County Poor Farm is now headed by a young bull bred by Curtis Cobb, of Elkhorn, Walworth County, Wisconsin. His name is Elkwis Sir Ollie Pontiac and he is now nine months old. His sire is a son of the noted National Dairy Show grand champion Iowana Sir Ollie and his dam was Kayewood Jean Pontiac, a daughter of King Pontiac of Brothertown, formerly at the head of the Kaye herd.

THE BREED IN NEW ZEALAND

Friesians hold the leading records in everyone of the seven New Zealand test classes for both milk and butterfat production, the highest record being 31.312 lb. milk and 1.145 lb. butterfat made in the mature class. Last year 693 test certificates were issued, of which 518 were for Jersey cows, 130 for Friesians, 25 for Shorthorns, 17 for Ayrshires and three for Red Polls.

Wanted—Young woman for hanging up, shaking out, and folding. Wages twelve dollars weekly, with bonus, to start. Apply Tabor Laundry Works, 446 Bathurst Street.

Herd under State and Federal Supervision

UP IN WISCONSIN

The June News Letter of the Wisconsin Testing Associations shows that 141 associations report their May production and that no less than 102 associations are led by black and white cows, fifty-one, or exactly one-half, being purebreds.

The leader for the month was a registered Holstein owned by Theo. Mathiew, Chippewa Falls, and enrolled in the Eau Claire Association, No. 3. She is credited with 113.5 lb. fat. A registered Holstein, owned by A. F. Bennett, of Pewaukee, is in third place with 93.5 lb. fat; a grade Guernsey is second with 95.2 lb. fat; grade Holsteins occupy fourth and fifth places.

A. J. Cramer, of the Wisconsin College of Agriculture, suggests as grain rations to be fed to cows on pasture:

On good pasture, June and July—100 lb. corn meal, 100 lb. ground oats, 100 lb. bran.

On poor pasture, August and September—200 lb. corn meal, 200 lb. ground oats, 100 lb. bran, 100 lb. oil meal.

One pound of the grain mixture should be fed for every four or five pounds of milk produced, depending somewhat on the quality and amount of pasture feed. Plenty of fresh water and salt should be provided to insure the best results.

MILK SUPPLY IS PURER

More than 1,800 samples of milk and cream have been purchased in all parts of Pennsylvania since January 1. All these have been tested and analyzed by chemists of the State Department of Agriculture. During 1923 no indications of chemical preservative was found in any of the samples taken and so far this year there has been no legal action against milk dealers for violating the law against the use of chemicals to preserve milk.

Eighteen years ago, according to Jas. Foust, director of the State Bureau of Foods and Chemistry, there were 700 prosecutions for violations of the milk law in a single year.

INDEMNITY MONEY STILL COMING

The receipts from the dog licenses issued in the state of Pennsylvania are used for indemnities for animals during tuberculin testing under the accredited plan.

In the first four months of 1924, no less than 386,782 dog tags were issued by officials of the state Bureau of Animal Industry. This total exceeds the number of the first four months of 1923 by 65,000, reports the bureau chief, Dr. T. E. Munce in a communication to Secretary F. P. Willits. Luzerne County led in the number of individual dog licenses, with 20,994.

Paying a fair price is a privilege as well as a duty. A fair price is founded upon justice. To pay less than a fair price is injustice to another; to pay more than a fair price is injustice to yourself.

A good many people seem to think that breaking the law with impunity is a personal triumph.

BULL BARGAINS

No. 1. Born Jan. 15, 1924. 99% white. His dam is a 21 lb. two-year-old and his ten nearest dams average 30 lb. Price, \$250.

No. 2. Born Feb. 19, 1924. 80% white. His dam is a 21 lb. three-year-old and his five nearest dams average 1,000 lb. butter yearly. Price, \$200.

No. 3. Born July 18, 1923. 60% white. His dam has a 7-day record of 22 lb. and a year record of 850 lb. His four nearest dams average 25 lb. in 7 days and 960 lb. in a year. Price, \$150.

No. 4. Born Jan. 3, 1923. His four nearest dams average 25 lb. 7 days, 900 lb. yearly. Price, \$100.

No. 5. Born April 10, 1924. His four nearest dams average 25 lb. 7 days, 900 lb. yearly. Price, \$75.

No. 6. Born April 20, 1924. Excepting his own dam, his four nearest dams average 31 lb. 7 days, 1,000 lb. yearly. Price, \$50.

No. 7. Born May 25, 1924. His sire is a 35 lb. bull. Price, \$25.

DAVID FALCONER

Scottville, Mich.

This herd has always been T. B. free.

PIETJE ALCARTRA FAYNE
707.7 lb. milk, 30.03 lb. butter in seven days as an eight-year-old. She averaged 101 lb. milk a day for fifteen days.

As a five-year-old, 632.7 lb. milk, 25.09 lb. butter in seven days.

As a three-year-old, 23.63 lb. butter, 568 lb. milk in seven days; 2,413.6 lb. milk, 95.36 lb. butter in thirty days. In C. T. A. work, she produced 17,168 lb. milk, 718 lb. butter in a year.

She is one of a number of daughters of KING PONTIAC ALCARTRA PIETJE in our herd.

A HEALTHY BUNCH

"No reactor has ever been found in this herd," is the proud boast of Clarence H. Titus, of Tunkhannock, Pa. Mr. Titus's duties as treasurer of Wyoming County make it imperative that he keep his herd low in numbers and he therefore offers to sell ten well bred young cows, part of them bred to freshen this fall and the remainder to freshen early in the spring. Among these ten are two daughters and three granddaughters of Napol Sir Keystone Beauty, the bull formerly at the head of Peter Small's herd and now in service at Iowana Farms.

Napol Sir Keystone Beauty is a son of Keystone Beauty Plum Johanna, the famous hornless champion whose recent death from burning was reported in our July 8th issue. Keystone Beauty Plum Johanna as a junior three-year-old produced 22,496.6 lb. milk, 1,108.8 lb. butter in a year, the highest record ever made in her class by a Pennsylvania heifer. As a senior four-year-old, she produced 665.5 lb. milk, 32.88 lb. butter in seven days, commencing test about six weeks after freshening, averaging 91 lb. milk during the thirty days during which she produced 133.32 lb. butter and in the full year in strictly official test, produced 25,787.5 lb. milk, 1,294.71 lb. butter, world's record in class at time of making, still the largest year record ever made in strictly official work by any animal under full age. She is a daughter of Cornucopia Plum Johanna, 1,056.78 lb. butter in a year, dam of five good tested daughters, whose record with that of their dam average 18,723.1 lb. milk, 918.35 lb. butter with a four per cent. fat test.

The ten young cows offered by Mr. Titus have been bred to King Ormsby Veeman Korndyke. This bull is by King Ormsby Ideal, a son of King of the Ormsby from Emeretta Korndyke De Kol, 663.70 lb. milk, 34.37 lb. butter in seven days, 1,346.93 lb. butter and over 28,000 lb. milk in a year.

The dam of King Ormsby Veeman Korndyke is K. K. S. V. Victoria Veeman, a 17 lb. junior two-year-old daughter of King Korndyke Sadie Vale, from a 28 lb. cow sired by King Korndyke Pontiac Artis and from a 30 lb. four-year-old daughter of Sir Veeman Hengerveld.

IODINE IN TABLE SALT

A Philadelphia salt manufacturer proposes to add iodine to common salt for table use and says that some states require that salt sold within their borders contain a certain percentage of iodine which is regarded as a treatment or preventative of goiter. If the health authorities of Pennsylvania approve, it is very likely that a regulation will be issued permitting the addition and requiring the labels of the salt containers to carry the information that the chemical has been added.

Agricultural crops in Pennsylvania last year were valued at \$245,168,407, as against a value of \$409,968,877 in 1919, as shown by the census.

POISON THE FLY

The season is approaching when flies will take their toll in the cattle barns. A good spray mixture will take care of the cows but something more is often required in the calf barn or in cow barns where calves are kept. A poison mixture that will go far in eliminating flies in the barn is to mix together four tablespoons formaldehyde, one cup water, two table-

spoons sugar. Place a slice of bread in a saucer and pour the liquid over it. This is a poisonous solution and should be handled with care.

The saucers need attention almost every day as the liquid will evaporate rapidly in hot weather. Care should be taken that the saucers are placed where it is impossible for the animals to knock them down and then consume the bread.

KING PONTIAC ORMSBY PIETJE

heads my herd. He is by the noted King Pontiac Alcartra Pietje.

His dam is a daughter of Ormsby Korndyke Lad and her dam was by Nannettson and from a daughter of Paul Beets De Kol.

I am pricing his calves reasonable.

**MABEL BEETS MODEL**

She has spent her whole life in this herd. Cows and heifers of this quality, from A.R.O. dams, are bred to **KING PIETJE AAGGIE PONTIAC**. He was by King Pontiac Alcartra Pietje and his four direct descendant dams average 611.3 lb. milk, 30.62 lb. butter in seven-day work.

Herd under State and Federal Supervision

ROBERT I. SPRINGER

Susquehanna Co. R. D. 1 Factoryville, Pa.

Daughters of King Rag Apple Plum Copia

are being bred to King Sylvia Korn-dyke Tweede, our junior herd bull. His sire, Woodmont Echo Sylvia Champion was first prize three-year-old bull at the 1922 N. Y. State Fair, and he is the son of Butter Boy Empress, grand champion at the 1921 N. Y. State Fair. The dam of King Sylvia Korndyke Tweede is Wynola Korndyke Pontiac Lass, she made 20 lb. butter and 515 lb. milk in seven days as a junior two-year-old. Her sire, King Tweede Spring Farm, is getting a long list of high record daughters headed by a 32 lb. four-year-old. We expect great results from this cross of breeding. Our herd is under State and Federal Supervision and our last test was clean.

THE HERDSIRE AT HUSTEAD FARMS

King Pontiac Alcartra Wayne, 18th, is the name of the well bred bull now heading the Holstein herd at Husted Farms, Uniontown, Pa. His sire, King Pontiac Alcartra Wayne, is one of the best sires that ever stood in northern Pennsylvania, or for that matter, anywhere. Among the daughters of King Pontiac Alcartra Wayne is Pauline Mabel Maid, 32.76 lb. butter, 753.7 lb. milk in a week as a senior three-year-old, 132.18 lb. butter, 3,106.7 lb. milk in thirty days; while as a senior two-year-old she produced 28.15 lb. butter, 627.8 lb. milk in a week. This cow is credited with making seven Pennsylvania state records for milk and butter production.

Crestmont Ormsby Alcartra is another daughter of this sire. She produced 15,883.1 lb. milk, 722.98 lb. butter in 305 days as a junior two-year-old, thereby becoming the class champion of Pennsylvania in the ten months' division, while for the entire United States she

KING PONTIAC ALCARTRA WAYNE, 18TH
Herdsire on the Husted Farms, Uniontown, Pa.

took that year sixth prize for fat production and fifteenth prize for milk. The following year, as a junior three-year-old, she is credited with 21,552 lb. milk, 1,030.4 lb. butter in 330 days, the seventh highest record reported in her class that year. In this lactation period she made in strictly official test 594.4 lb. milk, 29.14 lb. butter, the second highest butter record reported up that time for Pennsylvania junior three-year-olds.

King Pontiac Alcartra Wayne was sired by King Segis Pontiac Alcartra from Aaggie Grace Beryl Wayne, 32.12 lb. butter with a daily milk average of 80½ lb. This cow has several sons who have sired A. R. O. daughters and one of her own daughters, Aaggie Grace Beryl Wayne, made a 30 lb. seven-day official butter record.

The dam of King Pontiac Alcartra Wayne, 18th, is Crestmont Duchess Ormsby. She is also by King Pontiac Alcartra Wayne and her dam, Fairmont Duchess Ormsby, is a 19.59 lb. junior three-year-old daughter of Piebe Ormsby

Duchess, 2d, 26.64 lb. butter in seven days as a senior four-year-old and 25.32 lb. butter in seven days as a senior three-year-old.

Crestmont Duchess Ormsby has a number of large records. As a junior two-year-old she made 18.16 lb. butter in a week; then as a junior three-year-old, she made 22.85 lb. butter in seven days, averaging over 80 lb. milk a day during the week of her test. She was entered in the ten months' division. She carried calf exactly 200 days yet she produced 18,243.1 lb. milk in the ten months, and is credited with 806.65 lb. butter which was the second highest record made in that division by a junior three-year-old and was Pennsylvania state record in class at time of making. In April of this year, Superintendent Gardner reported that Crestmont Duchess Ormsby had closed a year's test as a five-year-old and he credited her with 27,138 lb. milk, 1,271.77 lb. butter. In the early part of her latest lactation period she made a seven-day butter record of 29.52 lb. She is full sister to the 29 lb. junior three-year-old Crestmont Ormsby Alcartra mentioned above as making 1,030.40 lb. butter in 330 days.

The Holstein herd at Husted Farms is under the care of Herdsman R. Bruce Williams. The farm superintendent is C. A. Spencer. Both Mr. Spencer and Mr. Williams are well known to Holstein breeders of northern Pennsylvania and southern New York. Husted Farms are owned by W. B. Husted, who, when he is not at work on the farms, amuses himself with the details of a soft coal and coke business. The Husted herd is under state and federal supervision. All the cattle on the farms have been purchased from accredited herds and just as soon as it is possible the Husted herd will also be placed on the accredited list.

SHERBURNE TO BE CLEAN

The great Holstein section around Sherburne, New York, is planning to become an accredited area. The Chenango County Farm Bureau is cooperating with the State and Federal authorities in an effort to have all the herds in this district tuberculin tested under the area plan. Nearly every herd in the township contains a few purebred Holsteins and a large number consist solely of purebreds.

Mrs. Mugs had the reputation among tradesmen of quibbling over the fraction of a cent, and she was living up to it in her argument with the ice man.

"Is that all the ice I get for ten cents?" she demanded peevishly.

"Don't worry, lady," he replied as patiently as possible. "Some day you might be in a place where you couldn't buy this piece for a million dollars."—*Legion Weekly*.

King Artis Waconda

Is
Bred
in
the
Purple!

His dam, a 30-lb. cow, made a world's record for year production as a three-year-old—his two nearest dams average 30.59 lb. butter, 586.85 lb. milk in 7 day official test.

In his pedigree occur the names of the first 30-lb. cow, the first 30-lb. three-year-old, the first 34-lb. cow, the first 37-lb. cow—a mother and daughter that each produced over 100lb. milk in a day, and the first cow to produce more than a thousand pounds of butterfat in a year, yet I am selling his sons and daughters at very reasonable prices.

HAMPSHIRE

FOR
SIX
YEARS

FOR
SIX
YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIRE are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—*THE HAMPSHIRE ADVOCATE*—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs.

FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

Waldron Farm Holsteins

Are noted for their fine individuality, size and producing ability

KING SYLVIA PONTIAC PIETJE 292881

stands at the head of our herd of 60 head of top-notch Holsteins. He is a son of Champion Echo Sylvia Pontiac (You all know about him), from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in a week as a junior four-year-old, she by Woodcrest Sir Clyde and from the best bred daughter of the famous May Echo Sylvia.

Owing to our herd being made up chiefly of his daughters, we offer this great four-year-old sire for sale. If we could afford to keep him we would. This is YOUR opportunity.

Herd under State and Federal Supervision, last test CLEAN.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

VOL. III

HARRISBURG, PA., AUGUST 8, 1924

No. 15

Chenango Valley Stock Farm

A New York State Holstein Dairy Farm

AWAY back in 1906 Whitman A. Follett, of North Norwich, New York, purchased a purebred Holstein-Friesian Cow, Zoe Pietertje, buying her from the well-known, old time, breeder, Ogden Cole. From time to time during the next four years Mr. Follett purchased a few purebreds and in 1910 sold all his grades and during the last fourteen years his dairy has been composed entirely of purebreds.

In her new home, Zoe Pietertje dropped two heifer calves and some of the present members of the Follett herd are among her descendants.

The first regular herdsire was Prince Rag Apple Korndyke, No. 73415. He was a son of Pontiac

Sadie Vale Concordia, the first cow that ever made a 30 lb. official seven day butter record.

Another remarkably well-bred bull that headed this herd was Dutchland Creamelle Johanna Count. He, too, has a remarkable pedigree. His sire was Dutchland Creamelle Korndyke Lad, formerly in service in the Field herd. He has a long list of daughters with large short-time and long-time records. He was by Dutchland Sir Pontiac Rag Apple and his dam was Dutchland Colantha Vale, 30.42 lb. butter, 736.6 lb. milk in a week, 1,082.37 lb. butter, 27,625 lb. milk in a year.

One of her daughters, Dutchland Pietertje Vale, has a year record of 1,263 lb. butter and nearly 28,000 lb. milk and a 35 lb. seven day butter record with 750 lb. milk. Dutchland Colantha Vale was a daughter of Colantha Johanna Lad and her dam was Creamelle Vale 1,155.85 lb. butter, 29,591.4 lb. milk in a year, world's milk record at time of making. She was a granddaughter of Sadie Vale Concordia and her dam, De Kol Creamelle, has an unofficial rec-

A COUPLE OF GOOD PRODUCERS
in the Chenango Valley Herd.

Korndyke and his dam was Fairview Rag Apple Korndyke with an official record made as a three-year-old of 367.1 lb. milk, 21.67 lb. butter. Her pedigree shows a combination of large producing strains. Her sire, Dutchland Sir Pontiac Rag Apple, has a long list of good record daughters and was full brother to two former world champions, Pontiac Rag Apple and Pontiac Clothilde De Kol 2d.

Pontiac Rag Apple made over 31 lb. of butter in seven days as a senior four-year-old, second highest record in class at time of making and she is reported to be the first cow of the breed that was ever sold for \$8,000.00.

Pontiac Clothilde De Kol 2d was the first cow to make 37 lb. of butter in seven days or over 1,000 lb. of butterfat in year test. She made world's butter records for seven day, thirty day and year test and was the first cow to make over 30 lb. of butter in a week at three successive lactation periods.

Fairview Rag Apple Korndyke was a granddaughter of Junior De Kol, who in turn was a grandson of

THE FOLLETT FAMILY
taken on Mother's Day, May 11, 1923.

ord of 26,280 lb. milk in a year and was the first cow that ever averaged 100 lb. of milk a day for 100 days.

The dam of Dutchland Creamelle Johanna Count was Dutchland Cornucopia Hengerveld 2d, 730.4 lb. milk, 32.85 lb. butter in a week. She is a daughter of Colantha Johanna Lad and her dam was Dutchland

Cornucopia Hengerveld, 611.1 lb. milk, 27.94 lb. butter in a week as a senior four-year-old. This cow was a daughter of Pietertje Hengerveld's Count De Kol and she has three tested daughters each of which have made over 30 lb. butter in seven day test.

The three nearest dams of Dutchland Creamelle Johanna Count have seven day records that average 30.40 lb. butter, 692.7 lb. milk or an average daily milk production of 98.8 lb. He is full brother to Dutchland Creamelle Cornucopia, a cow that made over 30 lb. butter and 600 lb. milk in a week and has a strictly official year record of 27,690.8 lb.

CHENANGO VALLEY JOSEPHINE
A daughter of Dutchland Creamelle Johanna
Count from a daughter of Prince Rag Apple
Korndyke.

milk, 1,284.16 lb. butter made as a five-year-old, over 1,100 lb. butter in a year as a three-year-old and over 800 lb. butter in ten months as a two-year-old.

Before purchasing a herdsire, Mr. Follett has always studied the pedigrees of the animals he was offered. While he was always considered the animal first, he has been careful to buy herd bulls slightly related and so has always avoided violent out crossing. So in all the herdsires we have a number of ancestors in common. The first bull carried the blood of Pontiac Korndyke and of his son, Dutchland Sir Pontiac Rag Apple, and of the former world's champion cow, Sadie Vale Concordia. The second great herdsire traces, through both sire and dam, to Colantha Johanna Lad and was a grandson of Dutchland Sir Pontiac Rag Apple and was also a descendant of Sadie Vale Concordia.

Then came Colantha Sir Aaggie Oakdale, a grandson of Colantha Johanna Lad. This bull was by Colantha Sir Aaggie, who for many years stood in the D. W. Field herd and spent the last few years of his life at Bonalevo Farms. He has a number of high record daughters and his dam was the famous Aaggie Cornucopia Pauline, the first cow to make over 34 lb. butter in seven days, a cow that made world records for both seven and thirty days both as a senior three-year-old and as a senior four-year-old and whose butter record of 34.32 lb. stood supreme in the senior four-year-old class for eight years. A whole book could be written on the performances of this cow and of her descendants.

Colantha Sir Aaggie Oakdale is a son of Princess of Oakdale 2d, 536.5 lb. milk, 31.30 lb. butter in seven days; 123.35 lb. butter in thirty days with an average milk production of better than 72 lb. a day. She has a daughter that has a 31.36 lb. seven day butter record while her dam, Princess of Oakdale, made 30.59 lb. butter, 565 lb. milk in a week and 124.19 lb. butter

in thirty days with a milk average of 81.2 lb. The dam and the two granddams of Colantha Sir Aaggie Oakdale have seven day records that average 32.07 lb. butter, 586.9 lb. milk or a daily milk average of 83.8 lb.

The young bull in service at the present time is Colantha Sir Pontiac Aaggie Abby, No. 407202. He is a son of Colantha Rag Apple Pontiac, who was by Colantha Johanna Lad from Aaggie Rag Apple Colantha, she by Colantha Sir Aaggie from Colantha Pontiac Rag Apple, a daughter of Colantha Johanna Lad and Pontiac Rag Apple, one of the full sisters to Dutchland Sir Pontiac Rag Apple. Note that here we again combine the blood of Colantha Johanna Lad, Dutchland Sir Pontiac Rag Apple and Aaggie Cornucopia Pauline.

Aaggie Rag Apple Colantha, granddam of Sir Pontiac Aaggie Abby, has official seven day records of 601.5 lb. milk, 35.26 lb. butter made as a senior three-year-old. As a five-year-old she made a year record of 20,970.7 lb. milk, 1,024.45 lb. butter. Her dam, Colantha Pontiac Rag Apple has a seven day record made as a senior four-year-old of 556.2 lb. milk, 33.06 lb. butter. She was by Colantha Johanna Lad and her dam, Pontiac Rag Apple, made as a senior four-year-old 619.5 lb. milk, 31.62 lb. butter, the second highest record in her class at time of making, being exceeded only by the 34.32 lb. record of Aaggie Cornucopia Pauline, who is the other granddam of Aaggie Rag Apple Colantha.

Colantha Sir Pontiac Aaggie Abby is from Rag Apple Aaggie Colantha Abby. As a senior-two-year-old this young cow is credited with records of 332.3 lb. milk, 17.15 lb. butter in seven days and 1,276.2 lb. milk, 68.08 lb. butter in 30 days. She too, is backed by high record ancestry. Her sire, King Rag Apple Aaggie Colantha is by Colantha Johanna Lad and is from Rag

PRINCE RAG APPLE KORNDYKE
The first high class herd sire owned by Whit-
man A. Follett.

Apple Aaggie Colantha 713.4 lb. milk, 41.27 lb. butter in seven days; 2,851.3 lb. milk, 126.67 lb. butter in 30 days as a senior four-year-old, while she has a year record of 25,303.8 lb. milk, 1,263.03 lb. butter. She is a daughter of Dutchland Colantha Aaggie Cornucopia 676.4 lb. milk, 34.76 lb. butter in a week, a daughter of Aaggie Cornucopia of Dutchland 601.5 lb. milk, 30 lb. butter in a week, whose dam was Aaggie Cornucopia Pauline, 34.32 lb. butter, 659.2 lb. milk in seven days.

On the dam's side, Rag Apple Aaggie Colantha Abby is backed by a series of great record animals. She is

a daughter of Aaggie Colantha Abby Hartog 616.2 lb. milk, 30.65 lb. butter in seven days as a senior four-year-old, a big thirty day record, and a ten months record of 21,779.1 lb. milk, 868.03 lb. butter made as a five-year-old. She was by the century sire, Aaggie Cornucopia Johanna Lad, the best known son of Aaggie Cornucopia Pauline and her dam was Colantha Abby Hartog, 668 lb. milk, 33.53 lb. butter in seven days, a daughter of Colantha Johanna Lad and Abby Hartog Clothilde, 605.9 lb. milk, 31.39 lb. butter in seven days.

In the pedigree of Colantha Sir Pontiac Aaggie Abby we have three instances of three direct descendant dams that each made over 30 lb. of butter in seven days. His paternal granddam is a 35-lb. cow, whose dam was a 33-lb. daughter of a 31-lb. four-year-old. His maternal grandsire is a son of a 41-lb. four-year-old whose dam is a 34-lb. daughter of a 30-lb. cow, who in turn was from a 34-lb. four-year-old. In this case there are four direct descendant dams each above 30 lb.

Then the maternal granddam, Aaggie Colantha Abby Hartog, is a 30-lb. four-year-old, whose dam is a 33-lb. daughter of a 31-lb. cow. In addition, two of the sires appearing in the last column of a four generation pedigree are sons of Aaggie Cornucopia Pauline, the foundation animal of the four direct descendant 30-lb. group just mentioned.

Six different times Colantha Sir Pontiac Aaggie Abby traces to Colantha Johanna Lad, whose dam was the first cow to make 35 lb. butter in a week or over 1,200 lb. butter in a year. He traces three times to the famous Aaggie Cornucopia Pauline, one of the greatest producing and greatest transmitting cows the Holstein breed has ever known.

Pages could be filled in telling of the remarkable records made by animals carrying a large percentage of the blood that flows in the veins of Colantha Sir Pontiac Aaggie Abby, the Follett junior herdsire. But we will content ourselves by just saying, that despite the fact that his dam's record was made as a two-year-old, the seven nearest dams of this bull have seven day official records that average 32.31 lb. butter, 591.3 lb. milk and his fifteen nearest dams, that is, all that appear on his five generation pedigree chart, have official seven day records that average 31.86 lb. butter, 605.5 lb. milk.

It is evident that in selecting this young bull as a herdsire Mr. Follett compared his pedigree with the pedigree of his former sires. We find an intensification of the blood of Colantha Johanna Lad and Aaggie Cornucopia Pauline. Through both sire and dam we get the blood of Pontiac Korndyke, on the sire's side through Pontiac Rag Apple and on the dam's side through her full brother, Dutchland Sir Pontiac Rag Apple. This brother and sister each carry 75% of the blood of Pontiac Korndyke.

Through the dam is introduced the blood of Abby Hartog Clothilde, one of the greatest producing cows of her day and acknowledged to be one of the greatest transmitting dams of the breed.

The first calves sired by Colantha Sir Pontiac Aaggie Abby are just beginning to arrive and, in the words

of the owner, "they are fine." They are vigorous, hardy and show great promise.

The present Follett herd consists of fifty head. The herd is under State and Federal Supervision and the latest test gave the herd a clean bill of health. The cows are large and the young stock well-grown, Mr. Follett believing that in order to have the animals do well in after life it is necessary to give them a good start and also that large cows have greater power of production and are capable of earning a larger profit. The many cans of milk that daily leave this establishment are evidence that the herd consists of producers.

The Folletts purchased Chenango Valley Stock Farm, as their establishment is called, in 1896. The farm contains 204 acres. About 75 acres are cultivated, the remainder being in woods and pasture. The farm consists of part hillside, part flat land and so is well adapted for dairy purposes.

The Chenango Valley is one of the best farming districts in New York State and so when the Folletts reserved a herd prefix in the naming of their animals they selected "Chenango Valley" and so we find practically all the animals in the herd have names commencing with these two words.

Water from living springs is piped to all the buildings. The barn and other buildings are substantial, well kept and well adapted for the purposes for which they are used. A home electric light plant furnishes electricity for the house, barn and garage.

Mr. and Mrs. Follett have three living children. Lorimer W., is nearing eighteen. The older daughter teaches school near by and her younger sister goes to school and helps around home.

Mr. Follett paid a little tribute to his wife, saying that she was about three-quarters of the whole works. She keeps the herd books and is remarkably well informed on pedigrees and blood lines.

"Whit" Follett, as he is called in his own neighborhood, ranks high as a farmer. His son, Lorimer, while interested in Holsteins, is also interested in bees and raises airedales. He has also made a start with pure-bred Hampshire swine. The Folletts are members of both the Farm Bureau and the Dairyman's League.

Radical Ways to Improvement

A WRITER in *Hoard's Dairyman* suggests a law that would compel the slaughter of every dairy cow that does not produce over 300 lb. butterfat in a year when given ordinary good dairy feed and care.

The *Pacific Dairy Review* suggests that such a law should be supplemented by one that would provide that when a cow is shown to be able to produce that much butterfat, but is unable to do so because her owner is too stingy to give her enough feed, such owner should be hanged.

Does it pay to advertise?—There are many mountains in Colorado higher than Pike's Peak, but only a few people know it. Why? Because Pike's Peak is well advertised and the others are not. Moral: Advertise whatever you may have for sale in THE HOLSTEIN BREEDER AND DAIRYMAN.

Factors Involved in Tuberculosis Eradication and in Maintaining Sound Herds

VERANUS A. MOORE

New York State Veterinary College, Cornell University, Ithaca, N. Y.

THERE is no undertaking in live stock sanitary work in which so many people are interested as the project to eradicate bovine tuberculosis. The history of veterinary medicine tells us that there are few, if any, cattle diseases that are of a more ancient origin; that have spread over a larger portion of the earth's surface; that are more chronic in their nature or more insidious in their dissemination than tuberculosis. It came to the present generation as a natural heritage and its dissemination has been accelerated by the modern practices of dairymen until it has become intimately associated with the animal husbandry of the essential elements in the symptom-complex of its eradication and the subsequent maintenance of clean herds.

The economic importance and the sanitary significance of bovine tuberculosis have made it the object of extended experimentation and research. No other disease of animals has been studied more thoroughly and the nature of but few is better understood. There is quite definite information on the escape of tubercle bacteria from diseased animals, the means by which they are spread in nature, how infection takes place, the limitations of methods for its diagnosis and the relation to each other of the various types of acid-fast bacteria that cause disease in lower animals and man. There is such a wealth of knowledge concerning its natural history and its intertwining with the cattle industry that many beliefs formerly entertained have been modified or dispelled altogether.

The investigations mentioned have helped particularly to clarify our conception relative to the different types of mammalian tubercle bacteria and the reaction of the infected body to tuberculin. In 1894, when official eradication was started in Massachusetts, it was believed by many physicians and health authorities that much tuberculosis in the human family came from cattle. It was this conviction that made possible the payment of indemnities for the reactors that were destroyed. Then, as now, it was felt by many that men who permitted tuberculosis to get into their herds were no more entitled to indemnity than those whose animals had anthrax or actinomycosis. Further, it was thought in this country that the flesh of reacting cattle, no matter how slightly affected, was not fit for human food; and, consequently, such animals, if slaughtered, were a total loss to the owner.

Researches on tubercle bacteria have replaced the belief that a single type was the cause of all mammalian tuberculosis, so generally accepted 30 years ago, with indisputable evidence that there are certain biological differences that distinguish the various strains and that the human family is less susceptible to the bovine type than was supposed. The evidence is quite conclusive that children are susceptible to it, although the amount of such infection is not large. The recent study by Park and Krumwiedie of fifty cases of glan-

dular tuberculosis in children showed that 42 were due to the human and only 8 to the bovine strain of tubercle bacteria. In a series of 101 cases of tuberculous meningitis, Krumwiedie found only 6 due to the bovine strain. After reviewing the literature, Calmette, in his recent book on tuberculosis states: "From the sum total of facts collected by investigators in the course of recent years, the conclusion apparently should be drawn that tuberculosis of bovine origin is dangerous for man generally during early life." Further and more convincing evidence that it is not a serious factor in human disease is that tuberculosis has been spreading in cattle, while the number of cases in man has been declining steadily during the last few years.* In 1918 there were 16,973 deaths from tuberculosis in New York State and in 1922 there were 10,522. The falling off in New York City has been attributed to the pasteurization of milk, but there has been a corresponding reduction in the number of deaths up state where this precautionary measure is not followed generally. Thus the menace to human life of bovine tuberculosis is less formidable at present than accidents at grade crossings. Our health officials no longer object to the flesh of animals affected with localized lesions, so that the food value of the carcasses is saved.

DEATHS FROM TUBERCULOSIS IN NEW YORK STATE

Year	New York City	Rest of State	Total
1918	10,098	6,875	16,973
1919	8,498	5,980	14,478
1920	7,135	5,408	12,543
1921	5,922	4,853	10,775
1922	5,803	4,719	10,522

The eradication of bovine tuberculosis has been placed on a different basis. It has been transferred for the greater part from the domain of public health to the realm of cattle sanitation. This emphasizes its significance as a factor in farm economics and does not minimize the importance, especially to the country people, of eliminating such danger as may exist from cross infection. No one wants milk from tuberculous animals and no breeder can afford to have a diseased herd. A liberal bonus paid for milk from tuberculin tested cows would do much to stimulate activity in its production. It has been suggested by many practical men that it would solve the tuberculosis problem in dairy herds. The consuming public must be taught that it will have to pay more for "clean milk from healthy cows," and one of the elements in this complex question is to teach the people that it is economy to do so.

Tuberculin has given rise to several troublesome

*The appended statistics are taken from a communication from the State Department of Health, March 5, 1924.

questions. When it was introduced it met with severe and bitter opposition. Some of us remember well the arguments against it. Years of educational work were required to convince the people that it possessed diagnostic properties and that it did *not* cause tuberculosis. As its use increased people came to believe either that it was of no value or that it was infallible. Its limitations have never received the consideration to which they are entitled. When discrepancies occurred there has been a tendency to explain them on the ground that the parties who administered the tuberculin were either incompetent or dishonest. The possibility that the stage of the disease at the time might modify the reaction was given little attention.

At first, tuberculin was administered subcutaneously and a rise of temperature indicated the reaction to it. By taking only the animals that gave a high curve, lesions were found in from 98 to 100% of them. This gave it a reputation for accuracy not excelled by any other means of diagnosis. Experience showed, however, that in herds where the disease was of long standing, certain animals would pass one or more tests, but, in from one to three years later, would react. Also animals which gave lesser temperature curves, those that came within the limits of physiological variation, were often negative. The practical difficulty with this method was the frequency with which infected animals were left in the herd. It often required years before all of them were found. The effect of repeated injections on the reaction and the cause for the same have been studied carefully and theories to explain the various phenomena are well known.

The intradermal application of tuberculin described by Moussu and Mantoux and introduced in this country by Ward and Baker suggested several advantages. It was accepted rather hastily as a substitute for the subcutaneous injection, and a code was prepared by the United States Live Stock Sanitary Association for interpreting the reaction caused by it. It was found, however, that this method in common with the subcutaneous test allowed occasional passing of diseased animals, and also that many cattle that gave an apparent reaction failed to exhibit lesions. The number of such cases varies within wide limits. An appraiser told me in December that a large percentage of the cattle he had appraised were no-lesion cases, and true to form he accused the veterinarians of improbity. In a packing house where such animals are killed over 20% of no-lesion cases were recorded. Such reports correspond with those that have come to us frequently.

It was evident that so many apparent errors must have some rational explanation. Attention had been called by Haring and Bell to the importance of using the proper tuberculin for intradermal tests. In 1922, Hagan and Traum in our laboratory started a careful study to determine the effect on the skin of various tuberculins, including the precipitated product. They found that it would often cause a reaction in non-tuberculous experimental animals and similar, non-specific ones were obtained in cattle. These experiments may explain the large number of no-lesion cases on a perfectly natural and purely scientific basis. Further knowledge and a little more care in its ap-

plication may be necessary if confidence in the reliability of tuberculin as a diagnostic agent is maintained. It does not seem wise to overlook the limitations of tuberculin applied by any method, or to be too positive in the interpretation of a reaction when it may be either non-specific or due to a state of lethargy. These delicate reactions may be unfortunate from a diagnostic point of view, but they are very significant. Early in the history of tuberculosis in this country many cattle breeders and dealers ignored the precautions against its introduction, only to find later that their herds were extensively infected and the markets of the world closed to them. From a practical point of view, the question to be considered is, How wide a margin of error is permissible. When cattle prices return to normal, the slaughter of considerable numbers of innocent animals will not meet with approval.

TO BE CONTINUED.

Government Dairy Herd Survey

AN increase of 6% in the number of milk cows two years old and over, on farms in the United States for the year ended June 1, 1924, is indicated by the milk cow survey of the United States Department of Agriculture, which was made by the rural mail carriers, covering 121,000 farms. The Bureau of the Census in 1920 enumerated 23,724,148 dairy cows and heifers over one year of age on farms. For the period January 1, 1920, to January 1, 1924, the Department of Agriculture has estimated a 4% increase in milk cows, which in the light of this survey and the production of dairy products, would seem to have been conservative.

This is the first survey relating to milk cows which has been made by rural carriers, so that similar comparisons for previous years are not available. The survey also included inquiries as to the number of heifers between one and two years of age, and heifer calves under one year of age being raised for milk cows, and indicated for the farms covered that there were 24.6% as many heifers between one and two years of age as there were dairy cows, and 21.8% as many heifer calves.

The census of 1920, which was taken as of January 1, 1920, showed 20.6% as many dairy heifers 1 to 2 years of age, as dairy cows, while the present survey shows 24.6% as many heifers, which would indicate a tendency either to increase the herds during the coming year more rapidly than was the case four years ago, or to a more rapid turn-over. Subsequent surveys will throw additional light on this question. In six States, Massachusetts, Rhode Island, Connecticut, New Jersey, Michigan, and Minnesota, the percentage of heifers to cows was lower in the present survey than on the census date in 1920. The fact that the census data were gathered as of January 1st and the present survey was made as of June 1st should be considered in making a comparison of percentage of heifers to cows, it being pointed out in this connection that the majority of heifers 1 to 2 years of age at the time of the 1920 census was nearly 2 years of age, while for the present survey the majority had probably just passed one year of age.

MY DAIRY AT PASTURE

My cows and heifers are bred to a son of **King Segis Pontiac Konigen** and **Dutchland Pietertje Beauty**, an A.R.O. granddaughter of **Dutchland Sir Pietertje Hengerveld** and **Beauty Pietertje Butter King**.

The first twenty-two sisters of this bull, tested for a year average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision and passed clean at last test.

You'll be pleased if you write for prices on our cows, heifers and calves.

RAYMOND D. STRICKLAND

NICHOLSON, R. D. SUSQUEHANNA CO., PA.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

Surplus Milk and a Remedy

By L. P. EMMERICK

DURING the last few months the Washington and Richmond fluid milk markets have been flooded with the largest surplus in the history of these markets. This has made it necessary for the dealers to divert this large amount of surplus milk to manufacturing channels. As the prices received for these manufactured products have been relatively very low it reduced the general price level considerably. This glutted condition also made for very unhealthy market conditions.

The best way to wipe out this surplus, and thus restore a normal and healthy market would be by disposing of all "boarder," or unprofitable cows.

Cow Testing Association records are proving of immense value in helping dairymen to find out these "boarders" or unprofitable cows. Here is what the records of a 36 cow dairy shipping to the Washington market showed. The 36 cows had a total production of 213,744 pounds of milk, and 7,613.6 pounds of butterfat. This brought in a total return at the farm of \$6,381.44. The total feed cost was \$3,346.70 which left an income over feed cost of \$3,034.74. After crediting the value of manure and calves and deducting all overhead charges it left a net profit of \$1,124.53.

For each cow in the herd there was an average production of 6,048 pounds milk, and 211.5 pounds butterfat. A return of \$177.26 was received at a feed cost of \$92.96. Therefore the income over feed cost was \$84.30 while the net profit was \$31.24.

By dividing the herd in two parts and placing the records of the highest eighteen milk producers in one group, and the lowest eighteen milk producers in another group some startling information was brought out. The cows in the first group produced 142,517 pounds of milk and made a total net profit of \$1,322.46. The cows in the second group produced 71,227 pounds of milk and showed a net loss of \$197.77. In other words, if this dairyman had only had the first group of eighteen cows instead of having the whole herd of thirty-six he would have been \$199.77 better off at the end of the year and would have relieved the market of 71,227 pounds of milk during the year. With cows in the first group eighteen he was able to make milk at a feed cost of \$1.36 per hundred, while with the cows in the second group, which were making the cheap, surplus milk, it cost \$1.98 to produce one hundred pounds milk.

When we consider that most of the herds in the country are about on the same footing as this herd it can easily be seen that by getting rid of the "boarder" cow the surplus would disappear, market conditions would improve, the cost of production would be lowered, and profits would increase.

If ice cream isn't the great American food, it ought to be. Too expensive for everyday? Not when you stop to think that in energy one quart of ice cream is equal to 10¾ pounds of tomatoes, or 3¼ pounds of peas, or 14 eggs, or 1¼ pounds of beefsteak, or 8¾ pounds of strawberries, or 7 pounds of apples.

Proposed Pennsylvania Purebred Bull Law

A PUREBRED Bull Law will be presented to the Pennsylvania Assembly and Senate at its next session unless something unforeseen intervenes. Such laws are already in effect in several states and the proposed law follows very closely along the lines of those already in operation. It has the backing of several of the breed organizations of the state. The test of the proposed bill follows:

Before any person, owner or keeper of any bull kept for public service within the State of Pennsylvania shall allow said bull to serve any cow or heifer, free or for pay, he must register the bull in a herd register or record book recognized by the Department of Agriculture of Pennsylvania for the registration of pedigrees and obtain a certificate of registration of said bull and then forward said certificate to the Secretary of Agriculture of Pennsylvania, whose duty it shall be to examine and pass upon the correctness or genuineness of such certificate and enroll such bull as purebred and issue a certificate of enrollment under the seal of the Department of Agriculture, which certificate shall set forth the name, breed, age, color, markings of the bull and whether or not tuberculin tested, and also the number and name of the breed record where registered.

A copy of the certificate of enrollment must be kept on the stall of said bull.

It shall be unlawful after January 1, 1926, for any person to keep any bull for public service, either free or for pay, which bull is not so enrolled in accordance with this act or to permit any bull not so enrolled to serve any heifer or cow except his own heifer or cow, either free or for pay.

Any person violating any part of this act shall be guilty of a misdemeanor and shall be fined not less than \$20.00 and not more than \$100.00 for the first offense, and not less than \$100.00, nor more than \$200.00 for the second or any subsequent offense.

Summary conviction before any Justice of the Peace with right of appeal to a Judge of the County Court or Court of Quarter Sessions upon giving bond, with surety, in twice the amount of the fine and costs.

Death of bull to be reported and certificate of enrollment to be returned to the Secretary of Agriculture.

Report of sale of bull and transfer to be recorded on enrollment certificate and forwarded to new owner.

List of enrolled bulls to be made by counties and name and address of owners, and to be published once each January in one paper in each county.

League Pool Price for June

The Dairymen's League Coöperative Association's gross pool price for 3 per cent milk at the 201-210 mile freight zone for June is \$1.42 per 100 pounds, with deductions of \$.08 for expenses and \$.10 for certificates of indebtedness. The net pool price, therefore, is \$1.34 and the cash distribution is \$1.24.

The Torrens system of land titles is the best yet devised.

King Artis Waconda

Is
Bred
in
the
Purple!

His dam, a 30-lb. cow, made a world's record for year production as a three-year-old—his two nearest dams average 30.59 lb. butter, 586.85 lb. milk in 7 day official test.

In his pedigree occur the names of the first 30-lb. cow, the first 30-lb. three-year-old, the first 34-lb. cow, the first 37-lb. cow—a mother and daughter that each produced over 100 lb. milk in a day, and the first cow to produce more than a thousand pounds of butterfat in a year, yet I am selling his sons and daughters at very reasonable prices.

Bulls and their Daughters

By S. BASHEROV.

THE inheritance of a cow to produce large quantities of dairy products economically and with maximum profit to her owner, depends in a great measure upon the quality of bulls used generation after generation. The daughters of good bulls are generally better than their dams and this is especially true if high class prepotent sires are mated with inferior cows. On the other hand, the offsprings of poor purebred or scrub bulls are generally poorer than their dams. A farmer that continuously uses high class purebred bulls is sure to eventually develop a high producing and profitable dairy herd; whereas, a farmer using poor bulls and saving their offsprings for dairy purposes, is just as sure to develop a herd of poor and unprofitable cows.

Good dairy cows rather than more cows should be the aim of every dairyman. It has been proven time and again that profit in dairying depends, in a great measure, upon the producing ability of each and every cow in the herd rather than upon the size of the herd. To be sure, a herd of 12 cows all equally good, will bring about twice the profit as a herd half that size. It is, however, equally true, if five of this herd of 12 cows bring an annual profit of \$500 and the other 7 lose \$200, that the profit from the 12 cows is not as great as if only five of the best cows were kept and the other 7 disposed of.

From data recently collected on the Newlands Project, Nevada, it is shown that cows producing less than 200 pounds of butterfat in a year, produced it at a feed cost of 25 cents per pound and that such cows returned \$17.70 in dairy products for each ton of alfalfa hay consumed. Whereas, cows that produced over 400 pounds of butterfat in a year, produced it at a cost of 8 cents a pound and that a herd composed of such cows will return \$37.00 for each ton of hay consumed. Evidently, the price the dairyman gets for his hay crop, depends a great deal upon the kind of cows through which he markets his hay. If he feeds it to inferior cows, he has

a poor market; but if he feeds it to excellent cows, he will get a very high price for his hay. What is true of hay, also holds true for other feeds fed to dairy cows.

The farmer's future success in dairying lies entirely within his own hands. If he avails himself of good sires continuously, retains only the best heifers and feeds them during their growing period and later while producing, in accordance with their inheritance, his success is certain. If he follows no constructive breeding plan and uses inferior bulls, he is sure to have eventually nothing but an unprofitable herd of scrubs.

Sheffield Farms August Prices

AT a meeting of the Group Members representing the producers who sell to the Sheffield Farms Company, held in New York City, July 29th, there were present representatives from fifteen of the sixteen routes together with a number of dairymen visitors. There were also present three representatives of Sheffield Farms Company, Inc., including Mr. Loton Horton.

After a discussion of the milk situation, Dr. H. W. Underwood of Starlight, Pennsylvania; John H. McCarty of Cambridge, New York, and Rodney Lovell of Sharon, Connecticut, were appointed as a committee to arrange August prices.

The prices finally agreed upon were: Class 1, \$2.00 per hundred; Class 2, \$1.70 per hundred; Class 3, \$1.55 per hundred, while Class 4 would be determined by market conditions prevailing during the month.

If the other groups of producers advanced prices during the month, this Price Committee is to return and make a corresponding adjustment.

Septic tanks are the most sanitary method for the disposal of human wastes. They can be installed wherever there is water available for indoor toilets. The ordinary outdoor toilet is a menace to the health of the children at school and to the family at home. Health should be the first consideration.

A Profitable Business—
Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Farmers' Greatest One Crop System

By G. T. McELDERRY, President Alabama Farmers' Union.

THE one crop system, practiced by farmers throughout this country for the past 140 years, in electing corporation lawyers to Congress and the legislatures, has proven more disastrous to the agricultural interests of the country, than pestilence, war, hail, cyclone, drouth, insect pest, boll weevil, hell and high water.

Every unjust, unfair and oppressive law now on the federal statute books was placed by lawyers; as both houses of Congress, since the foundation of this government, has had a large majority of its members lawyers and they cannot evade the responsibility of unfair legislation.

Lawyers cannot escape the responsibility for the evils that at the present time harrass the nation. Lawyers enact the laws; lawyers construe the laws, and lawyers enforce the laws. It has been said that wise men sometimes change, but fools and donkeys never. It does seem that 140 years is quite long enough for the farmers to remain in the donkey class; if only for the sake of a change, they might try some other method than the election of the employees of the other crowd to make laws for the farmer.

The evils of government of which we have a just right to complain, have been brought about by looking at a law, from a legal, rather than a right point of view.

Frequent Milking Increases Production

IN THE *Journal of Dairy Science* appears a study by Professors Ragsdale, Turner and Brody, of the University of Missouri, on milk production and the effect thereon of milking at various periods.

Four cows were used in the experiment and they were milked at intervals ranging from one to thirty-six hours. The deductions are that the oftener the cow was milked, the greater would be her total production or to use the words of the authors, "the greater the amount of milk accumulated in the udder, or the longer the interval between milkings, the less the speed of milk secretion in unit time."

If the production of milk during the first hour be taken as 100%, the rate of secretion during each succeeding hour is approximately 95% of the preceeding hour. Therefore, if a cow produced 17.2 lb. milk when milked twice daily, if milked three times daily she would produce 18.9 lb. and if milked four times daily the amount would be 20 lb.

Cows milked three times daily would produce 110% of the amount they produced when milked twice a day and if milked three times daily they would produce 116% of the amount they produced on twice a day milking.

The first bathtub in America was exhibited by Adam Thompson at Cincinnati in 1842. It was supplied with water from a tank in the attic and was strongly denounced as injurious to health.

Why the West Is Restive

H. C. McKENZIE, a tax expert of national reputation, says: "A man's net income is the measure of his ability to pay taxes." If that be true, and few deny it, the farmer should pay very little tax compared with those engaged in industries that pay several hundred per cent on capital invested. No better illustration of the inequalities of taxation can be given than the statement of the *New York Times* that within 30 days, thirty-eight companies declared stock dividends running up to 700 per cent and amounting in the aggregate to \$1,108,000,000, while in Greeley County, Kans., according to Noah Bowman, state tax commissioner, 25% of the farms were sold in 1923 to pay the taxes.—*Sedgwick County, Kansas, Farm Bureau News*.

Ayrshire Test Requirements Changed

THE Ayrshire Breeders Association have recently raised their Advanced Registry requirements. One of the classes requires the production of 10,000 lb. milk, 400 lb. butterfat in a year for mature animals while the A. R. class requires 12,000 lb. milk, 480 lb. fat. These requirements become effective July 1st of this year.

The discussion on testing work disclosed a strong demand for a record system which emphasizes herd averages and requires that all producing females in that herd should be tested. A committee has been appointed to consider the subject of testing in connection with a daily dairy milk record system, such committee to report at the next annual meeting.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

August 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Decision in the "George" Case

WE have noted with much interest the decision of the New York State Court of Appeals in the somewhat celebrated "George" case. The case was fought hard from start to finish by the counsel, Ex-Judge Nathan L. Miller of New York appearing for the Association and Ex-Judge Frank C. Laughlin of New York appearing for George upon the final argument before the Court of Appeals. To a careful, discriminating reader the opinion is disappointing.

The court starts out in its opinion with the assumption and statement that Mr. George, who became a member of the Association in 1918, was barred from questioning any of the acts of the Association because of the then existence of the present constitution and by-laws. Then they proceed to a discussion of the facts and proof as deduced upon the hearing of the former motion made at the special term of the Supreme Court and in the Appellate Division of the Supreme Court. The text of the decision even to a layman is so wide apart from the actual facts as to startle and almost shatter our faith in the present system of jurisprudence were it not for the fact that we well know and appreciate that human nature is prone to err.

While we have been taught to understand, believe, and rely upon the fact that justice might be sought and obtained in our courts, yet when we read in the opinion almost at the start of the same that "we do not upon this appeal pass upon the scope or application of the statute as we have determined that the petitioner has no ground of complaint, but we point out that in passing first upon the question of whether the petitioner has any grievance, we indicate no opinion that justification of petitioner's complaint in whole or in part would lay the basis for relief in this proceeding," thus practically stating that the court would not consider the merits of

a question, would not brush aside a mere technicality of the law and deal out even handed justice.

Further along in the opinion, considering the question as to whether or not the Association could hold meetings outside of the State of New York, the court again said, "The determination of whether a corporation has such power must depend upon the statute under which such corporation is created and conflicting inference might well be drawn from the provisions of the statutes of this state. *We do not now decide which inferences are strongest.*"

Declining to indicate clearly and squarely the law of the State of New York upon the question as to whether or not the corporation may have meetings without the State of New York! Apparently that question is still left in the air. Then, further along in the opinion comes this strange statement: "Action by membership corporations without the state has not been prohibited, at most the legislature has not authorized it. No definite public policy against corporate action without the State of New York can be deduced from the absence of such authority expressly conferred by the legislature. On the contrary the Membership Corporation Law expressly provides that certain corporations may conduct their annual meetings without the state (Sec. 48)." Such allusion to Section 48 was unfortunate, for May 3, 1923, the New York Legislature repealed so much of Section 48 as permitted meetings outside of that state. It is very strange the Court of Appeals overlooked that fact. With so much of that section repealed it would seem to us, from a layman's standpoint, that had the court grasped clearly the fact of such repeal, the decision in the case made by it would have been exactly the reverse of the one which it made. It illustrates the fallibility of human memory or lack of proper research, and causes us to wonder whether or not Judge Laughlin made such point clear to the court. As the matter stands we see good reason for the vigorous prosecution of the motion by Mr. Stevenson and his forty-six associates so that we may definitely understand whether or not the reserve fund can be dissipated at the rate of \$50,000.00 per year, for if such be the case we can well see the beginning of the end of the Holstein-Friesian Association of America.

THE HOLSTEIN BREEDER AND DAIRYMAN had been hopeful that the various lawsuits brought against the Association would, at least, result in freeing the members from bondage, that they would not only be relieved from paying tribute but that the management and control of the Association would be placed in their hands.

In the many legal actions that have been brought against the Association, apparently only one decision has been rendered dealing with the legality of the present board of directors, the delegate system and the holding of meetings outside the State of New York, and this decision was handed down by Judge Pooley, of the Supreme Court of the State of New York, who ruled that the Association was not entitled to more than six directors and that the delegate system was null and void and ordered that a special meeting be called in the State of New York for the purpose of electing a board of six directors. This decision was rendered in the George case.

The management of the Association which had been declared illegal by the Pooley decision appealed the case. The Appellate Division reversed this decision, not on the grounds that Judge Pooley had erred in deciding the delegate system null and void or that the Association was entitled to sixteen directors instead of six but rather on the point that Mr. George had, because of things he had done and things he had not done, placed himself in a position where he could not legally raise the question.

Mr. George carried the case into higher court. The Court of Appeals in their recent decision has affirmed the decision of the Appellate Court, deciding that Mr. George has no legal right to question the legality of the present board of directors or the delegate system and the several other matters brought up in the case.

The Court of Appeals in their decision make it very plain that they are not deciding the legality of the present board of directors or the delegate system only so far as Mr. George is concerned, and in this they contend that he had no legal right to bring the action.

It is unfortunate for the members of the Holstein-Friesian Association that the Appellate Division or the Court of Appeals did not decide on the legality of the present board of directors and the delegate system of government so that these matters could have been definitely disposed of. For as long as extravagance prevails in the Association and the members are deprived of a direct vote in their efforts to stop this extravagance, no doubt they will continue to seek relief through the medium of the courts. For the court, in its opinion, has as much as suggested that if the right parties should bring the action, Judge Pooley's opinion would be the one accepted.

We have every reason to believe that the action that is now pending, brought by Mr. George E. Stevenson and forty-six other breeders, will be pushed to trial and it is hopeful that some of the forty-six members, if not all of them, will be able to prove that they have not sacrificed all of their privileges and are legally entitled to bring the action to restore the Association to the members and place it in a position where it can function legally and economically.

Dairy Cows and Free Schools

THE dairy cow is responsible for the first free school in the United States, which was opened Feb. 12, 1642. It began with a bequest by Benjamin Symes of Elizabeth City County, Virginia, who ordered in his will that his eight cows and 200 acres of his land be set aside as an endowment for a free school for the county, profits from the sale of the milk and first increases of the herd to be used to build a schoolhouse, and future profits to be used to operate it.

The school was successfully established along the lines outlined by Mr. Symes and county records show that five years later the school had a herd of forty cows.

T. J. Strauch, Chief Dairy Inspector of the Richmond Board of Health, is responsible for this story which he told at the Holstein-Friesian banquet at the time of the Richmond Convention.

THE BREEDER AND DAIRYMAN classified ads are small but they do the trick.

Wandering on a Wrong Path

UNDER the heading of "Surplus of Milk and a Remedy" that well-known writer on dairy subjects, L. P. Emmerick, Assistant Dairy Husbandman at the Virginia Agricultural College, calls attention to one of the great reasons why in certain months there is a milk surplus.

Boarders or unprofitable cows not only lower the natural profit of the dairyman by not paying for their feed and board but also increase his labor, increase the size of his investment and depress the market for his products.

Mr. Emmerick illustrates his theme by the story of one herd containing 36 milkers.

By dividing this herd of 36 into two groups of 18 and disposing of the poorer half, the dairyman would have been nearly \$200.00 better off at the end of the year. He also would have saved the interest on his investment in the poorer 18 cows and would have kept off the market over 70,000 lb. of milk. His 18 best cows made milk at a feed cost of \$1.36 per hundred while the poorer 18 used \$1.98 worth of feed to produce each 100 lb. of milk.

As herds go, this Virginia herd was of fair quality, the cows producing an average of 6,048 lb. milk. But the best 18 cows produced twice as much milk as the poorer half. Not only did the best 18 make all the profit but they had to earn enough to pay for the loss of nearly \$200.00 by the poorer 18.

This situation is duplicated in many herds scattered throughout the country, not only in Virginia but also in the great northern dairy states. In many herds the poor cows eat up part or all of the earnings of their profitable stablemates. Their owner, while he may suspect the state of affairs, often has no positive proof which are and which are not the animals that provide a living for him and his family. Despite his striving he wanders on a wrong path.

There is another lesson this true story carries for the thoughtful breeder and dairyman. Isn't it possible that the Holstein-Friesian Association made a mistake when its Advanced Registry Department started to emphasize large records instead of profitable production?

There is something attractive about spectacular records. Perhaps that is the reason why, under its present management, the Extension Department of the Holstein-Friesian Association of America, catering to the showy side of the business, make so much "todo" about extraordinary large records and even go so far as to discredit the value of stock that is not from high record ancestry.

In the herd of a millionaire breeder, with an unlimited amount of feed and labor, a cow can be forced, by a skillful feeder, far above her normal production. Profit earning ability is lost sight of yet, unless a cow makes a profit over the cost of her feed, plus labor, plus interest on investment, the dairyman is unable to make a living with her and her kind.

Is it not time that we, as an association of more than 23,000 breeders and dairymen, again officially pay attention to the profit earning capacity of the animals composing our great breed of dairy cattle, the tools with which we work?

A Great Dairy Market

CHICAGO'S annual milk bill is \$59,990,703, the city's butter requirements cost \$28,800,000 and Chicagoans ate about \$13,000,000 worth of cheese a year ago says the *National Dairy News*.

That Chicago handles almost as much butter as the New York, Philadelphia and Boston markets combined is a startling statement in this article but we assume that much of the butter handled on the Chicago market is shipped to other great distributing points. Butter receipts in Chicago for 1923 totaled 225,892,083 lb. Of this Wisconsin supplied 70,588,286 lb. and Iowa was second with 42,107,610 lb.

Cheese receipts in Chicago in 1923 totaled 123,645,413 lb. and of this 110,648,145 lb. came from Wisconsin.

Those who advocate the milk producers of Wisconsin and Minnesota contributing to a fund for the purpose of advertising dairy products produced in these two great states, the advertisement to be used in the great eastern coast cities like these two states to a milk jug with a glass in the cities of the east. They apparently overlook the fact that the eastern cities consume an equal per capita amount of fluid milk and that Chicago, the second largest city in the country, lies right at their door.

Spare Us this Infliction

AMERICAN owners of Holsteins have one advantage over South African breeders of Friesians in that locusts do not come along and eat all the green food. In a report of the wonderful work of the great South African Friesian cow, Lady Dorothy's Parthenia Butterfly, it is said that at one time her output was materially reduced because locusts cleaned up every scrap of the growing crops on the farm including the pasture.

Butterfly is owned by Mr. Howard Hobson, of Maseru, South Africa, and in her first four lactation

periods, has produced 100,000 lb. milk, and 4,000 lb. butterfat. While she milked very close to 120 lb. in a day, she is said to have never received more than 22 lb. of grain feed daily, and through all her lactations she grazed from twelve to twenty hours per day.

The figures for her first four lactation periods are here appended:

Lactation	Days	Milk lbs.	Butterfat lbs.
1st	390	19,110	655
2d	365	21,094	805
3d	480	33,890	1,301
4th	365	30,004	1,254

Volume 51 Ready

VOLUME 51 of the Holstein-Friesian Herd Book is just being received by the members who placed their orders for that book with Secretary Houghton. This volume contains the registrations from March 15, 1923 to Sept. 1 of the same year. During this five and one-half months' period 13,300 bulls and 36,600 females were registered, a total of 49,900 bringing the total entries to 1,267,100 of which 413,900 are males and 853,200 are females.

A report of the Convention at Cleveland, June 1923, is also carried together with reports of the various officers and committees as submitted at that meeting. We recommend for Sunday reading the accounts of the various meetings of the directors, something many members never take time to even read.

Volume 51 contains the list of members as on the date of March 1, 1924. We notice the name of Charlie Cole of Granville, New York still appears as a member. Thousands of Holstein breeders will join with us in asking WHY?

As the season advances the amount of protein in pasture grasses lessens. Therefore add more protein to the grain rations than you used in the spring.

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

Full Information Free--Write Today for Sample Copy.

This Journal keeps you posted on the care and feeding of the hog. Much valuable information, worth many times your investment.

CLUB ACTIVITIES

ORGANIZE

The Falsen Holstein Breeders Association at its first annual meeting at Falsen, N. D., elected the following officers: Mike Bossert, president; Jack Gefron, vice-president; J. M. Zaback, secretary and H. F. Kreime, treasurer.

LONG'S LATEST

The latest from Chicago is a radio lecture by C. M. Long of the Extension Department on the true type cow. Mr. Long is reported as standing in the studio with the model before him and then lecturing on its good points to his invisible audience.

HOLSTEIN DANCES IN WISCONSIN

Wisconsin Holstein breeders are holding a number of get together dances. The Mormon-Coulee Holstein Club held one Saturday night, June 21st, at the barn of Henry Schild. There were several hundred persons there and luncheon followed.

On June 27th, the La Crosse County Holstein Breeders Association held a similar event in the West Salem sale pavilion and again a large crowd attended.

ACTIVITY IN BARRON COUNTY

According to Fred J. Krehenbuhl, secretary of the Barron County Holstein Association, 1,064 head of Holstein cattle were sold in Barron County for a total of more than \$75,000 in the twelve months from June, 1923, to June, 1924. During this period 926 grade cattle were sold at a total of \$62,825.75, an average of \$67.65. The number of purebred cattle sold was 138, the total price being \$13,870, an average of \$105.

TRIP SHOWING RESULTS

The trip of the 135 bankers, county agents, farmers and business men from the States of Missouri, Kansas and Oklahoma to the dairy region of Wisconsin is said to have already borne fruit as several buyers from these states have purchased about 30 head of grade Holsteins as well as cows from dairymen in Wood, Clarke and Marathon Counties. Most of the cows have C. T. A. records and A. O. Collentine, Wisconsin Dairy Extension Specialist, believes that this is only the beginning of a growing business in selling dairy cattle to the states represented in the recent trip.

BRUGGER IS OPTIMISTIC

Representatives of the Commercial Club of Pueblo, Colo., are negotiating with Carl Brugger, secretary of the Fond du Lac County Holstein Association with the view of purchasing several carloads of purebred Holsteins.

The Pueblo Association is acting for a number of Colorado farmers who want to place registered dairy cattle on their dairy farms. Mr. Brugger looks for a big demand for cattle this fall due to the fact that crop prospects are good and the price of grain and cotton is up which will mean that farmers will have money to invest in registered stock.

MINNESOTA BREEDERS PICNIC

The Trempealeau County Holstein Association held its annual picnic on the Asylum farm at Winona, Minn., June 19. Despite threatening weather fully 1,500 attended. At the business meeting in the afternoon the following officers were elected: President, A. C. Hagstad; vice president, Ole Fredrickson; secretary, B. A. Peterson; treasurer, S. N. Hegge; board of directors, N. L. Frederickson, Ole Fredrickson, E. A. Hegge, and W. D. Young.

The association decided to reorganize during the ensuing year with the different communities as centers. By this method

it will be possible to reach many breeders who find it difficult to affiliate directly with a county association.

The speakers of the day were County Agent Spreiter of La Crosse County; S. F. Sims, of Madison; Senator Gaveney, of Arcadia, and L. L. Oldham. For two hours the interested audience listened to optimistic messages on the future of the dairy industry and the Holstein breed.

A Holstein judging contest between the Whitehall and Independence cow testing associations closed the day. Whitehall was represented by R. A. Lamberson, E. A. Hegge and B. A. Peterson. Independence was represented by Russell Paulson, E. C. Markham and Peter Nelson, who won the contest. They will represent the county when the Northern Wisconsin Fair is held at Chippewa Falls.

UNDEFEATED HOLSTEIN BALL TEAM

About one hundred attended the annual Holstein Breeders' picnic held at the home of Lee Walker near Metamora, Mich., July 10. The event was favored with beautiful weather.

A ball game between the Holstein breeders and a team from Imlay City resulted in a victory for the cow men by a score of two to one. This Holstein team has now played through three seasons without being defeated.

The officers of the association were reelected for another year. H. C. Cramton, of Hadley township is president; William Rossman, of Metamora Township, treasurer; and Joseph Cox, of Mayfield township, secretary.

Dewey Pietson, of Hadley was elected to fill the new position of county association sale manager.

Ralph Bishop, candidate for state representative briefly outlined his platform and policies. County Agricultural Agent Patch talked a few minutes.

B. F. Beach, assistant secretary of the Michigan Milk Producers' gave a good talk on the progress and work of the Producer's Association. At the present time the milk producers in the Detroit area are receiving a better price for their milk than any other group in the northern states.

C. V. Ballard, assistant state county agent leader, spoke of the necessity of farmers using more of their own milk products rather than buying butter substitutes and failing to encourage the children to drink milk.

DAIRY EXPORTS AND IMPORTS

June exports of butter showed very little change from the total exported in the corresponding month of last year, the figures for this year being 456,952 lb. or 3,086 lb. less than for June, 1923. Oleo exports showed a drop from 102,543 lb. to 67,899 lb. A little less cheese was exported, the figures for this year being 328,490 lb. while for June, 1923, the total was 371,579 lb.

While imports of butter showed a big jump over the total brought into the country during June of last year, cheese showed a falling off of over two million pounds while the amount of condensed, evaporated and powdered milk brought into the country showed a slight decrease as the following figures show:

Imports for June, 1924 and 1923	
	1924
Butter	7,444,178
Cheese	4,861,588
Condensed, Evaporated and Powdered	
Milk	427,734
	1923
Butter	2,932,804
Cheese	7,075,351
Condensed, Evaporated and Powdered	
Milk	455,645

Exports of powdered milk during June, 1924, were nearly twice the amount exported during June, the preceding year, the figures being 251,107 lb. for this year while for June a year ago they were 130,490 lb. Nearly three hundred thousand more pounds have been exported for the first six months of the year than for the first six months of last year.

FAIRS AND EXPOSITIONS

- Aug. 9-16—Davenport, Iowa, Mississippi Valley Fair and Exposition.
 Aug. 15-23—Aurora, Ill., Central States Exposition.
 Aug. 16-23—Sedalia, Mo., Missouri State Fair.
 Aug. 20-29—Des Moines, Iowa, Iowa State Fair.
 Aug. 24-30—Columbus, Ohio, Ohio State Fair.
 Aug. 24-30—Danville, Ill., Interstate Fair.
 Aug. 25-30—Milwaukee, Wis., Wisconsin State Fair.
 Aug. 23-Sept. 6—Toronto, Ont., Canadian National Exposition.
 Aug. 28-29—Grove City, Pa., Cattle Show.
 Aug. 29-Sept. 7—Detroit, Mich., Michigan State Fair.
 Aug. 30-Sept. 6—Hamline, Minn., Minnesota State Fair.
 Aug. 30-Sept. 5—Lincoln, Nebr., Nebraska State Fair.
 Sept. 1-5—Aberdeen, S. D., Tri-State Fair.
 Sept. 1-5—Superior, Wisconsin, Tri-State Fair.
 Sept. 1-6—Indianapolis, Ind., Indiana State Fair.
 Sept. 1-6—Spokane, Wash., Spokane Interstate Fair.
 Sept. 1-6—Staunton, Va., Staunton Fair.
 Sept. 1-6—Rochester, N. Y., Rochester Exposition.
 Sept. 1-6—Wheeling, W. Va., West Virginia State Fair.
 Sept. 1-6—Timonium, Md., Maryland State Fair.
 Sept. 5-15—Ottawa, Can., Central Canadian Exposition.
 Sept. 8-13—Syracuse, N. Y., New York State Fair.
 Sept. 8-12—Huron, S. D., South Dakota State Fair.
 Sept. 8-13—Topeka, Kansas, Kansas Free Fair.
 Sept. 8-12—Chippewa Falls, Wis., Northern Wisconsin State Fair.
 Sept. 8-12—Kankakee, Ill., Kankakee Interstate Fair.
 Sept. 8-12—Louisville, Ky., Kentucky State Fair.
 Sept. 9-13—Wilmington, Del., Delaware State Fair.
 Sept. 13-19—Hutchinson, Kansas, Kansas State Fair.
 Sept. 13-20—Springfield, Ill., Illinois State Fair.
 Sept. 14-20—Springfield, Mass., Eastern States Exposition.
 Sept. 14-20—Sioux City, Iowa, Interstate Fair.
 Sept. 15-20—Nashville, Tenn., Tennessee State Fair.
 Sept. 16-19—Billings, Mont., Midland Empire Fair.
 Sept. 16-19—Douglas, Wyo., Wyoming State Fair.
 Sept. 16-20—Reading, Pa., Reading Fair.
 Sept. 20-27—Memphis, Tenn., Memphis Tri-State Fair.
 Sept. 20-27—Oklahoma City, Okla., Oklahoma State Fair.
 Sept. 22-27—Salem, Ore., Oregon State Fair.
 Sept. 22-27—Pueblo, Colo., Colorado State Fair.
 Sept. 22-27—Helena, Montana, Montana State Fair.
 Sept. 22-28—Waterloo, Iowa, Dairy Cattle Congress.
 Sept. 23-27—Allentown, Pa., Allentown Fair.
 Sept. 27-Oct. 4—Milwaukee, Wis., National Dairy Exposition.
 Sept. 27-Oct. 4—Chattanooga, Tenn., Chattanooga Interstate Fair.
 Sept. 27-Oct. 4—Muskogee, Okla., Oklahoma Free State Fair.
 Sept. 29-Oct. 4—Birmingham, Ala., Alabama State Fair.

- Sept. 29-Oct. 4—Trenton, N. J., Trenton State Fair.
 Sept. 29-Oct. 5—Wichita Falls, Texas, Texas-Oklahoma Fair.
 Sept. 30-Oct. 3—Lancaster, Pa., Lancaster County Fair.
 Oct. 4-11—Atlanta, Ga., Southeastern Fair.
 Oct. 6-10—York, Pa., York County Fair.
 Oct. 6-11—Richmond, Va., Virginia State Fair.
 Oct. 6-11—Meridan, Miss., Mississippi-Alabama Fair.
 Oct. 6-11—Little Rock, Ark., Arkansas State Fair.
 Oct. 11-26—Dallas, Texas, State Fair of Texas.
 Oct. 13-17—Raleigh, N. C., North Carolina State Fair.
 Oct. 20-25—Columbia, S. C., South Carolina State Fair.
 Oct. 27-Nov. 1—Savannah, Ga., Savannah Tri-State Exposition.
 Oct. 30-Nov. 9—Shreveport, La., State Fair of Louisiana.
 Nov. 1-8—Portland, Ore., Pacific International Exposition.
 Nov. 13-22—Beaumont, Texas, South Texas State Fair.
 Nov. 20-29—Jacksonville, Florida, Florida State Fair.

THE CANNED MILK MARKET

On July 1st there were in the hands of manufacturers of condensed and evaporated milk no less than 286,994,000 lb. Only twice before since compilations of such stock was first begun in the latter part of 1919 has the monthly report shown larger totals. This was in October and November, 1920, when stock exceeded the amounts above mentioned by twenty-one million pounds and thirteen million pounds respectively. June normally has shown an increase in stock but the June, 1924, increase was more than double that of any other June on record with the result July 1st stocks this year were 52% heavier than a year ago, 53% higher than two years ago and 37% higher than in 1920, the previous July 1st high record.

Despite this heavy accumulation there seems to be a feeling among the trade at the close of the month, that the market is gradually working into a better position. A material increase in domestic demand seems to be expected. Warmer weather during July has already increased the demand for bulk goods from the ice cream trade. This is expected to continue during the remainder of the summer. A price advance in the fluid milk market also seems to be a possibility.

HOLSTEIN WINS SPECIAL PRIZE

Henry Chizek of Wahpeton, N. D., made an exhibit of purebred Holsteins at the Richland County Fair early in July and among other prizes, carried off championship for both male and female and the "Great Northern" special for the best dairy individual of any breed.

The Dexter Community won first prize in the community agricultural exhibits. Junior club work was given a prominent position and the winners will represent Richland County at Fargo, when the North Dakota State Fair is held.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

Cow Testing Association Reports

ILLINOIS C. T. A. WORK

Due to the fact that the report from Og'e County did not reach Professor Rhode's office in time, it was not included in the May report. The highest producing cow in the Ogle Association was a purebred Holstein owned by Rock River Farms, her figures being 2,538 lb. milk, 83.7 lb. fat. She ranks sixth in the entire state. The highest producing herd in the Ogle County Association is owned by Rock River Farms. This herd of ninety six purebred Holsteins had an average production of 1,249 lb. milk 42.5 lb. fat. They ranked eighth in the entire state in order of production.

The June report is headed by a purebred Holstein owned by Fred Kupper-smith of the Jo Daviess Association No. 4. This cow made 2,289 lb. milk, 91.5 lb. fat just beating out a purebred Brown Swiss of the Hawthorn Farm, she with 2,469 lb. milk, 91.4 lb. fat. H. M. Wood of Delavan owns the next two, both purebreds with 2,295 lb. milk, 84 lb. fat and 2,211 lb. milk, 83.2 lb. fat respectively. H. Senf of DuPage County Association has a purebred in fifth place with 1,756 lb. milk, 80.8 lb. fat. A grade Guernsey is next with 2,100 lb. milk, 77.7 lb. fat. A grade Holstein is seventh with 77.6 lb. fat then comes a purebred Holstein owned by C. E. Warford & Son with 2,574 lb. milk 77.2 lb. fat followed by another purebred owned by J. H. Burr with 2,124 lb. milk, 76.4 lb. fat.

The Warford herd of fifteen purebred Holsteins again stands in first place with 1,518 lb. milk, 47.7 lb. fat. A grade herd is next with an average of 47.3 lb. fat but the next two are purebred Holstein herds, the seventeen cow dairy of A. D.

Cornue, of Hebron averaging 1,293 lb. milk, 45.2 lb. fat while the twenty-one purebreds owned by H. M. Wood averaged 1,328 lb. milk, 43.8 lb. fat. W. H. Gardner of Solon Mills in the McHenry Association, has a purebred dairy consisting of only six cows but they averaged 1,265 lb. milk, 42.2 lb. fat.

Fourteen associations sent in reports. In eight instances the leader was a purebred Holstein while in two cases she was a grade Holstein. Five different associations report that purebred Holstein herds stand first for high average production, in three other cases the highest herd consists of both purebred and grade Holsteins and in one instance the leading herd consists entirely of grade Holsteins.

REJECTED COW HEADS LIST

An interesting story is told by H. C. Phelps, tester of the Lafayette-Saline Cow Testing Association which operates around Corder, Mo. A number of grade Holsteins were shipped from St. Louis to Concordia a few years ago. John Kuddes of Corder had placed an order for a cow. He was sick and so unable to make the journey when the cows arrived at Concordia and as he had made no arrangements he had to take the animal discarded by all the other farmers. She looked so unpromising that Mr. Kuddes put her in with his fattening cattle intending to beef her but she improved so much with good feed that he took her back into the dairy with the result that she made the highest record of the association. From February 1, 1923, to February 1, 1924, this grade Holstein "Bess" produced 11,190.8 lb. milk, with an average test of 3.7% making 422.7 lb. butterfat. The value of her product was \$199.25 and her feed cost was \$77.88 leaving a profit of \$122.07.

THREE-YEAR-OLD LEADS FOR YEAR

There were 224 cows on test for nine months or more in the Linn County Testing Association No. 2 reports Chas. J. Moore, tester. One hundred and nine of these produced between 200 and 300 lb. fat in the year; fifteen exceeded 400 lb. while four produced more than 500 lb. The leader was May, a three-year-old registered Holstein, owned by E. J. Gilmore, Marion, Iowa, she being credited with 15,176.1 lb. milk, 556.8 lb. fat. A five-year-old stablemate was second with 17,076.9 lb. milk, 541.8 lb. fat. Mr. Gilmore's herd of twelve purebreds carried off the honors for high herd average with 11,305 lb. milk, 373.7 lb. fat.

Canary, a member of the Gilmore herd was high individual for the month of June with 2,370 lb. milk, 78.2 lb. butterfat. Mr. Gilmore owned Bess, who stood second for the month's production with 75.6 lb. fat.

There are 27 herds in the association containing 362 cows, of which 330 were on test for the month of June. Seventy-three cows produced more than 40 lb. butterfat while 23 went over the 50 lb. mark.

NEBRASKA COWS MAKE BIG SHOWING

Beauty Gerben ReBecky owned by the North Platte Substation of the Nebraska State Agricultural College has averaged 96 lb. milk a day for the first four months of her present milking period. She also topped the list of thirty cows in the June honor roll by producing 6.185 lb. butterfat in the two days of her official test.

N. P. Hengerveld Segis Rose of the same herd, led the junior three-year-old

KING ORMSBY ENDERCAMP

heads our Accredited Herd
 His sire is King of the Ormsbys. His dam is one of the best daughters of Judge Segis.
 The seven nearest dams of this choice young bull, all that appear on a four-generation pedigree chart, have seven-day records that average 30 lb. butter.
 We are offering choice young cows and heifers bred to him at low prices for quality.

E. R. GELATT & SON,
 Thompson, R. No. 1, Pa.

EUGENE B. BENNETT

Allamuchy, N. J.

 HOME FARM

Purebred Holsteins

Looks Better Every Day

COLONEL JOH LYONS

His sire is KING JOH, a son of King Segis Pontiac Alcartra from a 33-lb. daughter of Johanna McKinley Segis.

His dam, Gypsy Lyons, is a 33-lb. daughter of King Lyons and from a 29-lb. three-year-old daughter of Judge Hengerveld De Kol.

He heads our herds which are under State and Federal Supervision, and contain 120 as good Holsteins as you will find ANYWHERE.

L. N. MACK & SON--FLOYD MACK
 Montrose, Pa.

MABEL BEETS MODEL

She has spent her whole life in this herd. Cows and heifers of this quality, from A.R.O. dams, are bred to **KING PIETJE AAGGIE PONTIAC**. He was by King Pontiac Alcartra Pietje and his four direct descendant dams average 611.3 lb. milk, 30.62 lb. butter in seven-day work.

Herd under State and Federal Supervision

ROBERT I. SPRINGER

Susquehanna Co. R. D. 1 Factoryville, Pa.

Traverse Echo Sylvia King

*Now heads our
herd of producers*

His dam produced 33.27 lb. butter in a week, averaging 105.2 lb. milk daily and has two daughters with records above 32 lb. butter.

The seven-day records of his three nearest dams average 33.03 lb. butter, his ten nearest dams average 33.67 lb.

Come and look him over. He is a show bull.

W. B. KENNEDY & SON

Bradford Co. Wyalusing, Pa.

ALLIS FARMS OFFERS SONS OF Walker Lyons Colantha

The 17 nearest dams in his pedigree have 7 day official records that average 31.17 lb. butter.

The dams are good producers and choice individuals, from producing strains and with good records. Prices Reasonable. Herd Accredited.

L. L. ALLIS

Ruemerfield, Bradford Co., Pa.

class with a record of 5.212 lb. butterfat. K. P. K. Vandervort owned by the Woodlawn Dairy, Lincoln, led the senior three-year-old class with 5.187 lb. Dossie De Kol Pontiac Colantha owned by H. L. Severe of Palmyra led the junior four-year-old class with 4.455 lb.

A number of seven-day records are reported. Clothilde Topsy King of the North Platte Substation made 32.3 lb. butter; Varsity Derby Empress made 29.99 lb.; Varsity Piebe Queen, 28.96 lb.; and Varsity Piebe Quintelle made 28.17 lb. These three are owned by the Nebraska State College at Lincoln.

Jessie Gerben Lyons, owned by the Nebraska School of Agriculture at Curtis, made a year record of 772 lb. butter as a senior three-year-old while N. Bo-peep Gerben Hengerveld of the North Platte Substation herd, made 737 lb. butter as a senior two-year-old.

There were thirty-three cows on the June honor roll of which thirty were Holsteins, two Guernseys and one Jersey. Seventeen belong to the State Agriculture College, six to Woodlawn Dairy, four to the North Platte Substation, three to Union College, two to H. L. Severe and one to the Curtis School of Agriculture.

HERTZY MAKES ANOTHER RECORD

The Cherokee Holstein Testing Association was reorganized in June, 1923, and started work as an all Holstein Association. During the year twenty-six herds were enrolled and 318 cows completed the year's work. There were 24 herds that went through the year and the average per cow was 7,856 lb. milk, 285 lb. butterfat. The well-known grade Holstein, Hertzzy owned by W. C. Wurthmann, of Wausau, Wis., completed another big year record, being credited with 16,391 lb. milk, 638.3 lb. fat. Hertzzy is now seven years old and she returned \$3.30 for each dollar invested in her feed. It cost her less than 12 cents to produce a pound of fat and 46 cents to produce 100 lb. milk while she made a net profit of \$248.

The Wurthmann herd for the third successive year held high average. The eleven cows which finished the year averaged 11,509 lb. milk, 418 lb. fat. Mr. Wurthmann owns the three highest cows in the association as well as the animals that stand fifth and tenth.

EVERY FARM IS NAMED

In the Alleton-Kohlsville Cow Testing Association every milker in each herd is enrolled and all the establishments have registered names. The high cow is a grade Holstein owned by Paul Moritz and in June she produced 83.5 lb. fat from 1,941 lb. milk. Moritz's herd consists of grade and registered Holsteins. For the third consecutive month the high herd for milk and fat consisted of grade Holsteins owned by George Schmidt, their average being 1,876 lb. milk, 59.65 lb. fat. They were on good pasture and received a daily grain ration consisting of four pounds bran and barley.

Maredor Radium Artis It Mercedes

the head of my Accredited Herd, is not only a choice individual but is from a 25 lb. daughter of a 27 lb. cow and was sired by **Radium**, grand champion at the 1921 New York State Fair, son of May Echo Verelle, the greatest transmitting cow of the **May Echo Family** and the dam of the world champion milker, **May Echo Sylvia**.

MAPLEHURST PONTIAC BOUKINA

Maplehurst Pontiac Boukina No. 465265 is owned by W. D. White of Grove City, Pa., and is enrolled in the Grove City Cow Testing Association. In her latest lactation period she has 548 lb. butterfat, 16,158.9 lb. milk to her credit. She was milked seventeen days in April of this year during which she produced 43 lb. fat, 1,131.9 lb. milk. In May she is credited with 2,128.3 lb. milk, 95.8 lb. fat; in June she had 2,489.3 lb.

MAPLEHURST PONTIAC BOUKINA
16,158.9 lb. milk, 548 lb. butterfat in a year
C.T.A. work. Owned by W. D. White, Grove City, Pa.

milk, 99.6 lb. fat and she is doing equally as good in July. Mr. White informs us that she had only ordinary farm care under general conditions provided in his part of the country and was milked only twice a day.

Her dam is Aaggie Boukina Korndyke and her sire is King Pontiac Soldene 11th, a grandson of King of the Pontiacs. The junior herdsire at the White farm is King Fayne Valdessa Ormsby whose twelve nearest dams have year records averaging 1,029 lb. butter.

STATE OWNS LARGE HERD

During the month of June 39 registered Holsteins on the farm belonging to the Toledo State Hospital for the Insane each produced 1,635 lb. milk. Nineteen averaged over a ton of milk during the month. On June 5, the state of Ohio owned 1,624 lb. milk cows and all of them have been or soon will be given an official test. With the exception of the Industrial School for Girls and a part of the supply at the State School for the Deaf and Blind, the entire milk supply used at the state institutions is being produced by dairies owned by the state of Ohio.

ONE, TWO, THREE

Three purebred Holsteins stand first, second and third for milk production in the thirty-one associations reporting June work to Pennsylvania State College. The cow that held first position was owned by Cook & Bennetch and she is credited with 2,349 lb. A purebred owned by K. E. Bartners, enrolled in the Sharpsville-Orangeville Association is second with 2,295 lb. Cook & Bennetch, and the Bowen Star Farm are enrolled in the Middle Bucks Association.

A Jersey was first for fat production with 92.8 lb. while a purebred Holstein owned by R. B. Hobart, enrolled in the

Sharpsville-Orangeville Association is second with 90.4 lb.

The highest ten cow average in butterfat was 74.4 lb. made by the Butler County Association; second honors were won by Sharpsville-Orangeville Association with a yield of 70.1 lb. and third place goes to Volant Association with a yield of 66.2 lb. fat.

In the thirty-one associations there are 10,683 cows for testing of which 1,456 cows produced more than 40 lb. fat, 439 more than 50 lb. while 880 produced more than 1,200 lb. milk. The Sharpsville-Orangeville Association which operates in Mercer County had 104 cows that produced more than 40 lb. fat and 169 that exceeded 1,000 lb. milk by far the leader in each respect.

MARYLAND C. T. A. WORK

Eight of the ten highest producers tested in Maryland during June were black and white cows, a purebred Guernsey ranking seventh and a grade Jersey ninth. Purebred Holstein were first, third, fifth, sixth and tenth.

Julian, a purebred Holstein cow owned by Millard Rice, of the Upper Montgomery County Association ranks first with 2,856 lb. milk, 106 lb. fat. In this association Mr. Rice's cows rank first and second and fourth while in the entire state they stand first, third and fifth, Wayne being credited with 2,217 lb. milk, 73.1 lb. fat and Aaggie Sego with 2,265 lb. milk, 72.5 lb. fat. Flora Mutual De Kol 4th of the Essex Farms, owned by John M. Dennis & Son of Riderwood, is sixth with 2,409 lb. milk, 72.3 lb. fat. Flora is the leader in the Baltimore County Association. A purebred owned by Charles Wertheimer is tenth with 1,944 lb. milk, 67.8 lb. fat.

The Miller Rice herd led the Upper Montgomery County Association with an average of 962 lb. milk, 33.2 lb. fat.

SOUTH DAKOTA TESTING

Ten South Dakota Testing Associations reported their production during June to Dairy Specialist H. M. Jones of the South Dakota State College. There are 238 herds containing 3,123 cows enrolled while a year ago there were only 104 herds containing 1,480 cows. During June 307 cows exceeded 40 lb. butterfat, 442 exceeded 1,000 lb. milk while 131 herds averaged more than 25 lb. butterfat per cow.

The highest producing cow was the purebred Holstein owned by the Sioux Falls Penitentiary, her production being 2,007 lb. milk, 74.26 lb. fat. The highest herd average was 45.81 lb. fat per cow made by the purebred Holstein herd owned by Erwin & Peterson. This herd consisted of fourteen cows that are credited with an average production of 1,379.9 lb. milk. A member of this herd produced 2,040 lb. milk, 71.4 lb. fat.

FOR SALE—High-grade Holstein milkers and springers, car lots or less. Choice lot two-year-old springing heifers. All tuberculin tested. **E. E. LEWIS, R. 3, Racine, Wis.**

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

BIG PRODUCERS PAY BEST

H. E. Jamison, of the Dairy Extension Department of the University of Illinois has summarized the records made during the past year by the 347 cows enrolled in the Franklin-Jefferson-Marion Testing Association. He found that the 41 cows which each produced more than 10,000 lb. milk during the year averaged to return their owners \$217.55 over and above feed cost. Forty-three cows that each made less than 4,000 lb. milk in the year made an average return of only \$36.03 above feed cost.

Jesse Payne of West Frankfort, owned the high producing herd consisting of fifteen purebred and grade Holsteins. These cows averaged 10,692 lb. milk, 368.1 lb. butterfat and they produced butterfat at an average cost of 25 cents a pound. The second highest herd was a mixed dairy of Jerseys, Guernseys and Holsteins.

The leader for milk production was a purebred Holstein owned by C. F. Harris of Mount Vernon. She is credited with 13,954 lb. Her fat production was 485.6 lb. at a cost of 32 cents per pound.

JUNE WISCONSIN TESTING

The June Report of the Wisconsin Testing Associations shows that the leader is a registered Holstein, owned by Theo Mathieu of Chippewa Falls and enrolled in the Eau Claire No. 3 Association. She is credited with the production of 105.6 lb. fat in the month. A grade Holstein of the Plover Association, owned by P. A. Krubsack, is credited with 101 lb. fat. A registered Holstein, owned by August Lorenz, in the Cross Plains Association ties for third place with a grade Holstein owned by L. Mortenson of the Wausau No. 1 Association, each of these cows having 93.8 lb. fat credited to them.

The news letter contains the report of 139 Associations. Thirty of these are headed by Guernseys, five of which are purebreds and twenty-five are grades while eighty-five are headed by black and white cows of which thirty-three are registered and fifty-two are grade Holsteins.

FORMING NEW TESTING ASSOCIATIONS

Several new testing associations are forming in Pennsylvania. A special short course for testers will open in the dairy building of Pennsylvania State College, starting at 9 A. M., Monday, August 11th, and will continue until Saturday noon, August 16th. Any one knowing of young men whom they think would make good testers are asked to encourage them to attend this course, an outline of which will be sent by the Dairy Husbandry Extension Department on request.

FOR SALE—Registered Holstein bull ready for service; one yearling heifer; two heifer calves; bull calf. Accredited Herd. MRS. I. T. SHADE, Harris Station, Ohio.

This is one of the daughters of **TIDY ABBEKERK PRINCE**, in our herd which consists largely of descendants of that great sire. Her name is Tidy Abbeckerk Princess Madaline and she has two 7-day records that average 31.31 lb. butter, 604.8 lb. milk.

Our herd, established 1901, is under State and Federal Supervision.

KING SYLVIA PONTIAC PIETJE

combines individuality of a high order with remarkable breeding. His sire is Champion Echo Sylvia Pontiac and his dam, who made 659.8 lb. milk, 26.23 lb. butter in 7 days as a junior four-year-old, is a granddaughter of May Echo Sylvia and the 33-lb. cow Alma Clyde.

The only reason I would sell him is that my herd of 60 purebreds contains many of his daughters. Come and see him and my herd which is T. B. FREE.

MRS. MAUD DWIGHT,
South Otselic Chenango Co., N. Y.

NOTED HOLSTEIN LEADS IN C. T. A. WORK

The highest producer in the King County Testing Association during May was the purebred Holstein-Friesian six-year-old cow **Pietertje Mutual Fobes** owned by Thomas J. Owens of Kirkland, Wash. During the month while milked only twice a day **Pietertje Mutual Fobes** produced 2,375 lb. milk, 84.1 lb. fat.

It will be remembered that as a junior three-year-old **Pietertje Mutual Fobes** produced 23,680 lb. milk, 818 lb. butter in 305 days making a world's record for combined milk and butter at the time. She has an official seven day record of 675 lb. milk, 28 lb. butter.

Mr. Owens has 85 animals in his herd of which 65 are purebreds. He had nine animals in his test barn and these are milked only twice a day. His cows are kept under ordinary herd conditions and the cow testing association records are made while the animals are on pasture feed.

TUTS AGAIN IN FRONT

Tuts, a purebred Holstein cow owned by Mast Stoltzfus, Morgantown, Pa., again headed the Goodville Testing Association for the thirty days, June 15 to July 15, her production being 1,357 lb. milk, 52.9 lb. fat. Jessie, a purebred owned by Ira M. Eby is second with 1,583 lb. milk, 52.2 lb. fat. A grade of the Stoltzfus herd is third with 1,098 lb. milk, 46.1 lb. fat. Grade Holsteins occupy the next three places with a purebred owned by Jason M. Eby in seventh place with 1,022 lb. milk, 42.9 lb. fat. Nine of the ten cows having the highest production are black and white, the one in the ninth place being a grade Brown Swiss. There were eleven herds enrolled in this association reports tester Luke W. Martin and they contain 109 cows of which fourteen made over 40 lb. fat in the month, thirty exceeded 1,000 lb. milk and fourteen produced over 1,200 lb. milk.

STATE OWNED HERD FIRST

The purebred Holstein herd owned by the Missouri State Sanatorium led the Lawrence-Barry Cow Testing Association for the month of April, with an average butterfat production of 40.6 lb. per cow. Eight of the ten leading cows belong to this herd and the highest cow of the association produced 2,014 lb. milk, 66.5 lb. butterfat during the month. There were 254 cows tested of which eleven produced 50 lb. butterfat, thirty over 40 lb. while thirty-four cows exceeded 1,000 lb. milk in the month.

HOSPITAL HERD WINS PRIZES

The herd owned by the State Hospital at Jamestown, N. D., won a number of prizes at the Stutzman County Fair, including first on yearling bull, first and second in the two-year-old heifer class, first for both senior and junior heifer calves.

MISSOURI COWS "SHOW THEM"

A net income of \$290.40 per cow was made by five purebred Holsteins of the Whitaker Farm at Walnut, Missouri. These cows produced in one year 9,497 gallons of milk which contained fat equivalent to 3,310 lb. butter, an average for each cow of 1,899.4 lb. gallon milk and 662 lb. butter.

These cows were under the supervision of a representative of the State Agricultural College during the year. The figures were arrived at by estimating the butter at the average price of 50 cents per pound or \$331. At 3½ cents a gallon the 1,660 gallons of skimmilk left on the farm was worth \$58.10 for feeding to hogs and calves so that the gross average income was \$389.10 per each cow. The cost of feed including pasture at \$2 per month was \$98.70 per animal.

It was estimated that the manure was worth the labor of caring for the animals. The figures do not include the value of calves raised, but two heifer calves were sold at an average price of \$212.50 when less than seven months of age.

These cows are said not to have been pampered in any way, but to have been milked and fed under average farm conditions with no better care than the average dairyman can give his cows. The man who looked after the animals fed and cared for a herd of twenty-five dairy cattle, thirty brood sows, about five hundred chickens and fed out about three carloads of fat hogs. With the exception of a little oil meal all the feed given was produced on the Whitaker Farm. Very little grain was fed during the pasture season and during the winter the cows received good legume hay and silage in addition to a little grain.

PASSING GOOD NEWS ALONG

Recent visitors to the Holstein establishments of A. L. Burlington and W. B. Kennedy of Wyalusing, Pa., were Dallas P. Honeywell, of Hillside Farms, Will F. Maguire, director of the Central Poor District of Luzerne County, and J. O. Vaughan herdsman of the good herd owned by the Central Poor District and located at Retreat, Pa.

A two-year-old heifer in the Retreat herd has made a 25 lb. seven day butter record so the trio decided to pass the good news along to Messrs. Burlington and Kennedy as their herdsire, **Traverse Echo Sylvia King**, had 75% the same breeding as the 25 lb. two-year-old.

They greatly admired the Wyalusing breeders' new herdsire; in fact informed those gentlemen that, when the time comes to change herdsires, they believe it would be possible to make arrangements for an exchange.

Traverse Echo Sylvia King was just four years and three months of age at the time of their visit and tipped the scales at 2,300 lb. although he is so well proportioned that he does not look his weight. He is a real show bull. His top line, size, length and depth of body, and his remarkable handling qualities indicate that he could hold his own in any show ring in the entire country.

SENSATION CLO' HILDE TEHEE

Now Heads My ACCREDITED HERD

His dam produced 945.87 lb. butter, 21,968.9 lb. milk in a year as a senior three-year-old. His sire's dam made 30,024.1 lb. milk, 1,250 lb. butter in a year.

How about a few females bred to him?

LAST CALL

J. T. Willard's Dispersal Sale at Spartanburg, S. C., August 12, 1924. R. A. Backus, Manager.

FIRST SALE IN COUNTY

The first auction sale of purebred Holsteins ever held in Thurston County, Washington, was staged at Olympia, June 10th. Although the Thurston County Breeders Association managed the sale, the entries were all from herds in the Chimacum Valley, Jefferson County. Nearly all the offerings were young.

There were forty-one animals sold for \$6,845, an average of \$166.97. The top price was \$380 which Chas. E. Fisher of Thomas paid for Tarboe Rose Bloom De Kol, consigned by Hugh Nisbet of Chimacum. James Carstairs, Jr., of Elma, paid \$335 for Quidee Mechthilde Newman Wayne, from the Tom Yarr consignment. The animals bringing \$200 or more with names and addresses of their purchasers are here-with listed:

Consigned by Hugh Nisbet, Chimacum	
Melbrook Bessie Jane, 7 yrs., Fred Schulze, Olympia	\$255
Fayne Chimacum Gladys, 4 yrs., R. H. Ensign, Olympia	205
Tarboe Rose Bloom De Kol, 3 yrs., Chas. E. Fisher, Thomas	380
Lady Boon De Kol June, 5 yrs., James Carstairs & Son, Elma	205
Maldeta De Kol Holly, 4 yrs., John Luscher & Son, Fairview, Ore.	275
Bessie June Hartog, 1 yr., Christ Ibberson, Olympia	205
Consigned by Thomas Yarr, Chimacum	
Quidee Mechthilde Newman Wayne, 3 yrs., James Carstairs	335
Clothilde Newman, 2 yrs., W. A. Hunter & Son, Potlatch	205
Nanet Mechthilde Newman, 2 yrs., F. C. Baker, Olympia	260
Astrea Ormsby Blossom, 1 yr., Christ Ibberson	200

THE WILLARD HERD DISPERSAL

Without exception the greatest dispersal sale of Holsteins ever held in the Southern States will be that of the noted J. T. Willard herd which will be staged on Mr. Willard's farm four miles north of Spartanburg, S. C. The Willard herd is fully accredited but in addition the animals over six months of age, so we are informed, will be sold subject to a sixty-day retest. The herd contains about 75 head of purebred Holsteins. Many of them were raised on the Sigsbee Dairy Farm, as the Willard establishment is termed. Others were secured at long prices by Mr. Willard, who spent considerable time and money traveling through the Eastern States and spared no effort to secure high-class stock.

The senior sire, Prince Pietje Ormsby Echo, is by a son of Avon Pontiac Echo, that famous son of May Echo Sylvia. The dam of Prince Pietertje Ormsby Echo has two different years made over 800 lb. butter in a year as a heifer and each time has given over 20,000 lb. milk. She is a daughter of King of the Ormsbys, son of Spring Brook Bess Burke 2d and full brother to Bess Johanna Ormsby.

The junior sire, Duke Korndyke Cedarvale Posch, is from a cow that made 99 lb. butter in seven days, 968 lb. butter, 24,122 lb. milk in a year. His sire is Polly Posch's Son, whose daughters have made good and who is a maternal brother to Ormsby Korndyke Lad, both being from the cow Polly Posch, said to be the first cow that

SALE CATALOGS

PEDIGREE EXPERT

Get our R. Austin Backus for your sale—in the box at more sales during the past six months than any other pedigree man. Book your date before it is too late.
BACKUS PEDIGREE CO., MEXICO, N. Y.

ever produced 700 lb. milk in a week, two different years. She has a 34-lb. seven-day butter record and was noted for her individuality as well as her wonderful producing capacity.

Butter Girl May Johanna, 955 lb. butter, 22,823 lb. milk in a year as a four-year-old, is in the sale together with two of her daughters. This cow is by Colantha Johanna Lad 8th while her dam is a 30-lb. cow that produced 1,067 lb. butter and over 25,000 lb. milk in a year. Butter Girl May Johanna comes from one of the greatest producing families of the breed. Her state champion two-year-old daughter also is in the sale and has a son and two daughters catalogued.

Space forbids individual mention of the wonderful animals in this herd but practically everyone is worthy of special mention. They could not be purchased at any price if Mr. Willard was able to devote the necessary time to the management of the herd. Knowing that many, who would like to own one or more of these animals are apt to be short of funds at this season of the year, Mr. Willard has arranged to take in payment one-half cash and to accept notes at 7% interest for the balance. He asks any who decide to avail themselves of this opportunity to bring along bank references and so save time and trouble and expense.

Conflicting reports have appeared as to who is to be the auctioneer at this great sale. The man who will wield the hammer is George Baxter while R. Austin Backus of Mexico, N. Y., will be sale manager and also will work in the box.

The sale will be held Tuesday, August 12th, and should not be missed by anyone who can possibly attend.

WASHINGTON STATE SALE

The Washington State sale was held at Snohomish, Washington, on June 25th, and resulted in an average of \$141, the sale total being \$9,155 for sixty-five head. The biggest buyer was Charles E. Peabody of Bothell, who dispersed his Donnybrook herd in 1920 and now is starting in again. He took twenty head for \$3,770 paying the top price, \$305, for the young cow Wayne Boon Clothilde 3d consigned by T. R. Yarr of Dabob. Mr. Peabody also took the dam of this heifer for \$240. The highest price for a male was \$230 which C. E. Fisher of Auburn paid for Tobe Johanna Beets, a very handsome young bull consigned by Ray T. Smith of Lynden.

Animals bringing \$200 or more are herewith listed together with names and addresses of their purchasers and prices paid.

Consigned by Charles Eldridge, Chimacum	
Miss Selah Johanna Newman, 5 yrs., George W. Brown, Winton	\$215

HAMMOND'S "CATTLE COMFORT"

Hammond's

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henney it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—CATTLE COMFORT may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers

COMING SALES IN NEW YORK STATE

R. Austin Backus of Mexico, N. Y., plans a series of consignment sales this fall. In fact "Austin" has quite an ambitious program. He plans to hold these sales at Watertown, Jefferson County; Syracuse; Herkimer and Fort Plain; at Sidney, and at either Binghamton or Oswego, N. Y. While Sidney is in Delaware County, only the Susquehanna River flows between that and Chenango County, which for many years has been one of the greatest Holstein counties of the Empire State. Mr. Backus has certainly used excellent judgment in locating the places where these consignment sales will be held for each one is the center of territory in which Holsteins predominate.

The exact dates of these sales are not yet fixed. They will depend upon the wishes of the consignors and the ability to make suitable arrangements. Anyone who has surplus stock and is in a position to make up a consignment is requested by Mr. Backus to communicate with him at Mexico, New York, where he makes his headquarters.

Mr. Backus is without question the greatest sale manager at present doing business in New York State. His earnestness, activity and integrity and his application to business has earned him this title. He personally superintends the making up of the catalogs compiled in his office and so keeps up-to-date on new records and developments in the breed and his knowledge so gained is in evidence at every sale in which he works with the result that intending purchasers gain information and his employers profit thereby.

MERCEDES LEADS IN WEST VIRGINIA

The leader of the Tri-County, W. Va. Testing Association was Mercedes, a registered Holstein owned by the Kanawha Farms, near Charleston, she having

2,175 lb. milk, 77.2 lb. fat to her credit. Prilly, a grade Holstein in the same herd was second with 1,407 lb. milk, 60.5 lb. butterfat. Sunbeam, a purebred Holstein, owned by Harry Woodrum, of Charleston, was third with 1,647 lb. milk, 60.4 lb. fat.

GREAT SOUTHERN DISPERSAL SALE

J. T. Willard's Famous Herd to be sold at his
 Sigsbee Farm, Spartanburg, South Carolina

TUESDAY..... AUGUST 12, 1924

75 Registered Holstein-Friesian Cattle

FULLY ACCREDITED HERD—Sold Subject to 60-Day Retest

NOTE THESE SENSATIONAL OFFERINGS!

Three State Champions, including a daughter of Colantha Johanna Lad 8th with 955-lb. of butter and 22,823-lb. of milk at four years, she from a 30-lb. dam with 1,067-lb. of butter and 25,500-lb. of milk.

A daughter of Ormsby Korndyke Lad, with nearly 23-lb. and 561-lb. of milk, from a good record daughter of Pontiac Korndyke.

A daughter of King Korndyke Sadie Vale, from a 30 lb. four-year-old dam.

A daughter of Finderne Pride Payne, with a good year record as a two-year-old.

A daughter of Judge Lyons, with 811-lb. as a four-year-old; her dam, a 26-lb. cow, is backed by three generations of 30-lb. cows.

A daughter of Polly Posch Son.

26 yearly record cows and heifers in the sale—many above 15,000-lb. of milk and 700-lb. of butter—others running strong in semi-official test.

Herd under State and Federal Supervision

Orwell Ridge Farm

At the head of our
 ACCREDITED HERD stands
 the splendidly bred young sire

BERYLWOOD PRINCE AAGGIE CHICAGO whose dam produced 53,670 lb. milk, 2,272 lb. butter in two years. He was by Prince Aaggie of Berylwood, California's greatest show bull whose seven nearest dams averaged 1,181.81 lb. butter in yearly work.

Let us price you a few good ones.

JAMES E. EASTMAN

R. D. 2 Rome, Pa.

THE NEW DENNINGTON HERDSIRE

The herd at Dennington Stock Farm is now headed by Dutchland Creamelle Denver King, the young bull purchased by Mr. Jermyn for \$4,200 at the Dutchland Farms sale. This bull is a son of Dutchland Konigen and is from Dutchland Creamelle Lady Denver, a cow with a long list of big records. Two different years, she has produced over 1,000 lb. butter in a year and more than 30 lb. butter in seven days' official test. Her highest year record was made as a junior four-year-old at which time she is credited with 1,134.72 lb. butter, 22,810 lb. milk. Her leading seven-day record was made as a five-year-old and her marks are 32.17 lb. butter, 629.3 lb. milk. She has a junior two-year-old daughter with 22.77 lb. butter in seven days, 820.91 lb. butter, 18,717 lb. milk in a year. Her sire is Dutchland Creamelle Korndyke Lad and her dam, Dutchland Colantha Denver, is a daughter of Colantha Johanna Lad, with records of 36.25 lb. butter, 702.3 lb. milk in seven days, 1,315.15 lb. butter, 25,431.9 lb. milk in a year.

Dutchland Konigen is a son of King Segis Pontiac Konigen and Dutchland Pietertje Vale, 35.17 lb. butter in seven days; 1,263 lb. butter, 27,939 lb. milk in a year. She is a daughter of Dutchland Colantha Vale, 1,082.37 lb. butter, 27,625 lb. milk in a year in strictly official test. Dutchland Creamelle Denver King traces twice to this great cow, as she is grand-dam to both his sire and his dam.

The majority of the ancestors of Dutchland Creamelle Denver King have, for several generations, been members of the Field herd and so have had an opportunity to make records. Of his nineteen nearest dams only one is untested and the eighteen tested for seven-day records averaging 30.15 lb. butter, 655.55 lb. milk. His eleven nearest dams tested for a period of a year, have records averaging 1,200.4 lb. butter, 27,111 lb. milk.

In the Dennington herd he will have an opportunity to show his worth as a sire of producers. This herd is owned by Mr. J. J. Jermyn, of Scranton, Pennsylvania, and the Dennington Stock Farms are located near that city. The famous J. J. J., well known to all interested in horse racing, spent many years on these farms and it is hoped that the Dennington herd will cut as big a figure in the Holstein industry as J. J. J. did in racing circles.

A. R. Bush, Montrose, Pa., tells us that the members of his herd are averaging over 1,000 lb. milk a month; five of these are heifers and in their first lactation period.

A HEFTY FELLOW

The weight record for a Holstein is held by Gliston Stately, a British Friesian bull, exhibited at the Royal Show. He is said to have weighed 3,472 lb. The bull was slaughtered and the butcher reported that the dressed carcass weighed 2,356 lb. in addition to 172 lb. of loose fat and a weight of 136 lb. for the hide.

WHEN TO CUT TIMOTHY

That timothy should be cut when well advanced in bloom is the recommendation of the Pennsylvania Department of Agriculture. When cut at this time, it contains approximately 200 lb. digestible matter per acre more than when cut when the seeds are in the dough state and about 350 lb. more than when cut when the seeds are ripe. Cutting hay late in the day rather than in the morning is also suggested as a means of improving its quality. If the hay is cut early in the day and exposed to the direct rays of the sun, the leaves die first and become brittle so that many break off and are lost in handling. When the hay is cut late in the day and allowed to lay over night, the leaves dry less quickly and remain tough the next day so that less loss results in handling. Leaves act as a pump, drawing water from the stems. When kept fresh, even though the plant is cut off, leaves continue to do this. When the plants are cut early in the day, leaves dry quickly and do not draw the moisture from the stems.

When cut early in the day a tedder should be used from 2 to 6 hours after mowing depending upon the sun's heat. When cut late in the day, the tedding should be done the next morning after the dew is off.

PROSPECTS FOR THE POTATO CROP

A decrease of 40,000,000 bushels in the 1924 potato crop of the country below last year's production is indicated by the Federal estimates of July 1st, the estimated total production being 372,968,000 as compared with 412,392,000 bushels for the 1923 crop. The crop of last year was above the average in size, so that the prospect for 1924, is only slightly below the usual amount.

The decrease is fairly uniform over the entire country, including every important late producing area. The estimated acreage is 98.3 per cent. of last year and the condition of the crop practically the same as in July, 1923, but 1.1% below the ten year average.

Owing to the backward season, the figures from the important northern producing states are of value chiefly as an indication of the acreage planted and the first-growth of the crop rather than of the actual size of the final production.

YOUR OPPORTUNITY

Four Accredited Yearling Heifers.

One born March, 1923, by our 34-lb. herdsire, Clever Model Glista.

Three, born January, March and June, 1923. All by our 27-lb. son of Model Daniel Glista, whose dam is a 31-lb. daughter of Glista Coreva, 34.08 lb. The three youngest are from A. R. O. dams. All are straight and well grown and of our own breeding for generations.

Only \$75 each

 F. Jones, Mgr.

Centerville, Pennsylvania, R. 4

SHE'S A DANDY

VANDERCAMP SEGIS AAGGIE JEWEL

is the dam of our herd bull KING ORMSBY ENDERCAMP. She has records of 533 lb. milk, 29.57 lb. butter in a week, 21,110.5 lb. milk, 904.32 lb. butter in a year.

We will sell a few big handsome cows and heifers bred to this fine young bull who was by KING OF THE ORMSBYS.

Herd under State and Federal Supervision. Last test CLEAN.

O. P. WALKER & SONS

Susquehanna Co., Thompson, Pa.

KING PONTIAC ORMSBY PIETJE

heads my herd. He is by the noted King Pontiac Alcartra Pietje.

His dam is a daughter of Ormsby Korndyke Lad and her dam was by Nannettson and from a daughter of Paul Beets De Kol.

I am pricing his calves reasonable.

Herd Under Supervision and Clean.

A. CONRAD SLIFER

Lewisburg, R. D. 3, Union
 County, Pa.

Floa Pietertje Segis

a member of Everbreeze Herd.

Cows of her type and quality are bred to the great KING HENGVERD HARTIE, one of whose daughters produced 960.6 lb. butter, 26,233 lb. milk in 10 months, World's milk record at time of making.

Isn't the fact that our herd is ACCREDITED worth something to you?

George Lightbody

Lackawanna Co. Dalton, Pa.

JESSIE MAIDA RUTH

is a show cow and a producer.

She has records of

Butter 29.78 lb.; Milk 742.6 lb. 7 Days
Butter 122.05 lb.; Milk 3,118.6 lb. 30 Days
Butter 946.05 lb.; Milk 24,103.1 lb. 365 Days

She is the dam of our herdsire

KING PIEBE OF YORK 14th.

WM. S. GRIMM

York Co., R. D. 1 RED LION, PA.

THE FIVE NEAREST

dams of our herdsire

King Reliance Lockhart Veeman

have official records averaging 29.23 lb. butter.

His dam is Pearl Lockhart Reliance. She is a great show cow and, in addition is a World Champion of the Dairyman's Division—her record of 882.1 lb. butter in a year standing supreme in the senior four-year-old class.

Let us price you some good cows and heifers bred to this great young bull.

Her established fifteen years, under State and Federal Supervision, last test CLEAN.

DAN E. ANDERSON

Pine Ridge Stock Farm

R. D. No. 3 Norwich, N. Y.

FOR ONLY \$100

Bull Calf, nicely marked, nearly ready for service. Dam is a 21 lb. two-year-old.

NETHERLAND RACHEL DE KOL 2d

Sire is IDYLLWILDE KORNDYKE DIONAGEN whose dam, granddam and granddam's dam are all above the 30 lb. mark. Like his son, he is a handsome fellow with a deep barrel, straight back and square rump. We are proud of the type and producing capacity of our stock.

A. E. ROBINSON

Susquehanna Co. Montrose, Pa.

CURE FOR IVY POISONING

The best remedy for poison ivy poisoning is strong soap, hot water and a stiff brush, says W. A. McCubbin of the Pennsylvania Bureau of Plant Industry. He doubts the value of most of the old fashioned cures.

Few persons are entirely immune to poison ivy. The poison is contracted by contact with the ivy or with other objects which have brushed through it, such as shoes or clothing, animals, tools or sticks.

The poisonous property is a non-volatile oil which penetrates the skin and underlying tissues, producing intense irritation and much inflammation. There is little or no basis for the belief that susceptible persons contract the poison by merely passing a clump of ivy.

Mr. McCubbin says that the ivy oil cannot be washed off with ordinary soap and water but it can be washed off the skin by a thorough scrubbing with very hot water and strong laundry soap. Even after irritation has started and the small blisters have appeared, virtually all the irritating oil can be washed out by thoroughly scrubbing. The water should be as hot as possible and the soap used should be a coarse laundry soap containing free alkali. A piece of pumice stone or a stiff brush is a valuable aid and several washings should be given the infected parts of the body.

DAVE SLOAN HONORED

At the annual meeting of the Alumni Association of Penn State College held June 6, David K. Sloan of the class of 1910 was elected vice president, receiving 694 votes out of a total of 696 cast. Mr. Sloan is the well-known Bradford County agent. In the course of his duties he has come in contact with many Holstein owners.

From the Penn State Alumni News we learn that Mr. Sloan was born 1887 at Orangeville, Columbia County, Pa. After studying at the Bloomsburg State Normal School, he started his agricultural studies at Penn State graduating in 1910. He was class president in his junior year and president of the Athletic Association in his senior year. After graduation, he was assistant in soil survey for the College in Washington County. In January 1911, he became assistant farm manager of the Pennsylvania Reform School at Morgantown and then held a similar position near Pottstown, taking his present position in 1913. Mr. Sloan with H. N. Cobb, also a graduate of Penn State, some time ago purchased the Jennings-hurst Farm near Towanda, Pa. He is active in its management although he still holds his position as county agent.

DOINGS IN THE WALDRON HERD

Some time ago Mrs. Maud Dwight of South Otselic, N. Y., owner of the Waldron herd, sold to Frank Hubbard of Cincinnati, N. Y., a pair of heifers coming three years old. When these two heifers were fresh they each gave over 40 lb. milk a day on two milkings with the feed and care given the general dairy on Waldron Farm.

Two young heifer calves, granddaughters of King Sylvia Pontiac Pietje were sold to W. W. Huntley of South Otselic. The dam of one of these calves freshened when only twenty-two months old and gave over 40 lb. milk daily on twice a day milking. Both Mr. Huntley and Mr. Hubbard are making a start in the purebred Holstein business.

Echo Pontiac Urma No. 568258, an 18 lb. three-year-old daughter of the 31 lb. sire, King Urma, recently freshened giving birth to twins. The dam of this heifer is a daughter of King Pontiac Artis Canada, the well-known Canadian herdsire by King of the Pontiacs from Pontiac Artis, the highest yearly record daughter of Hengerveld De Kol. The sire of the twins is King Sylvia Pontiac Pietje, senior sire at the Waldron Farm. He is by Champion Echo Sylvia Pontiac and is from May Echo Pontiac 2d, a daughter of Woodcrest Sir Clyde with records made as a junior four-year-old of 659.8 lb. milk, 26.23 lb. butter in seven days and 2,548.8 lb. milk; 109.29 lb. butter in thirty days. She is from a daughter of May Echo Sylvia. Echo Pontiac Urma is a splendid young cow that gave 75 lb. milk a day in ordinary every day work.

The Waldron herd is composed of animals of choice individuality and high class breeding. They are kept for production, Mrs. Dwight believing that purebred Holstein are the most profitable dairy animals.

MARYLAND GRAIN RATIONS

John A. Conover, Extension Dairy Specialist of the University of Maryland, suggests that more attention must be paid to grain feeding during July, August and September for these are the three months when the grass dries up, becomes tough and often is very scant. Mr. Conover says that many times in the stress of harvesting, hay making and corn cultivation the pastures are overlooked and when they are finally visited, a great change for the worse has taken place.

Most dairymen find that it pays to feed some grain even when the pasture is good and it pays much more when the pasture begins to get thin and tough.

The following mixtures are recommended.

500 pounds corn and cob meal
300 pounds ground oats or bran
100 pounds cottonseed meal

700 pounds corn and cob meal
150 pounds Maryland Special
100 pounds cottonseed meal

250 pounds corn and cob meal
100 pounds wheat bran
100 pounds gluten feed or Maryland Special

500 pounds corn and cob meal
200 pounds linseed oil meal or
150 pounds cottonseed meal

An experienced husband is one who remembers his wife's birthday, but forgets which one it is.—San Francisco Bulletin.

COOL MILK PROMPTLY

Prompt cooling to 50° F. is absolutely essential when producing milk of low bacteria count, says F. C. Button, professor of dairying at the New Jersey Agriculture College.

The quickest and therefore the best way of cooling milk is to run it over a surface cooler. On such a cooler the milk passes over the outside surface in a thin layer. Cold water is circulated through the inside and thus chills the milk. By this means the temperature of the milk can be brought within 2 or 3 degrees of the temperature of the water. Ice water will be needed in hot weather to bring milk to 50 degrees Fahr.

Morning's milk should be cooled to at least 50 degrees Fahr. Night's milk may, however, be cooled within 2 or 3 degrees of the temperature of spring or well water, since it is afterward placed in the cooling tank where further chilling can take place. The water in this vat should not be above 45 degrees.

After milk has been cooled by a surface cooler it can be held at 50 degrees Fahr. by placing in the vat 2 to 2½ pounds of ice for every gallon of milk. If the milk is not precooled before being placed in the vat, 4 pounds or more of ice are needed to cool each gallon of milk. This pre-cooling will cut in half the amount of ice required in the tank.

The use of small-top milk pails and clean, sterilized utensils, and the milking of clean, healthy cows help to keep bacteria out of milk. Some always get in, however, and unless the milk is cooled quickly they multiply rapidly. In warm milk bacteria double their number every half hour. At 50 degrees they increase very slowly.

CHENANGO COUNTY

We note in a late copy of THE HOLSTEIN BREEDER AND DAIRYMAN the head lines of an advertisement, "Come to Chenango County for Good Holsteins," and at just this time the "slogan" would be, Come to the Chenango County Big 4 Picnic to be held at Norwich Fair Ground. The Big 4 consists of the Grange, Dairymen's League, Home Bureau, and Farm Bureau. There is a promise of "big eats" and much fun. One of the leading events of the Barnyard Golf Contest and Sherburne is said to have at least two expert "ringers," Charles Merrill, who has had much practice, and Homer Lathrop, who is said to have practiced all summer with his two little boys. It will be well for the rest of the county to get busy. Farmers in this county are nearly through haying; the crop has been very large and good quality. Corn looks good, oats fair. Many farmers in Sherburne had large acreage of peas; the yield was good and price average fair.

The cleaning up of the town of Sherburne in the T. B. testing work is well under way. Dr. Jones of Norwich, State Veterinarian, is doing the work. G. C.

Looking for a needle in a haystack is a needless occupation.

FEED SUGGESTIONS

In the June News Letter of the Pennsylvania State College, R. H. Olmstead offers the following feed suggestions:—

Dry weather may set in at most any time now and pasture will begin to get short. Grain feeding should be started before this dry weather begins. If a cow once drops in milk production it is impossible to bring her back. Cows that freshen in the fall will need little or no grain now if they are in good condition. These to freshen next spring, however, should by all means be fed grain to keep up their production through the fall and winter months. The extra milk now may not more than pay for the grain fed but it will bring returns during the fall and winter when otherwise the milk production would be much less.

A mixture of equal parts corn, oats and gluten fed at the rate of one pound of the grain to each five or six pounds of milk is sufficient for the present time, depending on conditions of the pasture. As the pasture begins to get shorter a little extra protein feed such as linseed oil meal and cottonseed meal should be added to the grain mixture. A mixture up of 200 lb. corn, 200 lb. ground oats, 100 lb. gluten, 50 lb. cottonseed meal and 50 lb. linseed oil meal will be very suitable for these conditions. Some alfalfa or clover will eliminate buying so much of the high protein feeds.

HAY FEVER CURE

Hay fever, according to the doctors, is caused by the dustlike pollen grains of weeds and flowers carried by the wind. The latest remedy recommended is inoculation with an extract from the pollen substance which causes the irritation of the nasal passages. Usually the trouble is caused by pollen from the least conspicuous and more common flowers and weeds, says Dr. E. M. Gress, botanist of the Pennsylvania Department of Agriculture. He lists Kentucky blue grass, timothy, red top and rag weed as the principal sources of the pollen which so greatly distresses some unfortunate persons every summer.

CALIFORNIA ASSOCIATIONS RESUME

Work in a number of California testing associations was suspended during the foot and mouth quarantine but have been resumed. The big Ferndale association in Humboldt County again leads the state for high herd averages. Noel Negley, California Dairy Extension Specialist says "Economy of production" must be the watchword this year and only high producing cows that are well fed will be able to make money for their owners.

ONE DAY'S BUTTER PRODUCTION

A world's record in butter production is claimed on behalf of the Hanford Produce Company, Sioux Falls, Iowa, by its manager, John Schunk, who says that 105,000 lb. butter were manufactured in a single day by that company. This is 52½ tons of butter and for this large amount 4,500 cans of cream was required.

Wm. D. Lenker—Dr. J. L. Lenker

BONALEVO QUALITY WALKER INEZ

A member of our ACCREDITED HERD. She is by KING QUALITY while her dam is a 31.31-lb. daughter of ADMIRAL WALKER PIETERTJE. At Lenkerbrook, cows of this quality are bred to our great herdsire KING MEAD SEGIS PONTIAC.

Let us price a bull calf to you.

JUNE CANADIAN TEST REPORT

The Canadian testing report for the month of June shows twenty-seven cows tested for seven days and fifty-six tested in the long-time divisions. The highest seven-day record is 668.8 lb. milk, 36.80 lb. butter made by the mature cow, Fairmont Dutchland Maud. Her thirty-day record is 2,509.2 lb. milk, 143.2 lb. butter and she is owned by Peter S. Arbogast, Mitchell, Ont. Queen Calamity Ormsby owned by E. L. Sweet, Belmont, Ont., is second with 646.3 lb. milk, 32.31 lb. butter. Hengerveld Wee Spot, a junior four-year-old owned by Ernest F. Jenkins of Belmont, Ont., led her class with 599.8 lb. milk, 29.68 lb. butter while Lady Mercedes Inka led the junior three-year-old class with the large records of 31.27 lb. butter in seven days and 131.55 lb. butter in thirty days, her milk records being 575.6 lb. and 2,443.4 lb. respectively. She is owned by Jos. Kilgour, Eglinton, Ont.

The leader in the mature class of the yearly division is Colonel Daisy McKinley with 26,110 lb. milk, 997.50 lb. butter. She is owned by Colony Farm, Essondale, B. C. Susie Texal Wayne, owned by W. R. Cummings, Cummings' Bridge, Ont., leads the four-year-old class with 16,465 lb. milk, 850 lb. butter while the leading junior three-year-old is L. E. S. Evergreen Gretchen, 17,537 lb. milk, 825 lb. butter. She is a member of the herd at the Experimental Farms, Lacombe, Alta. The only two-year-old reported is Colony Alma Korndyke Newman of the Colony Farm herd with 16,052 lb. milk, 748.75 lb. butter.

The feature of sub-division B of the year test is the record of five cows reported by S. Matchett, Peterboro, Ont. They range from 703.75 lb. butter to 543.75 lb. and three of them are between 650 and 700 lb. Mr. Matchett also reports a three-year-old with 763.75 lb.

In the ten months' division the leader is Lady Grey Korndyke, owned by H. S. Tannahill & Son of Huntingdon, Que. She is credited with 17,360 lb. milk, 730 lb. butter. Zozo Tensen a junior three-year-old is credited with 16,319 lb. milk, 728.75 lb. butter.

MARTIN SELLS GOOD BULL

O. I. Martin of Cambridge Springs, Pennsylvania, recently sold to his neighbor, Jim Drake, a well-marked, handsome, young bull calf from a big producing dam. The sire, King Tobe Alcartra De Kol, formerly stood at the head of the Martin herd.

King Tobe Alcartra De Kol was a son of King Segis Pontiac Alcartra and Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in seven days, 141.24 lb. butter, 2,530.5 lb. milk in 30 days. Both of these records formerly stood at the head of the senior three-year-old list. This former world champion, Lady Tobe De Kol, has a daughter that made 30.21 lb. butter in seven days as a senior four-year-old while her dam, Christmas Tobe 2d, when over ten years old, produced 31.66 lb. butter in a week, 129.46 lb. butter in thirty days.

Three of the young cows now milking in the Martin herd are daughters of King

Tobe Alcartra De Kol and Mr. Martin plans that his herd will consist entirely of daughters of this bull when his younger heifers freshen.

This bull was a splendid sire. His daughters are both nice individuals and big producers and the younger ones now in dry pasture are well grown and promising. The Martin herd is under State and Federal supervision. Its product is marketed in Cambridge Springs and is consumed with relish by the visitors to that great pleasure resort.

PARAFFINING SILO WALLS

Twenty to twenty-five years ago many cattle owners annually tarred the inside of their silos, believing that such a course preserved the wood of the silo and at the same time helped to prevent the silage from rotting. It was a dirty, unpleasant job and as farm help became scarcer and wages higher, the practice has gradually fallen into disuse. In the Northwest a number of farmers have paraffined their silos, not only wood, but also cement and brick. It helps to prevent air seeping through small cracks and is said to prevent the silage from freezing to the walls of the silo.

Most large oil refining companies make paraffin as a by-product. It costs from four to five cents per pound and is usually shipped in one hundred pound bags. It is melted in a kettle until it becomes liquid which is at a temperature from 120 to 130 degrees. All that is necessary is to have the paraffin thin enough to spread nicely with a brush. A large paint brush or old whitewash brush is generally used. The walls should be perfectly clean and dry and are usually wiped down to take off the dust. The best job is done by paraffining the inside of the silo when it is empty but some of the northwestern farmers do the job as the silo is being filled. The hot paraffin is spread up as high as the operator can reach, then, when the new silage reaches nearly up to the top of the coating, the walls are again coated and this is repeated until the top is reached.

The paraffin is spread as thinly as possible as it is less likely to crack if spread very thin, about one hundred pounds paraffin wax is needed for an average sized silo.

A teacher entering a street car saw a gentleman whose face seemed familiar so she said "Good evening."

The man seemed surprised and she realized that she was mistaken and had spoken to a stranger.

Much confused she explained, "When I first saw you I thought you were the father of two of my children."

PROPOSED GRADE SALE AT NATIONAL

The grade cow sale which characterized the 1922 National Dairy Show will be repeated at Milwaukee next fall if the plans of the management are carried out. They are endeavoring to obtain the co-operation of the county agents and testers which work in the Wisconsin Cow Testing Associations.

The sale rules at present adopted require all cows four years old or over on August 1, 1924, to have a C. T. A. record or a semi-official record of at least 350 lb. butterfat. Cows under four years of age must have records of not less than 250 lb. butterfat. In view of the prices realized at St. Paul it is rather difficult to see why dairymen should thus dispose of their big producers.

An additional inducement is given in the list of prizes, ten in number, ranging from \$30 down to \$10. The plans are to have 200 record cows females from the five dairy breeds but if it is impossible to secure cows, heifers sired by purebred bulls and from cows eligible for the sale may be entered in the sale.

Old maid to photographer: "Can you make a good picture of me?"

Photographer: "We can do you justice."

Old Maid: "Justice! Justice! It's not justice, it's mercy I want."

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

Daughters of King Rag Apple Plum Copia

are being bred to King Sylvia Korn-dyke Tweede, our junior herd bull. His sire, Woodmont Echo Sylvia Champion was first prize three-year-old bull at the 1922 N. Y. State Fair, and he is the son of Butter Boy Empress, grand champion at the 1921 N. Y. State Fair. The dam of King Sylvia Korndyke Tweede is Wynola Korndyke Fontiac Lass, she made 20 lb. butter and 515 lb. milk in seven days as a junior two-year-old. Her sire, King Tweede Spring Farm, is getting a long list of high record daughters headed by a 32 lb. four-year-old. We expect great results from this cross of breeding. Our herd is under State and Federal Supervision and our last test was clean.

Herd under the Accredited Plan

At a colored revival one sister became overly happy. In the midst of her shoutings she exclaimed, "Ah wish ah war a June bug."

"What fawh?" asked the practical brother.

"Caze I'd fly away to de heavenly mansions."

"Pshaw! fool niggah, a woodpecker 'd git you 'fore you'd git out of the woods."

VANNEDOM HERD SOLD

The Elmwood Holstein herd, once owned by T. F. Vannedom, Marshfield, Wis., was sold a short time ago and now forms part of three Holstein herds in Auburndale, those owned by J. C. Kiefer & Son, Wm. Schultz and George Baltus.

The Elmwood herd was started some twenty-three years ago by T. F. Vannedom who died in 1922. While a number of good animals have come from this herd, its outstanding product was the famous Minerva Beets. At one of the first Holstein sales ever held at the Marshfield fair grounds, Minerva Beets was purchased by the auctioneer, Robert E. Haeger of Algonquin, Ill., who at a glance recognized her possibilities. Just how many first prizes and championships she won for Mr. Haeger is hard to tell; but she certainly carried off a great number and five different years she won grand championship at the National Dairy Show. Among those interested in modern Holsteins Minerva Beets stands as a flesh and blood "true type" cow.

After the death of Mr. Vannedom in 1922, the management of Elmwood herd fell to his son, Frank, whose health began to fail last fall. Believing that it would be better to disperse the herd than to keep them and not give them the attention they deserved, he decided to sell the lot. They have gone into good hands and no doubt will be again heard from.

ILLINOIS CENTRAL OWNS HOLSTEIN BULL

Three purebred bulls, two Jerseys and the registered Holstein Sir Herbert Hengerveld have been placed in Cherokee County, Iowa, under the terms of an agreement submitted by the Illinois Central Railroad system and accepted by the Cherokee Chamber of Commerce such agreement providing that the Chamber of Commerce also purchase three registered bulls and place them at convenient points throughout the county for the free use of dairy farmers. In order to take advantage of this opportunity the farmers of Cherokee have begun the nuclei of good dairy herds and about one dozen carloads of dairy cows have been imported from established dairy communities.

MOVIES AND HOLSTEINS

Johan Johansen is a moving picture magnate of Yuma, Arizona. He has two movie houses in that city as well as others in Somerton and Gadsen.

Mr. Johansen owns a hundred and sixty acre ranch in the south end of the Yuma Valley about two miles from Somerton. He purchased this ranch from the state eight years ago it then being public school land. He cut off the timber and leveled it and now it is one of the finest ranches in that valley. On it he erected a \$6,000 residence with farm buildings to match. This year the crops included 80 acres in cotton and 60 acres in alfalfa. The farm is stocked with purebred Holsteins which are attracting a great deal of local attention on account of their production.

BUY LAND FOR THE STATE

At a cost of a little less than \$8 per acre, three hundred and forty-two acres of wooded land in Barkhamsted township, Connecticut, has been added to the People's Forest.

The People's Forest is a tract of land which is being purchased by subscriptions received through the Connecticut Forestry Association. The lands are to be given to the State and added to its State forests. Although the fund has been in operation only a little more than a year, it now amounts to more than \$5,500; most of the contributions have been received from women's clubs and D. A. R. organizations.

The land purchased through the Connecticut Forestry Association is nearly all timbered and none of it is of any great agricultural value. It is part of what was formerly one of the largest forest areas in the state and was not cleared of its original virgin growth until after the Revolution.

A WORTHY GIFT

At the recent commencement exercises of the University of Vermont it was announced that a \$1,000 post-graduate fellowship had been donated by George H. Walker, the recipient to study three years in the dairy department of the College of Agriculture. The subjects to be studied are the production and handling of milk on relatively small farms and plants; the feasibility, under such conditions, of producing and marketing milk which is chemically and bacteriologically clean and uniform in its fat content; and of the practicability of doing this without unduly increasing the cost of production.

Mr. Walker is the founder of the Walker-Gordon Laboratory Company, whose certified milk is sold in many cities of the North Atlantic States. Mr. Walker is still actively engaged in the management of this enterprise which was one of the first and is the greatest of its kind.

BRINGS UP FOUR AT A TIME

A registered Holstein owned by Lucian Tuinstra of Ivy, Iowa, is laying claim to the title of "the greatest mother of the breed" for she not only mothered her own calf but brought up three others along with it. A picture taken by Miss Ida Tuinstra was recently shown in the Des Moines Register and depicts the juvenile bossies getting their dinner. Mr. Tuinstra leases his farm of 218 acres from the Iowa Investment Company and on it he keeps a good dairy herd.

NO RECORDS MADE

Ben Bachhuber of Elkhorn, Wis., says that lack of time, help and cash has prohibited him testing any of his cows this year. Mr. Bachhuber is the proprietor of Few Acres Farm and in his herd, Few Acres Clover Blossom, freshened May 30 with her second calf and the second week of July was milking around 75 lb. a day on three milkings a day. Her dam freshened May 15 and gave about 50 lb. a day with a high test.

The Accredited Herd of A. R. Bush

A Black and White Herd of Profit Earning Milkers

FOR more than one hundred years the farm on which A. R. Bush, of Montrose, Pa., resides has been owned by the Bush family, the present owner's grandfather, who came from Connecticut, settling on it in 1823. There are many stories that can be told about this place and the people who have lived thereon but we, at the present time, are more concerned with the history of its herd of purebred Holsteins.

A little more than sixteen years ago Mr. Bush made his first Holstein investment, purchasing a purebred heifer calf from a neighbor, J. R. Beebe. Beginner's luck is an old saying in the livestock business. In some things it means success but in the Holstein business it generally means a succession of troubles. In Mr. Bush's case it meant the wiping out of his investment for his calf evidently tried to emulate an ostrich with the usual result. The owner was very much discouraged and almost decided to never buy another purebred but one day not long afterwards he was driving by Mr. Beebe's farm when that gentleman called him in, condoled with him on his loss and offered to replace the animal for half price. The original purchase price was \$25 so that the price for the second heifer was only \$12.50. This animal was Clio De Kol 3d, No. 173473, a daughter of Sir Netherland Echo De Kol. Clio was born January 15, 1908. She proved a profitable investment for her new owner for in 1910 we find him registering a heifer from her; then on February

23, 1911, a little more than ten months after the birth of her first heifer, she dropped another which was named Irene Wayne Hartog De Kol. Irene did even better than her mother for she has given her owner eight heifer calves and, although in her fourteenth year, is still a profitable member of the herd. Several of her daughters have won blue ribbons at the Susquehanna County Fair not only one year but several years.

The first herdsire was Beryl Wayne Sir Posch and was purchased of another neighbor, LaGrange Griffis. This bull was an extra good one and his influence on the herd has persisted to the present day. When we study his breeding we are not at all surprised, for his sire was May Hartog Pauline De Kol Sir Posch and his dam was Lady Beryl Wayne. May Hartog Pauline De Kol Sir Posch, although he had name enough to kill almost any bull, was bred in the purple for he was by Alta Posch's Son from May Hartog Pauline De Kol herself, thus combining in the closest possible manner the blood of two world's champions; one the first two-year-old heifer to make 27 lb. in seven days and the other the first four-year to make over 29 lb. butter in a week. Lady Beryl Wayne was a granddaughter of De Kol 2nd's Paul De Kol and a direct descendant in the female line from Beryl Wayne, former world's champion in the mature class, so that Beryl Wayne Sir Posch was close to a number of world's champions and was a remarkably well bred bull. Irene Wayne Hartog De Kol, the only old-cow

A. R. BUSH AND TWO OF HIS PETS

in the Bush herd, is one of his daughters.

Another bull who had an important influence on this herd was Lilith Pauline De Kol's Son. He spent most of his life in Susquehanna County and to him some of the credit is due for the many high class Holstein herds found in that county. This bull was a son of Johanna Aaggie's Sarcastic Lad and Lilith Pauline De Kol, the first cow to make 28 lb. butter in a week in official

PRODUCERS AND REPRODUCERS

The cow on the left produced 12,000 lb. milk in a year, making a profit of \$125 above cost of feed. The cow on the right also produced 12,000 lb. milk, testing 4.01% and her profit was \$171.

test; the first animal under full age to make over 100 lb. milk in a day in official test; a world's champion over all ages and breeds at the time she made her record and holder of the world's championship in the junior four-year-old class for about eight years. She was also the dam of Lilith Pauline De Kol's Count, one of the greatest sires of the breed, and many believe that if her Pennsylvania son had had an equal opportunity and his daughters had been officially tested, he would have had just as much influence on Holstein history as did his brother but he spent his life among a community of dairymen and only a few of his daughters were fitted for any official records they made.

The importance of opportunity in estimating the value of a sire is generally overlooked. One bull may sire a bunch of daughters that go into big herds where they are fitted by expert handlers and given every opportunity to make records, while another bull may sire

A FAMILY GROUP

The cow to the left is Irene Wayne Hartog De Kol, now 14 years old; the others are some of her daughters.

a bunch of cows which are of equal or superior quality and yet may be almost unknown outside his immediate neighborhood because his daughters are not tested.

In the Bush herd, the daughters of Lilith Pauline De Kol's son were not tested. In fact, Mr. Bush has never made any official records on his animals; but whenever possible his animals have been enrolled in a cow testing association. One member of the herd produced 12,000 lb. milk in a year with an average test of 4.01% butterfat and a net profit of \$171 above cost of her feed; another member of the Bush herd made over 12,000 lb. milk in a year and made a net profit over feed cost of \$125.

Just at the present time there is no bull at the head of this herd, Mr. Bush having sold his noted herdsire, King Alcartra Rag Apple Posch, to a syndicate of breeders residing around Berwick, Pa. King had headed this small herd for several years. Some of his daughters are in milk, some are yearlings, some calves and two more calves by him are expected around the first of September. He was not owned entirely by Mr. Bush for a neighbor with a large grade herd owned a half interest in him and has a splendid young dairy of high class Holstein grade heifers by this sire.

King Alcartra Rag Apple Posch was shown several years at the Susquehanna County Fair. Three successive years, 1921, 1922 and 1923, he was grand cham-

THE GREATEST FARM MANUFACTURING PLANT
Turning pasturage into humanity's greatest food.

pion male, defeating a number of bulls who were also of high quality. In 1923, the second prize "get of sire" was by him, the first prize group being by his sire, King Pontiac Alcartra Pietje and so consisting of his brothers and sisters.

It is hardly necessary to tell the breeding of King Pontiac Alcartra Pietje but in passing will just say that he was by King Segis Pontiac Alcartra and his dam was Fairmont Zerma Segis Pietje, 35.61 lb. butter in a week, world's record in the junior four-year-old class at time of making. The sons and daughters of King Pontiac Alcartra Pietje have won high honors in a number of show rings in several states and his daughters are noted for both individuality and producing capacity.

King Alcartra Rag Apple Posch was from Rag Apple Posch Pietertje, 415.6 lb. milk, 20.06 lb. butter in seven days as a senior two-year-old. Her dam and dam's dam each made over 23 lb. butter, 500 lb. milk in seven-day official test, while her sire, Tobe Rag

FOUR HALF SISTERS

Half sisters by King Alcartra Rag Apple Posch.

Apple Korndyke, has a long list of good record daughters and was by Sir Rag Apple Korndyke from a Christmas Tobe 2d, 31.66 lb. in seven days, 129.46 lb. butter in thirty days as a ten-year-old cow. One daughter of this cow, Lady Tobe De Kol produced 631 lb. milk, 36.59 lb. butter in a week as a senior three-year-old, world's record in class at time of making.

The Bush herd is accredited and no reactor has ever

been found in it. The milkers carry square udders and are a bunch of producers of which any one could be proud. On April 1st of this year the entire herd in milk, five of them heifers in their first lactation period were averaging more than 1,000 lb. milk monthly.

The Bush farm consists of one hundred acres. It is well adapted to dairying. The lay of the land is so that it is partly sheltered from the cold winds that come

A PROMISING PAIR

Daughters of King Alcartra Rag Apple Posch.

from the north and sweep over the hills of Susquehanna County in winter. Springs furnish water of high quality for the pastures and the water is piped to the house and barns. The barns are nothing fancy—just what you would find on most any eastern dairy

farm. Mr. Bush is a high class farmer as well as a dairyman and everything is kept picked up around both buildings and fences.

The family consists of A. R. and Mrs. Bush, who is just as much interested in the stock as is her husband.

KING ALCARTRA RAG APPLE POSCH
Grand Champion at the Susquehanna County Fair three successive years.

They have two children, a daughter who recently graduated from the Mansfield State Normal School and a son who resides in Montrose. The family is highly respected in their community and Mr. Bush is active in all movements to promote the Holstein breed and was one of the committee responsible for the interesting Holstein exhibit of Bridgewater Township at the recent Montrose Centennial celebration.

The Fred C. Lehman Herd

N EARLY ten years ago Fred C. Lehman, of Cumberland County, Pennsylvania, purchased a farmstead known locally as the Greider Stock Farm. This farm consists of fifty-three acres, practically every foot of it tillable. The land is limestone soil, in fact, limestone crops out in a good many places on the farm to the detriment of the tillage implements and perhaps of the temper of the operator. But everything has its compensations, the soil derived from the weathering of limestone is fertile and strong and, as every farmer knows, limestone soil the world over produces good pasture which in turn produces livestock of high quality.

The Greider Stock Farm is located between Carlisle and Newville, Pa., about one-half mile from the concrete road running between those two towns. The farmstead is picturesquely located, only the highway separating the dooryard from the Conodoguinet Creek, which flows through one of the best farming districts of Cumberland County and empties into the Susquehanna River near Harrisburg.

Mr. Lehman, or may we call him "Fred," to distinguish him from others of that name, as the Lehmans are one of the leading farm families in that section of the country, had been but a little more than a year in his new home before he decided to be a breeder of purebred Holsteins. His first animal, we believe, was Sadie Vale Cornucopia, born April 26, 1907, and although she is past seventeen years old, still an active and profitable member of the herd. This cow is closely related to a number of large producers. Her sire was brother to the noted King Segis and a grandson of the former world champion cow, Mercedes Julip's Pietertje,

the first cow to make 29 lb. butter in seven-days official test. Sadie Vale Cornucopia was from Aaggie Cornucopia Butter Girl. This cow was by a son of De Kol 2nd's Butter Boy 3d, and her dam was a granddaughter of De Kol 2nd's Paul De Kol, thus combining the blood of what is generally considered as the two best transmitting sons of the great De Kol 2d. The dam's dam, Armyn De Kol, comes on the maternal side from the Armyn family, a strain noted for production and from which came some of the best daughters and granddaughters of Ormsby Korndyke Lad.

Mr. Lehman knew that he had a real good cow so that he thought the next thing to do was to put an official record on her. She was then past ten years old; in fact, she freshened at the age of ten years, seven months and twenty-eight days. She was not tested until sixty days after freshening. Her owner had had absolutely no experience in official work yet she produced 21.41 lb. butter, 451.8 lb. milk in seven days, her average percentage of butterfat being 3.79. We do not know whether this cow has been ever exhibited but several of her descendants have won prizes at local fairs and she is still an attractive animal and must have been a high class show cow in her prime.

Sadie Vale Cornucopia is an example of what a purebred Holstein-Friesian cow will do for a dairyman. She was purchased when she was ten years old. She is now seventeen. In the seven years she has been in the Lehman herd, she has produced 64,000 lb. milk. Sons and daughters of this cow have been sold to local dairymen and have brought in \$1,100.00, and there still is one daughter left in the herd.

Later on Dutch Corner Fayne Walker, No. 473191,

was bought. The dam of this cow is a daughter of Segis Lyons while she, herself, was by Governor Walker Lyons, a son of Betta Walker, 26.26 lb. butter in a week as a four-year-old, a daughter of Betta Lyons Netherland, 34.71 lb. butter, who in turn was from Blanche Lyons Netherland 34.26 lb. butter. Dutch Corner Fayne Walker, when just seven days past her fifth birthday, freshened and in due time was

A PLACE IN THE SHADE
Two members of the Fred C. Lehman herd.

put in official test. She produced 103.4 lb. milk in a day, 29.71 lb. butter, 656.5 lb. milk in seven days, and in ten days produced 41.6 lb. butter, 932.3 lb. milk. Her highest seven-day milk production was 702 lb. made 30 days after freshening. In thirty days she produced 2,854 lb. milk; in 60 days, 5,381 lb.; and in one hundred days, 7,932.8 lb. There are three daughters of this cow in the herd; one of which, Mabel Walker Sylvia Ormsby, freshened last December, when one year, eleven months, and four days old. In official test she produced 529.4 lb. milk, 18.14 lb. butter. On August 7th, the day previous to the one on which the representative of the BREEDER AND DAIRYMAN visited the farm, Mabel produced 48.3 lb. milk in the day in her two milkings and in the first six months of her year's work, she has to her credit 10,055 lb., a wonderful showing for a heifer that freshened when merely a yearling.

The highest record cow in the herd is Ideal Winkje Korndyke, No. 513153. Her sire is by Lyons Dutchland Lad, a grandson of Blanche De Kol Hengerveld, 33.2 lb. butter in a week. Her dam, Arlep Winkje Korndyke 2d, is by Hillside Vale De Kol, a Pennsylvania bull whose descendants have made large records.

FOUR MEMBERS OF THE LEHMAN DAIRY

Arlep Winkje Korndyke 2d is from an A. R. O. dam and has an official record of 20.69 lb. butter, 458 lb. milk as well as four tested daughters, three of which have each made over 21 lb. butter in seven days. Her highest record daughter is Ideal Winkje Korndyke. Tested as a junior four-year-old, she produced 30.53 lb. butter, 719.6 lb. milk in seven days which at the time of making was state record in her class. In ten

days she made over 43.16 lb. butter, 1,008.6 lb. milk and 5,413.7 lb. milk in sixty days. One daughter of this cow, Beauty Konigen Korndyke, freshened when she was just twenty-four months old. She produced 16.05 lb. butter, 390.5 lb. milk tested no less than 84 days after freshening. Ideal's own record was made 26 days after freshening and her average butterfat percentage was 3.4%. She has a daughter in the herd that shows great promise.

From the foregoing the reader is apt to gain the impression that we have been talking of a large herd. This is an erroneous impression for there are only fifteen animals in the herd but the quality can be shown by the performance of the milking dairy last year. There were only eight milkers. Four of these were heifers; three were three-year-olds and one was a

DUTCH CORNER FAYNE WALKER
103.4 lb. milk in a day; 29.71 lb. butter, 656.5 lb. milk in seven days.

two-year-old, yet the eight averaged over 11,000 lb. milk in twelve months.

The present head of this herd is Dulcevista Echo Sylvia Ormsby now a four-year-old. He is a very handsome bull, largely white in color, with a good top line, nice shoulder, hide and hair and a very large barrel, a bull that would attract attention anywhere. His only daughter as yet in milk is Mabel Walker

POSING FOR HIS PICTURE
Dulcevista Echo Sylvia Ormsby and his owner, Fred C. Lehman.

Sylvia Ormsby, mentioned above as freshening as a yearling and producing over 10,000 lb. milk in the first six months of her lactation period. Her record of 529.4 lb. milk in seven days is, we believe, the second highest official seven-day milk record ever made by a Pennsylvania yearling heifer and is exceeded only by the record of 531.2 lb. milk by Eco-Sylvia Mechthilde, who later on made a world's record as a senior two-year-old.

Dulcevista Echo Sylvia Ormsby has a pedigree which shows a combination of very large records for his nine nearest dams average 30.7 lb. butter in a week, despite the fact that his dam was tested as junior two-year-old.

This dam is Forest Dale Hengerveld Ormsby, 18.54 lb. butter, 557.3 lb. milk in seven days, sister to a number of 30-lb. cows. Her sire, King Pontiac Hengerveld Ormsby is a brother to Ormsby Korndyke Lad, being by the same sire while his dam possesses wonderful breeding, being by King of the Pontiacs from a 30-lb daughter of Hengerveld De Kol.

Dulcevista Echo Sylvia Ormsby is by Sir Echo Sylvia Johanna whose dam made over 30 lb. butter in a week and whose sire, King Echo Sylvia Johanna, is also the sire of Carnation King Sylvia and was from Belle Model Johanna 2d, a cow that three different years made over 32 lb. butter and two years made over 37 lb.

The Lehman herd has been on the accredited list for four years; in fact, with the exception of the gov-

ernment owned herd at Carlisle, it was the first accredited herd in Cumberland County.

Fred Lehman is a progressive farmer and dairyman. Record is kept of the production of his cows every day in the year. He can show you records of what every animal has done and is doing.

One unusual eastern crop on this farm is sweet clover. The owner says that, although he has a large field of this crop, he is really not very strongly in favor of it. It grows rank and tall, producing a woody hay which the cows apparently do not like but the horses eat readily, and do well on it. As it has only been grown one year its effect on the soil is not yet noticeable. The other crops show good care and indicate that Fred Lehman is as good a farmer as he is a dairyman and that is saying a lot.

Factors Involved in Tuberculosis Eradication and in Maintaining Sound Herds

VERANUS A. MOORE

New York State Veterinary College, Cornell University, Ithaca, N. Y.

(Continued from page 507)

Early experience showed that many infected herds that were supposed to have been freed of the disease by removing all reacting animals, became, after a few years, as extensively affected as before. It is obvious that if tuberculosis re-establishes itself in herds from which it has been eliminated, and that if this reinfection occurs through the same agencies by which it gained entrance originally, the removal of the reacting animals is but the first stage in permanent eradication. The second, and apparently the more difficult part, is to prevent its recurrence. Now, as in earlier years, such measures as the proper disinfection of stables, care in the introduction of new animals and creamery milk for feeding calves are too frequently neglected or left to the initiative of the uninformed owner. This is poor insurance against the heavy investment that is being made to eliminate the disease.

It is important that the Accredited Herd Plan should be differentiated from certain local procedures. The purpose of the government plan is to assist cattle owners until their herds are accredited, when the responsibility of keeping them free is placed, and justly so, on the breeders and their veterinarians. It appears that the component parts of the plan—the eradication, and the subsequent maintenance of sound herds—are not always recognized as such, for often in attempting the first some of the requisites for the second are eliminated. The taxpayers are anxious for a procedure that will insure permanent freedom. Again the time and expense required to remove the disease from localities where there are few infected herds and the percentage of reactors is small, are much less than are necessary where the disease is extensive and of long standing. The International Commission on the Control of Bovine Tuberculosis recommended, on the basis of wide experience, that when there were 50% or more of reactors the entire herd should be considered

as tuberculous and treated as such. If the commission was right, it means that in dealing with this group of herds, greater efficiency in the use of tuberculin and greater skill in physical and other methods of diagnosis are required, if they are to be purified economically by the same method as the slightly infected ones.

A study of the procedures followed by those who have maintained clean herds and those who have eradicated the disease is interesting in disclosing the fundamentals of their success. Bang recognized that tuberculosis, like a noxious weed, grew into a herd and that it must be directed in such a way that it would grow out. He believed in the safety of pasteurized milk of reacting animals that appeared to be healthy, and the fact that Copenhagen was reported to have had the lowest death rate among children of any city of its size, gave a reasonable basis for his conclusion. He believed also in the conservation of valuable animals for breeding purposes. The advantages claimed by those who have used the method are that it replaces the reactors with sound animals in from 3 to 7 years; it can be applied to all herds simultaneously; it saves the quality and special breeding of the herd; and most important of all, it teaches the owners the technicalities involved in caring for cattle to prevent reinfection. The education of the owners in the nature of tuberculosis and the raising of their morale are its two outstanding benefits. A further factor is the elimination of the disease without material cost to the state. While the method may appear slow in its operation, it is as rapid as the usual clean up by the slaughter plan in badly infected districts. If, in 1918, this method had been applied to all of our breeding herds, most of them would be tuberculosis free now. The method has been followed successfully in a few herds in this state, but it is not favored generally. This, however, does not divest it of its good qualities for valuable breeding stock. The

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman

BOX 110, HARRISBURG, PA.

of the cattle originating in the Illawara district of New South Wales.

Between 1830 and 1850 many Shorthorns of Bates blood came to Australia, particularly to New South Wales. The Bates Shorthorns were noted for their milking powers. These cattle went to men who were more interested in developing cows that would milk heavily and whose sons would make good beef animals than they were in preserving the purity of the blood lines or even in any particular breed. The sons of the best cows were selected for herd sires. There was very little stock brought in from outside and, of course, there were no native animals except the descendants

MELBA 15TH OF DARBALARA

32,522 lb. milk, 2,017.5 lb. butter in 365 days. Owned by the Scottish Australian Investment Co., J. T. Cole, Manager, Gundagai, New South Wales.

of those that had come into the district a few years previously as there were no cattle in the country until brought there by whites after the American Revolution. When Shorthorn breeders, whose cattle were of unquestioned purity of blood started to show, cattlemen of the Illawara district entered their cattle in the same classes and immediately there was trouble. At some shows, prize winning cattle would be claimed as Illawaras by one faction and as Milking Shorthorns by the other faction but in Queensland five or six years ago, the breeders amalgamated and later on the breeders of New South Wales joined and the Illawara Milking Shorthorn is found to-day in every province of Australia with a few of them in New Zealand. The majority of the animals of this breed or variety are, as a rule, somewhat smaller than what we know as Milking Shorthorns, and are a little finer in the head and neck. The red color resembles the red of the Devon. These slight changes may be due to the blood of the Ayrshire and Devon ancestry as claimed by some or may be due to selection or to adaption to environment through successive generations. We are not qualified to give any opinion but animals of this breed have made wonderful records while others of the same breed have proven profitable in ordinary dairymen's herds and although there is little room for them in America, it is undoubtedly proven that they are well adapted to their native home and that the breed, variety or strain, call it what you will, is one of great value.

After a man accumulates greater wealth than any one man ought to have, all he wants is more.

Weather is one of the farmer's problems.

King Exports Sixty-two Purebreds

FROM the A. J. King Holstein farm located near Kansas City, Missouri, sixty registered females and two young bulls were recently shipped in Arms Palace cars to New York City. There they were loaded on the United States Government SS Cristobal for about a twenty days' journey to the Canal Zone, having been purchased by the Panama Railroad Company.

These sixty registered heifers all under two years old, came from several families. There were twelve head of the Ormsby strain; another dozen of Korndyke breeding; with a few Pontiacs and others of similar good blood lines. One of the young bulls is of Ormsby breeding; the other is of the May Echo Sylvia strain.

Mr. King, besides being one of the leading Holstein breeders of the Southwest, is a keen business man. His success in landing this great order is evidence enough of this fact even if it had not been already demonstrated in many other ways.

This sale of sixty-two head is the largest export sale of purebred Holsteins of which we have ever heard and is certainly the largest from any one herd. All Holstein breeders will congratulate Mr. King upon his success and will trust that the animals have a safe journey and arrive in good shape in their new home. When there, unless unforeseen complications occur, they are bound to make good and provide a good advertisement for American bred Holsteins, for being owned by the great Panama Railroad Company they are bound to attract lots of attention and be inspected by travellers from all parts of the globe.

No Foot and Mouth Experiments Permitted

ANY experiments with foot and mouth disease or its germ in the United States has been forbidden by Secretary Wallace who holds that because of its highly contagious nature, the only safe procedure with the disease is to stamp it out as quickly as possible.

Soon after foot and mouth disease trouble appeared in California, the Secretary began to receive letters and suggestions as to its treatment from persons who had lived in European countries where the disease is constantly present and long since got out of control. The fact is that foot and mouth is a very old disease and has been made the subject of prolonged study.

On July 23, the Los Angeles County Medical Association passed a resolution urging the Department of Agriculture to carry out or authorize investigations with foot and mouth disease. The resolution was transmitted by Dr. Harlan Shoemaker, who is secretary of the association. In his reply, Secretary Wallace outlines the government's policy as follows:—

"The decision of this department not to approve experimentation with the virus of foot-and-mouth disease in this country was arrived at only after most careful consideration of every phase of this subject. Our reasons for not permitting such experiments are: First, that only a cursory study of the disease could be made in infected areas under our system of prompt slaughter and burial of affected and exposed animals,

unless the virus were propagated and kept on hand for an extended period after the disease would otherwise have been stamped out. Second, that there is little or no prospect that such a study would add anything to the knowledge that has been gained by the vast amount of experimental and research study that has been made of this disease by European investigators of eminent standing in both veterinary and human fields of medicine. Third, the difficulty of controlling the virus of this highly infectious malady and preventing the escape of the infection. Fourth, the probability that many of the States, if they knew that experiments were being carried on with this disease, would immediately place embargoes upon shipments of practically all the products of the State in which investigations are being made. Fifth, the likelihood that any investigation or research study that might produce worth while results would have to be carried on for months and possibly years, during which time the virus of the disease would be a potential menace to healthy, susceptible animals in the vicinity.

"This department is most anxious to enlarge its knowledge concerning foot-and-mouth disease and to find a better method of stamping out the infection when it gains entrance into this country, but I feel, in view of the above facts, that we would not be justified in approving experiments such as your Board of Councilors has recommended, and that research studies of this disease should be carried on in countries where it is endemic and not in this country where the slaughter method of combating outbreaks of the disease has been employed so successfully."

Suggestions were received that flies or other insects may carry the trouble but the three previous outbreaks in the United States which occurred in 1902, 1908 and 1914 all started late in the year and despite months of severe winter temperatures the disease persisted in the northern states long after the close of the fly season.

Possibilities of Export Trade

EARLY in June, the Costa Rican Congress passed a law whereby the transportation expenses of all purebred animals brought into Costa Rica for breeding purposes should be paid by the government. The buyer pays the price of the animal at the farm and the government defrays the rest of the expenses.

There are many dairymen in Costa Rica who desire to improve their stock and importation to that country from America may be expected.

The value of America's farms and farm property far exceeds the capital invested in manufacturing enterprises.

But the value of America's manufactures is three times the value of our farm products.

Our nation's farms are valued at 77,924 millions.

The capital invested in manufactures is 44,579 millions.

But the value of the manufactured products is 62,418 millions, compared with annual farm products valued at 21,426 millions.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

August 22, 1924.

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Free the Mind From Mental Bondage

By DR. B. YOUNGBLOOD, *Texas College of Agriculture.*

THE way for the farmer or the stockman to secure for himself his proper place in the world is by the elimination of ignorance and prejudice, through the accumulation of knowledge, not of crops and livestock alone, but knowledge of every useful and cultural nature which tends to broaden his vision and enable him to think clearly and to speak and write his conclusions with force and ease. It is said that agriculture, in many ways, is 100 years behind commerce and industry, in both progressiveness and efficiency, and this is not far from correct. It is quite generally admitted that farmers and stockmen do not have enough influence in the affairs of their country to successfully demand and secure an equal opportunity in a business way with commerce and industry. Men, realizing this to be the situation, have given their best thought to ways and means of placing the agriculturist in a position of equal bargaining power with the merchant and the manufacturer, but no one has succeeded in fully solving this problem.

"It becomes apparent, however, to any thoughtful person who gives this problem his serious consideration, that there is but one approach to its solution. Farmers and stockmen need information, not only with reference to the technique of production and marketing, but also with reference to whether they see their problems clearly and have the logical methods of solving them.

"The farmer and the stockman need knowledge, not of one, but of many kinds. They need the help of the scientist in the solution of their farm and ranch problems. The farmer's wife needs it in the solution of her home problems, and we all need it in order to improve our ways of thinking and to open our minds

and free them from fallacy, bias, prejudice, and superstition, which have held mankind in bondage for many thousands of years. Men, though now enjoying a certain amount of personal liberty not hitherto enjoyed, are still held down by a certain amount of mental bondage, wherein men dare not think, however constructively, about many things which affect the welfare and the happiness of the race, without bringing down upon their heads the ban of their leaders of one kind or another, and oftentimes ex-communication from those economic and social institutions which they cherish most of all. This can only be attributed to a lack of breadth of mind, and breadth of mind can be attained only by freeing our minds of any restrictions which tend to hamper independent, constructive thinking among men and women with reference to their everyday affairs of life, both economic and social."

Showing Stock

WHILE nothing equals the printed page as an advertising medium yet the breeder should not overlook the opportunity to gain many friends and customers through the medium of town, county and state fairs. At such events although sales may not be made at the time of showing, acquaintances are made that result in business, months and even years afterwards. At fairs, people who think of buying animals at some future time are getting a line upon individuality and blood lines and are sizing up the exhibitors for it must not be forgotten that personality enters largely into the purebred livestock business.

Select a few of the top notchers of your herd and arrange an attractive display at your county or state fair. The expense outlay for exhibiting is nominal considering the many advantages to be gained. The exhibitor who keeps a complete record of visitors to his section who show that they are interested or intimate that they may be possible purchasers some time in the future, will find that he has in his possession a mailing list that will add many dollars to his bank account. A small folder or booklet telling something about the herd, the production of the cows, and the herd sires will be treasured by such visitors and save much talking and correspondence. Showing and such a folder supplements advertising in your favorite breed paper and the expense is very small considering the possible benefit.

No California Cattle Shows This Year

ONLY one livestock show is scheduled to be held in California this fall and that one is the San Joaquin County Fair, August 21-27. The livestock committee of the fair association has recommended that there be no exhibit of cattle, sheep, hogs or goats so that the livestock will consist of exhibits of poultry, dogs and horses.

No matter what capacity for production a cow may have, she cannot show it unless she is given sufficient nutritious food.

Food for Thought

WHEN visiting a State Institution where one of the finest herds of purebred Holsteins is being maintained, the herdsman, who is not only a capable dairyman but also has knowledge of all branches of Agriculture, was showing us through the henery. At that time, they had about 2,500 White Leghorn chicks kept in one house which was partitioned off into five apartments. While we were admiring the little chicks as they were busily engaged in scratching their evening meal from among the litter strewn on the floor, one of the chicks was noticed to stagger, flop over on his back and go into a fit of epileptics. I picked him up while in this stage and in a very few seconds he shook his head, rolled his eyes and looked around seemingly as natural as ever, not realizing or knowing that anything had happened.

In discussing the cause, the Superintendent said that it was due to the fact that the Mother Hen which laid the egg had been forced for egg production and had not been given sufficient time to rest and recuperate before her eggs were used for hatching.

If forced feeding for egg production will so be reflected on young chicks to cause them to stagger and at intervals roll over in fits, what effect does forced feeding a Dairy cow for heavy yearly production have on the growth and development of the calf being carried by the mother at the time she is being forced for milk production?

Blood Test Required for Southern Shipment

THE Georgia and South Carolina State Bureaus of Animal Industry have issued regulations designed to restrict any movement of abortion infected breeding stock into these states. The Georgia regulation applies only to cattle but South Carolina extends the ruling to swine. This ruling is substantially as follows:

All cattle and swine, six months of age and over, entering this state, if for purposes other than immediate slaughter, shall pass a blood test made by a Federal State or Commercial Laboratory showing them to be free from abortion disease. Tests will not be accepted if made on female cattle or swine in less than fifteen days following abortion or normal parturition or more than three weeks prior to shipment.

Each animal shall be ear tagged, or otherwise permanently marked for identification and the health certificate must show the date of the test and name of laboratory making same; the original report must be approved by the proper live stock sanitary official of the state of origin and attached to the copy of the health certificate sent to the respective state veterinarians of Georgia or South Carolina, by the veterinarian who issues the certificate. A copy of this certificate must be attached to the waybill and accompany the shipment to its destination.

Cattle that are moved in violation of the requirements will be quarantined and tested at the owner's expense. Reactors will be tagged or branded and quarantined at

the owner's expense. This would necessitate their return to original point of shipment or disposal.

It is very likely that the veterinarian and livestock departments of other states will follow the lead of the Georgia and South Carolina authorities. Breeders interested should write to the chief veterinarian of their own state or their Sanitary Livestock Board and obtain a copy of all rules affecting shipments of livestock.

Purebred Laws In Other Lands

ONLY purebred bulls registered in a recognized herd book can be used for breeding purposes in the territory under the Government of Northern Ireland as Ulster is now called.

The British Aberdeen-Angus Society at its spring meeting passed a resolution asking the British government to put a similar law into effect. The British Ministry, in refusing the request of this society, pointed out that of the 78,742 bulls reported as being used in service in England and Wales in 1921, only 21,574 were pedigreed animals and of this number more than half were under a year old when the figures were gathered. This does not mean that the animals were scrubs but simply that their pedigrees were not recorded in any herd book. There are many British herds whose lineage is of unquestioned purity in which the animals are not registered and these are classed as non-pedigreed herds and non-pedigreed animals.

New York Restricts Indemnities

BY an amendment to the farms and markets law, New York state will not pay indemnities upon a purebred basis for condemned, unregistered animals under two years old. Until this amendment went into effect purebred animals of any age, if eligible to registration, were paid for on a purebred basis, if condemned for reacting to the tuberculin test.

Another amendment to the same law provides that no indemnity shall be paid owners making false representations when applying to have the herd tested, nor to any owner violating any provisions of the accredited herd agreement or failing to carry out the instructions of the commissioner.

Dual Purpose Friesians

AT the Royal Show a British Friesian cow, Felhampton Ariadne, won the championship in the milk producing competition by giving 89 lb. milk in the two milkings. She has produced 26,200 lb. milk in 365 days in her second lactation period, averaging 100 lb. a day for 39 days. She comes of a dual purpose family for Felhampton David, one of her brothers by the same sire, was the second prize steer at the great stock show held at Smithfield last year and another half brother was the heaviest steer and also the champion at the 1922 Smithfield show.

Prejudices can live where principles would starve to death.

The Junior Breeder and Dairyman

Girl's Prize Winning Essay

In connection with the Calpatria Dairy Council's "Dairy Products for Health" week in Imperial County this spring the Calpatria Chamber of Commerce organized an essay contest for high school students. First prize was won by Miss Elsie Cox, a sophomore in the Calpatria high school. Miss Cox's essay was entitled "Modern Fountain of Youth Milk" and is herewith appended.

"From earliest times man has sought unceasingly for a 'Fountain of Youth' whereof he might drink and inherit a strong and healthy body, a progressive mind, and long life. We are told that Ponce de Leon in his memorable search for it failed, and, broken-hearted, gave up the quest, and until very recent years modern science even was not able to discover this valuable asset. At last, however, this 'Fount' has been discovered and found to have its source in a simple food-beverage, milk.

"Much research has proven that milk contains more food value and building materials than any other kind of food, while the amazing results of experiments with children of various ages show very decidedly that milk-using children are stronger physically and farther advanced mentally than non-milk-using children.

"Now, milk is not only a child's food, but is one which should be included in the diet of every adult as well, for man must learn to 'Eat to live, and not live to eat.'

"It is a well-known fact that indigestion is caused primarily by ill-selected food or too much food, and secondly by improper mastication due to decayed or ill-kept teeth. Both are menace to the digestive system and should be avoided. The problem may be solved, for milk in all of its various forms and uses is always

easily prepared and is not only nourishing, digestible and delicious, but it furnishes enamel for the building of sound teeth, without which the proper mastication of food is impossible.

"If man would succeed and appreciate the higher and better things in life, then he should drink or eat in some form or other a liberal amount of milk each day.

"Let the health-giving 'Fount' of milk flow, drink it, and give it to the children for upon them depends largely the welfare of the great nation of to-morrow."

Governor Cox on Club Work

"From the farms of our country, whether it be North, South, East or West, have come some of the most virile men and women of our nation who have done much to up-build the prosperity of the country and to bring justice and clear thinking into governmental councils. It is a fine investment in future citizenship to take the millions of children on the farms and to give them advantages that they otherwise could not have."—Hon. Channing H. Cox, Governor, State of Massachusetts.

Florida Boy Makes a Fine Start

Dudley R. Strumph is a Holstein junior, who lives on a thirty-acre farm about six miles from Jacksonville, Florida. Dudley says that he started in the Holstein breeding business when he was between eight and nine years old. His father gave him a setting of eggs which he placed under a hen and most of them turned out to be roosters. When they were big enough to sell, Dudley and his father started to Jacksonville, and on the way passed a dairy farm. Mr. Strumph and the dairyman were good friends, and after a little visiting,

the dairyman offered to trade a four-day-old heifer Holstein calf for the roosters, and Dudley agreed.

Milk had to be purchased to feed the calf until it was old enough to eat but she did finely. In course of time she was bred to a Holstein bull that had won first prize at the Florida State Fair for three years. She dropped a big Holstein bull calf as a two-year-old. When she straightened around on full flow of milk, she gave between 40 and 50 lb. milk a day, and this was too much for the Strumph family. Dudley doesn't say whether that was too much for them to milk or too much to consume, but she was sold to a near-by dairyman for \$150. Dudley has this \$150 in the bank, is the owner of a fine Holstein bull and is now raising a granddaughter of the original animal. He finished up by saying: "I got all this for the roosters hatched from one setting of eggs."

Colorado Boy Is Making Success

At its annual picnic held at Colorado Springs, August, 1922, the Colorado Holstein-Friesian Association gave away a bull calf which was won by a sixteen year old boy, Jesse E. Davidson of Lamar, Colorado. The calf was donated by Mrs. R. G. Douglas, then president of the State Association. The calf was carried home by a neighbor in a touring car, young Davidson helping to keep him steady and prevent him from committing calf suicide along the highway.

Jesse was very proud of his prize and exhibited him at the Lamar Show of 1923, winning grand championship with him. Last February he again showed the bull and again took highest honors. Naturally Mr. Davidson is enthusiastic over his pet.

But this bull is not the only animal owned by Mr. Davidson. About the time he won his bull he bought two heifers from McKay Brothers of Caddo. The McKay Brothers have been Holstein breeders for many years, in fact, Tilly Alcartra came from their establishment. Mr. Davidson paid \$400.00 for his two heifers and the next month one of them dropped a heifer calf. This animal was put into a calf club and with it the

young owner won a trip to the California State Fair last September and at that fair he won a trip to the Chicago International Livestock Show. At the second freshening of this calf's mother, another heifer was produced and the two youngsters, one a calf and one a yearling, were exhibited at Lamar last February and won first prize as Produce of Dam.

Mr. Davidson was not nineteen years old until this year. He was compelled to quit school but he is evidently making a success in the Holstein business.

American Boys Win Judging Contest

For the third successive year the American team won the International cattle judging contest between teams representing junior clubs of United States and Great Britain.

The American team consisted of three boys, Donald Williams, Elwyn Folkers and Harold Gaulrapp, members of the heifer calf club of Whiteside County, Ill. The English team consisted of three girls Winifred Emery, May Bambury, and Joan Moore, of the United Dairies' Calf Club, Hemyock.

The American score was 1580 points, the British score, 1,484. One of the judges said that the supremacy of the Americans lay chiefly in their superiority in comparing the points of the animals.

The individual leader was Donald Williams with 545 points, Harold Gaulrapp scored 530 while Miss Emery was credited with 518 points.

Big South Dakota Calf Club

In Marshall County, S. D., there is a dairy calf club which has eighty-three members. It was started last spring with grade Guernsey and Holstein calves which were shipped from Wisconsin. There have been only four losses out of the 83 head. At the Marshall County fair which will be held in September, the calves will be exhibited.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

CALVES BY

Berylwood Prince Aaggie Chicago

are now coming and they are all one can ask

Their sire is by California's best bred herdsire and greatest show bull and is from a cow that produced 53,670 lb. milk, 2,272 lb. butter in two years.

Put in your order for a young bull now. Herd ACCREDITED.

L. L. ALLIS

Rummerfield

Bradford Co., Pa.

Prizes will be awarded not only on the basis of condition and development of the calf but also on the amount of work done and skill shown by the young exhibitors. There will be \$170 in prize money divided among four classes.

An 800 Year Old Herd

When the boys from Whiteside County, Ill., who won the International Junior judging contest, were in Switzerland they saw a herd of purebred Brown Swiss cattle which is said to be in existence 800 years and to be the oldest herd of the breed or of possibly any breed in existence.

Dairymen's League Prices

THE Dairymen's League Coöperative Association, Inc., announces an increase in the base price of 3% grade B milk to \$2.60 per 100 lb. at the same time the price of Class 2 milk, sold in the form of sweet cream, is advanced to \$1.90.

This welcome news to dairymen in League territory was announced from the League offices at the close of a special meeting of the Board of Directors on August 13th. A sudden unseasonal shortage of fluid milk in the primary milk markets was the immediate cause of the increase says the League officials. Several factors seem to have entered into the situation—dry weather in parts of League territory, less milk coming in from outside because of low prices and hot weather.

The total increase in the price of fluid milk shipped to New York City is 74 cents since August 1st, which is believed to be a record advance in the history of the milk industry.

League dairymen are now receiving their checks for milk delivered to the pool during the month of July.

The gross pool price for 3 per cent milk at the base zone is \$1.50, which is 8 cents higher than the June price.

Deductions for expenses amounts to 8 cents and for

certificates of indebtedness 10 cents. The July net pool price, therefore, is \$1.42 and the cash distribution is \$1.32.

The League has begun the work of forwarding to its members by registered mail over 52,000 certificates of indebtedness, "series C," representing deductions from milk checks during the fiscal year ending March 31, 1924, to provide funds for the acquisition of milk plants and for working capital. The certificates are negotiable, bear 6% interest and mature May 1, 1929.

The total deductions amount to \$2,562,715.96, as compared with \$4,621,915.83 ("Series B"), year ending March 31, 1923, and \$4,307,060.24 ("Series A"), year ending March 31, 1922.

The certificates will be issued in multiples of one dollar. Any balance in odd cents due a member will be added to the member's "thirteenth check." The total of the "thirteenth check" for 1924 will be increased by \$24,981.07 as a result. The "thirteenth check" represents a member's share of monies remaining undistributed at the close of each year's business. The certificates of indebtedness actually issued will aggregate \$2,537,734.89.

The deductions for certificates of indebtedness during 1923-24 averaged \$0.0957 per 100 pounds of milk, as compared with \$0.1376 in 1923-24 and \$0.168 in 1922-23.

A Time Saver

A GOOD many bulls form the habit of dropping or lowering their heads when the caretaker attempts to catch them by the nose ring. A small chain around the horns of the bull and led down to the ring in his nose affords a convenient way of getting the animal, who usually gives up once the caretaker obtains hold of the chain either by means of the staff or by his hands. Some owners have a short chain hanging from the ring. This has a number of disadvantages, you have to reach below the nose to get hold of the animal and the bull is quite likely to step on the chain and, in time, tear the ring out of his nose.

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

THE MISSISSIPPI VALLEY FAIR

BY OUR IOWA REPRESENTATIVE

Davenport is a strategic point for a showing of dairy cattle, especially Holsteins. It is proud to be called the gateway to the west, and the Mississippi Valley Fair and Exposition which has its home there draws from the rich agricultural section on both sides of the river. The interest in the dairy cattle show is growing from year to year. This season four established Iowa breeders competed for the premium money offered for Holsteins. They were Iowana Farms, Davenport; State Sanitarium, Oakdale; Seven Springs Farm, Muscatine, and W. C. Wharton and daughter, Rose Hill.

The Iowana herd needs no introduction to any breeder. Its long career in the show ring and in A. R. O. work has made it well known. The Seven Springs herd under the management of Mr. Naber is headed by the show bull, Iowana Ona Hartog, a fine son of the Ona bull that has been used in the Col. French herd. He is a beautiful show animal but he had to give first place to the Iowana entry. Iowana carried off all the group prizes.

In the senior yearling class the Seven Springs Farm won first with a richly bred Ormsby bought at the Woodlake dispersal. Second place was taken by another Ormsby that is the junior sire in the Sanitarium herd. These people are making their initial bow to the ringside this year. Their herd, while it is not complete, is excellent in quality and ranks high in breeding. The fourth exhibitor was W. O. Wharton & Daughter. Mr. Wharton's entries showed exceptional strength and development. The awards are as follows:

Aged Bulls.—Wharton first on King Hengerveld Aaggie Veeman.

Bull, two years and under three.—Iowana first on Tritomia Pietertje Ormsby Lad; Naber second on Iowana Ona Hartog.

Bull, one year and under two.—Naber first on Ormsby Mechthilde Lad; Sanitarium second on Fayne Homestead Ormsby Aaggie; Iowana third and fourth on Iowana Fayne Burke and Iowana Ona King Pietertje.

Bull Calf.—Wharton first on unnamed; Naber second on Bostwick Pietertje Creathcart; Iowana third on unnamed; Sanitarium fourth on Korndyke Berta of Oakdale.

Senior and Grand Champion Male.—Iowana on Tritomia Pietertje Ormsby Lad.

Junior Champion Male.—Naber on Ormsby Mechthilde Lad.

Aged Cow.—Iowana first on Lady Johanna Aaggie Fayne; Naber second on Lorella Cornucopia of Home Farm; Sanitarium third on Miss Johanna Maid Ormsby; Iowana fourth on Iowana Star Pauline.

Cows, three years and under four.—Iowana first on Iowana Ona Homestead De Kol; Sanitarium second on Myrtle Berta Ormsby; Wharton third on Queen Jerk Korndyke.

Heifer, two years and under three.—Iowana first and second on Iowana Ona Fayne Dora and Iowana Ona Fayne Waldron Cornucopia; Sanitarium third on Lillian Pietertje Homestead De Kol; Naber fourth on Seven Springs Parthenia De Kol.

Senior yearling Heifer.—Iowana first on Iowana Ona Aaggie Bess; Naber second on Seven Springs Pietertje De Kol.

Junior yearling Heifer.—Iowana first and second on Iowana Ona Friend Julia and Iowana Homestead Babe; Sanitarium third on Minowaki Bessie Fayne; Wharton fourth on Francis Veeman Alcartra.

Heifer Calf.—Sanitarium first on Miss Ormsby Beets Clarier 2d; Iowana second and third on Iowana Ona Gladys and Iowana Oak Mechthilde; Wharton fourth on unnamed.

Senior and Grand Champion Female.—Iowana on Lady Johanna Aaggie Fayne.

Junior Champion Female.—Sanitarium on Miss Ormsby Beets Clarier.

Graded Herd.—Iowana first and third; Naber second.

Yearling Herd.—Iowana first; Naber second.

Calf Herd.—Iowana first and third; Wharton second.

Get of Sire.—Iowana first and second on get of Meadow Holm Hartog King; Wharton third, and Naber fourth.

Produce of Cow.—Iowana first; Wharton second, and Naber third.

Because of the California foot and mouth trouble, Governor Hart has ordered the cancellation of the 1924 Washington State Fair.

NORTH DAKOTA STATE FAIR

The North Dakota State Fair held at Fargo, July 14-19 drew a big attendance. The livestock exhibits were of a high order and received much commendation from Professor G. B. Fitch of Manhattan, Kans. He said "the younger classes of Holsteins contained the better animals, a circumstance that speaks well for the ability of the breeders. The junior yearling Holstein heifer owned by a club youngster was an excellent animal and easy winner."

The Bacon herd carried off both male championships. Senior female championship went to Edenvale Lady Ormsby Pietertje, the first prize mature cow shown by H. F. Schroeder of Glyndon, Minn., while the junior champion was the junior yearling, Ormsby Colantha Ava, owned by Carsten Madsen of Jamestown, N. D., member of a junior calf club.

The exhibitors were:—J. D. Bacon, Grand Forks, N. D.; John Eagleson, Valley City; Carsten Madsen, Jamestown; North Dakota Agricultural College, Fargo; E. J. Tainter, Park River; A. B. Thompson, Grafton; and H. F. Schroeder of Glyndon, Minn.

The awards were:—

Aged bull: 1st, Bacon on Sir Pontiac Colantha Bismarck; 2d, Thompson on Spring Farm King 34th.

Bull, three years and under four: 1st, Bacon on Lilac Hedge Pontiac Mooie; 2d, North Dakota Agricultural College on Dean Ormsby Mercedes.

Bull, two years and under three: 1st, Bacon on Belmont De Kol Ormsby Beets.

Yearling Bull: 1st and 2d, Bacon on Bacon Mercedes Wayne Hartog and King Colantha Star.

Senior bull calf: 1st and 4th, Bacon on King Sirocco Homestead Segis and Sir Pontiac Paul Colantha; 2d, North Dakota Agricultural College on Dean Ormsby Mercedes 4th; 3d, Schroeder on Sir Peter G. Lyon Ava.

Aged cow: 1st, Schroeder on Edenvale Lady Ormsby Pietertje; 2d and 4th, North Dakota Agricultural College on Miss Ormsby Madaline and Adelaide Korndyke Champion; 3d, Thompson on Gerben Westside Mona.

Cow, three years and under four: 1st, Schroeder on Minita Pietertje Ormsby; 2d, Bacon, on Bacon Josephine Ollie Mercedes; 3d, North Dakota Agricultural College on Ndacol Ormsby Mercedes.

Heifer, two years and under three: 1st and 2nd, Bacon on Lilac Hedge Bismarck Lass and Lilac Hedge Colantha Lass; 3d, and 4th, North Dakota Agricultural College on Ndacol Cynthia Mabel and Ndacol Cynthia Queen.

Senior yearling heifer: 1st, Bacon on Bacon's Pontiac Belle; 2d, Schroeder on Miss Ormsby Pietertje Lyons.

Junior yearling heifer: 1st, Madsen on Ormsby Colantha Ava; 2d, Bacon on Lilac Hedge Mollie De Kol 3d; 3d, Schroeder on Bess Korndyke Clothilde Burke; 4th Eagleson on Queen Homestead De Kol Oak.

Senior heifer calf: 1st, Tainter on Pauline Ormsby Mercedes Fobes; 2d, 3d and 4th, North Dakota Agricultural College on Nakota Bess Ormsby Pietertje, Nakota Bess Ormsby Melba and Nakota Bess Ormsby Countess.

Senior and grand champion bull: Bacon on Lilac Hedge Pontiac Mooie.

Junior champion bull: Bacon on Bacon Mercedes Wayne Hartog.

Senior and grand champion female: Schroeder on Edenvale Lady Ormsby Pietertje.

Junior champion female: Madsen on Ormsby Colantha Ava.

Graded Herd: 1st and 2d, Bacon.

Yearling Herd: 1st and 2d, Bacon.

Calf Herd: 1st, North Dakota Agricultural College; 2d, Bacon; 3d, Thompson.

Get of Sire: 1st, North Dakota Agricultural College; 2d and 3d, Bacon.

Produce of Cow: 1st, 2d, North Dakota Agricultural College; 3d, Bacon.

The awards in the junior Holstein Calf classes were:

1st: Carsten Madsen, Stutsman County (also junior champion, open class); 2d, Ralph Welch, Walsh County, 3d and 6th, John Eagleson, Barnes County; 4th, Glenn Eikenberry, Walsh County; 5th, Alfred Balweg, Stutsman County; 7th, Wayne Eikenberry; Walsh County; 8th, Myrtle Piper, Cass County; 9th, Arthur Eagleson; 10th John Stokke, Walsh County; 11th, George Pierce, Stutsman County; 12th Clarence Piper, Cass County.

The awards in the showing contest were: 1st, Wayne Eikenberry; 2d, Alfred Balweg; 3d, Ralph Welch.

GREAT SOUTHERN FAIR

The state of Tennessee has appropriated \$15,000 to supplement the premium list of the Tri-State Fair which will be staged at Memphis, September 20-27. Breed associations have contributed liberally to the prize lists especially in the beef breed classes. The Holstein-Friesian Association adds \$420 to be competed for by black and whites.

An illustrated booklet entitled "The Story of the Fair" has been compiled by Frank D. Fuller, secretary-manager and will be ready about August 1. It will give the complete program of the events and attractions and also valuable information for exhibitors and visitors and will be mailed to any person making application for it.

WORLD'S RECORD ON TWICE A DAY MILKING

Aralia De Kol Mead 2d has added to her great list of records by producing 22,485.8 lb. milk, 1,072.08 lb. butter in a year on two milkings a day. This is the world's record for butter in subdivision B and stands as the breed record for twice a day milking. It is surpassed however, by the tremendous record of 954 lb. betterfat or 1,192.5 lb. butter made in a year as a four-year-old by the phenomenal Australian cow, Melba 15th of Darabalara during which she was milked twice daily. Aralia, however, surpasses her Australian competitor by qualifying in the ten months division in which she is credited with 20,589.1 lb. milk, 972.04 lb. butter. By this performance, she captures the worlds' records both for milk and for butter production in subdivision B. for the ten months period.

Aralia De Kol Mead 2d is the dam of the great show bull Prince Aaggie of Berylwood, who, although exhibited extensively during 1922, was grand champion wherever shown. His offspring are inheriting his exquisite type and have carried off high honors wherever exhibited. Eastern Holstein breeders are greatly interested in the performances of Prince Aaggie of Berylwood as one of his sons, Berylwood Prince Aaggie Chicago, heads the eastern accredited herds of L. L. Allis of Rummerfield, Pa., and James E. Eastman, Rome, Pa.

Aralia De Kol Mead 2d has a long list of big records. As a six-year-old, she made 26,938.5 lb. milk, 1,303.84 lb. butter in a year; as a four-year-old, in ten months, she is credited with 21,217.2 lb. milk, 886.16 lb. butter while as a junior two-year-old she made a year record of 18,785.6 lb. milk, 851.01 lb. butter. She has two different years made over 30 lb. butter in seven days, as a junior-four-year-old making 32.03 lb. and as a six-year-old producing 37.13 lb.

She is the dam of Miss Aralia De Kol Mead, 897.82 lb. butter as a junior two-year-old while her dam Aralia De Kol Mead, made 1,215.20 lb. butter in a year and in turn was from the famous old cow, Aralia De Kol, 28,090 lb. milk, 1,142.32 lb. butter in a year. These four direct descendant cows of the Aralia family average 1,139.8 lb. butter in yearly test, a showing not equalled by any other four direct descendant cows. Prince Aaggie of Berylwood has a remarkable pedigree.

His dam and sire's dam average over 1,300 lb. butter and 25,800 lb. milk in yearly test while his three nearest dams have year records averaging 1,283.61 lb. butter. His seven nearest dams have yearly records averaging 1,181.81 lb. butter, 25,719.3 lb. milk which is the highest showing ever reported for seven nearest dams of any herdsire. He is full brother to Miss

PRINCE AAGGIE OF BERYLWOOD
Owned by Berylwood Stock Farm, Hueneme, Calif.

Aralia De Kol Mead the two-year-old, completing the four generations group. The dams in his pedigree, besides being tremendous producers are also transmitting this desirable quality as they have produced eleven daughters that have made records averaging over 1,000 lb. butter, and 21,000 lb. milk, despite the fact that five of them were two-year-olds at time of testing and three of them were tested only for a ten months period.

CHOCOLATE MILK

In many widely scattered parts of the country a large trade has been built up in the manufacture and sale of chocolate milk. In some places the business started off good when the product was first introduced but after a short time the customers seemed to tire of the product while in other places a good business has been built up and a steady demand maintained. The quality of the product is largely responsible for whether or not such a trade can be maintained and this trade is also influenced by the price demanded.

The Brooklandwood Farms, Lutherville, Md., has built up a wonderful trade in chocolate milk and we are informed that their business is still growing. They are within easy riding distance of the City of Baltimore. They have a show farm and splendid herds of purebred Holsteins and Guernseys. In

addition they have catered to this trade as a profitable means of marketing part of the product of their dairy. There are many dairies so situated that such a trade could be built up if proper attention could be given to the many details.

All milk sold in this manner means so much less on the general market. It also means cutting out the middleman and thus benefiting both the producer and consumer.

The editors of the BREEDER AND DAIRYMAN have in contemplation a series of articles on preparation of what may be called "dairy by-products," or what rather should be called "marketing direct to the consumer."

In the manufacture of chocolate milk, it is necessary to have chocolate syrup. This can be purchased already prepared from any reliable extract house and from many drug stores but it is just as satisfactory and even more economical to prepare your own syrup. The following formula is used at the Pennsylvania State College creamery and has proven satisfactory. Enough syrup can be made at one time to last several days; it will not spoil if stored in a cool place:

Ingredients for chocolate syrup.—1 pound of best grade Dutch process cocoa, 7 pounds of granulated sugar, 2 quarts of water.

Mix cocoa with 1 quart of water to a thick paste free from lumps. Stir the sugar into the cocoa paste. Add another quart of water and stir. Heat the mixture to 200 degrees Fahrenheit. Stir slowly while heating. Hold for fifteen minutes.

PREPARATION OF MILK.

Pasteurize the milk by heating it to 155 degrees F. and hold it for fifteen minutes. This temperature has been found to be most satisfactory for chocolate milk, since it improves its keeping qualities and prevents a layer of cream forming on top of the bottles after they stand.

ADDING THE SYRUP.

To nine parts of the hot pasteurized milk add one part of the above syrup, then cool and bottle.

VISCOLIZING.

Experiments conducted by the Pennsylvania State College show that cocoa settles out in larger amounts when the mixture of milk and cocoa is viscolized than when it is not. For that reason, if a viscolizer or homogenizer is used, the milk should be viscolized and the syrup added afterwards. A satisfactory product can be prepared without the use of such machines as the viscolizer, emulsors, and homogenizers.

FLAVORS.

Flavors other than chocolate are sometimes used. Pineapple and vanilla are the most common. One ounce of flavoring to ten gallons of chocolate milk is about right. Malted milk is sometimes added for the purpose of giving additional flavor to the milk.

FARM BUREAU AGENTS INSPECT MARKETS

New York State Farm Bureau managers made a three days' marketing inspection trip in New York City and on July 23d enjoyed a three-hour sail around New York harbor on the municipally owned ferryboat, President Roosevelt. The trip was sponsored by the Department of Agricultural Relations of the New York Central. Representatives of several municipal departments were on hand to point out terminals, piers, markets, etc., and to explain the relationship of each to the marketing and food distribution system of New York City as the boat skirted the shore line.

There were 250 on board including farm bureau managers, directors and county presidents of the Dairymen's League Co-operative Association, Inc., and members of the Conference Board of Farm Organizations. Prior to the boat ride, Acting Mayor William T. Collins delivered an address of welcome to the visitors in the mayor's reception room in the City Hall. S. L. Strivings, master of the New York Grange, made the response.

The visitors had a busy day. In the morning they inspected the headquarters of the Dairymen's League at 120 West 42nd St. They were taken in busses from the League's offices to a broadcasting station, then to the City Hall and later to the President Roosevelt's slip at the Battery by a special escort of motorcycle policemen.

DAIRYMEN FORMING CREAM POOL

A cream pool movement has been started by the Minidoka Cassia Counties Holstein-Friesian Breeders Association. Idaho dairymen are dissatisfied with the prices paid for butterfat by the cheese factories and are also dissatisfied with the tests given by the factory representatives, claiming that they are lower than they should be.

In such pools the farmer selects the tester and the buyer pays him as well as the expenses of testing. Similar pools in other parts of Idaho are said to have been of great benefit to farmers.

CHAPMAN TAKES JUVE'S PLACE

J. L. Chapman, Sr., of River Falls, Wis., has been appointed by the Holstein-Friesian Association of the state as director to succeed K. L. Juve of Sheboygan Falls, who resigned because of the dispersal of Pinehurst Farm herd of which he was superintendent and his acceptance of a position outside the state.

Mr. Chapman and his sons operate one of the best known herds in the northwestern part of Wisconsin.

Holstein day at the New York State Fair will be Tuesday, September 9. The judge is again "Bob" Haeger of Algonquin, Ill., and judging is planned to start at 9 a. m.

KING ORMSBY ENDERCAMP

heads our Accredited Herd

His sire is King of the Ormsbys. His dam is one of the best daughters of Judge Segis.

The seven nearest dams of this choice young bull, all that appear on a four-generation pedigree chart, have seven-day records that average 30 lb. butter. We are offering choice young cows and heifers bred to him at low prices for quality.

LAST CALL

Mrs. C. R. Duroe's sale of thirty-five purebred Holstein
 Friesians at South New Berlin, N. Y., August 30.

THE DUROEDEL HERD

A herd of purebred Holsteins that has been in existence sixteen years will be
 dispersed at South New Berlin, Chenango County, N. Y., August 30, when the Duroe
 herd will be sold at public auction.

Early in 1908, the late E. A. Duroe purchased from E. H. Powell, Syracuse,
 N. Y., a heifer calf, born February 11 of that year. Her name was Lakeside Neta
 Pauline and she was by Korndyke De Kol Burke from Neta Paul's De Kol 2d.
 Then a little later he purchased two daughters of the King of the Black and Whites
 from another veteran breeder, A. A. Hartshorn of Hamilton, N. Y. These were
 the foundation animals from which the present herd at Duroedell Farm has been
 built, although three or four purebred cows were afterwards purchased, one at a
 time from breeders in the neighborhood. Today the herd consists of thirty-five head.

A number of well-bred bulls have headed this herd. One of the former herd-
 sires was King Pontiac Daffy, by King of the Pontiacs from Daffy De Kol Spofford,
 561 lb. milk, 30.25 lb. in seven days as a ten-year-old. This cow has four tested
 daughters, one of which, K P Daffy, has an official record of 530.7 lb. milk, 30.10 lb.
 butter. K P Daffy was full sister to King Pontiac Daffy.

At Duroedell they have intensified the blood of King of the Pontiacs for, while
 King Pontiac Daffy was a son of that great bull, the two bulls succeeding him as
 herdsires were both grandsons of King of the Pontiacs. Following King Pontiac
 Daffy came Ormsby Lilith Lady Clothilde. This bull was by King Korndyke Henger-
 veld Ormsby from K P Lilith Lady Clothilde, 28.47 lb. butter in seven days as a
 junior four-year-old; 26.09 lb. butter in seven days, 814.71 lb. butter in a year as a
 senior two-year-old. She was full sister to K P Lilith Boon, 32.22 lb. butter in a
 week and to K P Lilith Clothilde, 22,229.8 lb. milk, 1,043.27 lb. butter in a year
 as a junior four-year-old, world's record for butter and second highest record for
 milk in class at time of making. Ormsby Lilith Lady Clothilde is half brother to
 Ormsby Korndyke Lad, had one hundred percent the same blood as Ormsby Lilith
 Clothilde and his dam was full sister to the dam of King Segis Pontiac Count.

King Dane Hildale, the latest sire at Duroedell Farm, was by King Pontiac
 Hildale from Rockledge Dane Count Aaggie, 27.13 lb. butter, 566.4 lb. milk in a
 week. She was from a granddaughter of De Kol Burke and was by Count Aaggie
 Cornucopia Paul 2d. King Pontiac Hildale, one of the best known bulls that ever

BACKUS PEDIGREE CO., MEXICO, N. Y.

**THE FEED SITUATION IN THE
 EAST**

August has usually been the best
 month of the year to secure low prices
 on feed and many dairymen operating
 in a large way have purchased the big-
 gest portion of their year's grain supply
 at this time. This year, however, has
 been an exception and prices have been
 steadily climbing the entire summer.
 The July news letter of G. W. Tailby,
 chief supervisor of the New York Dairy
 Improvement Associations says that the
 average price of fourteen of the common
 by-products used as cattle feeds has in-
 creased 17% since May 15 and even
 then prices were steadily climbing. He
 recommends a feed mixture which, at
 cash prices would cost \$38.06 per ton
 and says that in June a similar mixture
 would have cost \$31.58; and early in
 July, \$35.18. The dry weather during
 the latter part of July and early August
 will materially shorten pasture feed and
 with a bigger demand for grain, prices
 are sure to strengthen.

Mr. Tailby advises that, before the
 dairyman lays in a supply of feeds, he
 should follow price movements, talk the
 matter over with his dealer and, when
 the decision to buy is reached, arrange
 to pay cash. He advises reducing the
 hazard by providing good storage, free
 from rats and mice and then properly
 insuring both buildings and its contents.
 The dealer does this and the consumer
 has to pay the bill so that, when the
 dairyman takes advantage of what he
 thinks is a low price, he should take
 similar precautions.

The mixture Mr. Tailby advises is:

600 lb. mixed feed or middlings
 200 lb. barley or hominy
 400 lb. bran
 400 lb. oil meal
 400 lb. gluten feed

2000 lb.

T. B. WORK IN PENNSYLVANIA

The first six months of this year there
 were 10,188 herds containing 60,511
 cattle tested in seven different Pennsylv-
 ania counties, Crawford, Jefferson,
 Mercer, Warren, Elk, Lawrence and
 Butler.

Clearfield, Beaver and McKean are the
 next to be tested under the Accredited
 Herd Area Plan and the work will be
 followed up in Lawrence County.

The number of cattle tested this year
 far exceeds the number tested any pre-
 vious year. More money has been
 available for the work but the requests
 have increased at the rate that taxes the
 facilities of the Pennsylvania Bureau of
 Animal Industry.

**DEYSHER ENTERTAINS HOL-
 STEIN FANS**

About fifty Holstein breeders and
 friends of Chester County, Penna.,
 visited Berks Farm the last of July and
 were guests of Mr. Abner S. Deysher.
 The party left West Chester at 9:30
 A. M. Upon their arrival in Reading,
 about noon, they inspected St. Lawrence
 Dairy Plant and then, accompanied by
 Mr. Daniel S. Adams of the Dairy
 Company, they went to the Deysher
 establishment. After spending about
 three hours looking over this high class
 herd, they started back, making a stop
 at the County Home where they also
 saw a big producing herd of purebred
 Holsteins.

lived in central New York, was by King of the Pontiacs from Hildale Lorie Korn-
 dyke, 625.6 lb. milk, 29.93 lb. butter in seven days as a senior four-year-old. King
 Pontiac Hildale has a long list of tested daughters. His blood is found in many
 of the best herds of central New York.

The Duroe farm has always been operated from a dairyman's standpoint and
 the cows kept for their ability to make a profit over the cost of care and feed, yet
 a number of good official records have been made. Individuality has been kept in
 mind and also health. The herd is under state and federal supervision and in the
 last test the animals passed clean. The sale will begin at 10 A. M., August 30, and
 will be held on Duroedell Farm, South New Berlin, New York.

Cow Testing Association Reports

PUREBREDS LEAD IN IOWA

The West Branch Cow Testing Association operates in Cedar County, Iowa, and during the association year just ended, the average production per cow was 265.4 lb. butterfat. High cow and high herd were both owned by Ralph Branson of West Branch, who keeps only purebred Holsteins. The herd averaged 440.4 lb. fat at an average feed cost of \$88.21. His high cow, Cordova Wayne 2d is a four-year-old and she produced 13,647 lb. milk, 596.2 lb. fat in the year. Irene Buffalo Maid, a three-year-old, in the Branson herd produced 12,712 lb. milk, 526.5 lb. butterfat. Mr. Branson had six in the leading ten producers.

The average production for the five high herds in the association was 360.2 lb. fat per cow at a cost of 21.2 cents per pound and the average profit per animal was \$103.68. The average production for the five low herds was 229.2 lb. fat at a cost of 25.9 cents and their average profit was only \$45.06 per cow.

DENMARK ASSOCIATION MAKES ANNUAL TOUR

The members of the Denmark Cow Testing Association have an annual tour. This year's event took place July 2. There were fifteen cars containing about 75 persons.

The farm of Lawrence J. Larsen, east of Denmark, Wisconsin, was first inspected. Last year Mr. Larsen's twelve purebred Holstein cows averaged 10,966 lb. milk, 374.3 lb. butterfat.

The Jansen Bros. farm near Lange's Corners was next visited. This is their first year in the cow testing association and they have a fine herd of grade and purebred Holsteins, consisting of 22 head which have had an average test of 3.6% fat. One member of the herd was purchased from a man who said the cow

was not a good producer. The Jansen Brothers thought that she was and the cow testing association has proven that their judgment was correct for from December 13 to July 1 the cow produced 7,500 lb. milk, 301 lb. butterfat.

At the Brown County Asylum, manager Henry F. Wittig has built up a splendid Holstein herd. Cows in this herd have made up to 34 lb. butter in seven days test and nearly 700 lb. fat in a year. Here lunch was served, Mr. Wittig furnishing coffee and lemonade. A rising vote of thanks was given Mr. and Mrs. Wittig for their kindness and courtesy.

The last establishment visited was the Ferndell Farms owned by the William Larsen Canning Company. Manager Fox led out the show herd which was so successful last year. At present twenty-three head are being fitted for the Wisconsin State Fair, Central States Exposition, the Waterloo Dairy Congress and the National Dairy Show.

At Ferndell Farms a judging contest was staged with four prize yearlings. Manning Nelson, tester for the Denmark Association was high man, scoring 100%. Six tied for second place with a score of 85. They were: Alfred Anderson, Robert Johnson, Henry F. Johnson, E. R. Davis, Harry H. Hanson, and Mrs. C. Hansen.

WESTERN TESTING DURING JUNE

The three Ferndale Cow Testing Associations have been inactive during the foot and mouth quarantine but come back with a vengeance by furnishing the highest producing herd in the seven states reporting June production to the Western office of the United States Bureau of Dairying. This herd consists of twenty-five grade Jerseys and they averaged 1,440 lb. milk, 61.8 lb. fat. It is owned by Nat Houck of Alton, Calif. A grade

Guernsey herd of Tillamook, Oregon, is second with an average of 60.8 lb. fat for thirty cows while a twenty cow grade Holstein herd owned by Egbert Bros. of Bow, Wash., and enrolled in the Skagit County Association is third with an average of 1,643 lb. milk, 58 lb. butterfat. A seventeen cow dairy of registered and grade Holsteins owned by Barber Bros. of Nehalem, Ore., and enrolled in the Tillamook Association No. 3, is fourth with 1,362 lb. milk, 50.4 lb. fat, with Tillamook Association No. 2 showing the sixth highest herd consisting of twenty-six grade Holsteins owned by Ivan Gist of Cloverdale, Ore. They averaged 1,426 lb. milk, 49.6 lb. fat.

The two highest cows are both registered Holsteins. Lady, owned by A. J. Lawson of Blanchard, Wash., was first with 3,021 lb. milk, 117.8 lb. fat and Princess, owned by Arnold Kruger Plains, Mont., is second with 112.3 lb. fat. Oregon leads for highest average production, its 3,958 cows averaging 40.13 lb. while 3,667 Washington cows averaged 36.73 lb. fat. California had 11,706 cows tested and their average is 32.07 lb.

There were 45 associations reporting and they consisted of 1,444 herds with a total of 28,627 cows tested. The average production was 33.04 lb. butterfat, 7,926 cows or 27.6% producing more than 40 lb. butterfat during the test period.

PUREBRED HOLSTEINS IN FIVE LEADING PLACES

Purebred Holsteins occupy the five leading places in the Dairy Improvement Associations of New York State for the month of May. George True of Adam's Basin, Monroe County had the first and fourth, the leader producing 94.8 lb. fat, 2,709.4 lb. milk and her stablemate producing 88.3 lb. fat, 2,452.1 lb. milk. Both were six-year-old cows. Poplar Ridge Fayne Cornucopia, a three-year-old,

owned by C. E. Hess & Son of Phoenix, Oswego County, was second with 94.4 lb. fat, 2,552 lb. milk. Maple Knoll Roella, owned by J. M. Keeny of Chester was third with 89.4 lb. fat, 2,294 lb. milk. Winona Sadie Vale, a four-year-old, owned by D. L. Hayes & Sons of Montour Falls, Schuyler County, was in fifth place with 84.6 lb. fat, 1,838 lb. milk as a four-year-old.

The preliminary report for June shows that a purebred Holstein owned by F. H. Thompson of Holland Patent is in the lead with 86.5 lb. fat, 2,276 lb. milk while two other purebred Holsteins are credited with over 79 lb. fat.

The Thompson herd, all purebred Holsteins, were represented by sixteen cows enrolled in the Boonville Association. Six cows of this herd each gave over 70 lb. fat and the entire herd averaged 46.2 lb. fat, 1,253 lb. milk.

SOUTH CAROLINA TESTING

Butter Girl May Johanna 2d, then the property of J. T. Willard, Spartanburg, S. C., led all the cows in her state in July by the production of 73.3 lb. butterfat, 2,092 lb. milk in the month as a senior four-year-old. Mr. Willard had four other animals above 46 lb. fat, one of which Sigsbee Farm Copia Colantha stood in third place by the production of 69.1 lb. fat, 2,282 lb. milk in the month as a junior three-year-old. The Willard dispersal sale will be over long before this article appears in print. We hope that the majority of the animals in the herd remain in the southern states and that the dispersal of this noted herd may mean the starting of a number of new ones.

The herd of V. M. Montgomery also of Spartanburg, is represented by eight in the honor roll. O. K. L. Aaggie, last month's state leader, is third among the Holsteins and fourth in the entire state for July. She is credited with 1,875 lb. milk, 66.8 lb. butterfat as a junior four-year-old. Cedardale Alice Korndyke Posch made 1,782 lb. milk, 59.7 lb. fat in her fifth lactation month and Star Segis Pontiac Superior, purchased by Mr. Montgomery at the Richmond National Sale, is credited with 1,423 lb. milk, 59 lb. butterfat as a senior four-year-old in her sixth lactation month. "Echo" the junior two-year-old owned by Kai Schwensen also of Spartanburg in her seventh lactation month is credited with 1,354 lb. milk, and exactly 54 lb. fat. Sarcastic Lillie Pontiac Colantha of the Clemson College herd produced 1,567 lb. milk, 49.7 lb. fat as a senior two-year-old.

WISCONSIN TESTING

A grade Holstein owned by George Tubbs led the Pulaski Testing Association, which operates in Outagamie Co., Wis., during July. She is credited with 1,740 lb. milk, 64.3 lb. fat. Another grade Holstein owned by Fred Roepcke follows closely with 1,800 lb. milk, 63 lb. fat.

There were 537 cows tested during the month, 15 of these produced more than 50 lb. butterfat.

A registered Holstein owned by Peter Hopfensperger led the Junction City, Wis., Testing Association for July, with the production of 1,612 lb. milk, 56.4 lb. fat. Otto Mayer owned the animal in second place with 1,468 lb. milk, 51.4 lb. fat. Mr. Mayer's black and white herd carried off the honors by producing an average of 1,124 lb. milk, 39.2 fat, while

Mr. Hopfensperger's herd of registered Holstein was second with 1,106 lb. milk, 38.2 lb. fat per cow.

Barney DeClean owned the leader of the Green-Bay-De Pere Wis., Testing Association, a purebred Holstein in his herd producing 2,085 lb. milk, 62.6 lb. fat during July. Martin Zelten owned the high herd, their average being 1,317 lb. milk, 44.3 lb. fat.

Sixty-two cows of the 460 tested produced more than 40 lb. fat, eleven exceeded 50 lb. while two exceeded 60 lb. in the month.

LEADER OF HER STATE

By producing 2,349 lb. milk during the month of June, Arona De Kol Netherland 2d, a member of the Penn Arco Farm herd and owned by Cook and Ben-neth of Langhorne, Pa., became the highest producer for that month of the 10,683 cows tested in the thirty-one Pennsylvania testing associations.

The Penn Arco Farm herd is enrolled in the Middle Bucks Association which also furnished the third highest milker in the state, a cow owned by H. A. Bowen of Perkasee, she producing 2,295 lb.

Arona De Kol Netherland 2d is a daughter of Arona De Kol Netherland and Sir Hengerveld Reg Apple. Her best day's milk is reported as being 81.3 lb., and she is a nine-year-old.

The Penn Arco Farm herd is owned jointly by C. H. Cook and Paul B. Ben-neth and practically every month during the past two years had one or more cows in the highest ten in the Middle Bucks Association and in June of this year had four in the list. The herd consists of thirty-five head of purebreds.

TESTER'S COW FIRST

Mable, a six-year-old grade Holstein, owned by Oliver Pritchard, who is tester for the Kane County, No. 2, Ill. Testing Association led that association for fat production during the month of July by making 1,786 lb. milk, 85.7 lb. fat. Douwe, a purebred Holstein owned by C. E. Warford & Sons was second with 84.5 lb. fat, 2,167 lb. milk.

Warford & Sons' herd of seventeen purebreds again had the high herd average production being 1,271 lb. milk, 45.3 lb. fat while Mr. Pritchard's twelve grade Holsteins were second with 1,178 lb. milk, 41.4 lb. fat.

The average production for the entire association was 763 lb. milk, 26.3 lb. fat. Two members of this association purchased their first purebred Holsteins during the month.

ENGAAS CARRIES OFF HONORS

Black and white cows and herds carried off the honors in the Holmen, Wisconsin, Testing Association for the month of July. High herd honors were credited to the registered Holstein herd owned by John Engaas, of Holmen, their average being 38.92 lb. fat, 851 lb. milk. Second high herd average went to Engaas Bros., their purebreds producing 37.7 lb. fat.

Engaas Bros. owned the high cow, a six-year-old member of their herd producing 1,577 lb. milk, 63. lb. fat.

Experience is a school where a fellow learns what a big chump he has been.

HOLSTEINS MADE GOOD START

The Montgomery County Cow Testing Association was recently started in Montgomery County, Pa., with C. E. McCormick, Collegeville, as treasurer, and Carl A. Sager as tester. During the month of July there were 274 cows in milk in this association; twenty-six cows exceeded 40 lb. fat and seven made over 50 lb. while twenty each produced over 1,200 lb. milk.

Although the leader was a purebred Jersey, black and white cows made a fine showing, four of the best ten being purebred Holsteins while the four highest milking herds are black and white. The leader made 57.2 lb. fat while Annie, a purebred Holstein owned by A. K. Rothenberger was second with 1,649 lb. milk, 56.07 lb. fat. Grade Holsteins were fourth and fifth with 53.24 lb. and 53 lb. fat respectively. Lily, a purebred Holstein, owned by J. L. Wood & Sons, is in sixth place with 52.9 lb. fat, a purebred Holstein of the Ursinus College herd is eighth with 47.73 lb. fat to her credit and a purebred Holstein owned by Mrs. Howard Bieler is in tenth place with 46.87 lb. fat.

The Ursinus College herd consisting of twelve purebreds led for milk production with an average of 979 lb. The herd of A. A. Heebner, consisting of fourteen grade Holsteins is second with 923 lb.; Mrs. Bieler's herd of eleven purebreds and grades averaged 914 lb., while the purebred herd of J. L. Wood & Sons averaged 905 lb. for thirteen head.

The leading herd for average butterfat production was owned by O. M. Woodward & Son with an average of 34.2 lb.; the Ursinus College herd averaged 32.2 lb., the herd of Mrs. Bieler averaged exactly 32 lb., while the A. A. Heebner herd averaged 31.6 lb.

GRADE LEADS IN VOLANT C.T.A.

A grade Holstein, five years old, led the Volant Cow Testing Association for both milk and butterfat during the month of June by the production of 1,785 lb. milk, 76.8 lb. butterfat. She was owned by A. E. McCreary & Son and her average test was 4.3%. Second for milk was a purebred Holstein owned by C. M. Hartzell with 1,708 lb. The Volant Association operates in part of Lawrence County, Pa., and Paul J. Stonebraker is the tester. During June twenty herds containing 226 cows were under his jurisdiction. There were twenty cows that produced over 50 lb. fat, sixty-eight over 40 lb. and twenty-four exceeded 1,200 lb. milk. The average for the ten highest cows was 61.1 lb. fat, 1,513 lb. milk.

THREE BEST WERE HOLSTEINS

Johanna Aaggie Homestead owned by O. K. Iverson of Kalispell, Montana, was the high record cow during the first year of the operation of the Flathead Cow Testing Association. In 11 months she produced 25,018 lb. milk and 673.2 lb. butterfat. There were 15 cows that produced over 400 lb. fat.

Johanna Posch Belle Fayne, owned by V. H. Voelker also of Kalispell, produced 22,171 lb. of milk and 658.3 lb. butter-

**Colantha Sir Pontiac

RALPH C. JACKSON

Conneaut Lake, Pennsylvania

fat and Ollie Astrea Homestead of the Iverson Herd produced 16,366 lb. milk and 552.7 lb. butterfat.

Tester E. R. Ford says there were 36 herds in the Association and 586 cows were tested. The average production for the 237 cows that were on test for ten months or more was 7,443 lb. milk and 284.7 lb. fat. Fifty-three cows and four bulls were sold to the butcher while 11 purebred bulls, 6 purebred cows, 56 grade cows and 9 grade heifer calves were purchased. On the strength of the testing records, 48 grade cows, 19 grade heifers and 16 purebred calves were sold by members.

The bulk of the hay ration fed by most of the members, was alfalfa, 25 of them using only alfalfa for hay. Twelve members fed either corn or sunflower silage, 13 members fed a grain ration consisting of barley, oats and bran in various combinations. The favorite one being, three parts barley, two parts oats and one part bran. Fifty pounds of oil meal were added to this mixture for some of the high producers.

SOUTH DAKOTA TEST WORK

Purebred Holsteins made a splendid showing in the South Dakota Associations for the month of July as the leading cow, the best producing herd and the cow earning the largest net income are all purebred black and whites.

Dakota Bryonia, owned by the Sioux Falls Association, is the largest producing cow, being credited with 2,535.8 lb. milk, 91.29 lb. butterfat. Second to her was "Johanna," owned by Lewis Larson of the Day County Association, credited with 1,839.8 lb. milk, 84.63 lb. fat. Her butterfat was valued at \$33.85 and she is charged with a feed cost of \$5.70 for a daily ration of 10 lb. bran and 13 lb. corn silage in addition to her pasture. Her income over cost of feed was \$28.15.

The highest average herd was owned by A. J. Brandt of the Watertown Association. His twelve cows averaged 1,197.6 lb. milk, 41.73 lb. fat. The nine Associations report 2,935 cows on test in 216 herds. Of this number 248 exceeded 40 lb. butterfat and 381 exceeded 1,000 lb. while 101 herds averaged more than 25 lb. butterfat per cow.

COW TEST PICNIC

The second annual picnic of the Saline-Lafayette Cow Testing Association was held at Concordia, Missouri, July 30th. It was well attended.

A Calf Club team from Lafayette County demonstrated the testing of milk and told the value of keeping accurate records on cow production. This team will compete with others at the Missouri State Fair in putting on similar demonstrations and judging dairy cattle.

Among the speakers of the afternoon were C. E. Driver, Dairy Agent of the Missouri Pacific Railway; State Dairy Commissioner E. G. Bennett; E. A. Duensing, president of the Concordia Chamber of Commerce, Cliff B. Goodwin, president of the Marshall Chamber of Commerce; E. M. Harmon, dairy specialist of the Missouri College of Agriculture and George Catts, agricultural secretary of the Kansas City Chamber of Commerce.

Four good Holsteins with cow testing association records ranging from 10,000 to 12,000 lbs. milk and fat records ranging from 321 to 412 lbs. were lined up and the visitors were asked to guess how much milk and butterfat they produced. One of the cows had a milk record of 10,584 and another had 10,516 lbs., a difference of only 68 lbs., but there was a difference of 81 lbs. in their fat production. Altho many of the visitors were good dairymen there was a wide variation in the estimates.

A BUSINESS PIONEER

Thousands of cattle are shipped every year from this country and from Canada into the English market but the business has grown up in comparatively recent years. On July 22, at Whittlesea, his English home, died Jonathan Hall Truman, the first man to take live American cattle into the English markets. He shipped 250 fat stock from Chicago in 1877.

Mr. Truman, however, is better known to American livestock interests as the founder of Trumans' Pioneer Stud Farm at Bushnell, Ill.

In 1882, he imported twenty-five Shire stallions and sold them for an average of \$1,820. In 1883, Mr. Truman with one of his sons, started the Pioneer Stud Farm and two others sons joined him in later years. He was internationally known and a few years ago was always the center of a group of interested livestock and horsemen at any large gathering in Chicago or other points in the middle west. Mr. Truman, who was 82 years old had been practically confined to his house for a number of months. We learn that, on July 21, on the last day he was out doors, he induced his son Horace to take him in a wheel chair so that he could see his livestock in the pasture, his favorite diversion in his latter years.

AGAIN MAKES STATE RECORD

The new state champion of Texas, over all breeds is the purebred Holstein, Utility Segis Hengerveld No. 365087, owned by the Ho-tex Farms, Dallas. These farms are owned by Mrs. Ella M. Gage and the manager is Louis H. Smokler. Utility Segis Hengerveld's new record is 26,794.4 lb. milk, 922.66 lb. butterfat or 1,153.32 lb. butter. She takes the state championship away from the Jersey cow, Bright Morning Sultana, 900.6 lb. butterfat in the year.

The highest day's milk for the new champion was 108.9 lb. and she made an official record of 30.24 lb. butter, 702 lb. milk in seven days. Her total feed bill for one year, according to her manager, was \$494.20. As the milk from this herd is sold as baby special milk at 25 cents a quart, her gross earnings for the year were \$3,338.50 and her net profit was \$2,844.30. Her feed averaged 32 lb. a day and her bill for concentrates was \$321.20. She is charged with eating seven and one-half tons of hay at the farm price of \$75. She was milked four times a day and the labor charge was \$91 for the year.

Utility Segis Hengerveld was brought from Michigan into Texas several years ago. As a junior four-year-old she produced 21,531.6 lb. milk, 863.93 lb. butter in 365 days which is still the state record in that class.

"Berkshires on Every Farm"**The
Berkshire World**

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

CECIL L. A. RESSEGUIE

KINGSLEY PENNA.

KING TO SHOW AGAIN

The King show herd which has been so successful in the great fairs in the Southwest in the last few years is intending to make another big trip. Their first appearance will be at Sedalia, Missouri, on August 16 and they will take in nine of the best fairs in eight different states. They will be under the care of Frank Wells and his assistants, who have had considerable experience with the animals. Mr. King says he knows that his stock are going into fast company but believes that they will get their share of the prizes. The King show herd will consist of sixteen head and will be headed by Triune Ormsby Picbe 4th, who carried off a number of grand championships last year. Another bull that is expected to get his share of prizes is a son of Sir Pietertje Ormsby Mercedes 41st. This pair of herd bulls were very successful in last season's fairs. The balance of the exhibit are cows and heifers that won prizes last year and a few younger ones that show promise of duplicating the performances of their older stablemates.

The home of the King herd is Grandview, Missouri, but the owner is in the real estate business in Kansas City. He shows his herd partly as an advertisement for the breed and partly as an advertisement of his own stock. By exhibiting some of the best cattle he has ever been able to take out, he expects to get a lot of business from the southwestern farmers who have raised immense crops this year and as prices of wheat and corn have materially stiffened during the past few weeks, Mr. King believes that the consequent prosperity of the farmers will help the demand for the dairy cow, particularly Holsteins. Instead of sitting down waiting for buyers to come to Kansas City, Mr. King is sending out his herd so that the intending buyers can see the quality of his stock and he hopes to place at least 200 head of purebred Holsteins before the present season ends.

BULL ASSOCIATIONS IN THE WESTERN STATES

By S. BASHEROV

The first bull association in the western part of the United States was organized in Oregon in 1915. To-day in seven states consisting of Idaho, Montana, Nevada, New Mexico, Oregon, Utah, and Washington, there are fifty-one active bull associations with a membership of 1,590 farmers. They jointly own 241 bulls and their dairies consist of 8,534 cows, 541 of which are purebred. Of these 51 associations, 28 are Holsteins, 16 Jerseys and 7 Guernseys.

Idaho leads with 32 associations. Utah now has twelve associations in operation and three more have recently been organized for which bulls have not yet been purchased. Montana, Nevada, New Mexico and Oregon each have one association and Washington has three.

LOOK! One full aged cow, two bred heifers, four yearlings and a few heifer calves. Good Price for Quick Sale. Herd under State and Federal Supervision, first test CLEAN. Write for photo or call and see them.

A PRODUCER AND HERD BUILDER

Ridge Frances Pauline Julip is one of the cows owned at Orwell Ridge Farm, the property of James E. Eastman, Rome, Pa. No official records have been made at this establishment but early in the year Ridge Frances Pauline Julip and one of her daughters, Ridge Fanny It Pontiac Fayne, freshened. Finding out that Lisle L. Allis of Rummerfeld, whose farm is a few miles distant, was testing, Mr. Eastman persuaded Mr. Allis to put Frances and her daughter in the test string. When the test closed, Ridge Frances Pauline Julip had to her credit

RIDGE FRANCES PAULINE JULIP
501.6 lb. milk, 24.03 lb. butter, average test 3.83%. Owned at Orwell Ridge Farm, James E. Eastman, Rome, Pa., Prop.

an official record of 501.6 lb. milk, 24.03 lb. butter, and her daughter, Ridge Fanny It Pontiac Fayne, was credited with 559.7 lb. milk, 29.69 lb. butter in seven days and 1,086.4 lb. milk, 59.02 lb. butter in fourteen days. The old cow was tested as an eight-year-old and her daughter as a senior four-year-old, while the seven-day record of the dam was begun 25 days after she freshened and that of her daughter was begun 32 days after.

Ridge Frances It Pontiac Fayne is the only tested daughter of Ridge Frances Pontiac Julip, although 80% of her calves have been heifers. She is a daughter of King Segis Pontiac Julip who was by King Segis Pontiac from a good daughter of King of the Pontiacs. King Segis Pontiac was by King Segis and Pontiac Clothilde De Kol 2d, the first cow to make 37 lb. butter in a week and over 1,000 lb. butterfat in a year. Mr. Eastman has been persuaded to consign Ridge Frances Pontiac Julip to the Bradford County Breeders' Consignment Sale which will be held at Troy, Pa., November 1. She has been bred to Berylwood Prince Aaggie Chicago, a splendidly bred young bull owned jointly by Mr. Allis and Mr. Eastman.

This young bull is a son of Prince Aaggie of Berylwood, who heads the great California herd owned by Berylwood Stock Farm. This bull was the undefeated grand champion at the 1922 California fairs. His dam, Aralia De Kol Mead 2d, has just made new world records in subdivision B by producing 20,589.1 lb. milk, 972.04 lb. butter in ten months and 22,485.8 lb. milk, 1,072.08 lb. butter in 365 days. Aralia already had a year record of 1,303.84 lb. butter made as a six-year-old. The dam of Berylwood Prince Aaggie Chicago is Hartwood Netherland Segis, 27,018 lb. milk, 1,145 lb. butter in a year, 53,670 lb. milk, 2,272 lb. butter in two years.

Under the circumstances, the records made by Ridge Frances Pauline Julip and her daughter are considerable out of the ordinary. These two cows had no previous preparation and in the case of the dam there was only two weeks rest between her two lactation periods. The test was carried on with the cows standing in the stanchion with strange cows and in a neighbor's dairy and cows very seldom test to good advantage in a strange barn.

From January 11 to August 11 of this year, seven months, Ridge Frances Pauline Julip has produced 10,546 lb. milk, 409.4 lb. butter.

The other member of Mr. Eastman's consignment to the Troy Sale is a heifer calf born the first day of the year. Her dam, Ridge Empress It Pontiac Fayne, has produced 433.4 lb. butter in a year as a three-year-old. Since the date of the birth of her calf, that is, January 1, 1924, up until the first day of August, seven months, she has produced 10,097 lb. milk, 363.9 lb. butter. She has 75% the same blood as the 29.69 lb. four-year-old, Ridge Fanny It Pontiac Fayne, and her dam has 100% the same breeding as Ridge Frances Pauline Julip, the 24-lb. eight-year-old.

The sire of this calf is Walker Lyons Colantha, whose seventeen nearest dams have seven-day official records that average 31.17 lb. butter.

The Eastman herd is accredited. Records are kept of every milking of the cows and at any time Mr. Eastman can tell you what they are doing in their everyday work. The owner is a real business farmer and we expect to tell you much more about the animals in Orwell Ridge herd during the coming year.

BACK VOSS FOR POSITION

A number of Holstein owners of Walworth County are backing J. G. Voss of Elkhorn, Wisconsin, in his effort to secure the position of Clerk of the Circuit Court.

Mr. Voss is one of the best known Holstein breeders in the State of Wisconsin. He has spent practically all his life in Walworth County, except for six months when he was on a stock farm at Bartlett, Illinois. Years ago he was president of the State Holstein-Friesian Breeders' Association and has served as Secretary of the Association and also as a Director of the National Association. For ten years he was County Superintendent of the Schools and has always been prominent both in breed circles and community life.

IT WOULD HAVE BEEN A GOOD TRICK IF IT HAD SUCCEEDED

(From the New York Journal.)

"James Grodkin, sixty years, laborer, died at Bellevue from injuries received in a fall from the second to the third floor of the house in which he lived."

MONTANA PUREBRED LIVESTOCK TOUR

When the twenty-five cars of farmers and business men made the second annual purebred livestock tour of Flathead County, Montana, on July 12, the Holstein establishments of Joe Monegan, Winfield Scott and the Hori Farms were visited. The Monegan ranch houses the largest herd of purebred Holsteins in Flathead County while at the Hori Farm the dairy barn had been recently remodeled and equipped for dairy cows. A picnic dinner was held at the Auto Tourist Park at Whitefish and there were 150 present. Coffee, hot beans, buns, weiners, ice cream and ice cold milk were served to the crowd by the ladies of the Whitefish Chamber of Commerce.

Edgar L. Beard, secretary of the Chamber, was chairman of the speaking program. Editor Moss of the Whitefish Pilot welcomed the visitors to the city. J. O. Tretsen, dairy specialist, and R. B. Millin, livestock specialist from the State College at Bozeman pointed out the advantage of dairying and livestock farming in the Flathead section. Rev. J. E. Parker of Kalispell in an address on the present economic condition of the farmer pointed out that some relief in the price situation must come. In his opinion the greatest need of the hour was an awakening of the public mind to the duties of citizenship. He called attention to the fact that there are in the country fifty-four million registered voters and at the last general election only twenty-seven million voted.

BULL KILLS NOMINEE FOR GOVERNOR

Andrew S. Anderson, nominated by the Democrats for governor of South Dakota, was gored to death August 11 at his farm, Beresford, S. D., about thirty miles south of Sioux Falls.

According to press dispatches the fatality occurred early in the morning. Mr. Anderson was walking in the pasture when one of the bulls attacked and killed him.

The fatality may exert considerable influences upon the political situation. In 1910, Mr. Anderson was elected to the legislature from Clay County and was reelected in 1912 and again in 1914, when he defeated Carl Gunderson, who is now nominee for governor on the Republican ticket. In 1916, Mr. Anderson was nominated by the Democrats for lieutenant governor but was defeated, although he ran considerably ahead of his ticket. The Democrats offered him the nomination for the position of governor in 1922 which he declined at that time but accepted this year.

A LONG SESSION

Once and again they said good-night. And heeded not the hall clock's warning; She cuddled close—he held her tight, The passage of the swift hours scorning. Thrice and again they said good night—Until it was good morning!

A super-sheik is one who can hold a girl's interest with a mouse loose in the room.

FOR SALE—High-grade Holstein milkers and springers, car lots or less. Choice lot two-year-old springing heifers. All tuberculin tested. E. E. LEWIS, R. 3, Racine, Wis.

NOT EXACTLY DAIRY CATTLE

Eugene B. Bennett, contributing editor of the HOLSTEIN BREEDER AND DAIRYMAN and former president of the Pennsylvania Holstein-Friesian Association, has been traveling in Europe the past few months. Being greatly interested in all things agricultural, Mr. Bennett has spent most of his time in the rural districts rather than sight seeing in the cities. Subsequent issues of the BREEDER AND DAIRYMAN will contain brief articles by him

ITALIAN WORK CATTLE

From a photo taken by Eugene B. Bennett near Rome, Italy.

telling of some of the things he has seen on his travels and such articles will be illustrated by photographs personally taken by Mr. Bennett. While in Italy he secured a photograph of Italian work cattle from which the accompanying illustration was made. The photograph was taken near Rome on the estate of an Italian nobleman. This breed of cattle is widely distributed throughout Italy and is known as the Podolian. Animals of this breed usually have white or light gray coats and enormous horns.

Vast herds of these cattle roam over the Tuscan and Roman marmmas as the swampy regions are termed and are descended from the Italian water buffalo. Oxen of this breed are used for farm work and are generally white in color.

BIG COW IN SMALL HERD

About sixteen years ago representatives of the Skaalen Home for the Aged, which is located north of Stoughton, Dane County, Wisconsin, purchased five purebred Holstein heifers, buying three from one man in Trempealeau and two heifers from a breeder at Deerfield. One of these original animals is still in the herd together with seven of her daughters. One member of the herd, Porcelain Thora Baker, has official records of 36.28 lb. butter, 672.9 lb. milk for seven days, 148.22 lb. butter, 2,798.1 lb. milk for 30 days.

The superintendent of the Home is the Reverend B. J. Larsen, who states that the entire product of the herd is devoted towards the maintenance of the inmates, the family, as he calls them, being now over half a hundred.

Voice over the phone: "Is Mike Howe there?" (Is my cow there.)

At the other end of the wire: "What do you think this is, the stockyards?"—

Fond Mamma—And what did my little pet learn at school to-day?

Little Pet—I learned two kids better'n to call me "Mamma's little pet."

GOES TO PERU

Sir Burke Johanna XXVI is the name of a purebred Holstein bull shipped recently from the herd of Louis Sorenson of Larsen, Wisconsin, to Risso Brothers' Dairy Farm which is located near Lima, Peru, South America.

This bull is a son of Sir Burke Johanna and Jessie Fobes Mechthilde Homestead, a cow with a year record of 20,000 lbs. milk and 920 lbs. butter made as a ten-year-old. During the year she made this record she carried calf 186 days. Five of her offspring were sold as calves for \$2,350.00.

With Sir Burke Johanna XXVI will be shipped a herd of 11 females purchased by the South Americans at the recent dispersal of the Ericson Herd. When the cattle arrive at Lima, it is planned to stage a celebration in which a number of men prominent in Peruvian agricultural circles will take place. The herd these animals are going to consist of 250 milkers, Holsteins and Brown Swiss.

TO BOOM KANSAS WHEAT

A campaign is under way in Kansas to have every sack of flour milled in the state bear the legend "Kansas grows the best wheat in the world."

Woody Hockaday, who is in charge of the campaign, is attempting to have the automobiles tags of Kansas next year bear this slogan as well as to have the hotels of the state have this inscription appear on every sheet of their stationery.

The only kind of friend worth having is the kind you get for nothing.

HAMPSHIRE

FOR
SIX
YEARS

FOR
SIX
YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIRE are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—*THE HAMPSHIRE ADVOCATE*—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs. FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

THE HOLSTEIN BREEDER AND DAIRYMAN

**For Two Years and a Device to Keep the
Cow's Tail out of Your Eyes and
Face for Life while milking - \$1.00**

For a limited time, while the supply lasts, we are offering a CORBIN TAIL HOLDER with a two years' subscription to the HOLSTEIN BREEDER AND DAIRYMAN, new or renewal.

The accompanying illustration shows how perfectly the device works. Every dairyman has had the disagreeable and oftentimes painful experience of being switched in the face while milking.

Dairyman will realize the sanitary value of this holder. Much filth and stable litter gets into the milk by the persistent switching of the cow's tail.

Clip this ad., sign, attach to it a \$1 bill, money order or personal check, and mail it TODAY. The HOLSTEIN BREEDER AND DAIRYMAN will be mailed to you for the next 24 issues and you will receive the Corbin Tail Holder FREE.

The Iowa State Fair

BY SPECIAL CORRESPONDENCE

THE bankrupt condition of the Hawkeye farmer was hardly reflected by Iowa's seventieth State Fair and Exposition. The attendance crowded the best record in history, 408,000, and the quality and number of exhibits surpassed anything that has ever been put on either in Iowa or elsewhere.

As one would naturally expect in this section where the choicest beef is finished, beef cattle predominated, but the dairy breeds are creeping up from year to year in number and popularity. The Des Moines Fair is claimed to be the greatest State fair of America and it is fast becoming one of the leading dairy shows.

In the Holstein classes, the largest of any dairy breed, there were 262 entries, and the quality was splendid all through. Exhibitors came from Minnesota and Texas, Oklahoma and Wisconsin, Colorado and Iowa.

The outstanding exhibit was made by the Iowa Board of Control. There are fifteen institutions under the supervision of that body and each maintains a herd of Holsteins. It has been the policy to start with grades and good bulls. Then as progress is made the herds are gradually changed to purebred and it is from these that their exhibit was made. There were sixty-two head in the group, and the quality was first class all through. There were Advanced Registry cows with records crowding the 1,000 lb. mark and there were bulls that rank among the best in breeding as well as individuality.

The four-year-old bull, Cherokee Ormsby Piebe, owned by the Independence Hospital, came to the show expecting to carry the purple ribbon home again. He is so in the habit of taking the highest honors that it was quite a shock to be outclassed by another Ormsby—Corwin Wimple De Kol Ormsby—shown by the Modern Woodmen of America Sanatorium of Colorado. He was easily the best bull at the show. His size, quality, and type all combined to make him a worthy grand champion. The same herd took the female champion honors on their great show cow, Zwingara Segis Clothilde, and did it justly.

Aside from these highest places the judging was received with considerable criticism by on-lookers. It was the general opinion that the judge had no decided type in mind. One could never tell what was going to catch his eye.

The outstanding exhibit was that of John M. Kelley, of Baraboo, Wisconsin, in the Get-of-Sire class. In this class Mr. Kelly showed four cows in milk and as an exhibit they were practically unbeatable. Such a

showing does more to convince the breeder of the advisability of the producing animal in this class, than pages of argument.

Exhibitors:—Board of Control of Iowa State Institutions, Des Moines; George Fox, Oelwein; J. H. Hanson, Randalia; Hargrove & Arnold, Norwalk; Iowana Farms, Davenport; F. H. Pieplow, Aurora; G. E. Sauerby, Oelwein; P. P. Stewart, Maynard, Iowa; Holtex Farms, Inc., Dallas; F. E. Prince, Pittsburg, Texas; John M. Kelley Farms, Baraboo, Wis.; A. J. Breeders' Calf Herd:—1st, Fred Pieplow; 2d, Modern Woodmen; 3d,

Get of Sire:—1st, J. M. Kelley Farms; 2d, Modern Woodmen; 3d, Mudcura Farms; 4th, Iowana Farms; 5th, P. P. Stewart.

Produce of Cow:—1st and 4th, John M. Kelley Farms; 2d, Board of Control; 3d, Marlow & Randall; 5th, Fred Pieplow.

Factors Involved in Tuberculosis Eradication and in Maintaining Sound Herds

VERANUS A. MOORE

New York State Veterinary College, Cornell University, Ithaca, N. Y.

(Concluded from last issue.)

The country has recognized the need for trained veterinarians and several states are supporting veterinary colleges. In 1919, the profession in the United States was put on a reasonable educational basis. Because they have come but recently to represent a learned profession, veterinary practitioners are not always appreciated. They are, nevertheless, essential to the animal husbandry of the country. They are checking the inroads of disease—which is the great stumbling block to animal husbandry—with courage and sacrifice we know not of. They are riding the country roads by day and night relieving the suffering of lower animals and instructing their owners. Those well qualified have the confidence of the breeders and they are doing more effective teaching than any of us. They carry the salient truths of science pertaining to animal diseases from the research institutions to a multitude of owners who need the information. They know the conditions in the herds and the attitude of their owners towards sanitary questions, and, consequently, they are in the strategic position to direct breeders into right thinking and acting.

In order to secure more uniform veterinary service, and fairly equal remuneration for all competent veterinarians, Norway has divided her territory into districts in each of which is a veterinarian who receives a salary and who, in addition to his private practice, does such official work as circumstances may require. There are four classes of veterinarians based on the nature of private practice and the government needs. The method provides efficient veterinary service for all animal owners. It would seem that through some system of examination and test for efficiency, local accredited veterinarians in this country could be made a part of the state live stock sanitary force. It would provide an adequate service for treating the sporadic diseases and combating the specific ones. Further it would give all cattle owners, who are anxious to eliminate tuberculosis, an equal opportunity and eliminate the occasion for the charge

of discrimination against both breeders and practitioners.

A further requirement is the complete coöperation between the Federal bureau of animal industry, the state live stock sanitary authorities and the veterinary practitioners. Actual coöperation of all interested parties from the owner of the cattle to the highest sanitary official is very essential. It would encourage legitimate appropriations for the work and tend to minimize the time for exterminating the disease. Much confusion is resulting from too many plans operating independently, but each looking to the State and Federal Governments for authority and aid. While the practitioners are essential factors, the state and federal authorities who pay the indemnities and accredit the herds must fix the requirements and supervise the work. Such a coöperation would mean a sanitary service that would include all the competent veterinarians as well as all the breeders who are anxious to get rid of the disease. They would all be working together for the protection of our animal husbandry, which is the greatest industry in eastern agriculture.

The functions of the state sanitary service and the practitioners are to control the communicable diseases and minimize the losses from the others. The protection of the live stock industry as a whole does not permit the centering of all attention on the extermination of one disease to the neglect of the others. Diseases are changing and new ones are developing. The recent finding of lesions in cattle, easily mistaken for tuberculosis, and due to acid-fast bacteria unlike the tubercle organism, suggests the eternal vigilance required to keep in check the development of parasitism, or disease producing tendencies in microscopic life. Johne's disease is spreading gradually. It is equally as common in our cattle now as tuberculosis was 60 years ago. If not carefully controlled it promises to become a far more troublesome scourge for the next generation than tuberculosis is now. Infectious abortion has attained equal or greater signifi-

cance economically than tuberculosis and the sporadic diseases are causing more actual loss among animals than either of them. The responsibilities that confront our live stock sanitary officials are not limited to the eradication of tuberculosis. Their problem is not only large and difficult, but accompanied by a multitude of very perplexing factors that demand attention. They are component parts of the symptom-complex of disease control. It is because of these potential dangers that threaten our animal husbandry that I plead for a coöperation that will assure a veterinary service competent to protect our dumb creation. As man cannot live unto himself alone, so the eradication of one disease cannot be separated entirely from the control of others.

The elements that seem to be necessary to enhance the control of tuberculosis, and at the same time safeguard our live stock against other maladies, involve but few changes in the Accredited Herd Plan. The States, in coöperation with the Federal Government can formulate a policy that will utilize their veterinarians in a way that will make available competent service for all live stock owners and efficiency in uniform tuberculosis eradication. The problem is easily solved if it becomes a matter of general interest, most difficult and expensive otherwise. Progress is made sometimes by retreats as well as by advances.

It is natural that the enthusiasm of the promoters of the present plans should cause them to believe the solution of the problem to be so near that its perspective is lost; and that the pitfalls surrounding them, that have entrapped many in the past, should not be recognized for the moment. The conquest over an epizootic has been likened to a battle won, but the eradication of a widespread and chronic disease is like the victorious ending of a great war, the real value of which will be measured by what it has accomplished for a better future in comparison with what it has cost. The question that is uppermost in the minds and ambitions of this group of men is how can this great war against bovine tuberculosis be won in the shortest possible time. The questions that are being asked by those most vitally interested, however, pertain to the efficiency of the campaign; to the length of time before the final conquest; to the cost of the procedure; to the reason for loss to the cattle industry of valuable strains that have required generations of careful selection to produce; and whether, after all, the victory could not be won in shorter time, with less immediate disturbance to the cattle industry and with greater assurance for its future by a federation of all the official, professional and allied forces interested in the project.

"Billy" Bishop Honored

At its commencement exercises last June the Washington State College conferred a certificate of merit on five men who are prominent in state agricultural circles and who have rendered signal service to agriculture in that state. One of the men honored was the Honorable Wm. Bishop of Chimacum who is now in his twenty-fifth year in the state legislature. Mr. Bishop is one of the prominent

Holstein breeders of Washington. Today he still lives on the farm on which he was born more than sixty years ago. "Chimacum" Holsteins are noted all over the country, particularly on the Pacific Coast, for their large production as well as for show ring ability. Mr. Bishop was for a number of years a director of the Holstein-Friesian Association of America. His term of office expired in June 1919. At the Philadelphia meeting when his successor was appointed, he made a speech in which he commented on the tactics used in several campaigns by the faction which at that meeting gained control of the National Association.

This faction, aided by periodicals which, at that time and since that time, have steadily upheld the actions of its own members and depreciated the actions of the conservative element in the association, had been criticizing the acts of the then chairman of the executive committee, the head of the financial committee, and the directors and had steadily said that the association's finances were not properly handled despite the fact that the reserve fund had been added to practically every year and the net worth of the association was steadily increasing.

Mr. Bishop said in part, "I want to say to you all without fear of contradiction that the suspicion that was raised among the breeders of this Association a year or a year and a half ago was without foundation. You were awfully deceived. Many members have a suspicion that there is something wrong in the management of this Association."

"I am going to guarantee to you that when this new Board of Directors comes in they can stand on this platform in a year from now, or two years, or five years, and say to you that I told you the truth, that when they were in the management of this Association and examined the books, they found nothing wrong and will guarantee to you that there was nothing wrong. And I want to say to you all that I am leaving the Board of Directors with much pleasure that I have been a member of the Board of Directors of The Holstein-Friesian Association."

The history of the past five years has shown that Mr. Bishop spoke the truth but he did not say enough. The faction that gained control of the Association at that meeting have held control of the Board of Directors ever since and, although they have increased the transfer fee to six times the amount it was previous to the June meeting of 1919, yet they have so managed or mismanaged the affairs of the association that, for the year 1923, the receipts from all sources were less than the expenditures.

As it Should Be

H. R. SHOULTES, president of the Washington State Holstein-Friesian Association, has recently been elected a director of the First National Bank of Chehalis. Congratulations to Mr. Shoultes; evidently the Holstein business is looking up. It is rather unusual for a cattle breeder to become a bank director—it is generally the other way round.

Iowa and Missouri State Fair Prize Winners

CORWIN WIMPLE DE KOL ORMSBY

First prize three-year-old bull, senior and grand champion at the Iowa State Fair. Owned by the Modern Woodmen of America Sanatorium, Woodmen, Colo.

ZWINGARA SEGIS CLOTHILDE

First prize aged cow, senior and grand champion at the Iowa and Missouri State Fairs. Owned by the Modern Woodmen of America.

CHEROKEE ORMSBY PIEBE

First prize aged bull at the Iowa State Fair. Owned by the Board of Control of Iowa Institutions.

MISS PEARL PIEBE

First prize senior yearling and junior champion at the Missouri State Fair. Owned by A. J. King, Kansas City, Mo.

WOODCRAFT PONTIAC CHAMPION STAR

First prize senior yearling bull and junior champion at the Iowa State Fair. First prize senior yearling, junior and grand champion at the Missouri State Fair. Owned by the Modern Woodmen of America.

OAKWOOD PIEBE OLLIE

First prize senior yearling heifer and junior champion at the Iowa State Fair. Owned by Mudcura Farms, Shakopee, Minn.

A. W. Downton: Breeder and Builder

STARRUCCA is the name of a little village in northeastern Pennsylvania close to the New York State line and almost on the border of Wayne and Susquehanna Counties. It is the center of a district where dairying predominates and in this territory can be found a number of good dairy herds. One of the best of these consists of purebred Holsteins owned by A. W. Downton.

Mr. Downton and his good wife came from England about a quarter of a century ago. The Downtons now own thirty-three head of purebred Holsteins. This

ARTHUR W. DOWNTON

herd is under state and federal supervision. In the last test only one animal did not pass clean and she was a grade that had lately been added to the herd.

A number of good sires have headed this establishment in past years. One of these bulls is Plum Spring Farm Copia, a son of Cornucopia Merrilles De Kol 2d, 32.73 lb. butter, 685.5 lb. milk in seven days and 131.42 lb. butter, 2,923.3 lb. milk in thirty days. She was a granddaughter of Pontiac Korndyke and her own dam has a seven-day official record made as a junior four-year-old of 31.08 lb. butter, 574.9 lb. milk. The other side of this pedigree is just as remarkable as his sire was a grandson of the first 44-lb. cow, K P Pontiac Lass and his dam was De Kol Plum Copia, 33.26 lb. butter in seven days as a six-year-old and 30.47 lb. butter, 668.7 lb. milk a week as a five-year-old.

Origin Sir Napol Cornucopia succeeded this bull. His sire was a son of Keystone Plum Johanna 29.35 lb. butter in seven days, 1,052.96 lb. butter, 22,190.7 lb. milk in a year. She was a daughter of Cornucopia Plum Johanna 1,056.78 lb. butter in a year, and she was also full sister to Keystone Beauty Plum Johanna, 32.88 lb. butter, 665.5 lb. milk in seven days and 1,294.71 lb. butter, 25,787.5 lb. milk in a year as a senior four-year-old, world's record in class at time of making.

The dam of Origin Sir Napol Cornucopia is Cornucopia Plum Johanna 2d, 731.6 lb. butter in ten months

as a senior four-year-old, Pennsylvania state record at time of making. Her sire is a son of Keystone Plum Johanna and her dam is Cornucopia Plum Johanna, the cow mentioned above as having 1,056.78 lb. butter in a year. This cow is not only one of the granddams of Origin Sir Napol Cornucopia but also appears in the pedigree of his three other grandparents, being granddam of two of them and dam of the other one. This cow has five daughters with records made in long time test. The records of this cow and her five daughters average 18,723.1 lb. milk and 918.35 lb. butter despite the fact that not all the tests are for the full year and that four of her daughters were tested as heifers. The six members of this family average practically four per cent fat in their long time work.

Arthur Downton is a brother to the late Dr. E. W. Downton, who for a number of years had one of the best herds of purebred Holsteins in northern Pennsylvania. The farm owned by the Doctor and the farm owned by Arthur Downton join, but for several years no purebred Holsteins have been kept on the farm formerly owned by the Doctor.

Mr. Downton became a member of the Holstein-Friesian Association of America in 1918 although he owned purebred Holsteins for quite a while previously. He is a member of the State Federation and also of the Dairymen's League.

When the Downtons came to their present home, there were very few buildings thereon. Now there is a complete set of buildings. Electric light and power is furnished by a home lighting plant. Mr. Downton is naturally a builder. This is shown in several ways; by the development of the herd; by the erection of new buildings; and by the making of roads around his large farm. He is never so happy as when he is improving something.

The Taxation Problem

"THE problem of the government is to fix rates which will bring in a maximum amount of revenue to the treasury and at the same time bear not too heavily on the taxpayer or on business enterprises. A sound tax policy must take into consideration three factors. It must produce sufficient revenue for the government; it must lessen, so far as possible, the burden of taxation on those least able to bear it; and it must also remove those influences which might retard the continued steady development of business and industry on which, in the last analysis, so much of our prosperity depends. Furthermore, a permanent tax system should be designed not merely for one or two years nor for the effect it may have on any given class of taxpayers, but should be worked out in regard to conditions over a long period and with a view to its ultimate effect on the prosperity of the country as a whole."

The above is from the book "Taxation:—The People's Business," by Andrew W. Mellon, Secretary of the Treasury.

The Whole Brown Family

THE accompanying illustration depicts a true Holstein breeder and dairyman's family, that of L. S. Brown of Saegertown, Crawford Co., Pa. The twins, Hilda and Helen, are on the extreme left of the picture. Mrs. Brown is between her two sons-in-law with Mr. Brown and his youngest child and only son, Edgar, on the extreme right. Directly in front of their mother are the two married daughters, the grandchildren occupy the front row.

The son-in-law standing next to the twins superintends the herd and farm of Luther Conroe, Cambridge Springs, Pa., while the other son-in-law is one of the proprietors of a large Cambridge Springs garage. The

MR. AND MRS. L. S. BROWN AND FAMILY—Sunday, July 27, 1924

Brown dog is always on hand when it is time to get the cows and it was approaching milking time when the photo was taken.

The picture was taken by a Breeder and Dairyman representative on a Sunday afternoon for Sunday afternoons are about the only spare time the older members of the family have and it is utilized by visiting backwards and forwards.

Mr. Brown has an accredited herd of purebred Holsteins and is regarded as one of the best farmers in the community. Like many farmers, he is considerable of a mechanic and not only built his own barn but also helped to build a number of other barns in his neighborhood. Sometime in the future, we plan to run a feature story on the Brown herd.

Reducing the cost of farm operations is the surest way the farmer and dairyman has of making increased profits.

A Maryland Breeder and His Herd

ALTHOUGH he has only a few cows, John M. Martin, Smithburg, Maryland, has several high class producers at Ivy Hill Farm. The acreage of Ivy Hill Farm is limited, the whole farm containing only eighty acres, part of it is in timber and part of it is in fruit. At the time of our visit, there was only eight cows in milk yet Mr. Martin was running long time tests and had made some very creditable records.

S J P K Jetta is a daughter of Sir Jessie Pontiac Korndyke and therefore a granddaughter of Pontiac Korndyke as her sire was by that bull and from one of his own 30 lb. daughters. She had just closed her

JOHN M. MARTIN
Smithburg, Md., and Topsy Pontiac Joh, owned jointly by Mr. Martin and his neighbor, C. E. Stouffer.

John M. Martin is an everyday farmer and dairyman who keeps purebred Holsteins because he believes that they are the most profitable dairy breed. He is one of the numerous class who have been practically overlooked and ignored by the present management of the Holstein-Friesian Association, yet without him and thousands of others like him the National Association would lose its largest source of income and would soon go on the rocks. May the day soon

Joh from Topsy Pontiac Isabelle, 513.5 lb. milk, 25.78 lb. butter in a week. She is from an A. R. O. daughter of Lord Lilith Netherland Roe and was sired by Sir Pontiac Topsy, a grandson of King of the Pontiacs.

Prince Lyons Joh was by King Joh from Segis Cleopatra Lyons a daughter of King Lyons and Segis Cleopatra, who was by King Segis from Cleopatra Gelsche, one of the best daughters of the famous foundation cow Prilly. Large milk and butter records show in every line of the pedigree of this sire.

come when the control of the breed organization is again in the hands of the men who work their own farm and care for their own cattle.

One of Our English Subscribers

WALTER SUTTON of Munthan Farm, Findon, Sussex is a prominent man in the British-Friesian fraternity for he was the developer of the former British-Friesian champion cow, Brookside Colantha, 31,551 1/4 lb. milk in a year, 1,104 lb. butter.

On the Munthan Farm is kept the Hache herd, one of the best in the country. In this herd are a number of animals that have carried off prizes at many fairs and also made large milk and butter records.

Brookside Colantha was added to the Hache herd in October 1918. December 7 of that year she dropped her third calf and then produced 16,440 lb. milk in 364 days. At her next freshening, she produced 23,690 lb. milk in 365 days and was exhibited at two shows, winning first prize in the milking test at the Sussex Show and first prize for the best dairy cow of any breed at Tunbridge Wells. During her fifth lactation period we do not know that she was exhibited but she made the record given above. Her five records total 96,861 lb. milk for 1,752 days. Only the last two records were for the full 365 days while her first record was only over a period of 297 days.

As Brookside Colantha was the first British Friesian cow to produce 30,000 lb. milk in a year, pictures of her appeared in many British and European papers and also in the leading agricultural journals in other parts of the world including this country.

Mr. Sutton is a noted dog breeder, specializing in English Springer Spaniels. The picture depicts him with two of his pets, Abinger Jester and his daughter, Abinger Lake. These two spaniels were only exhibited once and that time each won first in their respective classes, won first as brace or pair and also the special prize for best gun dog of any variety. Abinger Spaniels have won over fifty awards in field trials and three times have carried off the Bethume Challenge Cup and

cows and the picture sent us depicts her with a couple of handsome Abinger Springer Spaniel puppies. Miss Kate Sutton likes cattle and has written a book on general herd management, incidentally telling how the former British Friesian champion, Brookside Colantha, was handled and fed during her several lactation periods. This book will soon be published and will be sold for five shillings or about \$1.25 at normal exchange.

Livestock raising to be successful must be planned and entered into as a business, not as a speculation.

SPOTTED COWS and SPOTTED SOWS

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

Four Great Yearly Records

UNDER date of September 3, Superintendent Gardner sent out an announcement that Adirondac Wietske Dairy Maid owned by the Bridgford Holstein Company of Patterson, Calif. had for the fourth time made over 1,000 lb. butterfat in the year. Her four successive year records average 32,349.9 lb. milk, 1,048.13 lb. fat or 1,310.16 lb. butter. This latest record of 31,517 lb. milk, 1,005.82 lb. fat was started when this cow was eleven years, four months and

ADIRONDAC WIETSKES DAIRY MAID
Four yearly records each above 31,000 lb. milk and 1,200 lb. butter.

twenty days old. This is equivalent to 1,257.27 lb. butter computed on the 80% basis.

Adirondac Wietske Dairy Maid is the first cow that has ever made 1,000 lb. butterfat four successive years and is the first cow to make over 31,000 lb. milk four different years. She was bred by Harry Mason Knox of Canton, N. Y. but has made her records in the Bridgford Company's herd. As a six-year-old she is credited with 831.7 lb. milk, 41.02 lb. butter in seven days; 3,603.1 lb. milk, 158.31 lb. butter in thirty days. The following are her four yearly records:—

At 7-10-2	31,899.8 lb. milk	1,295.11 lb. butter
At 9-0-20	34,401.9 lb. milk	1,420.19 lb. butter
At 10-2-28	31,580.9 lb. milk	1,268.08 lb. butter
At 11-4-20	31,517. lb. milk	1,257.27 lb. butter

Average 32,349.9 lb. milk 1,310.16 lb. butter

Nov. 20-29—Jacksonville, Florida, Florida State Fair.

THE CENTRAL STATES EXPOSITION

Although the Central States Exposition held at Aurora, Ill., has only been running three years, it is a great fair and the cattle exhibits are of the very best. This event was staged from August 15 to 23 and brought together nearly one hundred and eighty head of high class Holsteins from five different states.

There were several outstanding features, one of the greatest being the coming together of Madam Artis Wayne Denver and Dorothy Ormsby Piebe. These two heifers were shown last year as two-year-olds. They met twice and the Madam was placed ahead of her Iowa rival. These were the only defeats suffered by Hargrove & Arnold's great heifer last year with the exception of the National after she had been shown all season and then another Iowa heifer was placed ahead of her, the decision being acknowledged to be close by the judge himself. Judge Haeger, who praised her highly last year, again favored the Wisconsin heifer and she went on to senior and grand championship.

The Jefferson County Asylum herd, which was cared for by the veteran showman Frank White and his son Roy, who came from Waterloo, Iowa, to assist his father, won both senior and both grand championships and also the junior female championship, the championship for junior male going to Triune Ormsby Piebe 27th of the Hargrove & Arnold herd. The Asylum was stronger in the individual classes than they were in the groups of which they only won that for graded herd, placing second for young herd and get of sire, third for calf herd and only fourth for produce of cow, Hargrove & Arnold winning in all four.

The Illinois breeders showed a great deal of interest in the

Medill McCormick County Herd \$1,000 Special. There were seven herds, each consisting of eight animals and Judge Haeger placed the DuPage County aggregation first, with Kane second, Lake third, Winnebago fourth, and Boone fifth.

The detailed awards are:—

Bulls, three years old and over, (14 shown): 1st, North Star Joe Homestead, Baltz Hoesly, Monticello, Wis.; 2d, Maple Row Sarcastic Lad, Jefferson County Asylum, Jefferson, Wis.; 3d, King Pietertje Ormsby Piebe Jewel, Hargrove & Arnold, Norwalk, Ia.; 4th, King Canary Oak De Kol Fobes, J. E. Mack, Ft. Atkinson, Wis.; 5th, Fultona Ormsby Minita Boy, Monclova Stock Farm, Monclova, Ohio.

Bulls, two years old and under three, (5 shown): 1st, Whitehurst Colantha Artis Lad, A. F. Randolph, Canton, Ill.; 2d, Piebe Johanna Lad Beets, Frank T. Fowler, Lake Villa, Ill.; 3d, Prince Wayne Creamelle Gus. Korth, Watertown, Wis.; 4th, Rock River Sir Johanna Hengerveld, Harry L. Averill Batavia, Ill.; 5th Creamelle Sir Perfection, C. S. Brantingham, Rockford, Ill.

Senior yearling bulls, (8 shown): 1st Triune Ormsby Piebe 27th, Hargrove & Arnold; 2d, Prince Creamelle Acme Vale,

MADAM ARTIS WAYNE DENVER

First prize three-year-old, senior and grand champion female at the Central States Exposition and Wisconsin State Fair. Owned by the Jefferson County Asylum, Jefferson, Wis.

J. W. Piper, Watertown, Wis.; 3d, Whitehurst Colantha Lad, A. F. Randolph; 4th, Monclova King Prilly Columbus, Monclova Stock Farms; 5th, Oatman Cedar Lawn Pontiac, Oatman Farms, Dundee, Ill.

Junior yearling bulls, (8 shown): 1st, King Mutual Fan, Jefferson County Asylum; 2d, King Piebe 19th, Hargrove & Arnold; 3d, King Homestead Fobes Gewina, Emil Funk, Watertown, Wis.; 4th, Ormsby Segis Polkadot De Kol, Frank T. Fowler; 5th, King Netherland Homestead De Kol, Chas. Miller, Naperville, Ill.

Senior bull calves, (21 shown): 1st, King Piebe 28th, Hargrove & Arnold; 2d, King Richmond Pontiac, Christ & Hackbarth, Ft. Atkinson, Wis.; 3d, Monclova De Kol King Prilly, Monclova Stock Farm; 4th, King Pietertje Ormsby Piebe 50th, Hargrove & Arnold; 5th, King Levera Homestead Hargrove, E. E. Bain, Lisle, Ill.

Junior bull calves, (9 shown): 1st, King Piebe 38th, Hargrove & Arnold; 2d, Old Mill Johanna Walker Gerster, Carl E. Rudolph, Deerfield, Ill.; 3d, Unnamed, William Sayre, Jefferson, Wis.; 4th, Unnamed, Milford Meadows Stock Farm, Lake Mills, Wis.; 5th, King Piebe 39th, Hargrove & Arnold.

Senior and Grand Champion Male:—North Star Joe Homestead, Baltz Hoesly, Monticello, Wis.

Junior Champion Male:—Triune Ormsby Piebe 27th, Hargrove & Arnold.

Aged Cows (21 shown): 1st, Racine Aaggie Beets, Frank T. Fowler; 2d, Ivaloy Prilly Rose Hall, Monclova Stock Farms; 3d, Prairiedale Belle Columbus, Andrew Drendel, Naperville, Ill.; 4th, Doetje Nellie Segis, Oatman Farms; 5th, Beauty Queen Pail De Kol 2d, C. E. Warford & Sons, Virgil, Ill.

Cows, three years and under four (8 shown): 1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Dorothy Ormsby Piebe, Hargrove & Arnold; 3d, Monclova Royalton

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc.,
Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year,
(two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

September 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Records

THE HOLSTEIN BREEDER AND DAIRYMAN has favored Cow Testing Association records from its beginning. There is only one accurate way of determining the economical value of a dairy cow as a milk producer and that is to record her performance at the pail in terms of cost of production. Cow Testing Association records furnish this information more accurately than any other system.

The value of a dairy cow cannot be measured alone on the amount of milk and butterfat she might be able to produce. Her ability to digest food and utilize labor economically must be considered.

In other words, it is not how much milk or how much butter a dairy cow can be made to produce but rather which cow or breed of cows can produce the largest amount of milk and butter and show the greatest profit and when does that cow arrive at a point in her producing ability when she returns to her owner the greatest profit on food and labor.

To feed and fit a cow for the purpose of determining the maximum amount of milk and butterfat that she can be made to produce without regard to the cost of food consumed or labor involved does not prove the economical value of that cow as a dairy animal.

Records compiled at the cooperative Test Plant at Dixon, Illinois, giving the cost of milk production by cows kept under Advanced Registry conditions, shows that large records are not based in economical production.

Thirty cows kept under Advanced Registry conditions, such as existed at the Dixon Test Plant, that produced on an average of 20,903 lb., showed a loss above the market value of the milk produced of \$441.55 each.

The total loss on a dairy of 30 selected cows main-

tained under Advanced Registry conditions, producing on an average of 20,903 lb. milk per year, kept at the Dixon Test plant, was \$13,246.50.

A cow producing 28,823 lb. milk, the highest record made at the plant, showed a loss of \$396.21.

A cow producing 15,742 lb. milk in a year showed a net loss over the value of the milk at market price of \$492.05.

The dairy interests are realizing more than ever the value of Cow Testing Association records. It is not necessary to have these records certified to by innumerable supervisors and then passed upon by the Association. If you do not believe that they are true, the cow is usually in a physical condition to go into any working dairy and so nearly duplicate the record that has been previously credited to her, that it removes all question of a doubt as to their accuracy and honesty.

Farm Organization

UNDER the title of "A 'Who's Who' of Farm Organizations" an interesting editorial recently appeared in the *Breeders Gazette*.

"Professional organizers might well say that agriculture has been an outstanding success in recent years. Farmers are organized as they have never been before. National, regional, state and local societies based on actual or mythical farmer memberships have multiplied until their activities are overlapping, duplicating or neutralizing one another. Agriculture has been organized until it is in part organized against itself. Some of the organizations are fighting one another. Many of them are playing politics, at the expense of farmers. Conservatives are in control of some associations, radicals dominate others, 'progressives' sway a few and practical compromisers are directing the work of several. Ostensibly each organization is strong for some kind of remedy for agricultural ills, and is sure that its remedy is the only effective one. All are theoretically based on coöperation by farmers. All claim to represent 'dirt farmers.'

"We need a 'Who's Who' of farm organizations. It should disclose their pedigrees and aims. How long will farmers support all these uncoördinated associations which in many instances are fighting sham battles for them? Isn't it about time to cull out non-essential organizations, and correlate the work of those that have demonstrated their practical usefulness? If farmers are not tired of the expensive 'music' produced by the 'organ' in not a few of the organizations we miss our guess."

The *Gazette* is strong for strong, well-managed organizations of farmers. It believes that agriculture is over-organized, and that excessive organization is but little better than no organization."

Farm organizations that fulfill a need or a demand render a service to their community or to its members, officered and controlled by those who contribute to their support and share in their benefits, so conducted that they grow or expand as their services and usefulness is increased, are a blessing to any community, state or nation.

Successful farm organizations are built from the bottom up and not from the top down.

Agriculture has fallen prey to professional organizers and propagandists, who are interested in the farmers' welfare only to the extent that the farmer contributes to their support.

When the professional organizers and propagandists come along with a "BIG IDEA" and "A BAND OF SILVER TONGUED ORATORS and HIGH SALARIED PROPAGANDISTS," collecting money from the farmer to build up a "BIG" organization to serve him in a "BIG" way, at a "BIG" expense with high salaried efficiency experts, experience has taught that it is better for the farmer to step aside and keep his purse strings tied until the band of fakers have passed.

"A 'Who's Who' of Farm Organizations" is necessary.

Keep This in Mind

DAIRY conformation and economical production are the two factors entering into the selection of dairy cattle for milk or breeding purposes. Buyers of cattle should always keep these two facts in mind and remember the best place to find good cattle that produce economically and that are of good conformation is where they are bred for economical production by men who make it their business and know how to breed good cattle. If you follow these directions invariably you will be led to the herds of the plain breeders and dairymen. There is where the best cows of any dairy breed can be found in their working clothes and in a normal healthy state, ready to go into any herd and continue their work of consuming food and producing milk economically.

THE HOLSTEIN BREEDER AND DAIRYMAN represents the class of breeders who make dairying their business and we carry more regular advertisements for this class of breeders than any other breed publication. The advertisers in our publication represent the leading dairymen in their respective communities. We are pleased to represent the dairy interests and to assist in promoting the purebred Holstein cow as a dairy animal.

The Circulation Manager Says

WE are announcing with this issue the giving of a Corbin Tail Holder with a two years' subscription to THE HOLSTEIN BREEDER AND DAIRYMAN, new or renewal.

The Corbin Tail Holder is a simple device to attach the cow's tail to the large cord above the hock while milking.

By using two of these holders, one to fasten the tail of the cow back of the milker and the other the tail of the cow being milked, the milker is assured from any unpleasantness or annoyance brought about by having the cows switch him in the face and eyes with their tails.

Filth oftentimes enters the milk by the cow switching her dirty tail while the process of milking is going on. As the Corbin Tail Holder stops this unnecessary spreading of filth it can be considered as a sanitary device and is highly recommended by its maker and those who have used it as a sanitary device.

I recall one of my early experiences in milking. It was at home on the farm in early Fall. We were milking in the barnyard and while milking "Old Spot" she was continuously switching me in the face and eyes. As a means of protection I parted the switch of her tail and tied it to a stake in the fence. When I was about half finished with the milking she gave a spring and ran off, leaving the bush of her tail fast to the fence. She ran around the yard, badly frightened, whirling the bleeding stub of her tail round and round over her back.

I was extremely frightened and ran to the house crying that "Old Spot" had pulled off her tail and was bleeding to death. While she didn't die or seem to be any worse from the experience, I have always remembered the incident. Had I used a Corbin fastener, the tail would have been equally as secure and when the cow ran off she would have taken her tail with her.

Milk as War Material

WARS big and wars small come and go. Guns roar; shells shriek, explode and shake the earth; airplanes drop their bombs; machine guns spit their murderous rain of bullets; gasses burn and smother; the cries of men in deadly conflict rend the air. Immense, spectacular, heart-breaking, soul-destroying. The day of armistice comes; the treaty of peace is signed; and for the time at least that war is over.

But the one great unceasing war made on man is by foes numbering untold billions, who fight, unheard and unseen, in the king's palace and the peasant's hovel, in the New York mansion, the tenement flat, the desert lands of Arizona, New Mexico, southern California, everywhere—wherever the nomad man has wandered. This war is not immense, not spectacular, not soul-destroying, not even heart-breaking, except as some mother weeps over the loss of her beloved child. It is just the regular thing. An armistice day never comes; a treaty of peace is never signed. Stealthily, secretly, silently, relentlessly, murderously that war—the war of bacteria—goes on and on and on forever. Man's best defense against these unseen, unheard foes is good, clean milk, the modified milk he gives his babies, the certified or pasteurized milk he gives his children, thus building a foundation-bulwark against the enemy, the clean milk he uses himself that repairs the tissues—all form a real state of preparedness.

It is a war in which our bacteriologists are the scout planes; our milk producers are the privates; our distributors are brigade generals; our commissions are division generals; the public is commander-in-chief. There is no conscription; only enlistment. The legislatures do not raise by taxation the sinews of war. The consumers pay direct. You may be sure there is a bonus—or better yet, an adjusted compensation.

Every night before going to bed I drink a glass of good rich milk. I believe it is the perfect fluid for making power to run the machine over the road, smooth or rough, of daily life and for health, happiness and the joy of living.

We well may wonder what the dairyman "buys one-half so precious as the stuff he sells!"—George W. Wilde in *The Delineator*.

Hengerveld Lulu, Monclova Stock Farm; 4th, Empress Creamelle Susie, Jefferson County Asylum; 5th, Merrygold Pauline Peep, Elmer Frazier, Middletown, Ind.

Heifers, two years and under three, (19 shown):—1st, Piebe Artis Burke, Hargrove & Arnold; 2d, Neola Pansy Piebe, Hargrove & Arnold; 3d, Lavera Segis De Kol, E. E. Bain; 4th, Monclova Prilly Lucille De Kol, Monclova Stock Farm; 5th, Julia Creamelle De Kol Denver, Fred Albrecht, Watertown, Wis.

Senior yearling heifers, (12 shown):—1st, Johanna Wayne Rue, 2d, Jefferson County Asylum; 2d, Pietertje Ormsby Piebe Mercedes, Hargrove & Arnold; 3d, Mutual Calamo Clothilde and 4th, Creamelle Princess Denver, Jefferson County Asylum; 5th, Excelsior Ollie Perfection, C. H. Nevins, Winnebago, Ill.

Junior yearling heifers (15 shown):—1st, Lady Climax Minita Homestead, Carl E. Rudolph, Deerfield, Ill.; 2d, Warford Ollie Inka Johanna, C. E. Warford & Sons; 3d, Ormsby De Kol Louisa, John R. Logan & Son, Seward, Ill.; 4th, Miss De Kol Piebe, Hargrove & Arnold, 5th, Merrygold Tidy Pauline Pride, Elmer Frazier.

Senior heifer calves, (27 shown):—1st, Empress Susie Waldorf, Jefferson County Asylum; 2d, Monclova Prilly Betty Canary, Monclova Stock Farms; 3d, Triune Piebe Fobes, 4th and 5th, unnamed, Hargrove & Arnold.

Junior heifer calves, (9 shown):—1st, Clothilde Marguerite Albina, Jefferson County Asylum; 2d, Unnamed, W. A. Sayre; 3d, Unnamed, John R. Logan & Son; 4th, Whitehurst Colantha Artis Poach, A. F. Randolph; 5th, Ollie Pet De Kol Pietertje, Carl E. Randolph.

Senior and grand Champion Female:—Madam Artis Wayne Denver, Jefferson County Asylum.

Junior Champion Female:—Johanna Wayne Rue, 2d, Jefferson County Asylum.

Graded herds:—1st, Jefferson County Asylum; 2d and 4th, Hargrove & Arnold; 3d, Monclova Stock Farms.

Young herds:—1st, Hargrove & Arnold; 2d, Jefferson County Asylum; 3d, Monclova Stock Farm; 4th, John R. Logan & Son.

Calf Herds:—1st, Hargrove & Arnold; 2d, Monclova Stock Farm; 3d, Jefferson County Asylum; and 4th, John R. Logan & Son.

Get of Sire:—1st, Hargrove & Arnold on get of King Piebe, and 3d on get of King Pietertje Ormsby Piebe; 2d, Jefferson County Asylum on Dutchland Creamelle Denver Prince; 4th, A. F. Randolph on get of Beaver Dam Ormsby Artis Lad.

Produce of Cow:—1st, Hargrove & Arnold on produce of Miss Piebe Fobes, and 3d on produce of Neola Pansy; 2d, Monclova Stock Farm on produce of Ivaloy Prilly Rose Hall; 4th, Jefferson County Asylum on produce of Aaggie Fobes 2d.

MISSOURI STATE FAIR

The dairy cattle barns at the Missouri State Fair held at Sedalia, August 17 to 23 were filled to capacity while dairy cattle for which there was no room in the barns were in other buildings scattered around the grounds. There were nearly 500 dairy cattle shown and there were more Holsteins than there were of any other breed. The Modern Woodmen of America brought a great show herd from Colorado and their noted cow Zwingara Segis Clothilde carried off the blue in the full aged class and annexed both senior and grand championships without any trouble. The junior champion was the senior yearling heifer, Miss Pearl Piebe, of the King herd. The Woodmen had a great show bull in Corwin Wimple De Kol Ormsby, and he was made senior champion, the junior champion male being also from this herd. The Woodmen took the herd prize and first in the get of sire group. Larsen winning breeders' young herd and breeders' calf herd. There were 127 Holsteins exhibited and the judge was L. S. Gillette of Fostoria, Ia., who placed the ribbons as follows:—

Bulls, three years and over:—1st, Corwin Wimple De Kol Ormsby, Modern Woodmen of America, Woodmen, Colo.; 2d, Champion Echo Sylvia Pontiac, J. R. Harlan, Pawhuska, Okla.; 3d, Echo Sylvia King, Holtex Farms, Dallas, Texas.

Bulls, two years and under three:—1st, Castine Sir Johanna Nig Ormsby, Prinsedale Farms, Pittsburg, Texas; 2d, Sir Fonda Hengerveld Ormsby, Concordia Holstein Bull Ass'n; 3d, Triune Ormsby Piebe 4th, A. J. King, Kansas City, Mo.; 4th, Holtex Cadillac Echo Wayne, Holtex Farms; 5th, Forum Diamond Dike, H. O. Larsen, Dike, Ia.

Bulls, 1 year and under two:—1st, Woodcraft Pontiac Champion Star, Modern Woodmen; 2d and 5th, H. O. Larsen; 3d, Hollyhock Sir Pete Rhoda Korndyke, A. J. King; 4th, Inter Co., Prince Ormsby, J. S. Weathers, Windsor, Mo.

Senior bull calf:—1st, King Sylvia Carnation 2d, A. J. King; 2d, Holtex Cadillac Ormsby, Holtex Farms; 3d, Woodcraft Segis De Kol Champion, Modern Woodmen; 4th, Prinsedale Farms; 5th, Count Pontiac, H. N. Webb.

Junior bull calf:—1st, Woodcraft Parthena Pietertje, Modern Woodmen; 2d, Artis Matador King Molly, George J. Jaeger, Smithton, Mo.; 3d, Segis Ormsby King, A. J. King; 4th, Prinsedale Farms.

Senior champion bull:—Corwin Wimple De Kol Ormsby, Modern Woodmen.

Junior and grand champion bull:—Woodcraft Pontiac Champion Star, Modern Woodmen.

Full aged cow:—1st, Zwingara Segis Clothilde, Modern Woodmen; 2d, Crescent Beauty Star Billie, A. J. King; 3d, Alice Clothilde Piebe, Glen Davis, Columbia, Mo.; 4th, Aaggie Artis Pontiac Abbekerk, J. R. Harlan; 5th, Johanna Cora Melchoir Gem Walker, C. A. Wiest & Sons, Smithton, Mo.

Cows, three years and under four:—1st, Woodcraft Johanna Champion, Modern Woodmen; 2d, Queen Mercedes Ormsby De Kol, Holtex Farms; 3d, Tidy Hilker-Abbekerk, J. R. Harlan; 4th, Charlevoix Marbury De Kol, A. J. King.

Heifers, two years and under three:—1st, Woodcraft Korndyke Freule, and 2d, Houwtje Vale Posch 2d, Modern Woodmen; 3d, Forum Aaggie Lolo, H. O. Larsen; 4th, Bock Diamond Pontiac, A. J. King; 5th, Bell Halwood Korndyke, J. R. Harlan.

Senior yearling heifer:—1st, Miss Pearl Piebe, A. J. King; 2d, Holtex Sylvia Hengerveld Fayne, Holtex Farms; 3d, Woodcraft Gerben Chiron, Modern Woodmen; 4th, Prinsedale Dorris, Prinsedale Farms; 5th, Long Hollow Mercedes Butter Roy, H. O. Larsen.

Junior yearling heifer:—1st, Forum Maxie Diamond and 2d, Forum Bonnie Homestead, H. O. Larsen; 3d, Woodcraft Gerben Segis Pontiac, Modern Woodmen; 4th, Nancy Pearl Creator, A. J. King; 5th, Holtex Sylvia Cadillac Wayne, Holtex Farms.

Senior heifer calf:—1st, Forum Floa Madison and 3d, Forum Maxine Diamond, H. O. Larsen; 2d, Woodcraft Zwingara Julia Pontiac, Modern Woodmen; 4th, Carlotta Aylee Matador, C. A. Wiest & Sons.

Junior heifer calf:—1st, Woodcraft Changeling Parthena, Modern Woodmen; 2d, Forum Betsy Skylark, H. O. Larsen; 3d, Brookling Artis Matador, Geo. J. Jaeger; 4th, Rachel Aylee Matador, C. A. Wiest & Sons.

Senior and grand champion female:—Zwingara Segis Clothilde, Modern Woodmen.

Junior champion female:—Miss Pearl Piebe, A. J. King.

Exhibitors herd:—1st, Modern Woodmen; 2d, A. J. King; 3d, Prinsedale Farm; 4th, J. R. Harlan.

Breeders Young herd:—1st, H. O. Larsen; 2d, Modern Woodmen; 3d, A. J. King; 4th, Holtex Farms.

Breeders Calf herd:—1st, H. O. Larsen; 2d, Geo. J. Jaeger; 3d, Prinsedale Farms; 4th, Holtex Farms.

Get of Sire:—1st, Modern Woodmen; 2d, H. O. Larsen; 3d, A. J. King; 4th, Holtex Farms.

Produce of Dam:—1st, Prinsedale Farms; 2d, H. O. Larsen; 3d, A. J. King; 4th, Modern Woodmen.

WISCONSIN STATE FAIR NOTES

Madam Artis Wayne Denver, the splendid three-year-old heifer owned by the Jefferson County Asylum, carried off first prize in her class at the Wisconsin State Fair and was awarded both senior and grand championships by the judge, Ward W. Stevens of Liverpool, N. Y.

The male grand champion was Johanna Rag Apple Pabst, the three-year-old bull owned by Joseph Piek of Hartford, Wis., who defeated North Star Joe Homestead, the Central States Exposition Champion. King Mutual Fan of the Jefferson County Asylum herd was the junior male champion.

There were 512 Holsteins exhibited, which, in point of numbers, was probably the greatest Holstein show ever held.

Walcowis Ollie Hijlaard, who headed the Rock County Holstein herd, has been grand champion at this fair for three years but he was beaten in his class by North Star Joe Homestead. Sir Johanna Pauline Ormsby Keyes was third and there were fourteen in the ring.

The calf club classes were decided early in the week. There were twenty entries in the competition for the showing of calves and calf demonstration teams. The Sheboygan Club, S. S. Mathison of Plymouth, director was awarded first prize of \$50. Waukesha County Club, J. F. Thomas, Waukesha, leader, won second prize of \$40. Green County, Miss Vera Divan, Browntown, leader, won third prize; Walworth County,

L. J. Merrian, Elkhorn, director, fourth, and Jackson County, G. W. Vergeront, Black River Falls, leader, was fifth.

Considerable interest was taken in the individual showing. Irene Davis of Milton won second place with her young heifer, Colantha Superba Korndyke. Irene is fourteen years of age. She showed her heifer at the Janesville Fair last year and was placed fifteenth. She showed the same heifer again this year and took first place and then brought her up to the state fair. The junior club awards follow:—

JOHANNA RAG APPLE PABST
First prize three-year-old, senior and grand champion male at the Wisconsin State Fair. Owned by Jos. E. Piek, Hartford, Wis.

Junior Holstein heifer calf:—1st, Edward Fisher, Janesville; 2d, Clarence Halle, Plymouth; 3d, Alfred Gimpler, Monroe.

Senior Holstein heifer calf:—1st, Belmont Lohuis, Oostburg; 2d, Byran Kamarth, Dalton; 3d, Russell Stevens, Taylor.

Junior and senior Holstein bull calf:—1st, Clarence Halle; 2d, Linda Stolper, Random Lake; 3d, Erna Stolper, Random Lake.

Yearling Holstein heifer:—1st Olger Mickelson, Northfield; 2d, Irene Davis, Milton; 3d, Bryce Humphrey, Northfield.

CRAIG HERD WINS PRIZES

There were forty-eight head of Holstein cattle shown at the Washington County Fair, held at Washington, Penna., August 25-30. Although this was less than the usual number, the quality was high. The Craig herd made an exhibit and took first and third on yearling heifer; first on senior heifer calf; first on junior heifer calf and took second prize in class for senior bull calf. The Craig exhibit consisted of five animals which were shown in four classes and as the prizes won included three firsts, one second and one third, they certainly made a good showing.

A number of inquiries for Holstein literature were received at the booth operated by Allen N. Crissey, National Association Fieldman for the District of Pennsylvania, New Jersey and Delaware.

CHENANGO COUNTY FAIR

Special Correspondence

Yes, we went to the Fair! What one? As we live in Chenango County, N. Y., it was our Annual Agricultural Fair, held at Norwich, August 26-30. The management are endeavoring to make it a real Agricultural Fair and that includes Grange and Farm Bureau Federation. They are trying to eliminate some of the more objectionable features, including side shows, fakirs, etc.

The Home Bureau and Grange was represented by many of the towns in the county and the exhibit of canned goods, vegetables, grains, etc., was artistically arranged and very attractive.

Many counties in New York State through the coöperation of

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

the Farm Bureau and High Schools are doing much good in Junior Project work and Chenango is one of them. The girls are taught dressmaking, millinery and home work and the boys have calf club work, agriculture, chickens, etc.; the exhibits of each was worthy of special mention.

In the Calf Club the exhibit contained Jerseys, Guernseys, Brown Swiss and Holsteins. Of course, we were a little more interested in the Holstein exhibit and noticed the blue ribbon went to the Lathrop boys, sons of Homer Lathrop of Sherburne.

Mr. Lathrop is one of the officers of the Dairyman's League and judging from the looks of the boys' calves, he believes in helping the League to use surplus milk.

The cattle show was good. Several herds of Holsteins were there from all parts of the county. Among those who were winners of the blue ribbons were Otto L. Ives of Bainbridge, Clarence Coye, Earlville, Homer Lathrop and E. P. Smith of Sherburne.

The competition was very strong in the aged herd class. E. P. Smith of Sherburne got first prize. The junior herd was won by Clarence Coye, Earlville. Special mention should be made of a large herd of Guernseys shown from the Rogers Farm at Oxford. They were all in fine condition, good individuals, in every respect a show herd. Mr. Rogers carried away most of the ribbons for his breed. They had a very good showing of poultry, also some sheep and swine.

The horse races each day were good, in fact, it has proved to be the kind of a fair Chenango County is rather proud of.

FARMER'S CONTEST AT NATIONAL

At the National Dairy Show held at Milwaukee, September 27-Oct. 4, there will be a National Farmers' Judging Contest. The rules call for each contestant to be a bona fide farmer. To create widespread interest the contest is for teams consisting of three farmers from any one community or county. A number of western communities and organizations are holding elimination contests as to get the best men to form representative teams.

ALWAYS USE A Corbin Switch Holder To Secure Real Sanitary Milk with lowest possible SEDIMENT TEST

WHAT USERS SAY

From the New York State School of Agriculture, Morrisville, N. Y.:
"We have used the Corbin Switch Holder and found that it is a good idea.

(Signed) J. R. DICE,
Dairy Husbandman."

From the New York State School of Agriculture, St. Lawrence University, Canton, N. Y.:

"I put the Corbin Switch Holder on the cows and after the strangeness had worn off they did not seem to mind the holder. It is easily kept clean and is a sanitary device.

(Signed) H. A. DODGE,
Prof. of Animal Husbandry."

SUSQUEHANNA COUNTY FAIR

Special Correspondence

Five farms exhibited Holsteins at the Susquehanna County Fair held at Montrose, Pennsylvania, September 2 to 4. They were L. N. and F. E. Mack, Lathrop Farms, Bush Brothers, Brown Brothers and Howard & Son.

The exhibits were of the usual high quality generally seen at the principal fair of Pennsylvania's greatest Holstein county.

Mack Brothers carried off the lion's share of the prizes, their herdsire, Colonel Joh Lyons, winning first in the aged bull class, senior and grand championship; while they carried off the senior and grand female championships, the junior female champion being a junior heifer calf shown by Bush Brothers.

Having both grand champions, it was easy for Mack

PART OF THE CHAMPION HERD
Owned by Mack Bros., Montrose, Pa.

Brothers to win the herd prize and they were also awarded the blue in the Get-of-Sire class.

The awards in detail follow:

Bull, three years and over:—1st, Mack Bros.; 2d, Lathrop Farms.

Junior yearling bull:—1st, Howard & Son; 2d, Bush Bros.

Junior bull calf:—1st, Lathrop Farms.

Aged cow:—1st, Mack Bros.; 2d, Lathrop Farms.

Cow, three years old:—1st, Lathrop Farms; 2d, Mack Bros.

Heifer, two years old:—1st, Mack Bros.; 2d, Lathrop Farms.

Senior yearling heifer:—1st, Lathrop Farms; 2d, Mack Bros.

Junior yearling heifer:—1st, Lathrop Farms; 2d, Mack Bros.

Senior heifer calf:—Lathrop Farms; 2d, Mack Bros.

Junior heifer calf:—1st, Bush Bros.; 2d, Lathrop Farms.

Exhibitor's herd:—1st, Mack Bros.

Breeders' young herd:—1st, Lathrop Farms.

Get of sire:—1st, Mack Bros.

Senior and Grand Champion Male:—Mack Bros.

Junior Champion Male:—Lathrop Farms.

Senior and Grand Champion Female:—Mack Bros.

Junior Champion Female:—Bush Bros.

MANUFACTURED MILK MARKETS

The outlook in the condensed and evaporated milk markets showed a decided improvement at the close of August although stocks are still burdensome. However, manufactured goods have been moving more freely both in the domestic trade and in export business which seems to give promise of lessening the heavy surplus of recent months. July exports were heavier than those of last year by about 3,000,000 lb. and included over 2,000,000 lb. of evaporated to Germany. Later buying has indicated that further shipments are likely to Germany and Holland, the latter probably destined finally for Germany as well. Total exports for January to July inclusive amount to 121,450,000 lb. as compared with 99,069,000 during the same period in 1923.

Warm weather early in August was one of the factors which gave some strength to the markets. This caused a heavy increase in demand for bulk condensed, as well as for fluid milk, resulting in a decrease in make at an opportune time. Recent cooler weather has removed this support to a certain extent. Possibly the make may have also been slightly decreased where manufacturers had difficulty in financing canned

milk operations and had to skim or divert milk into other channels. As usual, what excess production occurred was evaporated goods, for the tendency to hold condensed manufacture as nearly as possible to orders in sight was continued.

August 1 total stocks are reported as 280,644,000 lb., this including both condensed and evaporated. This figure is not particularly encouraging, being but a reduction of approximately 8,000,000 lb. under July 1 and almost 50,000,000 lb. more than the previous August 1, high record in 1920. Compared with last year the increase is 42 per cent. There is more or less speculation as to what September 1 stocks will be, for previous years statistics do not reveal any positive trend during August. In 1920, for example the September 1 stocks represented an increase of 34,000,000 lb., in 1921 and 1922 there were decreases of 56,000,000 lb. and 3,500,000 lb. respectively, while in 1923 there was again an increase of 33,000,000 lb. But despite heavy stocks, manufacturers seem to regard the immediate future as holding prospects for a more active demand.

During July there were 177,808 lb. of powdered milk exported from the United States. The figures for July of last year was 235,701 lb. Despite this decrease more powdered milk has been exported for the first seven months of 1924 than there was during the first seven months of 1923, the figures for the present year being 1,782,734 and for the first seven months of last year were 1,574,095 lb.

The United Kingdom, France and Japan were our three biggest customers for powdered milk, 50,220 lb. going during July to the first mentioned, 42,157 lb. to France and 27,700 lb. to Japan. These countries were far in the lead, their closest competitor being Panama with 9,517 lb., Cuba, 9,072 lb. and Mexico with 8,226 lb.

AMERICAN DAIRY FEDERATION

A full meeting of the American Dairy Federation to consider a number of important matters will be held at the Hotel Wisconsin, Milwaukee, Wis., at 4 P. M., October 1. Under the organization plan of the Federation, only delegates from member organizations are entitled to take part in the meeting, each organization being entitled to five delegates and one vote.

The Executive Committee met at Washington, August 19, and discussed the questions which have arisen between the Joint Committee on Standards and the Ice Cream manufacturers. The principle that the standard of milk solids required in ice cream should be based on proper recognition of solids not fats as well as fat solids is agreeable to all but it was deemed advisable to take a referendum vote of all member organizations. The result of such votes will be registered at the Milwaukee meeting.

The Federation Executive Committee considered the method

of estimating indemnities allowed for cattle slaughtered in foot and mouth disease eradication. A committee with Charles L. Hill of Wisconsin as chairman was appointed to investigate and report. The bill pending in Congress to establish agricultural attaches was endorsed and a committee with chairman E. M. Bailey at its head was appointed to cooperate in securing this legislation.

More and better information as to production and consumption of dairy products in foreign countries is desired.

Arrangements are progressing for the big banquet scheduled to be held at Milwaukee, on the evening of October 1. Among the speakers are Secretary of Commerce Hoover, Dr. Lee K. Frankel, vice-president of the Metropolitan Life Insurance Co., and Dean H. L. Russell of the University of Wisconsin.

FINANCING A SHOW HERD

Fifteen head of purebred Holsteins will form the Clark County Holstein herd to be exhibited at the Wisconsin State Fair this fall and perhaps at the National Dairy Show. It is believed that \$475 will finance the exhibit. Each owner of the animals selected for the show herd is to pay \$20 per each animal while the seven Holstein clubs of the county will each donate \$25. The prize money won will be pro rated among the owners up to their initial expenses. Any additional money will be placed in the county Holstein Association treasury. Henry Williams of Granton is manager and treasurer of the project.

MEETING OF BRITISH SOCIETY

At a quarterly meeting of the British-Friesian Cattle Society held about the middle of August, it was decided to abolish the position of official auctioneer. Dr. C. W. Edwards, who has been the official auctioneer for the past few months, will be retained in the capacity of expert technical advisor.

Twenty-three new members were elected. If possible, a breeder from Holland will be secured as one of the judges of British-Friesians at next year's Royal Show.

QUITE A BUSINESS

During July the cash receipts of the Yakima Dairyman's Association was \$46,494. The total sales were \$48,251, and \$30,142 were remitted to the members. The milk received totaled 969,734 lb. for which \$15,250 was paid.

Fieldman L. D. Green reported that 909 dairymen held memberships. George V. Harris of Yakima is manager of the association.

Most people are wanters and whenever one of their wants is satisfied a hundred other wants come to take its place.

Letters to the Editor

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Gentlemen:

I want to enter a protest, in behalf of the small breeders, against the yearly test of our dairy cows. In the first place no one but the rich and prosperous breeder can afford it. In the second place it does not demonstrate the quality of the animal for dairy purposes, in my opinion, with more certainty or satisfaction than does the seven day test. Having in mind this idea, in starting a small herd, at our farm "Aldenheim," I have selected animals, so far as I was able to, whose sires and dams have shown ability to supply their milk with butterfat. We have headed our herd with a young grandson of King of the Pontiacs, whose first seven dams all have official seven day records running from 19.83 to 33.25 lb. The average test of these seven dams is 3.96% butterfat and the seven day records average 25.56 lb. butter.

We selected a grandson of King of the Pontiacs because of the fact that, in our opinion, he is the greatest sire of the breed, as demonstrated by the production of his daughters. Not only has he more daughters with official records, more 30-lb. daughters, more 20-lb. daughters than any other sire, but he has a most remarkable record in siring daughters that are butterfat producers. For instance, while we condemn the practice, it nevertheless appears that thirty-three of his two-year-old daughters have been given butter records which average 750.23 lb. at an average age of thirty-one months and twenty-four days. And that the average butterfat test of these records was 3.718%. Also it appears that 138 of his 283 daughters have official seven day records averaging over 4% butterfat. This is nearly 49% of the entire number. The only century sire with a greater percentage of daughters showing a 4% butterfat test is King Pontiac Champion,* a son of King of the Pontiacs, who has seventy daughters showing over 4% butterfat test out of his list of 125.

Ranking third among the century sires is Pontiac Korndyke, the sire of King of the Pontiacs, with sixty-nine daughters of his total of 152 showing 4% butterfat in their test. This gives him a percentage of 45.4.

Sir Veeman Hengerveld follows very closely to Pontiac Korndyke, having sixty-three daughters with 4% butterfat out of 141, giving a percentage of 45.3. Coming next in the list is Hengerveld De Kol who has fifty-one daughters showing 4% butterfat out of his total of 116. As the dam of King of

the Pontiacs is by Hengerveld De Kol the importance of ancestry appears.

Only the above enumerated five century sires, out of the list of sixteen shown by Volume 34 of the Blue Book have so many as 40% of their tested daughters which show a 4% butterfat production; in fact, but three others make a showing of over 30%; these are Pietertje Hengerveld Segis, with 36%; King Segis Pontiac Alcartra and Tidy Abbecker Prince, each with 32%. Colantha Johanna Lad follows with 26½%; thirty-five out of his 134 A. R. O. daughters showing over 4%. Changeling Butter Boy, the sire of the dam of our young herdsire, has twenty-seven of his tested daughters showing 4% butterfat out of his list of 114, giving him nearly a percentage of 23.

This information we have culled from a table prepared by us showing a list of Century sires, followed by columns showing first: number of A. R. O. daughters; second, number of A. R. O. sons; third, number of producing daughters; fourth, number of 30 lb. daughters; fifth, number of daughters producing over 4% fat; sixth, number of daughters producing over 5% fat and seventh, number of daughters producing over 4% fat on annual tests.

King of the Pontiacs has twenty-two daughters showing over 5% butterfat; King Pontiac Champion eighteen daughters, Sir Veeman Hengerveld, eleven daughters; Hengerveld De Kol has six; and Pontiac Korndyke has five. The sires producing daughters with 4% butterfat in their annual tests is headed by King Pontiac Champion with twelve, followed by King of the Pontiacs, with seven. No other century sire has more than one daughter who in her annual test has shown as much as 4% butterfat, so we think we are justified in selecting a grandson of King of the Pontiacs for our herdsire. We, this season for the first time, are looking for his offspring from A. R. O. cows. One of these cows has her first seven dams with records running from 16.10 lb. to 44.18, the average being 28.05, with an average butterfat percentage of 4.55%; another whose seven dams average 24.96 lb., with an average of butterfat of 4.15%; another whose seven dams average 29.76 lb. with an average butterfat percentage of 4.06%.

Wishing you abundant prosperity, I am

Very truly yours,

Hampton, Iowa.

JNO. M. HEMINGWAY.

GOING ALONG

The Allegheny County Cow Testing Association which was revived a short time ago largely due to the influence of the Allegheny County Holstein-Friesian Association, is going along in good shape, reports Albert B. Craig. There are twenty-six herds enrolled containing about four hundred cows.

TRAVERSE ECHO SYLVIA KING

At the head of the purebred Holstein herds owned by A. L. Burlington and W. B. Kennedy & Son, of Wyalusing, Pa., stands the splendidly bred bull, Traverse Echo Sylvia King, who, until its dispersal, stood at the head of the Loyalsock herd. Traverse Echo Sylvia King is only just a little past four years old yet he weighs 2,300 lb. but he is so well proportioned that he does not look his weight.

Messrs. Kennedy and Burlington were induced to buy this bull after seeing his offspring in the Loyalsock herd. He has a remarkably straight top line, a mellow hide and soft, silky hair, and, as his picture shows, is hard to fault in any respect.

King is a son of Echo Sylvia King Model and Traverse Inka Johanna and was bred in the herd owned by the Northern Michigan State Hospital. His sire has a number of good record daughters, all tested as heifers. His first daughter to

TRAVERSE ECHO SYLVIA KING

Herdsire owned jointly by A. L. Burlington and W. B. Kennedy & Son, Wyalusing, Bradford Co., Pa.

be tested for the second time made over 32 lb. butter in seven days and recently a two-year-old heifer with 75% the same breeding as Traverse Echo Sylvia King owned by the Central Poor District of Luzerne County in their herd at Retreat, Pa., made an official record of over 25 lb. butter in seven days. Many things can be said about the sire, who is a son of Champion Echo Sylvia Pontiac and Belle Model Pietje and so is full brother to Echo Sylvia Belle Model Pietje, who two different years made over 34 lb. butter in a week. Belle Model Pietje has three seven day records that are each above 33 lb., her largest being 36.13 lb. as a junior four-year-old while her dam Belle Model Johanna 2d, two different years made over 37 lb. butter in a week.

Traverse Inka Johanna, the dam of Traverse Echo Sylvia King has two different years made over 30 lb. butter in seven days, as a junior four-year-old making 30.41 lb. butter, 661.5

lb. milk while as a five-year-old she produced 33.27 lb. butter, 736.4 lb. milk in a week and averaged 102 lb. milk for thirty days. She has five good record daughters everyone of which has made over 24 lb. butter in a week, two have exceeded 32 lb. and the list is headed by Traverse Inka Hartog, 35.50 lb. butter in seven days as a five-year-old, 950.75 lb. butter in ten months as a senior four-year-old.

Traverse Inka Johanna is a daughter of Traverse Princess Inka 29.71 lb. butter in seven days, 119.93 lb. butter in thirty days, 940.8 lb. butter in a year, dam of three tested daughters two above 33 lb., one with 37.94 lb. butter in seven days and 1,220 lb. in a year.

Five of the seven dams appearing on a four generation pedigree chart of Traverse Echo Sylvia King have tested daughters with seven day records above 30 lb. The same can be said of more than half of the fifteen dams appearing on a five generation pedigree chart. The dam and both granddams have tested daughters with seven day records above 35 lb. Five of the seven dams appearing on a four generation chart have at least three A. R. O. daughters and three of these cows each have two or more 30 lb. daughters.

Some remarkable averages can be shown for the dams back of this great young bull. His three nearest dams have seven day records averaging 33.03 lb.; his seven nearest dams average 32.72 lb.; his ten nearest dams average 33.67 lb. Of the fifteen dams appearing on a five generation pedigree, fourteen are tested and the fourteen average 30.175 lb. butter in seven day work.

Traverse Echo Sylvia King heads healthy herds for the Kennedy cattle have passed two clean tests and the herd owned by A. L. Burlington is on the accredited list. Both herds are operated from the standpoint of dairy production and the animals composing the herds are choice individuals. We believe that Traverse Echo Sylvia King is destined to exert considerable influence upon the herds of northern Pennsylvania and particularly Bradford County.

PRICES AT BARRON

H. M. Stephens, representing the Agricultural Credit Corporation of Minneapolis was at Barron, Wis., late in July and purchased two carloads of Holstein and Guernsey cows and heifers. The prices for purebred cows, either Holstein or Guernsey, averaged about \$140 per head while grade cows were \$80; grade heifers, bred to freshen this fall cost about \$65 at Barron and young purebred bulls, about a year old, ranged from \$80 to \$100.

The Minneapolis corporation will buy these cows to sell to farmers in Minnesota, Montana and the Dakotas. F. J. Krahenbuhl, secretary of the Holstein Association says that more farmers in his district are listing cattle for sale this year than ever before.

Echo Belle Model King

His seven nearest dams have official seven-day records that average 35.49 lb. butter. He is by Champion Echo Sylvia Pontiac and he has 87½% the same blood as the 41-lb. four-year-old Echo Sylvia Belle Pietje.

My herd, numbering 85 head, is under State and Federal Supervision. I offer you young cows, two-year-old heifers, or choice heifer calves at reasonable prices.

LAST CALL

Fred C. Lehman's accredited herd dispersal at Greider Stock Farm, Carlisle, Pa., September 23d.

J. M. Olsen accredited herd dispersal at Sherburne Four Corners, N. Y., September 23d.

THE OLSEN HERD DISPERSAL

On another page will be found a story of a working dairyman who believes that purebred Holstein-Friesians are the greatest of all dairy cattle. This is the state of mind of all owners of herds featured in THE BREEDER AND DAIRYMAN and is not at all unusual.

As the story relates, Mr. and Mrs. Olsen came originally from Denmark, that home of good dairymen and good dairy women and, within a few miles of Sherburne, New York, the center of a great Holstein community, they have built a herd of high class Holsteins which, although the cattle have never been officially tested, enjoy a more than local reputation for producing capacity.

When we receive a communication from Austin Backus we always open his letter with a feeling that we are going to receive bad news, for, when Austin writes to us, he generally announces another good herd of Holstein-Friesians is going to be dispersed at public auction. We regret to learn of herds being dispersed although we know that when one herd is broken up usually several others are started.

A recent letter from Mr. Backus says that on September 23d in the Olsen farm at Sherburne Four Corners, Chenango County, the purebred herd of Mr. and Mrs. J. M. Olsen will be dispersed.

The story tells the breeding of some of the animals in the herd, as well as that of the present and past herdsires.

Speaking of the individuality of the animals, Mr. Backus says: "Among the animals in this herd is a wonderful show cow, just as typical as any cow I have seen in many a day, that, while without an official record, has milked 78 lb. milk on three milkings a day with ordinary feed and care. There are many animals in the

HAMMOND'S "CATTLE COMFORT"

Hammond's

Hammond's Paint & Slug Shot Works, Beacon, New York

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to manny dogs it affords relief and effects a cure.

Directions—**CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers

sale that have produced over 60 lb. milk in a day. They are a herd that looks the part, exceptionally large, strong, well built cows that just show production. In fact, all the animals in the herd have been well grown, and are of the true dairy type. "There are twenty-one cows that will be just fresh or ready to freshen at sale time and they are just the kind any good breeder and dairyman be anxious to buy."

Away last December a representative of the BREEDER AND DAIRYMAN looked over the Olsen herd and was impressed by the natural producing capacity of the cattle and the splendid location of the farm. The Chenango Valley is noted for fertility and the vicinity of Sherburne has been especially favored in this respect.

The Olsen farm contains one hundred and sixty-five acres of fertile soil and the buildings are about eighty rods from a railroad station from which milk is shipped to New York City. When the cattle are sold the farm will be offered. Farm property has moved slowly during the past year but there are already indications that this state of affairs will not last much longer and now is a good time to buy. Milk prices are on the up-grade, Dairyman's League prices for fluid milk advancing sixty-seven cents per 100 lb. on August 1st, the greatest advance on record, and there are intimations that there will be another raise in the near future.

The Olsen herd has been under State and Federal supervision for four years and is on the Accredited List. The cattle will be sold subject to a sixty-day retest.

The Olsen herd has been run from a dairyman's standpoint. The cattle have not been damaged by heavy feeding in order to make excessive records but have simply been handled as a good dairyman handles milk cows and that is, to enable them to earn him a profit over the cost of feed and labor.

Mr. Olsen is willing to allow three to six months' time on good, approved bankable notes to responsible parties who will bring bank references.

The sale is under the complete management of R. Austin Backus, of Mexico, N. Y., and Col. Glenn R. Mead, of East Aurora, N. Y., will officiate as auctioneer.

EASTMAN'S TROY SALE CONSIGNMENT

On page 559 of our August 22d issue occurs the following paragraph: "From January 11th to August 11th of this year, seven months, Ridge Frances Pauline Julip has produced 10,546 lb. milk, 409.4 lb. butter."

The dates should have been from January eleventh to August first so that in six and two-thirds months, Ridge Frances Pauline Julip produced 10,546 lb. milk, 409.4 lb. butter, averaging a little better than 61 lb. butter per month.

Ridge Frances Pauline Julip will be consigned by James E. Eastman of Rome, to the Troy-Canton Fourth Annual Holstein Consignment Sale which will be held at Troy, Pa., November 1st. This cow has been bred to Berylwood Prince Aaggie Chicago, a son of the great California show bull and show sire, Prince Aaggie of Berylwood, whose dam has just made new world's record in subdivision B, by producing 20,589.1 lb. milk, 72.04 lb. butter in ten months and 22,485.8 lb. milk, 1,072.08 lb. butter in 365 days. The dam of Berylwood Prince Aaggie Chicago is Hartwood Netherland Segis, 27,018 lb. milk, 1,145 lb. butter in a year, 53,670 lb. milk, 2,272 lb. butter in two years.

The other member of Mr. Eastman's consignment to the sale is a heifer calf born the first day of the year a granddaughter of Ridge Frances Pauline Julip, her dam being Ridge Empress It Pontiac Fayne. This young cow freshened Jan. 1, 1924, and the first seven months of her present lactation period, she has produced 10,097 lb.

milk, 363.9 lb. butter. The sire of this calf is Walker Lyons Colantha, a very handsome bull, whose seventeen nearest dams have seven-day official records that average 31.17 lb. butter.

The Eastman herd is on the accredited list. This establishment is run on a strictly business basis, the milk of each animal is weighed at every milking. Although the herd is small it is of high quality and animals from this establishment are capable of giving a good account of themselves wherever they may go.

SOUTHERN BUYERS TAKE WILLARD HERD

The fully accredited herd of J. T. Willard, was dispersed at public auction August 12, 1924 on his farm near Spartanburg, S. C. R. Austin Backus, of Mexico, N. Y., who had the complete management of the sale says that the event was a genuine success and truly demonstrated that the dairymen of the south are willing to pay for good registered cattle.

Sixty-five animals including a large number of young calves passed through the ring for a total of \$10,965, an average of \$168.69. Ten animals sold for an average of \$400.

The top cow of the sale was Butter Girl May Johanna 2d, formerly state champion of South Carolina in the junior two-year-old class, with 710.41 lb. butter, 16,095.4 lb. milk in a year. She went for \$775 to the bid of B. R. Littlejohn, of Spartanburg, who bought her for a family cow. Butter Girl May Johanna 3d, her sister from the same dam, with 18 lb. butter in seven days as a two-year-old, was sold for \$425 to Kingsley Bros., of Spartanburg. These gentlemen were the largest buyers at the sale, taking many of the choicest animals. They are founding a herd which promises to be one of the best in the south.

Jefferson Penn, a prominent business man of Buffalo, N. Y., who has a large farm at Reedsburg, N. C. was one of the heaviest buyers and Mr. Penn with E. L. Kendrick of Gastonia, N. C. were the only out-of-state buyers. The greater part of the animals went to parties in the vicinity of Spartanburg. This proves again that while at the time it may seem disappointing to see a large prominent herd dispersed, nevertheless it spreads the blood in a large number of different herds and increases the interest of the dairymen in the surrounding territory.

The buyers seemed unwilling to pay the value of the young calves and heifers, which is general in all sections. This indicates, Mr. Backus says, that when it is possible, the breeders should plan to keep their young stock and raise them,

Accredited Herd Dispersal

at GREIDER STOCK FARM

Half Mile from the Carlisle-Newville Concrete Road

SEPTEMBER 23, Starting at 1.30 P. M.

The entire herd of PUREBRED HOLSTEINS, including

IDEAL WINKJE KORNDYKE

30.55 lb butter, 719.6 lb. milk in seven days as a junior four-year-old. One daughter of this cow.

DUTCH CORNER FAYNE WALKER, 29.71 lb. butter, 656.5 lb. milk in seven days, 103.4 lb milk in a day. Three of her daughters, one MABEL WALKER SYLVIA ORMSBY, made 18.14 lb. butter, 529.4 lb. milk in seven days as a YEARLING.

This dairy, of which half were heifers, averaged 11,000 lb. milk last year. The four-year-old herd bull, DULCEVISTA ECHO SYLVIA ORMSBY, whose first daughter to freshen produced 18.14 lb. butter in a week as a yearling, averaging 75.6 lb. milk a day.

placing them on the market when they are ready to freshen or just fresh. This is the class of cattle the public are willing to buy at a profitable price.

The buyers were: M. L. Hart, B. R. Littlejohn, Kingsley Bros., Kai Schwen, G. C. Brown, Arthur Groce, Edward Hayes, J. A. Taylor, Claude C. Grady, A. G. Clark, Spartanburg; J. R. Becknell, Union; H. C. Arthur, Converse; R. S. Steer, Clinton; F. R. Reeves, and Robt. S. Quisenberry, Easley; South Carolina Sanitarium, Columbia; C. C. Collins, Tuscola, S. C.; Jefferson Penn, Reedsville, N. C. and E. L. Kendrick, Gastonia, N. C.

FALCONER WELCOMES GARDNER'S POSTAL

David Falconer of Scottville, Mich., is one of the many who welcomed the post card from Superintendent Gardner announcing that Bess Johanna Ormsby had, for the third time, made over 40 lb. butter in seven days. Mr. Falconer's junior herdsire is King Ormsby Pontiac Creator, a son of Spring Farm Pontiac Maid 2d and Creator, one of the full brothers of Bess Johanna Ormsby.

Spring Farm Pontiac Maid 2d as a four-year-old, made 35.66 lb. butter in seven days and as a five-year-old produced 800 lb. milk, 34.16 lb. butter in a week while in 297 days she produced 20,532.6 lb. milk, 918.16 lb. butter. She is by King Korndyke Pontiac Lass, a son of the former world champion and first 44 lb. cow, K P Pontiac Lass, and her dam Spring Farm Pontiac Maid is a 28-lb. daughter of a 26-lb. cow and was sired by Spring Farm King Pontiac.

A number of bulls of splendid breeding have headed the Falconer herd. The young members of the herd have pedigrees that, for large milk and butter production, are peer to those in any herd no matter how large or how noted.

Mr. Falconer is offering a number of splendid young bulls at reasonable prices. Any one wanting records in a pedigree can find them here and they can depend upon getting animals that are healthy as well as wellbred for this herd has always been free from tuberculosis.

OFFERS STOCK FROM A HEALTHY HERD

When selecting animals to start calf clubs or for junior there is nothing more important than to see that the animals are healthy and from healthy herds. A. C. Slifer of Lewisburg, Pa., has always been an advocate of health and individuality. Then, too, he has always been interested in calf club work and in his present advertisement, is offering an animal that should prove interesting to calf club leaders or anyone who has the work of establishing a club.

The sire of this heifer is King Pontiac Ormsby Pietje, a son of King Pontiac Alcartra Pietje and Arcady Beets Nannetson 2d, and A. R. O. daughter of

Ormsby Kornkyde Lad. King Pontiac Alcartra Pietje is one of the greatest sires that ever stood in Pennsylvania. His offspring have won high honors in many show rings, his daughters have made good in official test and also in the general dairy.

The dam of this calf is from a good daughter of King Joh and her dam is a daughter of King Lyons, thus combining in the closest possible manner the blood of two great sires that formerly headed the celebrated Moyerdale herd.

Mr. Slifer is a pedigree expert and so offers to send pedigrees of his stock to all who think of purchasing cattle from him. The Slifer herd is fully accredited and, although small, is of high quality.

WESTERN SHEEP SUPPLIES

More than seven million sheep and lambs will probably be shipped from the western states from August 1 to the end of the year is the estimate of the United States Department of Agriculture. This number is around 775,000 head more than the number marketed from these states during the similar period of last year.

There are two chief reasons for this state of affairs; the large lamb crop raised this year compared with last, and the range and feed situation west of the Continental Divide. There were about ten percent more lambs raised this year than there were last year, there being an increase in the number of breeding ewes as well as a lower percentage of losses.

The feed situation west of the Continental Divide is serious. Drought has prevailed over much of this area since early spring and the growth of grass and browse on the winter range has been deficient. Hay crops are considerably smaller than usual. Prospective prices are high for both hay and grain and in some states feed supplies have to be brought in from outside. Flocks and herds will be culled closely and fewer lambs will be winter fed and marketed.

In advertising there are two essentials—first, having something worth telling about to sell; second, tell about it.

Cow Testing Association Reports

IT'S PRESIDENT OTTO NOW

At a meeting held at the extension office, Carlisle, Pa., August 20, Ivo V. Otto, Boiling Springs was elected president of the Cumberland County Cow Testing Association.

Other officers elected were: Paul Gible, Silver Spring Township, vice president; Farm Agent Paul L. Edinger, secretary-treasurer. H. K. McCulloch of West Pennsboro Township and J. L. Basehore of Silver Spring Township, were elected addition members of the executive committee.

All the members of the association present at the meeting enrolled for another year.

In his report Tester A. A. Raudabaugh of New Kingston stated that in the five year period just ended, the members had raised their average production of milk per cow from 7,200 lb. to more than 9,000 lb. with a proportionate gain in butterfat. This gain showed the economic value of the testing association to the farmer and dairyman.

MARYLAND TESTING

The biggest producer in the cow testing associations of Maryland during the month of July is a purebred Holstein owned by Louis Lambert of Germantown, and enrolled in the Upper Montgomery Association. She is credited with 1,987 lb. milk, 86 lb. fat, her average test being 4.3%. Second is a purebred Holstein, Mosetta, owned by McKendree Walker of Gaithersburg, with 2,396 lb. milk, 83.8 lb. fat. A. C. McCordell of Frederick, has a purebred Holstein credited with a production of 1,616 lb. milk, 70.9 lb. fat; Douglas Diamond of Gaithersburg has one with

1,550 lb. milk, 68.2 lb. fat and E. Feucht of Elkton has a purebred with 1,438 lb. milk, 66.9 lb. fat; Jeanette Maiden De Kol of the Essex Farms, Lutherville, has 1,612 lb. milk, 66.2 lb. fat and Ormsby, owned by Chas. Wertheimer, produced 1,438 lb. milk, 66.1 lb. fat. There were seven purebred Holsteins in the list of ten highest producers.

Jeanette Maiden De Kol heads the list for Baltimore County with her stablemate Jewel Johanna Posch in second place with 58.6 lb. fat, 1,724 lb. milk. Pearl, of the McCardell herd, leads Frederick County with two members of the Chas. Wertheimer herd following her. Mr. Lambert's cow leads the Upper Montgomery County Association with Mosetta in second place. Two purebred Holsteins owned by Douglas Diamond follow her while in fifth place is another purebred of the Lambert herd. Purebred Holsteins figure prominently in several other associations while the highest average herd in Baltimore County consisted of Holsteins owned by T. H. Price their average being 29.1 lb. fat while H. M. Carroll's registered cattle averaged 23.9 lb.

JULY TESTING IN VIRGINIA

By L. P. EMMERICK

During July there were thirteen active Cow Testing Associations with 246 herds and 6,054 cows reported on test. Of this total 489 cows produced over 40 lb. butterfat, and 125 over 50 lb.

The high cow for the month was Aris Pietje Burke Lass, a six-year-old purebred Holstein that freshened April 26, 1924, owned by Miniborya Farm, Drewrys Bluff, Va., a member of the Henrico Cow Testing Association. Her record for the month was 2,373 lb. milk

and 80.6 lb. butterfat. Of the ten high cows, six were purebred or grade Holsteins, three were purebred or grade Guernseys and one was a grade Jersey.

The high herd for the month was the herd of ten purebred Holsteins owned by H. L. Butler and Sons of Culpeper, Va., and members of the Culpeper Cow Testing Association. This herd averaged 959 lb. milk and 38.3 lb. butterfat. Of the ten high herds, six were Holsteins, three were Jerseys and one was a Guernsey herd.

The average production of all cows including 694 dry cows was 574 lb. milk and 23.3 lb. butterfat. The Orange County Cow Testing Association had the highest production in both milk and butterfat. The 487 cows in this association, including 25 dry cows, average 6,620 lb. milk and 26.5 lb. butterfat.

There was considerable decrease in the average production of all cows in the production of the high herds and the number of Honor Roll cows for the month. This was largely due to the fact that a very large number of the Association cows in this state freshen in the fall, and are starting to dry off. Pastures are also getting short and dry in most sections of the state.

There were fifty-seven cows sold during the month as unprofitable. Five purebred bulls and nine purebred cows were bought during the month.

CUMBERLAND COUNTY COWS

August is the closing month of the year for the Cumberland County Cow Testing Association and the August report received from the tester, A. A. Raudabaugh of New Kingston, Pa., shows that all ten of the leading cows for the month were black and white in color.

KING ORMSBY ENDERCAMP

our herdsire is by King of the Ormsbys from a granddaughter of King Segis with 29.37 lb. butter in a week; 904.32 lb. butter in a year.

His dam and sire's dam average 33.80 lb. butter, 662.9 lb. milk in 7 days, 1,097.61 lb. butter in a year.

Let us sell you a few fine young cows and heifers bred to this great young bull. Herd is under State and Federal Supervision, last test CLEAN.

JUST A SAMPLE

PAULINE LILITH NETHERLAND 80 lb. milk a day, is one of the choice animals in our herd which produces milk and butterfat at a profit over cost of feed and care.

Such animals are bred to

TRAVERSE ECHO SYLVIA KING whose three nearest dams have official seven day records averaging 33 lb. butter.

Come and see Them and Him.

W. B. KENNEDY & SON,
Bradford Co., Wyalusing, Pa.

Mr. Raudabaugh also says that purebred Holsteins will lead for the year's work which will be reported later.

During August 27th, herds containing 237 cows were tested, 39 of these produced over 40 lb. fat, 13 exceeded 50 lb. while 39 made over 1,200 lb. milk.

Beatrice, a registered Holstein in the herd of Ivo V. Otto of Boiling Springs, led for production of both milk and butterfat, her totals being 1,885 lb. milk, 62.2 lb. fat. Registered Holsteins were second and third, W. H. Wertz having one with 1,539 lb. milk, 61.6 lb. fat and G. W. Strock of Mechanicsburg had one with 1,640 lb. milk, 54.1 lb. fat. Grade Holsteins occupy the next four places, their production ranging from 51.2 lb. fat to 52.1 lb. A purebred Holstein owned by A. N. Lehman is eighth with 1,457 lb. milk, 51 lb. fat and grade Holsteins hold the next two places. The ten highest cows range from 50 lb. fat to 62.2 lb. and the average for the ten is 1,570 lb. milk, 53.6 lb. fat, the average test being 3.4%.

In his remarks, Mr. Raudabaugh says, "everything is going nicely. We are buying in the winter's supply of feed, hesitating on a few on account of market conditions. Good feeding of the cows that will freshen this fall is being advised and the following ration is being used: 100 lb. corn & cob meal, 100 lb. oats, 100 lb. bran, 100 lb. oilmeal."

FOR SALE—State Road Farm, 265 acres. ¼ mile to postoffice, High school, and depot. 40 head registered Holsteins. All farm equipment. \$12,000. Part cash. Write or come, J. W. FLINT, Scio, N. Y.

TESTING IN THE WESTERN STATES

Donnybrook Cornucopia Clothilde, a purebred Holstein owned by the Western State Hospital at Steilacoom, Washington, led all the cows in the testing associations under the jurisdiction of the Bureau of Dairying's Western Office, by producing 3,148 lb. milk, 116.5 lb. butterfat during July. This cow is enrolled in the Pierce County Association. A stablemate produced 104.6 lb. butterfat during the month. A purebred Holstein owned by A. J. Lawson, of Blanchard, Wash., produced 2,610 lb. milk, 101.8 lb. fat. She is enrolled in the Skagit County Association.

The Western Office received reports from forty-five cow testing associations in nine different states. These associations tested 30,634 cows of which more than 13 per cent produced forty pounds or more butterfat during the month.

Dry weather has been prevalent throughout the western states and under the circumstances, this is an excellent showing and indicates that the dairymen are giving their animals good care and feed.

The Oregon associations led for high average, the Oregon cows averaging 35.3 lb. fat while the Washington cows averaged 34.33 lb.; Utah comes next with an average of 29.98 lb. followed by 29.88 lb. for fourteen California associations reporting July production so that things

This is one of the daughters of **TIDY ABBEKERK PRINCE**, in our herd which consists largely of descendants of that great sire. Her name is Tidy Abbecker Princess Madaline and she has two 7-day records that average 31.31 lb. butter, 604.8 lb. milk.

Our herd, established 1901, is under State and Federal Supervision.

are gradually getting back to normalcy in that state after the foot and mouth trouble. A California establishment heads the list of high producing herds containing over fifteen cows, the honors going to John Belloni of Ferndale No. 2 Association, whose twenty-nine cows averaged 55.2 lb. fat. The Western State Hospital herd is second with the splendid average of 54.7 lb. fat, 1,531 lb. milk for seventy cows while nineteen registered Holsteins, owned by A. J. Lawson, averaged 1,652 lb. milk, 51.6 lb. fat.

WALDRON HERD IS ACCREDITED

Waldron Farm has been added to the list of accredited herds of New York State. The sixty-two head of animals were again tested late in August and again passed clean. This herd, owned by Mrs. Maud Dwight, South Otselic, consists of a bunch of producers of high class breeding and individuality. At its head stands King Sylvia Pontiac Pietje, a son of Champion Echo Sylvia Pontiac from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in a week as a junior four-year-old, she being by Woodcrest Sir Clyde from a daughter of May Echo Sylvia.

The junior sire is King Dixie Keyes, who is also a show bull. His sire is from Sylvia Tensen Echo, 27.57 lb. butter, 729.5 lb. milk in a week as a junior three-year-old, she a daughter of Champion Echo Sylvia Pontiac from the 29 lb. cow, Alice Tensen. On the dam's side, King Dixie Keyes is also royally bred, his own dam being by a son of the 36 lb. cow, Lulu Keyes and the dam's dam being from the same dam as Sir Segis Dixie, sire of the famous De Kol Plus Segis Dixie.

FOR SALE—Registered Holstein bull nine months old; one heifer; two heifer calves; cow to freshen Dec. 28th. Accredited. **MRS. I. T. SHADE**, Harris Station, Ohio.

HOWARD'S HERD IS ACCREDITED

The list of Pennsylvania accredited herds is rapidly growing, one of the latest to be added being that of Maple Ridge Farm, Springville, Susquehanna County. Mr. J. S. Howard, the senior member of the firm just reports the welcome news.

At the head of this accredited herd stands the handsome bull, King Rag Apple Plum Copia. His sire carries 68% of the blood of the great Pontiac Korndyke and his dam, De Kol Plum Copia, has twice made over 30 lb. butter in a week. As a five-year-old she is credited with 30.47 lb. butter, 668.6 lb. milk in seven days; 120.63 lb. butter in thirty days with a daily milk average of 92.3 lb. As a six-year-old, this cow raised her record to 33.26 lb. butter, 579.4 lb. milk.

The younger bull at Maple Ridge Farm is King Sylvia Korndyke Tweede. He was by Woodmont Echo Sylvia Champion, first prize three-year-old at the 1922 New York State Fair and his dam is Wynola Korndyke Pontiac Lass with a record made as a junior two-year-old of 20 lb. butter, 515 lb. milk.

THE PASSING OF A GREAT DAIRY COW

By L. P. EMMERICK

On Aug. 23, 1924, the Virginia Polytechnic Institute Dairy Barns reported the death of one of the greatest dairy cows that has ever been developed in Virginia. This was the purebred Holstein-Friesian cow, Buckeye De Kol Pauline 2d, No. 94346.

This great cow was born on Dec. 7, 1906, making her only a few months of being eighteen years old when she died. Her dam was Buckeye De Kol Pauline No. 52614 and her sire was Homestead Crown Prince De Kol No. 25865.

In 1914, at the age of six years, Buckeye De Kol 2d finished a yearly record of 20,784.3 lb. milk containing 927.6 lb. butterfat, or 1,159.5 lb. butter. When this record was made she became the world's record cow owned by a college or agricultural experiment station and she held this world's record title for about eight years. At the same time she became the state record cow for milk and butterfat production and her record for yearly butterfat production remains unbroken in Virginia at the present time.

During the lifetime of this great cow she had only two heifer calves. She had fourteen sons, six of which have been sold to dairymen in Virginia to head their herds. One of her sons was raised and developed as a sire for the college herd. There are six splendid daughters left by this son. Four of these six granddaughters of Buckeye De Kol Pauline have an average yearly record made as two-year-olds of 13,143 lb. milk with 451.4 lb. butterfat or 564 lb. butter. Unfortunately this son contracted pneumonia while on the show circuit and died as a two-year-old.

The making of the Holstein herd at the Virginia Polytechnic Institute College of Agriculture has been largely influenced by the work of this cow and her offspring. May her career prove a valuable influence upon other dairymen and breeders who aspire to develop dairy cows of real merit.

JAPAN GETS CHAMPION'S DAUGHTER

Agassiz Canary ReEcho, a three-year-old daughter of the former world's champion Agassiz Segis May Echo, 1681.25 lb. butter in a year, has been sold by the Directors of the Dominion Experimental Farm at Agassiz, B. C., to A. Miyaki, president of the Japanese Government Dairy Farm. The price is reported as being \$2,000. It will be remembered that Mr. Miyaki purchased a number of animals at the Erickson dispersal sale.

LOOK! One full aged cow, two bred heifers, four yearlings and a few heifer calves. Good Price for Quick Sale. Herd under State and Federal Supervision, first test CLEAN. Write for photo or call and see them.

EIGHTY HEAD IN SEVEN YEARS

About seven years ago J. M. Olsen, of Sherburne Four Corners, Chenango County, New York, started raising purebred Holsteins beginning with a few purebreds. His foundation stock was secured from the firm of Henry Lathrop & Sons and a few animals were purchased at a sale held at Syracuse in 1921. These were from one consignment and the Olsens knew quite a little about the herd from which they came and which was dispersed at that time.

To-day the Olsen herd numbers nearly eighty head. This herd has been tuberculin tested periodically for the past four years and is on the Accredited List.

Mr. Olsen believes in putting official records on his cattle but he has never been able to do any official work on account of lack of help. Some of his neighbors talked of putting official records on their cattle and he arranged to piece some animals with them for testing purposes but plans went awry so no records were made. This was last February and at that time Mr. Olsen, for a few days, milked three of his cows three times daily.

Jesse Clothilde Pietertje 3d ranged from 60 lb. to 67 lb. daily, her highest single milking being 30 lb. Sunnycroft Alcartra Ladoga milked very evenly, her low day being 62 lb. and her highest day being 63 lb. Her heaviest milking was the morning of February 12th when she gave 31 lb. Netherland Gelsche Beauty ranged from 67 lb. to 75 lb. and on the morning of February 13th gave 31½ lb. She is an exceptionally good individual and was sired by King Gelsche while her dam was a daughter of Sir Mutual Ormsby De Kol.

The Sunnycroft cow is from an A.R.O. dam and was by King Segis Alcartra Pontiac, he by King Segis Pontiac Alcartra from the 32 lb. cow, Aaggie Grace Beryl Wayne.

Jesse Clothilde Pietertje 3d has an official record of 19.70 lb. butter, 480 lb. milk, made as a senior three-year-old. She is from an A.R.O. cow and was by Rag Apple Korndyke Chief, he by Rag Apple Korndyke from a 30 lb. daughter of King Hengerveld.

In the Olsen herd there are a fine lot of young heifers by a former herdsire, King Ladoga Hilldale. This bull was from Sylva Ladoga Pauline 518.4 lb. milk, 26.40 lb. butter in seven days and was sired by King Pontiac Hilldale, formerly owned by a syndicate of breeders residing around Sherburne, a bull that has many daughters in a number of good herds particularly that of John Howard.

King Pontiac Hilldale has nearly eighty tested daughters and was by King of the Pontiacs from Hilldale Lorie

KING PONTIAC HILLDALE
One of the leading sires of Central New York.

Korndyke, 625.6 lb. milk, 29.93 lb. butter in seven days as a senior four-year-old.

The present Olsen herdsire is Sir Aaggie Colantha Bonalevo No. 382865. Although this bull is only a two-year-old he has already sired a lot of promising heifers. The calves in the Olsen herd are by him and the older females are bred to him. He is a strongly bred Colantha bull. His dam, Bonalevo Colantha Quality Belle, as a senior three-year-old produced 443.1 lb. milk, 26.98 lb. butter in a week and 17,066.9 lb. milk, 760.88 lb. butter in 365 days. She is a daughter of Colantha Johanna Lad 8th and her dam was a 26.77 lb. four-year-old daughter of Czar Walker.

Sir Aaggie Colantha Bonalevo was sired by Colantha Sir Aaggie, son of Colantha Johanna Lad and Aaggie Cornucopia Pauline 659.2 lb. milk, 34.32 lb. butter in seven days; 2,640.3 lb. milk, 137.62 lb. butter in thirty days. The butter records, and we believe, the milk records as well, were world's records in class at time of making and the butter

records stood at the head of the list for several years. Descendants of this great cow make great records, year after year and generation after generation.

The purebreds at the Olsen farm are of good size and they are kept to make a profit for their owners. They have never been forced but have always been well cared for. When Mr. Olsen thought that his neighbors would test some of his cattle he had neither beets or beet pulp and his fitting ration consisted of hominy, oil meal and mixed feed, just farmer feeds.

The Olsen farm consists of 165 acres, beautifully located on a main road of the Chenango Valley. It is in a high state of cultivation, growing an abundance of all farm crops as well as some alfalfa. It is splendidly located, being only eighty rods from a railroad station from whence milk is shipped. Considerable cabbage has been grown on this farm each year.

The farm buildings are well above the average. The stable is equipped with watering devices and the water supply comes from hillside springs. Modern farm machinery, including a milking machine, is used.

Mr. and Mrs. Olsen were born in Denmark and crossed the ocean in 1893. For ten years they lived in Canada, then spent a number of years in the western states and in 1917 came to their present home. Mr. Olsen is a member of the Dairyman's League and of the Farm Bureau.

The average value of farm land in Pennsylvania this year is placed at \$73.50 per acre, including buildings.

JENSEN ADJUSTABLE CHAIN-HALTER

A perfect halter for use on your herd bull when tying him in the barn or staking him out. Enables you to keep him under perfect control. Presses on the most tender part of the nose. Adjustable for any sized animal. Don't take chances. The world's safest bull tie.

An Agile Shirt

A man purchased some red flannel shirts guaranteed not to shrink. He reminded the salesman forcibly of the guarantee some weeks later.

"Have you had any difficulty with them?" the latter asked.

"No," replied the customer, "only the other morning my wife said to me, 'John, where did you get that pink coral necklace?'"

A COMING CRAWFORD COUNTY HOLSTEIN HERD

A. C. Barr of Tryonsville, Pennsylvania, is the owner of a good dairy herd of which part is purebred. Mr. Barr plans to have all purebreds as soon as possible. His establishment is called Maple Lawn Dairy Farm and he has nineteen head of cattle, eleven of which are milkers.

Mr. Barr has been dairying ten years. He has only been in the purebred Holstein business four years, but he is an enthusiast. He started by purchasing three heifers from breeders in his community, one from Forest Russell and

ONE OF THE GOOD COWS IN THE
BARR HERD

two from Frank Jones of the Maple Grove Stock Farm. The two heifers purchased from Mr. Jones were daughters of King Pontiac Jupiter, a son of King of the Pontiacs from a good daughter of Hengerveld De Kol.

Every animal in Crawford County over six months of age has been tuberculin tested, for this county is under the accredited area plan and the test, which was recently conducted, showed a very low percentage of animals affected with disease. Mr. Barr has been a leader in the movement and his own herd is on the Accredited list.

Mr. Barr is a member of the Crawford County Bull Association. His first herd

year as a junior three-year-old, world's record in class.

The second herdsire of Maple Lawn Dairy Farm was Sensation Lucille Hartog whose dam is a 19.44 lb. three-year-old daughter of Maple Crest Pontiac Hartog and Lucille Jolie, who is also dam of Lucille Jolie Pontiac, 1,173 lb. butter in a year as senior four-year-old. Sensation Lucille Hartog is a son of Sensation who was from Lindale Bonnie Pauline and was by a son of Ona Clothilda D. Kol, over 1,100 lb. butter in a year, one of the greatest cows of the famous Ona family. Lucille Bonnie Pauline has a year butter record of over 1,250 lb. made as a full aged cow, produced over 1,000 lb. butter in a year as a three-year-old and was the first cow in Ohio to make over 30,000 lb. milk in year test.

Mr. Barr is a strong believer in purebreds. He has always headed his dairy with a purebred bull. He has a herd of purebred Hampshire swine and he owns a handsome Shire stallion, "Justice."

The Maple Lawn Dairy Farm contains 125 acres. Considerable fruit of various kinds is grown. A spacious and well kept lawn helps set off the house which is well shaded by large, handsome, maple trees.

Mr. Barr believes in up-to-date methods and in the use of machinery to lighten labor. He has a silo, tractor, manure spreader and lots of other farm machinery which is well taken care of and so is always ready for use. The majority of dairymen in Crawford County keep their bulls in the barn, often in dark unventilated stalls but on this farm, a strong bull yard has been built and the herdsires are enabled to take exercise in the open air and so retain their health and vigor.

Mr. and Mrs. Barr have two children, both girls. They, like their parents, are fond of livestock and it is a pretty sight

PASTURE CORNER AT MAPLE LAWN DAIRY FARM

sire was King Daisy Grace Fayne Valdessa, a son of King Holingen Fayne Valdessa and Daisy Grace De Kol 2d. This cow was from Pontiac Aaggie Korndyke and has a year record of 721.72 lb. butter, 13,227.5 lb. milk made as a junior two-year-old. Her dam, Daisy Grace De Kol made 1,203.5 lb. butter in a year as a junior four-year-old, world's record in class at time of making. King Holingen Fayne Valdessa was by King Valdessa from Finderne Holingen Fayne, 1,395.06 lb. butter in a

to see them playing on the spacious, well kept lawn, with their Welsh pony and their beautiful collie, "Susie."

HOPE SILVER WINS

Seth S. Silver of Cantril, Iowa, breeder of purebred Holstein cattle, Hampshire hogs and Herefords is a candidate for the position of Secretary of Agriculture for the state of Iowa on the Republican ticket. There are three other prominent candidates and a number of others are mentioned.

SPRING BROOK FARM

A Few Daughters of King Artis Waconda

How Do You Like Them?

I am asking very reasonable prices for these heifers and for young sons of King Artis Waconda, whose dam, a 30-lb. cow, made a World's record in long time test as a three-year-old.

Come and look over this bull, the cows he is bred to and their offspring. They will please you.

Sire: King Pontiac Maple Knoll Ormsby whose daughters are making good. He was by King of the Pontiacs from a 33-lb. sister of Ormsby Korndyke Lad.

Dam: Hillside Lady Saxon, 28.9 lb. butter, 548.7 lb. milk in 7 days as a junior four-year-old. As a junior two-year-old she made state records for both seven- and thirty-day butter production. Her dam, Hillside Saxon, has twice made over 30 lb. butter in a week, and is a 32.29-lb. daughter of Woodcrest Pietje and the 30-lb. cow Hillside Annette.

The three nearest dams of **Hillside Pietje Ormsby** average 31.45 lb. butter in 7 days with a daily milk average of 80.4 lb.

This bull is now in service in this herd.

No. 18

Pine Ridge Stock Farm and Its Owner

A Story of a Working Dairyman and His Holstein Herd

FOR fifteen years Dan E. Anderson of Norwich, N. Y., has been a breeder of purebred Holsteins. He became a member of the Holstein-Friesian Association of America in 1911. Usually a man keeps dairy cows of no particular breed, purchases a purebred Holstein bull as a herdsire and then, when the daughters of that bull come into milk, he finds that they are so much better than their dams that he believes purebreds will be even better yet and so buys a purebred or two. Mr. Anderson's progress was more rapid for he had his first purebred Holstein bull only a year before he owned purebred females. Evidently he had been seriously thinking over the matter before he had owned any purebreds at all. He had time and opportunity for thought for Mr. Anderson was born on the farm where he now resides and he is no longer a young man; in fact, he has a son, LaVerne, now eighteen years old and a daughter, Olive, about fifteen.

One of the first bulls ever owned by Mr. Anderson and he says, "one of the best," was Prince Calamo Korndyke. He was purchased from the veteran breeder E. A. Vandervort of Sidney, N. Y., and he was a son of Paul Calamo Korndyke, who was exhibited with a considerable degree of success by Mr. Vandervort and then later, when he was the property

PEARL, LOCKHART RELIANCE
882.10 lb. butter, 15,837.7 lb. milk in a year as a senior four-year-old. Dam of King Reliance Lockhart Veeman.

old Paul was noted is a family characteristic, transmitted from generation to generation.

The cow that you would see first if you went into the Anderson barn is Jewel Clothilde Alexina De Kol. She is large, handsome, and would be hard to improve upon in any way. She has been termed the "Jewel of Pine Ridge Herd." This great old cow is past sixteen years old, her date of birth being March 5, 1908. Her sire was Sir Clintonia York and her dam was Maud Inka Ononis, a

daughter of Sir Alexina Greenwood De Kol. Jewel was officially tested as a five-year-old and has records of 29.13 lb. butter, 598 lb. milk in a week; 114.71 lb. butter in thirty days with a daily average of 81.6 lb. milk. She has at least three daughters in the A. R. O. list. These are Korndyke Hengerveld Jewel, 491.2 lb. milk, 24.45 lb. butter in seven days, 14,771.4 lb. milk, 653.80 lb. butter in a year; a 13.88 lb. junior two-year-old; and a 20 lb. junior three-year-old. Her young son by King Reliance Lockhart Veeman is being used as a junior sire although, as a number of the younger members of the herd are his half-sisters, it is not the intention to keep him permanently.

Among the bulls used in this herd were Locust Pontiac Perseus Beets and Chenango Valley Korndyke Prince. The former bull was from a 22-lb. grand-

THE JUNIOR HERDSIRE

of "Bob" Haeger, became one of the greatest Holstein show bulls ever known, carrying off championships at leading fairs and national dairy shows. Descendants of Prince Calamo Korndyke are still in the herd and they indicate that the type and conformation for which

daughter of King of the Pontiacs while his sire was one of the handsomest sons of Hengerveld De Kol. Chenango Valley Korndyke Prince was by Prince Rag Apple Korndyke, a son of Pontiac Korndyke, formerly owned by Whitman A. Follett of North

Norwich, N. Y. The dam of Chenango Valley Korndyke Prince was a 24-lb. three-year-old daughter of Earl Korndyke De Kol, a bull that formerly headed the herd at Cornell University and then passed into the hands of Isaac Dalrymple, whose herd was, in those days, esteemed as one of the very best in Chenango County, considered from the standpoint of individuality or production. Earl Korndyke De Kol was a son of Belle Korndyke and therefore a maternal brother to Pontiac Korndyke. His daughters never had the opportunities to make records that were enjoyed by the daughters of his younger brother but there is evidence enough to show that this bull was one of the very best sons of old Belle.

Our readers will pardon us if our story seems disjointed as we have wandered from the breeding of the herdsires to that of the cows and then back to the bulls and then back again but by so doing we are the better able to show the reason for blood lines we now find in the herd.

When the Oneida Community herd was a going concern, Mr. Anderson purchased the bull, King Reliance Lockhart Veeman, now four years old. The five nearest tested dams of this bull have seven-day records

MINNIE MONK OF GRAYFIELDS
Owned by Dan E. Anderson.

averaging 29.23 lb. butter. His sire, King Veeman Pontiac Hengerveld, was by King Segis Pontiac Alcartra from Daisy Veeman Hengerveld, a daughter of Sir Veeman Hengerveld with records of 637.2 lb. milk, 29.14 lb. butter in seven days and 2,666.9 lb. milk, 121.63 lb. butter in thirty days. The dam of King Reliance Lockhart Veeman was Pearl Lockhart Reliance. As a three-year-old this cow was shown at the New York State Fair where she won first place in her class. As a senior four-year-old, she was officially tested and is credited with a seven-day record of 485.5 lb. milk, 26.70 lb. butter. She was carried along for the full year on twice-a-day milking and her record as recorded in the Dairyman's Division for the 365 days was 15,837.7 lb. milk, 822.10 lb. butter, her average fat test being 4.43%. Her butter record was the world's record in this division and class at time of making and, despite the high fat test, the amount of milk ranked second. Her dam has official records of 592.9 lb. milk, 26.30 lb. butter in a week, 2,521.8 lb. milk, 106.80 lb. butter in thirty days while her sire is King Pontiac Reliance, who has a long list of good record daughters and was by King of the Pontiacs from Maple Knoll Helen, a cow that two different years has made over 30 lb. butter in seven-day official

test. She is a daughter of King Korndyke Hengerveld Ormsby and therefore a sister to Ormsby Korndyke Lad and she has official records of 33.16 lb. butter in a week, 127.38 lb. butter in thirty days.

King Reliance Lockhart Veeman did so well in his new home that when the Oneida Community herd consigned to public sales, Mr. Anderson generally attended and when the herd was dispersed he bought liberally and so we find that a number of the animals he now owns were formerly owned by the Oneida Community.

We will mention some of the females in the herd. Edwina Reliance is a handsome cow, dark in color and is a daughter of King Pontiac Reliance from Edwina Bessie Korndyke, 27.14 lb. butter in seven days, 20,995.1 lb. milk, 977.62 lb. butter in a year.

Lena Aaggie Lilith is a daughter of Lena Aaggie Grace, 561.7 lb. milk, 24.23 lb. butter in seven days. Freda Lilith is from Freda Wayne Bleeker, 26.62 lb. butter in a week, 2,539 lb. milk, 105.28 lb. butter in thirty days. Both these handsome cows are by Ormsby Lilith Clothilde, who also has a long list of good record daughters. His sire was King Korndyke Hengerveld Ormsby, and his dam was K P Lilith Clothilde; therefore on the sire's side he is brother to Ormsby Korndyke Lad while on the dam's side he is brother to King Segis Pontiac Count, bulls whose daughters are noted for large and persistent production. K P Lilith Clothilde, in her second lactation period as a junior four-year-old, produced 22,229.8 lb. milk, 1,043.27 lb. butter in the year, her butter record being world's record in class at time of making while her milk record was the second highest record in class at time of making.

Another young cow of great producing capacity is Minnie Monk of Grayfields, whose picture does not do her justice. Tested as a senior three-year-old, she produced 414.9 lb. milk, 18.74 lb. butter in seven days. Her dam is a good record daughter of King Woodcrest Segis. Her sire, Sir Fairview Pontiac Korndyke, is a son of Pontiac Korndyke and the 30-lb. cow, Fairview Jessie Korndyke.

The Andersons recently sold a son of this cow, sired by King Reliance Lockhart Veeman to Menzo Brooker, who although he gets his mail from the South New Berlin post office, lives only a little way from the Anderson establishment.

There are at least forty head in the Pine Ridge herd. The cover illustration gives some idea of the size, type and producing capacity of the animals but to fully appreciate them you must see them. We don't know that any of Mr. Anderson's cows have ever been exhibited at any of the local fairs but they are certainly capable of holding their own in mighty stiff competition. The herd is under state and federal supervision and, at its latest test, was given a clean bill of health.

While Mr. Anderson's barn is large, well built and well kept up, it is not at all fancy and is practically duplicated on the establishments of hundreds of readers of the BREEDER AND DAIRYMAN. It has cement floors and water buckets. A good stream of running water from a fine spring comes into a cement cistern which is in the barn back of the horses and from which the horses as well as the herdsire drink.

The farm contains two hundred acres, a portion of which is wooded; in fact, the Andersons own and

operate a small sawmill. Pine Ridge Stock Farm is a typical New York State hillside farm located on a state road.

There are three generations of Andersons actively at work at Pine Ridge Stock Farm. While Dan is the cattleman and chief manager, he has the benefit of the advice and experience of his father and is ably assisted by his son LaVerne. We regret that the picture taken showing the three is not plain enough for reproduction, but all three are workers. Mr. Anderson, who stands

well over six feet, is a big man in a number of ways. He is regarded as a community leader and is greatly respected. He is a firm believer in farming and the farm. He thinks that, at the present time, owing to the result of the great war and of the disorganization of world-wide affairs caused by that war and its results, the farming industry does not hold its rightful position of importance in national business but he believes this condition is only temporary and, using his own words, "The time is coming when the farmer will be the man."

The Mother Cow of the Tracy Herd

By J. H. LEWIS

ON the farm owned by James R. Tracy & Son, owners of Purity Stock Farm, Platteville, Grant County, Wis., there is a purebred Holstein cow now in her sixteenth year. Should you look over this herd, the old cow is bound to be pointed out to you as she was the foundation animal of this Holstein herd and nearly every animal in the herd is her descendant.

Violet Artis De Kol, as this cow is called, was born January 29, 1909, on the Gates Farm, Ft. Atkinson, Wis. She was sold to George Riter, a Platteville farmer as a heifer and did not come into possession of the Traceys until in the autumn of 1915. They then had a herd of grade Guernseys but were running short on milk and cream for their delivery route in

Purity Lottie Segis at twenty-five months of age produced 392.1 lb. milk, 18.03 lb. butter in seven days official test and as a junior three-year-old produced 520 lb. milk, 22.71 lb. butter. The other tested daughter is Purity Cinderella Segis, who at twenty-five months old made an official seven day record of 453.7 lb. milk, 22.74 lb. butter. Laura Esther has a two-year-old daughter in the barn, at present untested, which the Traceys say is fully as good as either of her older sisters.

Going back to Violet Artis De Kol, the foundation cow, we find a second daughter on the farm. This is Artis May Arminda De Kol. As a five-year-old this cow made an official record of 544.2 lb. milk, 25.43 lb. butter. She has had several calves which the Traceys sold at good prices.

A third daughter is Etta Purity Segis, 433.4 lb. milk, 18.58 lb. butter in seven days as a junior two-year-old. The fourth daughter, Purity Bess Segis is now three years old and untested while there is yet another younger daughter.

In less than eight years, Violet Artis De Kol gave seven offspring to the herd including two male calves, one of which died young and the other is now in service. She has six granddaughters and two grandsons, four great-granddaughters and several great-great-granddaughters. For several years there has not been a Guernsey cow on the Tracy farm, Violet Artis De Kol has given them a high class herd of purebred Holsteins.

While this should be sufficient in itself to insure the cow everlasting comfort and kindness she was fitted for official testing at the age of ten years, eleven months and fifteen days and in seven day official test she made 531.1 lb. milk and 23.73 lb. butter and this encouraged a year's testing which this wonderful cow finished with a record of 18,291.4 lb. milk, 831.3 lb. butter.

Old Violet has never been sick. She has never gone off feed. She has been a bear for work and last spring came up on grass with a sleek coat, looking plump and carrying on with the best behaved members of the Tracy herd. She looks good for several years yet to come and her owners propose to personally see to it that she shall have the best of care and attention.

Violet Artis De Kol is a living example of the reason

VIOLET ARTIS DE KOL, NO. 121327
18,291.4 lb. milk, 831.3 lb. butter in a year. Born January 29, 1909, and still a producer.

Platteville and they bought the cow from Riter. Not long after they got her they realized they had picked up a pearl as well as a cow of great producing ability.

At the time Violet was purchased she had a heifer calf at her feet. This was named Laura Esther. When Laura was a junior four-year-old, she was placed in official test in which she made 28.21 lb. butter, 599 lb. milk. This so encouraged Tracey & Son that they ran her in the ten months' division in which she finished with a production of 15,740.5 lb. milk, 651.32 lb. butter. When the prize list was made up that year, she placed eleventh for milk and seventeenth for butter among all the four-year-olds tested in the United States during the season of 1920-21.

Laura Esther has three daughters in the Tracy herd;

why purebred Holsteins have grown to be the most popular and most numerous dairy breed in the United States. Longevity, uniform large production, prolificacy, these three great qualities leave little to be desired. When to these are added beauty of form and ability to transmit, the dairy farmer who chooses to work with purebreds has tools with which, if given care equal to that any good artisan gives his tools, he is bound to carve his way to success.

The Prince of Wales in Butter

AN unusual exhibit that is attracting a lot of attention at the British Empire Exposition is that of the Prince of Wales and his favorite horse modeled in butter. This forms part of the Canadian exhibits at the exposition. A photograph of the "statuary" was sent the BREEDER AND DAIRYMAN by our contributing editor, Eugene B. Bennett, who attended the exposition.

It depicts the Prince on his ranch in Alberta. Our illustration simply shows one section but the butter

THE PRINCE OF WALES IN BUTTER
From the Canadian exhibit at the British Empire Exposition now being held near London.

exhibit occupies several sections and the background represents buildings on the ranch of his Royal Highness.

The British Empire Exposition is being held at Wembley near London. It is composed of exhibits from the colonies and dependencies scattered throughout the world that make up the Empire. It is on a very large scale and while, like most exhibitions of this kind, it is a commercial enterprise, it also partakes somewhat of a patriotic nature and has attracted visitors from all parts of the world.

Milk and the Baby Death Rate

ONLY twenty-six infants out of every 1,000 born in Santa Cruz, California, die before they are a year old. This is the lowest death rate in any city in the United States according to figures of the American Child Health Association. The Pacific

Coast cities make a splendid showing which is attributed by Sam. H. Greene, of the California Dairy Council, as being partly due to the excellence of their milk supply.

In the cities with a population of a quarter million or more, Seattle, Wash., is the first low death rate of 49 per thousand; Portland, Oregon, is second with 53, and Minneapolis is third with 54. The cities are divided into five groups according to size of population. The leader of each group is a Pacific Coast city.

In the group with population of 100,000 to 250,000, Spokane, Wash., is first with 48; Yonkers, N. Y., is second with 59; Oakland, Calif., third with 63.

In the group with population from 50,000 to 100,000, Berkeley, and Long Beach, Calif., tie for first place with the death rate of 41 per 1,000, and the group with population between 25,000 and 50,000 is led by Pasadena, Calif., with 37 and Oak Park, Ill., with 37.

There are a number of surprises in the table. Washington, D. C., and Kansas City, Mo., each have the high rate of 92. Buffalo's figures are 90; Chicago, 87; Detroit, 86, and Philadelphia, 80.

Adulterating Cream with Coconut Oil

WHEN the foot and mouth disease broke out in California all the dairy inspectors of the State Agricultural Department were called in to help in the work of eradicating the disease. Just a week later a creamery operator gave up a position which paid him approximately \$250 a month to take another one that would net him about \$100 a month. As the approximate earning of the various creamery station operators is almost common knowledge in the trade there was quite a little talk about this but the reason did not become known until the clearing up of the disease in a number of districts released some of the inspectors. Following a number of clues Dr. F. G. Whitehead, field veterinarian of the department of agriculture found evidence which caused the creamery operator to appear for trial at Santa Rosa, July 31.

The evidence showed that when the man whose name was Cooksley, took his new position at Santa Rosa, he brought with him a number of cans of coconut oil which he purchased at the cost of 18 cents a pound. He colored this oil with butter coloring and mixed it with the cream. He is said to have cleared a profit of at least 39 cents a pound whereas the legitimate profit on butter fat amounts to between one and two cents a pound. When Cooksley found he was suspected he left Santa Rosa but he was later located and placed under bond to appear for trial. He was sentenced to jail for ninety days.

The addition of coconut oil to cream is difficult to detect chemically except by trained chemists with expensive equipment. It is adulteration with a foreign fat deficient in the nutritive, growth-stimulating elements contained in butterfat. Under the circumstances it seems that the penalty inflicted was very light considering the offense.

Sometimes it is difficult to tell the criminal lawyer from a lawyer criminal.

NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

WHEN one begins to consider the interests of the American woman of to-day there seems to be no end to them. First of all comes the home, in all its phases of home-making and housekeeping. The training and education of children, the feeding and clothing of the family, the pleasures of the home, all afford varied fields of activities, to say nothing of the housekeeping problems in these days of no domestic help, when one must be cook, laundress, maid of all work and lady, all at one and the same time. The average American woman is interested in the church, with all its organizations, and in many forms of welfare work which to-day carry out the teachings of the church.

Then there are the clubs with varying interests and objects of work, to one or two of which most women belong, doing much of their civic work in that way.

Nearly all women are interested in themselves, in their own mental and physical betterment, and are keen to pick up anything that will be of help. Most women read all the beauty hints (Yes, they do!) whether they will acknowledge it or not. And if you want to get a woman's attention just start to talk about dieting! She may not use her knowledge but she loves to talk about it.

The realm of politics is no longer closed to the American woman, and her activity along that line is limited only by her inclination, and will evidently be greater in the future and not less.

Now in all these things, the woman who lives in a small town or rural community differs not at all from the woman who lives in the city. The day is past when distinctions can be drawn between the city and the country. The radio, the automobile and good roads, the daily paper and good magazines and books, the telephone and good stores—yes, and the mail-order house catalog—have all contributed to wipe out the distinctions between the city woman and her country sister. And should comparison be made between them—give me the country woman every time. I firmly believe that there is a larger proportion of well-informed, intelligent women in the rural districts than in the larger cities, for while they may not wear the latest dew-dad in their ears or around their necks, nor have they usually seen the latest movie until it is at least six months old—yet they have on their tables good papers and books and they take time to read them. It would surprise some metropolitans to hear some of the original papers and talks given at some of the rural clubs. The trouble is that many country people have been suffering from an inferiority complex, once that is thrust aside and they become articulate and self-assertive there is no limit to the extent of their activities.

Now all this is by way of a preamble to the statement that should this page continue to be a feature of this magazine, there will be no telling just what may

appear on it, for the simple reason that it is hard to find anything which does not have an interest for the woman of to-day.

HAVE FLOWERS NEXT WINTER

It will soon be time to order bulbs for winter indoor blooming. An expenditure of two or three dollars will insure a succession of flowers throughout the winter months. They are easy to grow; almost any kind of soil will do. Keep in the dark until well rooted, then bring out one at a time, bringing them gradually to the sunlight. Paper pots may be purchased at a cost of about three cents each, and with care, can be used a second time. Bulbs will not force a second time, but may be planted outdoors in the fall, and will bloom the following spring. They will multiply outdoors eventually making a good-sized bed.

ESCALLOPED SUMMER SQUASH

A timely recipe just now when summer squash are growing on the vines faster than one can use them.

3 cups ground squash,
1 cup ground onion,
1 cup ground peppers, red or green.

Butter the dish, put in a layer of squash, sprinkle with bread crumbs to take up the moisture, also salt and pepper; then a thin layer of onion; then one of the peppers. Repeat until dish is full, having squash and bread crumbs and plenty of butter on top layer. The amounts of onion and peppers may be varied to one's taste. The three vegetables may be put through a food chopper and canned in their own juice, and make a wonderful winter supper dish.

DO YOU KNOW:

That a teaspoonful of salt, added to a basin of starch will give an extra gloss to linen?

That when the furniture looks sticky or smeary it is because too much furniture polish has been used?

That strips, torn from sheets, rolled tightly and pinned, come in very handy. From two to three yards is a good length, narrow ones for toes and fingers, and wider ones for arms and legs.

That vinegar will remove the stains from porcelain washbowls and bathtubs, when everything else has failed?

TO MY READERS

You'd scarce expect one of my size,
To speak in words so wondrous wise;
But in a magazine like this,
No words of wisdom come amiss.

Your great indulgence I must crave,
For this attempt at subjects grave;
In future pages there may be,
Something of fun and levity. C. A. H.

Improvement in Farm Situation

THE crop reports issued by the U. S. Dept. of Agriculture August 7th indicate a considerable change for the better as to the big staple crops of the year. The wheat crop is forecast at 814 million bushels compared with 786 million last year and 74 million bushels larger than the forecast issued for July 1st. The oat harvest is estimated at 1,439 million bushels, an improvement of nearly 100 million bushels indicated during the month. Other cereal crops showed improvement during the month. The potato estimate is 399 million bushels. The forecast on the hay crop showed a very slight decline during the month from 99,100,000 tons to 89,000,000 tons. A fairly good fruit crop is indicated. The whole report is much more optimistic than has been anticipated by many observers. It is not, however, sufficiently optimistic to warrant the somewhat exaggerated stories of increased earning power of the farmers of "billions of dollars added to farmer's income" which have appeared generally in the city press. The one crop in which the reports show poor condition is corn. The August estimate is 2,576 million bushels, almost 500 million bushels less than last year and 323 million bushels less than the 5-year average. A slight improvement however was indicated during July and it is safe to assume that there will be further improvement should weather conditions during August be extremely favorable.

The basis of these exaggerated stories in the press have been the sharp upturn in market prices of wheat, corn, oats and hogs. The effect of these increased market prices have not been translated into increased farm prices of equal importance. The farm price of wheat for example on July 15th averaged for the entire country was only \$1.058 per bushel while the market price is soaring around \$1.30, and in Kansas, Oklahoma and Nebraska where this year's crop of wheat was actually being marketed, the farm price was only \$0.93 and \$0.94 a bushel. This is the only one of this year's cereal crops yet reaching market and the high quoted prices on the other cereals has not as yet resulted in any increase in farmer bank accounts. Neither has the \$10 prices had any material financial result yet because it is between seasons for the hog raiser for the most part.

A careful calculation of the probable farm sales value of this year's primary crops, cereals, potatoes, tobacco, cotton, flax, rice, hay, fruits, etc., compared with an equally careful calculation of the farm sales value of the same crops in 1923 indicates that the difference on the credit side of the ledger for the year instead of being a billion and a half exploited by the daily papers is more likely to run between 300 million and 500 million dollars, and even these careful calculations are subject to material correction should the volume or the price of the two or three major crops, corn, cotton and wheat, be reduced by the time they are marketable in large quantities.

The situation is a very satisfactory one considering the general trend of agricultural production and prices compared with production and prices in other industries. It should encourage both farmers and men engaged in other industries but it is not a situation which encourages speculation or inflation. Economic studies

show that the purchasing power of farm products per unit has increased and the purchasing power of industrial products per unit has decreased materially in the past six months. It will be fortunate and lead to increasing and stable prosperity if this approach to equality continues steadily and not by sudden fluctuations and that is the prospect which is clearly evident at the beginning of this agricultural harvest season.—*National Grange Report.*

The Winner of the Missouri Cow Race

ALL the contestants in the Missouri Cow race held during the week of the Missouri State Fair were Holsteins, no representatives of any other breed coming forward to dispute the honors. The winner was the purebred Holstein-Friesian cow, Clifden Palmar Veritas Pontiac, owned by John F. Bluhm of Smithton, Mo. In the seven days she was credited with 458 lb. milk containing 16.84 lb. fat. She was milked four times daily and her total production computed on the 80% basis was 21.05 lb. butter.

CLIFDEN PALMAR VERITAS PONTIAC
Winner of the Missouri Cow Race. Owned by John F. Bluhm, Smithton, Mo.

Clifden Palmar Veritas Pontiac was born February 3, 1916. Her breeder was Fred J. Karlen of Winslow, Ill. Her sire was King Alcartra De Kol Pontiac and her dam was Clifden Palmar Veritas 3d. Clifden Palmar Veritas Pontiac is credited with a seven-day official record made as a seven-year-old of 676.4 lb. milk, 33.61 lb. butter. As a senior-four-year-old, she produced 15,017.3 lb. milk, 678.76 lb. butter in 305 days while as a senior three-year-old, she has a seven day record of 559.6 lb. milk, 27.14 lb. butter.

The Carnation Milk Products Co., now has a plant at Carenton, province of Manche, France, where condensed milk is being manufactured. Most of the product of this factory will be for French consumption but part of it will be shipped to England. This French factory is said to have capacity to handle 100,000 lb. of raw milk daily.

Your advertising, appearing in THE HOLSTEIN BREEDER AND DAIRYMAN, gets results, as it reaches the men who are buying purebred Holsteins.

Little Known Cattle Feeds

ON the government experiment farm at Beltsville, Md., the United States Department of Agriculture has been making extensive tests of various dairy cow feeds, many of them little known to the bulk of cattle owners. The knowledge gained is now being made generally available in Department Bulletin 1272 which has just been published. The details were carefully planned to insure a fair test and in every case the feed tried out was compared with some standard feed as similar in composition as could be obtained, one that might be replaced by the new feed if found satisfactory.

Much has been said in the general press about hydrolyzed sawdust. The investigation shows that this so called feed is unpalatable, contains little nutriment and could only be used in small quantities. Its assigned food value at the maximum is only 14.5% of that of corn meal.

Fish meal, though not so palatable as cottonseed meal, was found to be worth, pound for pound, 20 to 25 per cent more than prime cottonseed meal. The cows would eat all that was offered, and no bad effects on the physical condition of the cows were noted. The flavor of the milk apparently was not affected in any way either by exposing the milk to the odor of fish meal or by feeding the cows 4 pounds of the fish meal before milking.

Peanut feed containing 27.25 per cent crude protein possesses a nutritive value not exceeding 74 per cent of prime cottonseed meal. It is thought that the protein content affords a fairly reliable guide in estimating the value of this feed in comparison with cotton seed meal.

Potato meal is worth not more than 78 per cent as much as corn meal.

The maximum value that can be assigned to velvet-bean meal is 65 per cent that of cottonseed meal.

Sweet-potato meal appears to be almost as valuable as corn meal.

Potato silage and corn silage were found to possess about the same feeding value.

Apple-pectin pulp compared with dried beet pulp was found to be less palatable and less efficient as a feed.

Cattle owners who have been offered or are in a position to secure any "new" feed should write for this bulletin, addressing the United States Department of Agriculture, Washington, D. C. It will be sent free as long as the supply lasts and should prove a valuable addition to the library of any man who owns dairy cows.

The Dairy Situation

DRY, cool weather combined with fair to good pastures prevailed over the country during July, however, in New England drought was acute. The milk flow decreased normally 12 per cent from June and a corresponding decrease is shown in the receipts of butter on the four markets for July, which reached their peak the week of July 12, as against July 14, last year, and July 15 two years ago. The per cent of decrease in receipts of butter on the four markets since the peak has been slightly below that of last year but greater than two years ago. However, the number

of tubs decreased for each of the three years has been about the same.

Butter consumption has increased over last year but not to the extent that consumption in 1923 increased over 1922. The increase in population requires 24,000,000 additional pounds of butter annually to continue the present per capita consumption. The first seven months of 1924 show an increase consumption of a little over 3,000,000 pounds per month, as against 7,000,000 per month last year, indicating that the rate of increase of consumption is slowing down somewhat from 1923. Indications are, however, that production is also slowing down from the tremendous increases which occurred in 1920, 1921, and 1922. In other words, considering the decreased production of farm butter and the increase of population an increase of 3,000,000 pounds of creamery butter per month is required to maintain consumption at the present rate of 17 pounds per person per annum.

The price of creamery butter decreased steadily during July until at the end of the month it took an upward turn. The imports of butter are not large and imports of cheese for the most part are not especially disconcerting to the dairy industry. Condensed milk is moving into export somewhat better and imports have been decreased. Fall prices of market milk are advancing and consumption of all products of the dairy industry increasing with the possible exception of ice cream.—U. S. Division of Dairying.

FEDERATION PROMOTES HOLSTEIN SHOWING

Exhibitors of purebred Holsteins at some of the leading fairs of Pennsylvania will have a chance to win prize ribbons not listed in the premium lists. These extra ribbons are donated by the Pennsylvania Federation of Holstein-Friesian Clubs. One ribbon is to be given to the owner of the best purebred Holstein female and the other is to be given to the best Holstein male exhibited at these fairs.

In this act the Federation Directors aim to get out large exhibits of purebred Holstein-Friesian cattle, knowing that the public likes to see good animals and that the exhibiting of animals of high quality is a form of advertising, the memory of which is likely to linger long in the minds of those who actually see the stock.

This is the first time the Federation has donated such ribbons and is, as far as we know, the first time any state club of any breed has made a state-wide effort to have purebred cattle exhibited.

It is believed that the winning owners will treasure such ribbons, not because of their intrinsic value but because of the fact that the winning of such a ribbon is evidence that the possessor owns animals of high quality and exhibited them at the fairs thereby showing them to the public. Even if there is little competition the owner of an inferior animal cannot win a ribbon as they are awarded only to animals of high class breed type and conformation. Not every fair is the recipient of such ribbons but only a few where large exhibits of high class Holsteins are annually seen.

If the innovation meets with the general approval of the breeders and the members of the State Federation, it is planned to give more ribbons next year and possibly give cups or other prizes. When the fair season is over, a list of the winners will be sent to the three breed papers and possibly to other agricultural journals. G. H. TRUCKELL, Secretary.

The Junior Breeder and Dairyman

Cook Donates Silver Cups

At the Pleasant Valley and Crosswicks Junior Dairy Exhibits held in Mercer County, New Jersey, silver cups will be given by Charles H. Cook to be awarded to the young members whose animals have been best fitted and shown at these two fairs.

Mr. Cook's idea is that the prizes should be given on the work done by the young owners regardless of the type and conformation of the offspring. This would enable a boy or girl who owned an animal not of the best type to compete with the chance of winning and at the same time would not discriminate against members who had real typy animals. The competition is open to all junior members of dairy clubs in Mercer County.

Mr. Cook who resides in Trenton, N. J., is one of the owners of the Penn Arco Farm herd which is located at Langhorne, Pa. This herd consists of 35 purebred Holsteins and had the highest milk cow enrolled in test association work in the state of Pennsylvania during June.

Club Week in Maryland

Club week at the University of Maryland for the boys and girls of the state was August 7 to 12, and was attended by youngsters from practically all counties of the state.

The clubs under the leadership of county and home demonstration agents, arrived on Thursday, August 7 and after registering found their allotted places in the dormitories. The first afternoon they were entertained by motion pictures in the auditorium and games on the campus which helped to get the various groups acquainted.

The week was full of events, starting with the first assembly on Thursday evening while the demonstrations started 8.30 Friday morning. On Saturday the assembly exercises were attended by representatives of the Maryland State Bankers' Association which this year appropriated \$1,000 for the support and development of club work in the state and which has always supported it. The fact that many of the club projects undertaken by Maryland boys and girls are financed by local banks increased the interest taken in this meeting by the young folks.

This year for the first time, Sunday came in the club week. There was special programs and special services to suit the occasion.

On Monday afternoon the much anticipated trip to Washington was taken and the youngsters enjoyed seeing many of the points of interest and visited the United States Department of Agriculture where they were greeted by Secretary of Agriculture Wallace. The party returned to College Park late in the afternoon and after breakfast the next morning started for their homes.

School Boy Runs Dairy Business

Albert McCoy, a student in the agricultural course at the Kern, California, High School, is already in the dairy business and the following interesting story of his account was written by himself:

"A year and a half ago I borrowed \$700 from a local bank and used the money to get a start in the dairy business. The first two cows I purchased had to be returned because they did not measure up to their guarantee. The third cow I bought is a purebred Holstein, Fancy Marie Pontiac Prague, bred on the Berylwood Farm at Hueneme, Ventura County.

"She has a yearly record of 21,687 lb. milk and 894 lb. butter. Last September she presented me with a pretty heifer calf, which I have named Kerndale Aaggie Marie. The latter's sire, Prince Aaggie of Berylwood, is not only the bull with the highest record backing but was also grand champion wherever he was exhibited.

"My milking barn is 12 by 16 feet, has a concrete floor and stanchions for four cows. Father and I built it. The material cost \$56.

"My milk house which I built is 7 by 8 feet and also has a concrete floor, with screen windows on three sides. Here I cool and bottle my milk. Everything is done in such a sanitary manner the bacteria count is kept down to 2,800 per cubic centimeter and my milk would grade equal to certified.

"Milk house materials cost \$28; equipment, \$22; total, \$50.

"When I first started in the milk business I bottled the milk and sold it wholesale in Oildale. Now I am building up a milk route of my own, which materially increases the profits.

"Besides Marie, I am milking two purebred Holsteins, one grade Holstein, two grade Jerseys and one grade Shorthorn. Have two purebred Holsteins and one grade Shorthorn calf.

"I have put in many hours of hard work, sometimes plodding away from early morning until late at night, but I feel the reward has been worth the effort, as I have my cow and calf almost clear and—under the supervision of my instructor—have learned a lot about dairying. Have made several mistakes, but never the same one twice."

Calf Club Stories

In the Calf Club Round-Up held at Algoma, Wis., late in August some interesting articles were submitted by the young members, who had to tell the story of their animals and something about the care they gave them. John A. Massart and William Monfils, who live at Rosiere, Wis., and are fast friends, tied for third place while Teddy G. Blahnik took second prize. These are the stories they submitted:

Awarded Second Prize

WRITTEN BY TEDDY G. BLAHNIK

My calf was born Jan. 28, 1924. It was small at birth, weighing only 65 pounds. I fed the calf four pounds of milk for each feeding or 12 pounds a day until it was two months of age, and then started it on sweet whey, giving it 11 pounds a day, and a grain mixture consisting of 2 parts of oats, corn, and bran, and one part of oil meal (one and one-third pounds a day), and alfalfa hay. Care should be taken so as not to over-feed. The calf gained 1.7 pounds a day. I think show winners are in the breeding, not in the feeding.

Tied for Third Prize

WRITTEN BY JOHN A. MASSART

The name of my calf is Jude Jill Aaggie Posch De Kol, born May 14, 1924. This is a purebred Holstein calf bought from Frank Shimek when it was one week old. When I first started my project work my calf weighed 142 pounds. That was June 1.

The first month I fed her whole milk as her daily ration. She gained on an average of 3 pounds daily, making 90 pounds for the whole month. The second month, I stopped feeding her milk and gave her daily rations of oats, corn, bran, calf meal, and clover hay. She gained 80 pounds for the month, making an average of 2½ pounds daily.

The third month, being August, I kept my records only up to August 15, that being the time of the Calf Round-up at Algoma. She gained for the 15 days of August an average of 2 pounds daily, or a total of 30 pounds for the month to make a final weight at showing time of 342 pounds for the two months and a half.

My calf took second place in the individual showing, and the judges had a hard time to decide, but in the finals for showing, records, and calf she fell to third. I am perfectly satisfied with the way my calf stood against the others at the show.

Tied for Third Prize

WRITTEN BY WILLIAM MONFILS

I started my project work, June 1. When I started my calf weighed 124 pounds and was one month and a half old. My calf was born to one of our best cows and is one of the fifth generation. We still have the cow which is a very good one.

The sire of the calf is now three years of age and weighs very close to a ton. We bought this bull when he was a little over a month old from Frank Shimek. I kept a complete record of my calf from June 1 up to now, and I am still keeping a daily record of the feed it eats and of the amount of labor I am spending on it.

Up to now, I have spent about \$8 worth of labor on the calf. My calf was fed milk until it was 3 months of age. After it was fed skim milk for about two weeks. It was also fed hay and oats. I started feeding this mixture when the calf was a month and a half old. After the calf was this age, I fed bran, oats, hay, calf meal, and a little silage, always increasing the mixture in weight. I gave it about 12 pounds of this mixture daily. My calf made from 2½ to 3 pounds a day.

System Saves Time!

Keep the papers of your animals in Certificate Envelopes.

One envelope for each animal and you will save time, trouble and work.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

September 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Editorial Qualifications

STATE examination of the educational qualifications of editors is advocated by Robert Montgomery, one of the best-known editors in the great northwest. Read Mr. Montgomery's article on this question and then consider what changes there might be made in the editorial boards of the Holstein journals if his views were carried into effect.

"Journalism is a profession and should be protected from untrained, irresponsible members and from unreliable leaders. Furthermore, journalism, in the very nature of things, is informative and educational, and it has great duties and responsibilities along these lines. The people should therefore have some assurance that those who are guiding, informing and educating them are persons qualified for the discharge of these higher duties. If it is important or necessary that ministers, lawyers and school teachers should have to pass an educational test in order to practice their professions, how infinitely more important that men engaged in journalism should be required to stand such a test? For the newspaper enters every home and the facts which it prints are relied upon—or ought to be—as truth. Such a task, such a function, calls for trained, educated and responsible men."

Our Page for Women

FOR its new department the BREEDER AND DAIRYMAN has been fortunate to secure someone who will be able to handle those subjects which are foremost in the lives of the mothers, wives and sisters of BREEDER AND DAIRYMAN subscribers. In this person we have a mother, a farmer's wife and a once-

upon-a-time school teacher. We feel that with these three qualifications our Lady of the Women's Page will be able to discuss just about everything in which the woman of to-day is interested. Whether it be civic duties or the great political field into which our women are gradually making their way or whether it is only suggesting how to save time and extra steps in the work about the kitchen and farm, or the how and wherefore of making those "mixy" dishes which the husband and children usually remember their mother by, this woman is able to stir through the whole group and give you a real live-wire discussion on any one of them.

Our Editress is a woman of varied experience and she will be more than ready to answer everything that comes, through this department. We want to see something from everyone of the women into whose home the BREEDER AND DAIRYMAN comes. Ladies, this page is YOURS, make it go! Give it your full support, for upon that depends its continuance in our paper. Mrs. Crab-Apple Horndyke, as our modest Editress prefers to call herself, is at your service beginning with this issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

The Cost of Cigarettes and Butter

HOW can those who advocate oleomargarine as the poor man's butter reconcile their argument that this country is in need of a spread for bread cheaper than pure butter, with the fact that the American people last year spent \$36 per capita for cigarettes, and only \$9 per capita for butter. These are the figures of Ole Hansen, manager of the Farmers' Equity Coöperative Creamery Association of Orleans, Nebraska, which appeared in an article by him called the "Folly of the Nation," published in a recent issue of the DeLaval Monthly.

These figures produced by Mr. Hansen show very plainly that the American people are plenty able to supply their tables with pure butter. Cigarettes are only one of the many luxuries upon which our people are squandering millions.

When it comes to proper food with which to sustain health, our people can easily dig up the wherewithal to pay, and are in no way needing this disinterested sympathy of the oleo combine.—*Northwest Dairyman and Farmer.*

Will Honor Professor Farrington

AT a banquet which will be held in Milwaukee, Wednesday, October 1, at the time of the National Dairy Show, Professor Farrington of the University of Wisconsin will be the guest of honor. His portrait painted by the noted artist, Arvid Nyholm, will be presented to the College of Agriculture by some of his friends and former students as a mark of appreciation of his work and services.

For twenty years Professor Farrington has been actively connected with the University of Wisconsin as head of the Dairy Department and many men now prominent in educational and industrial dairy lines received instruction from him both in classroom and laboratory.

CLUB ACTIVITIES

JEFFERSON BREEDERS HEAR STRAIGHT TALK

The annual picnic of the Jefferson County Holstein Breeders' Association was held at the Jefferson County Fair Grounds, July 24. Despite showers there was a good attendance. The speaking held on the grounds started early in the day. Jerry Riordan of Harvest Farms emphasized the value of the milk scales and the Babcock test in making dairy business more profitable.

Dr. J. S. Healy, in charge of bovine tuberculosis eradication work in Wisconsin urged dairymen to sign up for the county wide area test. He said that more than 200 herds in the county are now being tested under state supervision.

The third speaker was John D. Jones, state commissioner of agriculture. He said that one thing wrong with the purebred business was that too much emphasis has been placed on pedigree and not enough on earning capacity. You have to get down to the number of pounds of butterfat a cow produces and her ability to transmit this producing ability to her offspring. Cow testing association records are as good or better for this purpose than official records. Mr. Jones, who is himself a dairy farmer, said he would like to see Jefferson County organize a cow testing association for purebred herds only. Fabulously high prices that have been paid for some animals have not done the small breeder any good and have not been based on earning capacity. In the course of his remarks about marketing, he said that no farmer can have success until he gets his cost of production down.

There was a lot of interest shown in the judging contest. There were three rings of dairy animals furnished by the County Farm. John Hetts of Ft. Atkinson was the judge upon whose placing the contestants were scored. Besides the individual contests ten three-men teams competed for the honor of representing the county association in the judging contest scheduled for the Wisconsin State Fair. The winning team was composed of Frank Hetts, Ted Blodgett and Glen Ramsey.

SIXTH YEAR OF OPERATION

The Holstein-Friesian Association of Linn County, Iowa, is now in its sixth year. It organized in 1918. I. E. Kendall was first president and F. M. Snides secretary-treasurer and there were seventeen members at the start.

The first work of the association was to place purebred bulls at the head of the member's herds and to start official testing. In 1921 Frank Haas became president and at the time a pure-

bred Holstein calf club was organized with thirty-six members. In the three years since the club started the association has spent \$350 on the club. In addition they have raised \$600 for fair premiums. Heifers shown by club members have won nearly \$1,000 in show prizes.

When the club closed on May 6th, of this year twenty-seven of the members were still owning the heifers with the calves they had raised. A new club was organized this spring under the direction of the county agent and the state dairy association. The new club has fourteen members. In addition a large Holstein sign has been erected by the association at a cost of approximately \$100.

The association reorganized Feb. 6, 1924, under the state and county unit plan which entitles members of the county unit to membership in the state association. At that time E. J. Gilmore was elected president and Harry J. Newell secretary-treasurer. The other officers of the association, which now has twenty-five members, are George Griffith, vice-president; R. L. Hutchins, J. J. Mills, Ludwig Petrak, E. F. Smith and Henry Rompf, directors.

ORGANIZE AT WASECA

The Waseca Holstein Breeders' Association was organized at a meeting at the Creamery Hall, Waseca, Minn., July 23. A constitution and by laws were adopted and it was decided to have a booth at the county fair and to stimulate interest in boys and girls club work.

Wm. O'Reilly of New Richland is president, Ray Laker of Isoco is vice president, and Fred Scholljegerdes of Woodville is secretary-treasurer. The board of directors is made up of A. A. Wilson of Janesville, J. W. Clausen of Waldorf, E. B. Hecht of Blooming Grove and Carl Christenson of New Richland.

NATIONAL DAIRY UNION NEEDS MEMBERS

On October 1st, the books showing receipts and expenditures of the National Dairy Union for the current year will be closed and balanced, although the annual meeting will not be held until the second week of November. A preliminary statement shows that the memberships which have been received thus far fall by approximately \$1,200 to meet the budget as planned and are \$1,000 below last year's.

Secretary A. M. Loomis urges those members who have

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

already sent in their membership check to send a small additional donation to support the work of the Union and to get other members. He also urges those interested in the work of the Dairy Union who have not yet become members to apply for membership and says:

"The work has been just as expensive, the need for it just as great and the accomplishments just as important as in previous years. The National Dairy Union has taken a leading part in every movement for the best interests of the industry, protection and enforcement of the Oleo laws, securing and defending proper and adequate tariff, for the creation of a Bureau of Dairying and many other matters of interest. All this is accomplished at a minimum of expense, the basis being so modest that the \$1,200 deficiency in receipts causes real embarrassment.

ANOTHER BIG PICNIC AT WAUWATOSA

A big crowd attended the annual outing of the Milwaukee-Waukesha Holstein Friesian Association held at the Milwaukee County School of Agriculture in Wauwatosa, Wis., Saturday afternoon, August 2.

The speakers were A. J. Glover, editor of *Hoard's Dairyman*, Eugene Wengert, district attorney of Milwaukee County, C. M. Long, Jerry P. Riordan and D. D. Aitken, a former president of the National Association. Reid Murray, Secretary of the Wisconsin Livestock Breeders' Association conducted a stock judging demonstration. A stock judging contest designed to aid in the selection of a county team to compete at the National Dairy Show was supervised by E. C. Thompson and Arthur Collentine of the State College.

A BIG WISCONSIN PICNIC

Nearly one thousand were estimated to have attended the picnic of the Mt. Horeb Holstein Breeders' Association held in the grove at the Fred Luhman Hickory Hill Dairy Farm about one-half mile north of Mt. Horeb, Wis.

The speakers were Roy L. Harris and John Donald of the state University, and Otto Dahle of Mt. Horeb. The Mt. Horeb band furnished music. Some purebred bull calves were sold at auction and the day closed with a dance in the farm machine shed.

Springdale defeated Daleyville two-to-one in the baseball game.

MEMBERS NOT CASHING CERTIFICATES

Members of the Dairymen's League apparently prefer to hold their certificates of indebtedness rather than cash them at ninety-five cents on the dollar, for around September first, only \$213,000 worth of Series A had been offered for sale to the association in response to its offer to purchase \$588,000

worth. The first offer of the association was to purchase all certificates of Series A ending in the figure zero. The face value of this lot was \$430,000, but only \$162,000 worth were offered for sale. The board of directors then voted to add \$150,000 to this and announced that the League would buy all Series A certificates ending with the figure 8.

From present indications it looks as though further drawings will have to be made before the League will be able to find sufficient investment for the funds it has set aside for this purpose.

LEGUME GROWING ADVOCATED

A membership drive is being planned by the Vesper Holstein Breeders' Association. At a meeting held at Wisconsin Rapids, July 25, County Agent James Lacey of Green Lake County gave an address, outlining the factors that make for progress in the dairy industry, and after paying tribute to what has already been accomplished in Wood County, he urged the importance of still further improvement and stressed proper feeding and the growing of feeds upon the farm as essential to successful and profitable dairying. He recommended the growing of alfalfa, clover, soy beans and sweet clover. He said that over 2,000 acres of alfalfa were planted in Green Lake County this year.

ORGANIZE TO SELL STOCK

A. A. Butterbrodt was elected president and John Wuethrich secretary-treasurer of the Greenwood Holstein club at a re-organization meeting on July 19.

The club fees are 10 cents per cow for grade cows and 25 cents for purebreds with \$5 as the maximum charge for the year. For cattle sold through the club, members will be charged 3% and non-members 5%. Nielsville and Granton have similar clubs, each consisting of over fifty members. Secretary Wuethrich believes that the surplus dairy cows of Clark County Wisconsin would soon be sold to outside buyers if the breeders of the county were organized so that the animals were listed and could be easily found.

AMERICAN DAIRY FEDERATION

The banquet of the American Dairy Federation which will be held October 1 at Milwaukee while the National Dairy Show is in session is not the annual meeting of the Federation which will be held in Chicago, December 3. A meeting of the Executive Committee of the American Dairy Federation will be held in Milwaukee some time during Exposition week. Secretary Loomis has sent out word that if member organizations or individuals have anything on hand on which they wish Federation interests, activity support or opposition, they should make arrangements at an early date for an opportunity to present their views to the Executive Committee.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO

Nov. 20-29—Jacksonville, Florida, Florida State Fair.

INDIANA STATE FAIR

J. C. Cort of Lake Mills, Wisconsin, judged Holsteins at the Indiana State Fair, about 170 head passing before him. Besides the state animals, there were exhibits from Illinois, Iowa, Kentucky, and Wisconsin.

The senior champion bull was Duke Ormsby-Aaggie Canary, owned by Chas. Weidler of South Bend, Ind., but he was defeated for the grand championship by the junior champion, General Homestead Mercedes, a junior bull calf, owned by H. A. Brace & Son of Lone Rock, Wis. It is rather unusual to have a junior calf win the grand championship, but this is a real nice animal, and previously won first in a big class at the Wisconsin State Fair.

The senior and grand champion female was the handsome three-year-old heifer, Corwin Colantha Florence Ormsby, first prize two-year-old at last year's National Dairy Show. The junior female champion was Oldenburg Carrie Nation, senior yearling heifer owned by Chas. Weidler.

H. O. Larsen, Dike, Ia., took first and fourth in the get of sire class with Weidler second, Brace & Sons, third, and Larsen was first and second in produce of cow. Weidler turned

the tables in the graded herd group with Larsen second and Brace third but in the breeders' young herd Larsen was first, Weidler second and Brace third; in the breeders' calf herd

CORWIN COLANTHA FLORENCE ORMSBY

First prize three-year-old, senior and grand champion at the Indiana State Fair. Owned by B. S. and S. H. Drago, Muncie, Ind. Photo taken as a two-year-old.

class Larsen was first, Weidler second and Elmer Frazier of Middletown, Ind., third.

"THE MADAM" DEFEATED AT MINNESOTA STATE FAIR

Thomas E. Elder of Mt. Hermon, Mass., judged Holsteins at the Minnesota State Fair, passing on animals owned by the Iowa Farms, Davenport, Ia., and the herd of the Jefferson County Breeders' Association of Wisconsin, together with a large number of Minnesota exhibitors. Despite the out-of-state competition, Minnesota won the larger share of the prizes. The upset of the show was the defeat of Madam Artis Wayne Denver, the great Jefferson County Asylum three-year-old, Mr. Elder putting Pietertje Fayne Countess, owned by Mudcura Farms, first, in the three-year-old class and then for the championship, turning the three-year-old winner down for Prilly Tirania, his first prize aged cow, owned by Glantz Bros. of Park Rapids, Minn. This is the "Madam's" first defeat in the show ring. The junior champion female was Oakwood Piebe Ollie, owned by Mudcura Farms, she first defeating twelve competitors in the junior yearling class.

The senior and grand champion male was North Star Joe Homestead, owned by Baltz Hoesly of Monticello, Wis. This was the bull that won grand championship at the Central States

Herd under State and Federal Supervision. We have 120 head to select from.

Exposition. Sir Inka May, junior yearling, owned by the Minnesota Holstein Company, won first in his class and was made junior champion male. Mudcura Farms took first in the graded herd group, with Marlow & Randall, second; Iowana Farms, third; Jefferson County Asylum, fourth, and Glantz Bros., fifth. The Asylum had the first prize yearling herd and this was their only blue ribbon. For some reason Mr. Elder did not like the type of their animals. Marlow & Randall won first for produce of cow in offspring of Mankato Lassie Ormsby with the Minnesota Holstein Company second with the offspring of Star Segis Pontiac Superior, the Jefferson County Asylum being third. The dairy herd prize was won by Minnesota Holstein Company with Jefferson County Asylum second and Marlow & Randall third.

In the county groups, Carver County was first and Washington County was second while Minnesota defeated Wisconsin for the state herd prize. The Minnesota Holstein Co. won the premier breeders' banner and Marlow & Randall of the Mankato Holstein Farms won the premier exhibitors' banner.

Animals were exhibited by eighty-five juniors and many of the animals were really high class. Wilfred Tvedt of Mantorville, won first in the yearling class and his heifer was so good that she won fourth prize in the open class in which twenty-seven animals were exhibited. Evelyn Leinenweber of St. James showed a nice heifer in the calf class and won first place. Another nice heifer was exhibited by Edith Huseby of Adams. The girls beat the boys with the young animals while in the yearling exhibits Myrtle Himrum of Lake Park, Minn., exhibited the third prize animal.

In the county groups of five animals, Mower County took first prize, Bleeker County second and Olmstead County third. A Guernsey group was fourth, a Holstein group fifth, competition being open to animals of all dairy breeds.

NEBRASKA STATE FAIR

Exhibitors from Colorado, Iowa, Missouri, Texas, Wisconsin, as well as from Nebraska, exhibited purebred Holsteins at the Nebraska State Fair, held at Lincoln, August 30 to September 5. Zwingara Segis Clothilde, owned by the Modern Woodmen Sanitarium continued on her conquering way annexing the blue in the aged cow class and then carried off the senior and grand championships. In the aged class, in which there were seventeen shown, John M. Kelley's animals took second, third and fourth.

The University of Nebraska took the junior championship

DAUGHTERS OF BEETS LONGFIELD CANARY CORNUCOPIA
First prize "Get of Sire" at Iowa and Nebraska State Fairs.
Exhibited by John M. Kelley, Baraboo, Wisconsin.

with their senior heifer calf, Ormsby LaVie of University of Nebraska. She was the best senior heifer calf winning in a class of twenty-one, a stablemate being second.

Corwin Wimple De Kol Ormsby was the first prize three-year-old bull and senior and grand champion male and the senior yearling, Woodcraft Pontiac Champion Star was the junior male champion so that the Woodmen herd took five of the six championships.

The Sanitarium carried off first for graded herd and yearling herd, but the University of Nebraska had the best calf herd and Mr. Kelley's great quartet of cows won in the get of sire class, the Woodmen being second and the University of Ne-

braska third. P. P. Stewart of Maynard, Iowa, took first in produce of dam with Kelley second and Kirkpatrick Bros. Company of Beatrice, Neb., third.

The judge was Axel Hansen, of Savage, Minn. The dairy show was the greatest in the history of the fair and the Holstein exhibit was both large and of high quality.

BUCKS COUNTY HOLSTEIN FIELD DAY

By COUNTY AGENT P. H. SPRENKLE

What the Calf Club work has done to increase interest among the parents as well as the boys and girls in better live stock was shown by the widespread interest which was shown when the Field Day of the Bucks County Holstein Association was held at "Circle View" farm, Solebury, Pa., owned by C. J. Koller.

Leading in interest was the judging contest for the adults, boys and girls, but there was also an inspection of Mr. Koller's

A COMING PENNSYLVANIA HOLSTEIN BREEDER
Walter Gross and the twin heifer calves from his calf club heifer.

fine herd, a Calf Club demonstration and address by experts in the different branches of dairy work.

"This is the best judging contest that I have ever conducted," said E. B. Fitts of State College who placed the animals in the competitions.

Over two hundred attended.

Forty-three men, women, boys and girls were entered in the judging contest. They judged a class of cows and one of two-year-old heifers. Fifty dollars was very generously given by Mr. Koller in prizes.

Winners in the adult class were as follows: First, Charles Rowe, Yardley; second, Mrs. Joseph S. Briggs, Yardley; third, Amos Bryan, Perkaspie; fourth, Newlin Brown, Wycombe; fifth, J. S. Briggs, Yardley; sixth, Alonzo Wothington, Plumstead.

Junior prize winners were: First, Clarence Gross, Plumsteadville; second, Merrill Kriebel, Plumsteadville; third, Helen Briggs, Yardley; Fourth, Roland Worthington, Plumsteadville; fifth, Claude Bryan, Perkaspie; sixth, Mary Briggs, Yardley.

Prizes included milk scales, cow blankets, halters, sanitary milk pails, milk stools and subscriptions to a Holstein publication.

Walter Gross, Plumsteadville, aged 16 years, gave a very interesting calf club demonstration. The young man had kept a very accurate record of production and feed costs, and had also been a member of the judging team that went to State College in 1923.

He first showed his heifer and her twin heifer calves to give the audience a chance to see the type of animals he had. Then he told the story of his experiences in calf club work from the beginning. His heifer produced 10,285 lb. milk in the first

milking period, bringing a return of \$223.55. During that time the feed cost was \$115.92, giving him profit, exclusive of labor, of \$107.61, without the twin heifer calves estimated at \$250.00.

To show that the financial institutions in the county believed the encouragement of calf club work is profitable it was explained that several banks have financed the purchase of calves for boys and girls.

All of the speakers declared that the dairy business is profitable if properly conducted.

Allen N. Crissy, fieldman for the National Holstein Association, pointed out those things which make the Holstein cow superior, emphasized that her size gives her the advantage over other breeds of being able to consume a larger amount of feed and convert it into milk.

D. K. Sloan, Bradford county agent, said that the purebred business is sound at the present time, but that dairymen should buy purebred cattle with the idea of getting better milk production rather than of selling the offspring at unusually large prices.

E. B. Fitts, State College, reviewed the dairy business in Bucks County during the past year. He spoke of the better sires campaign, the work of the cow testing association, all of the dairy field days and the calf club work.

Mr. Koller's herd attracted a great deal of interest. It was remarked that it was in excellent condition, showed type and size, and reflected credit upon the herdsman, Edward Alcott.

MICHIGAN STATE FAIR

Prof. L. V. Wilson of the University of Minnesota judged Holsteins at the Michigan State Fair. Hargrove and Arnold of Norwalk, Ia., A. F. Randolph of Canton, Ill., and the Monclova Stock Farm of Monclova, Ohio, had good herds and there were a number of good animals exhibited but the Michigan breeders' entries lacked the finish and flesh carried by the out-of-state animals.

Whitehurst Colantha Artis Lad of the Randolph herd won first in the two-year-old class and went on to senior and grand championship. Triune Ormsby Piebe 27th of the Hargrove & Arnold aggregation was junior champion.

Last year's champion Baynewood Daisy, owned by E. M. Bayne of Romeo, stood first in the class of twenty aged cows but she lost the senior championship to the great three-year-old heifer, Dorothy Ormsby Piebe. Triune Piebe Fobes of the Hargrove & Arnold string was first prize senior heifer calf in a class of twenty and was made junior champion.

Naturally Hargrove & Arnold made a big showing in the groups; in fact, they took first in all five classes. Starlight

Veeman Hengerveld, owned by John C. Buth of Grand Rapids, was first in the Advanced Registry class and Baynewood Daisy was first prize aged cow with long time record, Tessie Hengerveld Segis, owned by Detroit Creamery winning first in the class for heifer with long time record.

HIBBARD JUDGES

Granville Hibbard, of Brooklandwood Farm, Lutherville, Md., judged the cattle at Queen Annes County Fair Day. The first prize Holstein cow as well as the seco. 1 was owned by Charles R. Rathell, and Mr. Rathell's entries were second in both heifer classes. The champion bull was owned by Carter Byran. More than sixty animals of different breeds were exhibited.

THE DAIRYMEN'S LEAGUE FARM

According to the *Dairymen's League News* nearly nine million acres are owned by members of the Dairymen's League Cooperative Association, a tract of territory larger than the State of Idaho and larger than the combined States of Maine and New Hampshire.

A little more than one-half of this territory is under cultivation and the crops raised including milk are valued at \$216,718,260. A million head of cattle worth seventy-two million dollars are kept and are pastured on more than four million acres in grass and woodland.

The survey shows that the average League Farm consists of 125.97 acres, of which 66.6 acres are under cultivation, 57.62 acres are in pasture and woodland, 1.75 acres are in orchards.

The opinion is generally held that the men shipping milk to New York City are almost exclusively dairy farmers. The survey brings out that the value of the annual supply of milk produced on League Farms is considerably less than one-half of the value of all the products. The total sales of milk from the million cows kept amounts, so the *News* says, to seventy million dollars. But it does not say clearly whether this amount is received by the farmers or is what the League received for the milk as manufactured milk products are mentioned as well as fluid milk.

Horses are produced to the value of twenty-four million dollars, a surprising statement if true; eggs and poultry are produced to the value of fourteen million dollars, and this we do not doubt in the least. In addition there are two and one-half million dollars' worth of hogs raised; three-fourth million dollars worth of sheep and wool while honey and other bee products are worth three hundred thousand dollars. The statement is made that the hay and forage is worth sixty-one million dollars and cereals and grain, twenty-one million dollars but it is not stated whether this is the amount grown on the

farms or the amount sold. If this is the amount grown on the farm and fed to the cattle, it is equivalent to a manufacturer's raw materials or materials in the course of manufacture and should not be counted as manufactured goods ready for market.

League farmers own forty-five thousand silos, fifty-nine thousand of them have automobiles, twelve thousand own motor trucks, thirty-two thousand own gasoline engines and thirty-five thousand own individual electric light plants, while no less than five thousand have radio sets. There are about 70,000 members of the League.

DAIRYING, VITAMINES AND THE OLEO INDUSTRY

At Mason City, Iowa, on November 12, will be held the annual meeting of the National Dairy Union. The annual meeting of the National Creamery Buttermakers' Association will be held at the same time. Part of a strictly business meeting will be the election of Union officers.

In a communication to the press, Secretary Loomis says that there will be an organized effort by the oleomargarine industry to change the present federal law which requires the use of the word "oleomargarine" in labeling all products made in semblance or imitation of butter. The whole meaning of the law on this point is to give the public warning that the substance labeled is not butter. A change in the name would lessen the efficacy of this warning. It is needless to say that any effort to change will be vigorously opposed.

Oregon dairymen have a big fight on their hands as the oleomargarine interests are making a strong effort to defeat the state law which prohibits the use of any dairy products in the manufacture of oleomargarine. In Canada the oleomargarine interests are attempting to defeat the Canadian law which prohibits the importation, manufacture and sale of oleomargarine in that country. The oleomargarine people are also attempting to secure the repeal of several state laws which prohibit the use of oleo in state institutions.

An instance of the activities of the oleomargarine industry is that representatives of that industry have secured the approval of the Bureau of Animal Industry for new labels for certain brands of oleo. These new labels contain the words "contains vitamins." As the Bureau of Animal Industry is only lawfully given the control over the regulations relative to the sale of animal products, this ruling applies only to animal oleomargarine. The question will immediately be raised as to whether or not oleo oil contains vitamins and whether or not the presence of vitamins in any substitute can be determined in advance of biological or feeding tests.

The British Association for the Advancement of Science met at Toronto, Canada, the second week of August. Dr. Edwin E. Slosson, whose work in popularizing scientific facts is nationally known, said in his report:

"The vitamins may turn out to be the clew not only to the

cause of many obscure diseases, but also to some of the problems of history. What is called race suicide or class suicide may be due in part to an accidental dietary deficiency, for Prof. Herbert M. Evans of the University of California showed today that besides the vitamins necessary for health and growth, there is another that he provisionally calls 'Vitamin X,' which is essential for reproduction. Rats living on food devoid of X will grow up and thrive and live apparently normal lives, but are infertile. Fertility can generally be restored by adding to the ration some food containing the lacking vitamin or a few drops of the concentrated extract.

"Wheat germs, lettuce, egg yolk, liver, vegetable oils and butter, especially butter from alfalfa-fed cows, are among the foods containing Vitamin X, but it is absent from skimmed milk, sugar, white bread, and cod liver oil, although cod liver oil is very rich in the vitamins that promote growth and prevent rickets. Prof. Evans finds that he has been able to extract X from wheat germ in quantity and to obtain it as an oil of high potency but has not yet obtained it pure enough to determine its chemical composition.

"That a shortage of the fat soluble vitamin 'A' may increase the liability to lung trouble was shown by the experiments reported to-day by Prof. H. C. Sherman, of Columbia. Rats which had an insufficient supply of this vitamin in an otherwise adequate diet showed a striking tendency to break down with lung disease at an age corresponding to that at which pulmonary tuberculosis so often develops in young men and women. Of two similar sets of rats, kept on identical diet, except that one was deficient in fat soluble 'A,' the females on the complete ration bore an average of 28 young and reared 16 each, while those on the diet low in this vitamin bore an average of two young and reared none whatever, and lived only half as long. Both batches had Evans' vitamin X, so evidently vitamin 'A' is also necessary for reproduction.

"Butter is rich in vitamin 'A' and cod liver oil richest of all, so the practice of prescribing these fats in cases of consumption is substantiated by recent researches. Carrots are much richer in this vitamin than potatoes or turnips, spinach is richer than lettuce, and green celery than the bleached leaves."

The following day Dr. Slosson wrote:

"Another demonstration of the rapid advance of our experimental knowledge of physiology was given by Prof. E. Mellanby, of St. Thomas Hospital, London, who showed by photographs on the screen that it makes a vast difference to the teeth and bones which kind of fat is in the food. Certain fats and oils contain vitamins that is necessary for the proper formation of bones from the lime and phosphates supplied in the food. Others equally palatable and giving as many calories of energy are partially or completely devoid of this essential vitamin. Prof. Mellanby has raised puppies

of the same litter on three diets—differing only in the kind of fatty food. Cod liver oil proved to be the best, butter was fair, while linseed oil was woefully deficient. The dogs raised on the first had finely formed teeth, strong and well arranged. Those fed on linseed had weak, defective and poorly spaced teeth. They were also rickety. The butter-fed dogs were intermediate. The diet in all cases had plenty of lime and phosphate; in fact, the more of these there were in the food the worse the results unless the vitamin was also present. Where the vitamin was lacking, oatmeal and wheat germ caused bad cases of rickets. The speaker thought that oatmeal and other cereals contain some substance that interferes with the deposition of lime unless the anti-rachitic vitamin is present. But a little of it will suffice."

FRED LEHMAN'S DISPERSAL

At his farm, seven miles west of Carlisle, Pa., the accredited herd of Fred C. Lehman will be dispersed, September 23. Mr. Lehman's farm which goes by the name of Greider Stock Farm, is only one-half mile from the concrete road running from Carlisle to Newville.

The August 22 issue of the Breeder and Dairyman carried a story on the Lehman herd. We need only add that the animals include one cow that produced 30.54 lb. butter, 719.6 lb. milk in a week as junior four-year-old and 108.3 lb. milk in a day, while in 305 days she produced 15,144.3 lb. milk. Another cow in this herd bound to attract attention is Dutch Corner Fayne Walker with an official record of 29.71 lb. butter, 656.5 lb. milk. She produced 103.4 lb. milk in a day, 16,250.4 lb. milk in 300 days. She is a granddaughter of King Lyons and is from a granddaughter of King Pieter and Segis Fayne Hengerveld.

The herdsire, Dulcevista Echo Sylvia Ormsby, is a very handsome fellow, well grown and right in every way. His first daughter to be officially tested, Mabel Walker Sylvia Ormsby, freshened as a yearling and made 18.13 lb. butter, 529.4 lb. milk in a week. His dam is a daughter of King Pontiac Hengerveld Ormsby and his sire is Sir Echo Sylvia Johanna, who has three junior two-year-old daughters that each made over 500 lb. milk in seven days official test.

The auctioneer will be George Fry and the pedigrees will be explained by A. A. Raudabaugh, tester of the Cumberland County Testing Association.

DO YOU KNOW THIS FELLOW?

Ever hear of Chief Brightpath? Maybe you have not, but you have heard of Jim Thorpe, the famous Sac and Fox Indian who won the pentathlon and decathlon, the two all around athletic competitions at the 1912 Olympic athletic games. Jim

Thorpe and Chief Brightpath are one and the same person. Jim Thorpe's athletic prowess is known to almost everyone who is at all interested in athletics. Many believe that as a football player, he stands right at the top and he can play almost any other game nearly as well. He is six feet tall and weighs 200 pounds without any surplus flesh. Few know, however, that he is a business man as well as an athlete. Mr. Thorpe is interested in the Oorang Kennels at La Rue, Ohio, advertisers in the Holstein Breeder and Dairyman.

If you like Airedales or even if you like dogs of any kind, we would suggest that you drop a line to the Oorang Kennels, Box 57, La Rue, Ohio, and ask for their illustrated descriptive catalog. While the primary purpose of this book is to help sell Oorang hounds and airedales, it contains instructions on breeding, raising and handling dogs and is written up in entertaining style. Several of the stories it contains have appeared in sporting magazines.

Jim Thorpe is one of a number of Indian scouts who train Oorang airedales. The head of the establishment is Walter Lingo a well-known dog man who was born at La Rue which is only a few miles from Marion, the home of former President Harding. With Mr. Lingo and Mr. Thorpe are a number of other Indian scouts who help train the dogs to hunt game of various kinds. Bears, wildcats, coons and other animals are kept which the dogs are trained to hunt. One of the exciting stories of the book is the hunting and killing of Queen Mary, a bear that went bad and broke out of her enclosure.

The book contains nearly 200 pages and has, we should judge, at least one hundred illustrations. It suggests that in buying an Oorang Airedale one would feel like the author of the following poem:

You can't buy loyalty, they say,
I bought it, though, this very day!
You can't buy friendship, firm and true,
I bought sincerest friendship, too!
And truth and kindness I got,
And happiness, oh, such a lot!
So many joyous hours-to-be
Were sold with this commodity.
I bought a life of simple faith,
And love that will be mine till death,
And two brown eyes that I could see
Would not be long in knowing me.
I bought protection. I've a guard
Right now and afterward,
Buy human friendship? Maybe not!
You see, it was a dog I bought.

Nell—"When he proposed to me I lost my head."
Belle—"I presume you eventually found it on his shoulder."

BULL BARGAINS

- No. 1. Born Jan. 15, 1924. 99% white. His dam is a 21 lb. two-year-old and his ten nearest dams average 30 lb. Price, \$250.
No. 2. Born Feb. 19, 1924. 80% white. His dam is a 21 lb. three-year-old and his five nearest dams average 1,000 lb. butter yearly. Price, \$200.
No. 3. Born July 18, 1923. 60% white. His dam has a 7-day record of 22 lb. and a year record of 850 lb. His four nearest dams average 25 lb. in 7 days and 960 lb. in a year. Price, \$150.
No. 4. Born Jan. 3, 1923. His four nearest dams average 25 lb. 7 days, 900 lb. yearly. Price, \$100.
No. 5. Born April 10, 1924. His four nearest dams average 25 lb. 7 days, 900 lb. yearly. Price, \$75.
No. 6. Born April 20, 1924. Excepting his own dam, his four nearest dams average 31 lb. 7 days, 1,000 lb. yearly. Price, \$50.
No. 7. Born May 25, 1924. His sire is a 35 lb. bull. Price, \$25.

Newton's Food Flavors

The old style bottle extracts of our grandmothers' time have been replaced in the modern home by tube flavors, just as the kerosene lamp has been replaced by the electric light. Newton's food flavors are put up in tubes, the modern, up-to-date way of preparing extracts. They are more convenient; they cannot tip over and spill, they cannot break; they are dropped directly into the food instead of being measured out by the teaspoon. They are more sanitary, being put up in air-tight, light-tight tubes—they cannot spoil, they will keep indefinitely. They are much more economical, one 30 cent tube of Newton's food flavor lasting as long as 5 bottles of average alcoholic extract. We make 25 different flavors, every kind for which there is a demand:

ALMOND	CLOVE	PISTACHIO
ALLSPICE	CINGER	RASPBERRY
BANANA	LEMON	ROSE
CELERY	MAPLE	SAGE
CHERRY	MIXED SPICE	SPERMINT
CINNAMON	NECTAR	STRAWBERRY
PEPPERMINT	NUTMEG	VANILLA
PINEAPPLE	ORANGE	WINTER GREEN
	ONION	

Family size tubes, 30 cents. Bakers' size tubes, 60 cents. (The bakers' size tubes contain about three and one-third times the quantity of flavor contained in the family size tube.) Mail your order today.

LAST CALL

Fred C. Lehman's accredited herd dispersal at Greider Stock Farm, Carlisle, Pa., September 23d.

J. M. Olsen accredited herd dispersal at Sherburne Four Corners, N. Y., September 23d.

J. M. OLSEN'S DISPERSAL

On J. M. Olsen's farm located one-fourth mile from Sherburne Four Corners, two and one-half miles from Galena, three miles from Smyrna, four miles from Sherburne, seven miles from Earlville and nine miles from Norwich, New York, the accredited purebred Holstein herd of Mr. Olsen, consisting of seventy-seven animals, will be dispersed at public auction, September 23. In the September 8 issue of the Breeder and Dairyman, a brief account of this herd was given. We may say here that the present herdsire, Sir Aaggie Colantha Bonalevo, is now two years old and was sired by Colantha Sir Aaggie. His dam, Bonalevo Colantha Quality Belle, is a daughter of Colantha Johanna Lad 8th, and recently closed a year record as a senior three-year-old of 760.88 lb. butter, 17,066 lb. milk while her full sister, Colantha Quality Belle produced 810.65 lb. butter and over 16,000 lb. milk in ten months as a junior two-year-old.

There are a few heifer calves by the Colantha bull but many of the younger animals in the herd are by King Ladoga Hilldale, a grandson of King of the Pontiacs from a 26 lb. daughter of Idaline De Kol Count.

No less than twenty-one cows are recently fresh or will be fresh at sale time. The Olsen herd consists of heavy producers, of good size and conformation and many of the cows have, on ordinary farm care and feed, milked from 60 to 75 lb. daily.

Mr. Olsen will also offer his farm for sale. This consists of 165 acres in a good

**YOUNG STOCK FOR SALE AT DAIRYMEN'S PRICES****HARRY C. REYNOLDS, SCRANTON, PA.***Herd under Accredited Plan*

state of cultivation. There are twenty-five acres of alfalfa. The farm is well watered, spring water being piped to the house and barn. This is no backwoods farm as it is only one-quarter mile from a railroad station from which milk is shipped into New York City.

The sale will start at 10 a. m., September 23, and will be under the management of R. Austin Backus of Mexico, N. Y., while Col. Glenn R. Mead, the live-wire auctioneer of East Aurora, N. Y., will wield the hammer.

Mr. Olsen is certainly meeting possible purchasers more than half way for although his herd is fully accredited, he is selling his animals subject to a 60-day retest and on good bankable notes will allow from three to six months time. He promises to provide a good lunch at noon. So you had better plan to attend.

NOTES FROM IDEAL FARM

Good results are reported by Cecil Resseguie, Kingsley, Pa., from his advertisement in the BREEDER AND DAIRYMAN, the first ad bringing inquiries from New York State. Mr. Resseguie, although a young breeder, has high ideals; in fact, his establishment is known as the Ideal Farm and his cattle as the Ideal Herd while the herdsire he is raising will be called King Ideal.

King Ideal was sired by Dutchland Konigen Creamelle Boy whose thirteen nearest dams have seven-day records that average 32 lb. butter, 721 lb. milk. The dam of King Ideal is Pietje Alcartra Fayne, 707.7 lb. milk, 30.03 lb. butter in seven days, the record starting forty-one days after freshening. She is a daughter of King Pontiac Alcartra Pietje, who was by King Segis Pontiac Alcartra from the former world's champion junior four-year-old, Fairmont Zerma Segis Pietje,

35.61 lb. butter 608 lb. milk in a week.

In the current issue of Superintendent Gardner's "Reported Tests" the new record of Miss Korndyke Clothilde, another member of the Ideal Herd is reported. This cow freshened when eleven years, eleven months and four days old and made an official record of 558.7 lb. milk, 26.01 lb. butter. She, too, dropped a son by King Pontiac Alcartra Pietje and as Mr. Resseguie cannot retain both of these young bulls, he is offering this one for sale. Sons of King Pontiac Alcartra Pietje are always in demand and as there are only a few, we understand only three, for sale anywhere in northern Pennsylvania, this handsome fellow is bound to be snapped up by some enterprising breeder.

Money talks all languages, but has to get well acquainted before it is very sociable.

Cow Testing Association Reports

PUREBREDS AND GRADES DIVIDE HONORS

D'na, a grade Holstein owned by A. H. Metzler led the Goodville Testing Association for the month ending August 15 by her production of 1,528 lb. milk, 58.3 lb. butterfat, her average test being 3.8%. She is not the highest milk producer, however, as a purebred Holstein, Marian, owned by Mast Stoltzfus produced 1,568 lb. milk, 51.7 lb. fat, being third in this respect while Jessie, a purebred heifer owned by Ira M. Eby, produced 1,531 lb. milk, and exactly 49 lb. fat. Seven of the ten highest fat producers were black and white cows. A. H. Metzler, Mast Stoltzfus and Ira Eby each owned two in the list.

The tester Luke W. Martin of Goodville, Pa. had eleven herds containing 112 cows in milk in his charge. Of this number 21 made over 40 lb. fat, 5 over 50 lb., while 22 each produced over 1,200 lb. milk.

SOUTH DAKOTA TESTING

One cow out of every hundred tested in the South Dakota Associations during August was sold to the butcher for being unprofitable. Dakota Bryonia Brookings, owned by Sioux Falls Penitentiary was the highest producer, being credited with 80.58 lb. butterfat, 2,238.2 lb. milk.

She is also credited with the largest income over cost of feed, her net profit being \$20.75. She was given twelve pounds of grain, which consisted of three parts oats, two parts bran and one part oilmeal. This cow led in July with 91.29 lb. butterfat.

The records show that the average production is a great deal higher than it was for August 1923. Last year only

10% of the herds averaged as high as 25 lb. butterfat per cow, while this year 39% of the herds attained this average. The number of 40 lb. butterfat cows was down to 1.2% last year and is now up to 6%. August is ordinarily an exceptionally low month but pastures have remained unusually green this year with the resultant high production.

The Penitentiary herd is second for average production, the 25 Holsteins averaging 1149.5 lb. milk, 38.25 lb. fat. A Guernsey herd of 18 cows led for fat production, with an average of 40.44 lb. A Holstein herd of 11 cows, owned by A. J. Brandt, is third, with an average of 38.17 lb. fat, 1034.1 lb. milk and the Holstein herd standing fifth and sixth. The black and white breed made a good showing for the second, fourth and fifth largest individual producers are purebred Holsteins, Mr. Brandt having one credited with 56.78 lb. fat and Tom Maher of Brookings owning one that produced 56.60 lb. fat, 1,825.9 lb. milk. The Watertown Association averaged highest the 271 cows averaging 589.9 lb. milk, 24.22 lb. fat.

INCREASING

The United States Department of Agriculture reports that on July 1st there were 730 cow testing associations in active operation, as against 627 a year ago. This is a gain of more than 16% the past year.

States of the central west made the greatest increase. Michigan ranks first in the increased numbers of associations with a gain of 38. Minnesota is a close second with a gain of 35. Wisconsin with 163 still leads the number of associations followed by Michigan with 91, Minnesota 90, Iowa 61 and Pennsylvania 37.

ILLINOIS TESTING

The three highest record cows tested in the Illinois cow testing work during July as well as the highest average herd consisted of black and white cows. The leader was a purebred Holstein owned by J. H. Burr of St. Charles, and enrolled in the Kane County Association, No. 3. This cow produced 2,009 lb. milk, 86.3 lb. fat while the Burr herd consisting of sixteen purebreds averaged 1,344 lb. milk and exactly 46 lb. fat, standing third in the state for average. The second highest producer was a grade Holstein with 1,786 lb. milk, 85.7 lb. fat, while a purebred of the C. E. Warford & Son herd produced 2,167 lb. milk, 84.5 lb. fat. All three leading cows came from Kane County.

The highest herd consisted of sixteen grade Holsteins owned by R. D. Morris with an average of 1,329 lb. milk, 47.4 lb. fat. They are enrolled in the Jo Daviess County Association No. 1. The Warford herd of seventeen purebreds averaged 1,271 lb. milk, 45.3 lb. fat.

Of the seventeen associations reporting production, seven were headed by purebred Holsteins and four by grade Holsteins while in five associations the highest average herd were purebred black and whites. In the Stephenson Association, the best herd contained both purebred and grade Holsteins. This was owned by Floyd Parriott and the average for his ten cows was 1,228 lb. milk, 42 lb. fat. In McHenry County the leading herd was owned by A. D. Cornue of Hebron and consists of eighteen purebreds with an average of 1,107 lb. milk, 40.2 lb. fat.

Peter Olesen of Naperville, DuPage County had fifteen purebreds that averaged 952 lb. milk, 32.1 lb. butterfat.

KING ORMSBY ENDERCAMP

our herdsire is by King of the Ormsbys from a granddaughter of King Segis with 29.37 lb. butter in a week; 904.32 lb. butter in a year.

His dam and sire's dam average 33.80 lb. butter, 662.9 lb. milk in 7 days, 1,097.61 lb. butter in a year.

Let us sell you a few fine young cows and heifers bred to this great young bull. Herd is under State and Federal Supervision, last test CLEAN.

O. P. WALKER & SONS
Susquehanna Co. THOMPSON, PA.

My Former Herdsire King Tobe Alcartra De Kol

was by King Segis Pontiac Alcartra from Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in 30 days, as a senior three-year-old, world record at time of making. Her daughter made 30.21 lb. butter in 7 days as a heifer; her dam, 31.66 lb. as a ten-year-old cow.

I plan to keep all the daughters of this bull but have a few nice bull calves that I offer at farmer's prices.

Herd under State and Federal Supervision.

O. I. Martin
Cambridge Springs, Pennsylvania

DE KOL PIETERTJE PAULINE

How do you like her? She is just one of the good cows in Westview Herd, which is under State and Federal Supervision and passed its first test CLEAN.

A YEAR'S WORK

H. E. Jamison, of the University of Illinois, has summarized the records kept on 347 cows during the past year in the Franklin-Jefferson-Marion Cow Testing Association. There were 41 cows which produced more than 10,000 pounds of milk and their average return over cost of feed was \$217.55. There were 43 cows in the association that made less than 4,000 pounds during the year and these returned only \$36.03 above feed cost. The average production for the entire number of animals was \$76.45 and their average production was 6,611 pounds of milk and 271.3 pounds of butterfat.

The highest producing herd consisted of 15 purebred and grade Holsteins, owned by Jesse Payne, of West Frankfort. Their average production was 10,692 pounds milk, 368.1 pounds of butterfat.

A purebred Holstein owned by C. E. Harris of Mt. Vernon was first for milk, producing 13,954 pounds containing 485 pounds of butterfat.

URSINUS COLLEGE COW LEADS

Lily, a purebred Holstein, owned by J. L. Wood and Sons of Red Hill, Pa., was the leading cow for August in the Montgomery County Association, she having produced 1,342 lb. milk, 60.39 lb. butterfat with a test of 4.5 %. The second highest was also a purebred Holstein. She was owned by Ursinus College, Collegeville, Pa., and produced 1,528 lb. milk, 47.37 lb. butterfat.

The Ursinus College herd of twelve milkers averaged 940 lb. milk. The grade Holstein herd of A. A. Heebner consists of twelve cows averaging 871 lb. milk. The Ursinus College dozen averaged 30.8 lb. butterfat.

During August 270 cows enrolled in this association were milking and 63 were dry; 21 cows each produced over 40 lb. fat and 11 cows exceed 1,200 lb. milk.

ASSOCIATION PICNIC

Members of the LeRoy Cow Testing Association and their friends gathered at Wildwood Park, Minn., August 16, for a picnic dinner. Songs and readings were given by members of the glee club. County Agent Liebenstein spoke on "The Present Day Agricultural Situation and Problems of the Dairy Man." Philip Larson, tester, spoke on association work and E. A. Hanson of University Farm, who was in charge of all testing associations of the state, gave a demonstration on the selection of dairy cows using as illustrations two Holsteins belonging to C. F. Kehret. Ray Malcomson won the guessing contest, the object of which was to guess the number of pounds of butter fat produced by two cows since they freshened.

FOR SALE—Registered Holstein bull nine months old; one heifer; two heifer calves; cow to freshen Dec. 28th. Accredited. MRS. I. T. SHADE, Harris Station, Ohio.

CENTERVILLE, PA.

HAVE A BIG TIME

August 20th, the Chili Cow Testing Association held a picnic in the grove of Wm. Neinas of Chili, Wis., and staged a calf club show. Grant Wilcox won the first prize with his Holstein bull calf, with Milo Lindow second and Harry Brown third. The Wilcox calf was made grand champion, the female champion being an Ayrshire. Raush Bros. offered a prize of five gallons of Mobile Oil for the nearest guess to the amount of butter fat produced last year in the Chili Cow Testing Association. This prize was won by Cyril Dall.

Mr. and Mrs. Hein and their nine children, of Chili, won the prize of a sack of flour for the largest family on the grounds.

A GOOD YEAR

During the first year of the Eland, Wisconsin, Cow Testing Association, which closed August 1, 1924, there were 539 cows tested, of which 328 completed the year. Twenty-one cows averaged over a pound of butterfat per day and sixty made over 300 lbs. fat. First place was taken by Maggie, a Holstein owned by H. Vanderkooy of Wittenberg, she making 11,765 lb. milk and 471.6 lb. fat, with an average test of 4.01 per cent. She netted her owner \$130.96 over cost of feed. During the year association members sold 44 cows for dairying and 41 for beef.

HOLSTEIN FIRST

An eight year old Holstein owned by John Parks of Grand Haven, Mich., led the Ottawa Cow Testing Association both for milk and butter, her year's total being 15,979 lb. milk, 58.8 lb. butterfat. The high herd was owned by George Taylor and consisted of seventeen grade Holsteins and Jerseys. They averaged 8,084 lb. milk and 39.4 lb. fat. The average for the Association was 7,609 lb milk and 305.8 lb. fat for 277 cows.

LEADS FOR MILK AND FAT

Grace, four-year-old Holstein owned by Harry Hansen of Denmark, Wis., was the highest cow for milk and fat, for August, in the Denmark Cow Testing Association, producing 1,838 lb. milk, 60.7 lb. fat. The highest herd consisted of 19 Holsteins, owned by Peter Olsen of Denmark, their average production was 996 lb. milk and 36 lb. fat.

A HOT WEATHER PRODUCER

Pauline Adelia Ormsby owned by the Makida Farms, Jeffris, Wis., produced 110.6 lbs. butterfat during the month of July. She is now in year test. This is the highest record ever made in either Lincoln or Oneida Counties.

MAPLE GROVE YBMA GLISTA

Maple Grove Ybma Glista is one of the splendid bulls in use at Maple Grove Stock Farm, Centerville, Pa. He is from Maple Grove Spofford Princess, a cow that two different years has made over 25 lb. butter in seven days in a farmer's herd being credited with 542.3 lb. milk, 25.04 lb. butter as an eight-year-old and then, just one year and one day later, increased this to 27 lb. butter and 641.3 lb. milk. This cow is from an A. R. O.

MAPLE GROVE YBMA GLISTA
The handsome young bull in service in the accredited herd at Maple Grove Stock Farm, Centerville, Pa.

granddaughter of Helena De Kol Artis and was sired by a good son of Aaggie Cornucopia Pauline Count, a son of the former world's champion Aaggie Cornucopia Pauline.

The sire of Maple Grove Ybma Glista is Model Daniel Glista, a former herd sire at Maple Grove. He was by the show bull, Model King Segis Koningin and his dam was Glista Dinah, 502.7 lb. milk, 31.26 lb. butter in seven days as an eleven-year-old. She was a daughter of Glista Coreva, 593.1 lb. milk, 34.08 lb. butter in seven days as a six-year-old and 581.8 lb. milk, 31.21 lb. butter in a week as a seven-year-old.

The Maple Grove herd has been on the accredited list for several years and recently passed another clean test.

A SLIGHT OMISSION

In our story of the Whitman Follett herd which appeared in the August 8th issue of the BREEDER AND DAIRYMAN, we neglected to mention Mr. Follett's handsome Belgian stallion, "The Real Thing." The Real Thing's registry number is 4,973. He weighs 1,600 lb. His owners are very proud of him and believe that he is just the "real thing" in Belgians. Not mentioning this handsome horse was an oversight on the part of the editor, who likes to see a good horse as well as a good cow.

The Folletts are lovers of all kinds of livestock and, as a natural consequence, all the animals they own show the results of good feed and care.

SPECIALIZES IN CALF SALES

The great milk producing district around South New Berlin, Chenango Co., New York State, is the home of many high class herds. One of the best of these is owned by Menzo A. Brooker.

Mr. Brooker is a working dairyman and has a large and rapidly increasing purebred Holstein-Friesian herd, at the head of which stands Westside King Vale 4th. This bull was from Westside Zuba Burke Pontiac, 20.17 lb. butter in seven days when only twenty-two months of age averaging 58.3 lb. milk daily. Her dam was a 31-lb. cow and her sire was King Pontiac Hildale, who has a long list of good record daughters and is one of the many good sons of King of the Pontiacs. Back of Westside King Vale 4th are a number of wonderful producers and noted transmitting sires.

The Brooker herd is under state and federal supervision and all the animals therein have been raised on the premises. This is an ideal place to secure young stock either for calf or heifer club work or as foundation stock upon which to build a herd.

GILLETTE'S HERD WINNING PRIZES

The herd of W. R. Gillette & Son is being exhibited throughout northwestern Iowa again this year and is again making a fine showing.

At the Rockwell City fair this herd won eleven firsts, nine seconds and five thirds and six championships.

At the Sac County Fair they won all the championships together with eleven firsts, nine seconds and two thirds.

At the North Iowa fair, held at Mason City, there were eight herds competing. The Gillette aggregation won five firsts, seven seconds and seven thirds, winning more prize money than any other Iowa exhibitor. About one hundred head were shown and the cattle were judged by Professor Weaver of Ames.

The junior member of the firm is L. S. Gillette, who is judging at a number of large expositions including the Missouri and Iowa state fairs.

A LITTLE KNOWLEDGE IS A DANGEROUS THING

"I do hope you keep your cows in a pasture," said Miss Fisher as she paid the milk man at the Girl's Dormitory the other day.

"Yes'm," replied the milk man, "of course we keep them in a pasture."

"I am so glad," went on Miss Fisher, "I have been told that Pasteurized milk is much the best."

Representatives Wanted

The picnic and fair season, when rural people get together, is the time to earn good money at these gatherings soliciting subscriptions to *The Holstein Breeder and Dairyman*. Write to-day for terms. Send references with your letter.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

DEFINITION FOR SWEET CREAM BUTTER

The Joint Committee on Definitions and Standards for Food Products has proposed a definition for sweet cream butter with the recommendation that it be published for the purpose of discussion and criticism, according to Dr. W. W. Skinner, Chairman of the Committee. The proposed definition is intended to apply to a class of butter made by a process developed in the Bureau of Dairying of this department and which has distinctive commercial advantages and superior keeping qualities. Its manufacture has increased to a point which warrants its commercial recognition.

The committee invites criticisms and suggestions regarding the proposed definition from food officials, consumers, the trade, and all other interested parties. Communications should be addressed to the Secretary of the Joint Committee on Definitions and Standards, Bureau of Chemistry, Washington, D. C. The text of the proposed definition follows:

Sweet Cream Butter is the butter made from cream to which no ripening ferment has been added, and which has been pasteurized for not less than thirty minutes at a temperature not lower than one hundred forty-five degrees (145°) Fahrenheit, and no lot of which, prior to the time of manufacturing the butter, has attained an acidity exceeding two-tenths per cent (0.2%) calculated as lactic acid.

A SIRE OF GOOD STOCK

A bull destined to exert considerable influence upon the Holstein breed in Central New York is King Sylvia Pontiac Pietje, the senior sire at Waldron Farms, South Otselec, of which Mrs. Maud Dwight is proprietor. The reason we make the statement is not because of the blood lines exemplified in the pedigree of King Sylvia Pontiac Pietje al-

YOUNG DAUGHTERS OF KING SYLVIA PONTIAC PIETJE

Owned by Mrs. Maud Dwight, Waldron Farms, South Otselec, N. Y.

though they combine strains noted for transmitting ability and tremendous production but it is because of the promise shown by his daughters at Waldron farm.

The Waldron herd consists of over sixty head of top notch Holsteins and

practically every one of the younger members was sired by King Sylvia Pontiac Pietje. The size and vigor of these youngsters, their type and conformation and their promise is the reason for making the statement we did in the opening paragraph.

King Sylvia Pontiac Pietje is a grandson of May Echo Sylvia and a great-grandson of the former world champion, K P Pontiac Lass. He was sired by Champion Echo Sylvia Pontiac, whose daughters and granddaughters are making great records in both official and long time tests.

The dam of King Sylvia Pontiac Pietje is May Echo Pontiac 2d. As a junior four-year-old this cow produced 659.8 lb. milk, 26.23 lb. butter in seven days, 2,548.8 lb. milk, 109.29 lb. butter in thirty days. She is by Woodcrest Sir Clyde who has a long list of high record daughters and was by Pietje 22nd's Woodcrest Lad from Alma Clyde, 33.07 lb. butter in seven days; 970.47 lb. butter, 22,558.4 lb. milk in a year. May Echo Pontiac 2d is from a daughter of May Echo Sylvia and King Pontiac Artis Canada, a son of King of the Pontiacs from Pontiac Artis, the highest yearly record daughter of Hengerveld De Kol.

The Waldron herd is under state and federal supervision and at its last test was given a clean bill of health. Members of this herd trace to many of the greatest animals of the breed and the three latest herdsires were strong in the blood of cows whose records stand at the top of the yearly list.

NOTED IOWA SHOW HERD

The herd of H. O. Larsen of Dike, Iowa, was exhibited at a number of good shows in 1922—nine of them State Fairs and as many of our readers know, carried off a large number of prizes. The ribbons won that year were made into a quilt cover by Mr. Larsen's grandmother then 75 years old. It is said that her eyesight was so good that she did not need to use glasses. The Larsen herd includes a number of noted animals. Owanda Gerben Barber was undefeated in the aged cow class when she was a member of the Hargrove and Arnold Show herd in 1921. Drosky Sadie Vale Cornucopia is said to be the original of the illustration appearing on the metal signs of a Holstein Friesian Association of America, which inform those passing by that purebred Holsteins are raised at that establishment.

Sometime, some gifted author may write the story of Mr. Larsen's life which reads like a novel. When he was 15 years of age, his father died and he had to care for his mother and a number of younger children. He became interested in purebred Holsteins and purchased a few. One of his first pair of heifers was the mother of the great show cow Owanda Gerben Barber.

Wife (with newspaper): "It says here that men grow bald because of the intense activity of their brains."

Hubby: "Exactly. And women have no whiskers because of the intense activity of their chins."

INCREASED CONSUMPTION OF DAIRY PRODUCTS

The increasing importance of dairying in the United States as a source of the Nation's food supply is strikingly brought out in a study just completed by T. R. Pirtle of the dairy and poultry products marketing division of the United States Department of Agriculture. The per capita consumption of milk and cream has increased about 12 per cent during the past ten years, and per capita consumption of butter has increased more than 6 per cent, Mr. Pirtle says.

Special efforts have been made by the department during the past two years to obtain data on the consumption of dairy and poultry products on farms. Based upon reports from 30,000 township crop reporters in all parts of the country it is shown that the per capita consumption of milk and cream on farms is much larger than in cities. The average per capita consumption on farms with cows last year was approximately eighty-one gallons whereas the average for the entire country was only fifty-three gallons. Average consumption of milk and cream on farms ten years ago was only seventy-two gallons.

Farm consumption of butter has also increased greatly, being now more than double the average for the United States. Per capita consumption of butter on farms last year is placed at thirty-eight pounds as compared with an average of seventeen pounds for the country as a whole. This farm consumption shows an increase of over two pounds per capita since 1913.

SWEET CORN

Bob Adams, who is connected with the Kansas State College of Agriculture, is evidently a lover of sweet corn and has written a "poem" on it which is almost a rhapsody.

"Dame Nature formed it long ago, a giant grass in Mexico. From tribe to tribe the gift was passed. It reached our northern land at last, to serve the early settlers' need, a sturdy staff of life indeed; to swell with grain the Yankee cribs and pad with fat their lanky ribs. Still on our tables it appears, and in the form of roasting ears, against our rugged features pressed, it spreads them out from east to west. A noble food, but what a pity the way we eat it is not pretty. We gnaw it off in gulps and gobs, and on our plates we pile the cobs. Between the ears we hardly pause to wipe the butter from our jaws. When sweet corn yearly waves its banners we give vacations to our manners."

Two Negro expressmen mixed their flutters at the depot.

"Hey, dar, culled man," yelled one to the other, "I'll knock yo' out of house an' home ef yo' don't back up."

"I've got no home," retorted the offending driver. "Now what yo' gwine do 'bout it?"

"I'll dig yo' one, nigger—I'll dig yo' one."

SHOW COW ESCAPED

Wm. Jaehnig of Fredonia, Wis., exhibited a cow at the Wisconsin State Fair. On Saturday after the fair she was loaded in a freight car, but when the car reached West Bend the cow was missing and several days after had not been found. It is believed she broke her halter and jumped over the boards nailed across the doorway. She was insured for \$400.00.

A later report received just as the BREEDER AND DAIRYMAN was going to press says that Princess Houwtje Rag Apple, the cow in question had been found in a farmer's herd near North Milwaukee. It was remembered that the train made a stop a little north of that station and it is surmised that in starting, the jerk made the cow lose her balance and fall out of the car as she stood near the door. The farmer saw her attempting to get into the field with his cows and he took her in, fed, milked and cared for her until she was claimed. Examination showed no injury with the exception of a few scratches.

At Milwaukee, Princess Houwtje Rag Apple was placed seventh in a class of thirty-four aged cows by Judge Stevens.

ENGLISH MILK LAW

An English case recently decided is of interest to milk sellers. A farmer who operated a retail business and was a member of a Milk Recording Society was summoned for selling milk containing 2.49 per cent of fat instead of the legal minimum of 3%. The investigation brought out that the farmer kept 40 cows but the demand for his milk was greater than his supply so he purchased two gallons of milk daily from a neighbor who kept only two cows. The neighbor said that he milked enough for the use of his family and two gallons, imperial measure, or twenty pounds, for the dairyman. He left the rest of the milk for the calves which he was raising, and stated that he did not know that the first milk from cows contained very little fat. The inspector, who had caused the action to be brought, argued that milking cows in this style and selling the milk was equivalent to abstracting fat from the milk, but the magistrate held that, as the milk was sold as it came from the cows the purchaser had no cause of complaint and therefore dismissed the case.

REAL BAD LUCK

Holstein owners everywhere will condole with Emil Titel of Plymouth, Wis., whose herd sire, Admiral Ormsby Fobes, after winning the championship at the Sheboygan County Fair, slipped in the wet barnyard, broke his right hind leg and had to be slaughtered, August 13. The bull weighed 2,800 lb. and it was intended to show him at the New York State Fair. He was a son of Wisconsin Fobes 5th and Mr. Titel obtained him from John Erickson of Waupaca when he was a nine months old calf. It was reported that Mr. Titel paid \$8,000 for a half interest in this animal.

My Herdsire

He is a son of King Segis Pontiac Koni-gen. His dam is a granddaughter of Beauty Pietertje Butter King and was by Dutchland Pietertje Sir Aaggie. Tremendous milk and butter records have been made in both official and long time test by sisters of this bull and of his dam.

This producing blood he is transmitting to his offspring which are also choice individuals.

Let me price a few to you.
Herd under State and Federal Supervision and T. B. Free.

RAYMOND D. STRICKLAND
RD.. NICHOLSON, PA.

KING SYLVIA PONTIAC PIETJE

combines individuality of a high order with remarkable breeding.

His sire is Champion Echo Sylvia Pontiac and his dam, who made 659.8 lb. milk, 26.23 lb. butter in 7 days as a junior four-year-old, is a granddaughter of May Echo Sylvia and the 33-lb. cow Alma Clyde.

The only reason I would sell him is that my herd of 60 purebreds contains many of his daughters.

Come and see him and my herd which is now on the ACCREDITED list.

ALDENHEIM FARM NOTES

In the September 8 issue, page 582 appeared some interesting remarks by John Hemingway, of Hampton, Iowa. Mr. Hemingway discusses century sires, the tests of their daughters and the transmitting ability shown by such sires, dealing more with the percentage of fat in the milk than the size of the records made which depend largely upon the preparation given the cow, the amount

OATKA FAYNE PONTIAC

This young cow and her son are owned by John M. Hemingway, Hampton, Ia.

of feed eaten by the animal both before freshening and while the test is in progress, and the care and attention she received while in test.

Mr. Hemingway supplements his first letter by another, part of which we quote: "No ordinary breeder or dairyman can afford to make annual tests except he has some unemployed member of his family who shall attend to the milking. The wages of a man employed purposely to do this work, and the expense of his maintenance during the year, will not be offset by the increased value of the cow tested.

"We should strive for the attainment of two things in breeding Holsteins: One is perfection of form and appearance, that you may have a herd to admire—that you will delight to exhibit to your friends and neighbors. Second, to improve the production of your herd. The wealth of the production lies largely in the butterfat production. So it occurs to me that the intelligent breeder should select those strains of the Holstein family which excel in beauty of form and in production of butterfat. The capacity to produce butterfat depends upon the capacity of the animal's ancestors."

Aldenheime Farm is situated at Hampton, Iowa, about six miles west of Chapin, at which is the Home Farm, owned and operated by the Barney family.

Evidently Hemingway is not fully in accord with the present legislative agent

and former director of the National Association for he, in renewing his subscription says: "I am pleased with your publication. At first it appeared to be an organ of protest against the proceedings of the Holstein-Friesian Association of America, which, in my opinion, needed to be called to account in some respects. It was predicted that your life would be short, but your publication now evidences increased prosperity."

The Aldenheime herd is small but select, individuality as well as production, is kept in mind. One of the young bulls that will be placed in service is King Oatka Segis Pontiac, born December 19, 1923. He was sired by King Elsie Segis Pontiac and was from Oatka Fayne Pontiac, one of the best young cows in the herd. She freshened for the first time at two years and eighteen days old and made a seven day record of 13.10 lb. butter, her milk averaging 3.74% fat. Her dam is from a granddaughter of the century sire, Lord Netherland De Kol, and was by King Segis Champion, whose dam was the 36.35 lb. show cow Aaggie Pauline Sarcastic and whose sire was King Segis De Kol Korndyke, son of the former world's champion Pontiac Clothilde De Kol 2d. Oatka Fayne Pontiac was by King Pontiac Fayne Butter Boy, a son of King Pontiac Hengerveld Fayne and Briar Pontiac Daisy, a 30 lb. daughter of Pontiac Jewel Butter Boy.

The sire of King Oatka Segis Pontiac is King Elsie Segis Pontiac, the bull mentioned by Mr. Hemingway in his first letter. His dam, Elsie Segis Dutchland, has a seven day record of 30.04 lb. butter. Her sire is a grandson of King Segis and Pontiac Clothilde De Kol 2d and her dam is a granddaughter of Colantha Johanna Lad.

CLEARFIELD COUNTY HEALTHY

In ten townships of Clearfield County, Pa., 4,500 head of cattle were recently tested and only eighteen reactors were found. According to Dr. S. E. Bruner, official in charge, this small percentage indicates two things: First, the original cattle of the county were healthy and not infected with any disease; second, dairymen in that area have been selling stock and have not bought cattle from outside the county and so did not introduce the disease. Even though the number of reactors was small, the eradication work proved invaluable since it eliminated possible spread of the disease from the few infected animals to others throughout the county.

Representatives Wanted

The picnic and fair season, when rural people get together, is the time to earn good money at these gatherings soliciting subscriptions to *The Holstein Breeder and Dairyman*. Write to-day for terms. Send references with your letter.

MATRON OF THE HERD

Nellie Mechthilde Pontiac is the name of the oldest cow owned by L. S. Brown, of Saegertown, Crawford County, Pa. Her dam as a two-year-old heifer, produced 19.13 lb. of butter in a week while

SENSATION CLOTHILDE TEHEE
Now heading the herd of L. S. Brown,
Saegertown, Penna.

her sire is King Pontiac Ormsby a son of the King of the Pontiacs and Aaggie Topsy Ormsby, she by Duchess Ormsby Butter King and from Aaggie Topsy De Kol 2d, whose dam was one of the first cows to make a 29 lb., seven day official butter record. Nellie is now in long time test. In the first four months she has produced 300 lb. fat, 7,946 lb. milk and is due to freshen again before her year ends. Nellie is a persistent producer, her highest days milk being 76 lb. She has several offspring in the Brown herd, including a handsome two-year-old heifer that milks 50 lb. per day in her first lactation period.

A number of good bulls have headed this herd. One of these was Jolie Combination whose sire was by King Ona and from Lucille Jolie Pontiac, with 33.29 lb. butter in a week, 1,173.15 lb. in a year, world's record in the senior four-year-old class at time of making.

The younger member of this herd

were sired by King Valdessa McKinley Pondyke. His dam, as a junior two-year-old, produced 684.20 lb. butter, 16,748 lb. milk in a year and her dam and granddam each made over 1,000 lb. butter in yearly test as heifers. The sire of this bull was by King Valdessa from Finnerne Holingen Fayne with 1,325.06 lb. butter in a year, world's record in the junior three-year-old class.

Mr. Brown is a member of the Crawford County Holstein Bull Association. His present herd sire is Sensation Clothilde Tehee, whose dam, Lucille Clothilde Tehee, is a daughter of Sir Clothilde Concordia and has a yearly record, made as a senior three-year-old, of 945.87 lb. butter, 21,968.9 lb. milk in a year. Sensation Clothilde Tehee is by Sensation, son of Lindale Bonnie Pauline, over 1,000 lb. butter in a year as a three-year-old, 1,250 lb. butter and

ACCREDITED!

GRAND CHAMPION SEGIS 2d

heads our herd. He is a show bull, his sire and dam were both show animals, but better yet, his daughters are both show and producers. His dam made over 37 lb. butter in 7 days as a four-year-old; his seven nearest tested dams average 32 lb. butter.

Get my price on a good bull calf.

DE WITT GRIFFING

Heart Lake
Susquehanna Co. Pennsylvania

over 30,000 lb. milk in a year as a full aged cow. She was the first cow in Ohio to make a 30,000 yearly milk record.

Sensation Clothilde Tehee is a very handsome bull as his picture indicates. In the Brown herd, which is accredited, he will be mated with the daughters of two former herd sires and there is every reason to believe that his offspring will be both fine individuals and large producers.

One reader of the BREEDER AND DAIRYMAN says that the main trouble with it is that the covers are not far enough apart.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

FOR SALE

An Accredited Herd at an Attractive Price

TEN well-bred young cows, including two daughters and three granddaughters of **Napol Sir Keystone Beauty**, the son of the great Keystone Beauty Plum Johanna that formerly headed the Peter Small herd and now heads Iowa herd.

Part of this bunch is bred to freshen this fall, the remainder to freshen in the spring.

Herd is headed by a son of **King Ormsby Ideal** from a 17-lb two-year-old daughter of King Korn-dyke Sadie Vale.

No reactor has ever been found in this herd.

CLARENCE H. TITUS

Tunkhannock R.D.2 Wyoming Co., Pa.

Drowned in a Drinking Cup

A great show heifer owned in a leading North Dakota herd was recently drowned in her stable, her horn catching in her drinking cup and holding her nose under water.

Why Take Chances

Place a Hornless Bull at the head of your herd and raise Hornless Holsteins. For Type, Beauty and Producing Ability, they are unsurpassed. Let us tell you about them.

Herd under State and Federal Supervision.

Bonair Colantha Ormsby Champion

my junior herdsire, is from

Bonair Beechwood Ormsby 4th,

21,022.4 lb. milk, 828.17 lb. butter in ten months, Sub-Division B, World's records for both milk and butter at time of making.

The greatest sires of the breed appear in his pedigree. I have two sons of this bull, nearly white in color and well grown.

The dam of No. 1 made 9,927 lb. milk, 368.3 lb. butter in 9 months, showing \$126.33 profit over feed cost as a junior two-year-old and 12,205 lb. milk, 488.9 lb. butter in 11 months—\$173.44 profit over feed cost as a junior three-year-old. Her full sister made a World's record in Sub-Division B.

The dam of No. 2 produced 10,336 lb. milk, 425.8 lb. butter in 11 months as a junior two-year-old, making \$131.07 profit above feed cost. She freshened again in less than a year and is now milking 65 lb. daily.

Her dam, a maternal sister to the first two heifers, has a 10-months' record of 13,462.1 lb. milk, 536.13 lb. butter as a junior three-year-old, Sub-Division B. Her dam, the granddam of the first two mentioned, produced 15,832.6 lb. milk, 685.8 lb. butter in 10 months on twice-a-day milking.

Some of the greatest producing and transmitting blood of the breed is back of these animals.

Bolting Springs Herd is ACCREDITED.

The Story of Ever Breeze Herd

Small In Size But Full of Quality

FREQUENTLY breeders of purebred Holsteins are puzzled to select a farm name or herd prefix but few have solved the problem in as apt and appropriate a manner as George Lightbody of Dalton, Pa.

Dalton is located among the mountains of Northern Pennsylvania and the elevation of the Lightbody farm is such that the wind blows more or less there practically every day in the year so Mr. Lightbody had a happy thought when he christened his establishment Ever Breeze Farm. A

breezy place is generally healthful and so we are not at all surprised to find out that the Ever Breeze Herd is federally accredited and its health guaranteed by the veterinary authorities at both Harrisburg and Washington.

Ever Breeze Herd was started about ten years ago, the first animal being a heifer calf purchased when the noted herd owned by Dr. Hand was dispersed. She is still a member of the herd which includes several of her descendants.

One of the first herdsires was Sir Segis Abbekerk Calypso No. 313241. His sire was King Segis Inka Beets and his dam was Grace Abbekerk Calypso, an A. R. O. daughter of King Pontiac Walker Calypso and Grace Abbekerk Woodcrest Nig De Kol.

The second herdsire, used only for a short time, was Tobe Echo Sylvia Korndyke.

KING HENGERSVELD HARTJE
Head of the Ever Breeze herd. A sire of quality and transmitting ability.

MR. AND MRS. GEORGE LIGHTBODY
Owners of Ever Breeze Herd.

thirty days as a senior three-year-old, world's record in class at time of making. She in turn is dam of Geraldine Rag Apple Korndyke, a 30-lb. senior four-year-old. The dam of Segis Tobe Korndyke is a 25-lb. cow with a ten-months' record of 509.88 lb. butter, 10,973 lb. milk and she was from a 22-lb. cow and sired by King Segis Hengerveld De Kol, who has a number of high record daughters scattered through northern Pennsylvania.

Woodmont Echo Sylvia Champion was first prize three-year-old bull at the 1922 New York State Fair, and his dam, the 30-lb. cow, Butter Boy Empress, was the senior and grand champion female at that great show the previous year.

Mr. Lightbody had long been of the opinion that it was better and cheaper for a breeder to purchase a tried and proven sire than it was to head his herd with

a young bull, no matter how good his backing, so when F. M. Riker dispersed his herd about a year ago, Mr. Lightbody attended and bid off the well-known sire, King Hengerveld Hartje. This grand old

GRACE ABBEKERK CALYPSO
One of the show heifers in the Ever Breeze herd.

bull has only been used in small herds yet he not only had big records behind him but better still, had daughters of high quality. Some of his daughters had fallen into hands where they were officially tested. One, as a senior four-year-old, made 27.56 lb. butter in seven days, averaging nearly 75 lb. milk a day.

EVER BREEZE OUIJA PONTIAC
75 lb. milk in a day as a three-year-old, milked three times daily.
8,000 lb. milk in ten months as a yearling.

Several others tested as heifers made records ranking from 20 lb. to nearly 27 lb. The best known daughter of this bull is Walker Hartje Spofford. Although she has only a 27-lb. seven-day record she is noted because in ten months, tested away up in Maine, she produced 960.60 lb. butter, 26,233 lb. milk which was world's record in the ten-months' division at time of making and still stands very close to the top. However, it was not on account of the records made by the daughters of this bull that Mr. Lightbody decided to buy him but because of the fact that his daughters were large,

BLANCHE HENGERVERELD WAYNE
13,998 lb. milk in nine months on two milkings a day. A daughter of King Hengerveld Hartje.

carried square udders and were known to be big producers in their every day work.

King Hengerveld Hartje is from Maid of Elmwood Hartje. She has a record made as a four-year-old of over 30-lb. butter in seven days and she was sired by Butter Boy of Elmwood, a son of De Kol 2d's Butter Boy 3d and Jolie Johanna, the grand champion show cow at the St. Louis World's Fair.

King Hengerveld Hartje is a bull of striking appearance. His tremendous depth, spring of rib and barrel would draw attention to him even if he was

among a whole herd of bulls. He is straight of back and broad of hips and is really a wonderful old fellow.

Space forbids individual mention of all the animals in the herd, so we will only mention a couple. Ever Breeze Ouija Pontiac, a daughter of Rag Apple Concordia De Kol and Louise Hengerveld Pontiac produced over 8,000 lb. milk in ten months as a yearling. Blanche Hengerveld Wayne is by King Hengerveld Hartje from a granddaughter of Butter Boy of Elmwood. As a three-year-old she made an official record of 24.95 lb. butter averaging 77 lb. milk a day. Mr. Lightbody bought her at the Riker dispersal. She was fresh at that time and in the first three months after

PASTURE SCENE AT EVER BREEZE FARM

she was in her new home, she produced 5,761 lb. on twice a day milking, her best day being 76 lb. She was allowed to milk nine months and then was dried off as she was due to freshen again. In the nine months she produced 13,998 lb. milk and George says he had quite a time to get her dry. This showing is all the more noteworthy as Blanche milked from only three-quarters. With this sample ever before him is it any wonder that Mr. Lightbody believes that, in King Hengerveld Hartje, he has one of the greatest living Holstein sires?

For three years animals from this herd have been exhibited at the Lackawanna County Fair with signal success and have carried off a number of blue ribbons. As Lackawanna County Holsteins are considered sec-

A PAIR OF YOUNGSTERS AT EVER BREEZE FARM

ond to none in the State of Pennsylvania, this is quite a performance for so small a herd.

There are about one hundred acres in Ever Breeze Farm. Locally this has been known as the Carpenter Farm. The farm was settled upon and cleared by Joseph Carpenter who was born in Rhode Island and when a young man, made his home here where he continued to reside until his death at ninety-five years of age.

His son, Dennis Carpenter, was born on the old homestead and lived there all his life until he died in November, 1848, when he was nearly sixty-nine years old. He was the father of Adelbert, generally known as Dell, who passed away some years ago, leaving his wife and two daughters, the younger of whom, Helen, became Mrs. George Lightbody. Mrs. Lightbody teaches a near-by school and yet finds time to help her mother, Mrs. Carpenter, look after the house. The Lightbodies have no living children.

The father of George Lightbody came from near Glasgow, Scotland, but has spent most of his life in the vicinity of Waverly, Pa. Farmers in this neighborhood tell of his skill as a stock raiser and this skill has evidently been inherited by his son, George, as the condition of the animals indicate. Many purebred owners act as though they are afraid of their herd bulls but Mr. Lightbody has his bulls, in fact, all his animals, well trained. It is a pleasure for strangers to be around them.

Early Breeders of Lackawanna County

A Little Information About a 44-Year-Old Herd

IT is true that the Holstein-Friesian Association of America was practically organized in New England and also true that, for many years, the section in New York State around Syracuse was a center from which men came long distances from other states to secure foundation stock, but Pennsylvania, especially the northern section, was also very important in the early history of the breed in this country and the influence of the men and herds of this territory was very great.

In 1868, the first purebred Holstein was brought into Bucks County, Pa., from Massachusetts. This was a bull, Earl of Middlesex, bred by Winthrop W. Chenery, the first president of the original black and white breeders organization which was known as "The Association of Thoroughbred Holstein Cattle." About the same time a number of females were brought into the same part of the country, one of which was Texelaar 9th. Several herds were started by breeders living around Doylestown, Erie and Philadelphia, the Huidekoper herd was started at Meadville, Powell Brothers had a herd at Springboro, and the Lackawanna Breeders' Association was established at Waverly.

The original members of the Lackawanna Breeders' Association were L. W. and John L. Stone, E. G. and G. M. Carpenter, and J. W. Miller. One would naturally expect that men who formed a company and brought cattle from Holland in those early days would have among their number one who was born in Holland or was of Dutch descent but the opposite was the case, the men were American bred for a number of generations back. Perhaps, we may be able to tell a few things of interest about these men who did so much to establish the breed in the counties of Northern Pennsylvania and Southern New York.

About 1807 Lemuel Stone, a native of Coventry, R. I., settled in North Abington Township, Lacka-

The spirit of progress that caused Mr. Lightbody to start breeding purebred Holsteins and that induced him to place his herd under state and federal supervision is responsible, we believe, for his latest decision communicated to the editor in a letter of recent date in which he says that he will consign his entire herd to the sale of the Lackawanna Breeders to be held on the County Fair Grounds, Clarks Summit, October 20th. He is reserving his herdsire, King Hengerveld Hartje, now past twelve years old, also Blanche Hengerveld Wayne, a daughter of that bull, as a family cow. Then he goes on to say, "I am not getting out of the Holstein game by any means but am going to fit myself to go at it stronger than ever. I am taking an agricultural and dairying course at the New York State College, Cornell University, this winter." We know that Holstein owners everywhere will appreciate the spirit and the desire for improvement shown by this young Pennsylvania breeder and will wish him success in his studies and prosperity after he completes his college course.

wanna County. To him and his wife, Anna, was born, May 15, 1818, a son, Lora W. Stone. He in turn had a son, John L. Stone who for many years has been connected with the College of Agriculture at Cornell University. When the Lackawanna Breeders' Association was started J. L. Stone was secretary. The Lackawanna herds were founded by stock selected from some of the best herds of northern Holland and Friesland and included members of the Mooie, Aaggie, Netherland, Clothilde, Mechthilde, De Kol, Pauline Paul and Princess of Wayne families. In addition, the Stones had a large flock of purebred Shropshire sheep. Mr. John L. Stone graduated from Cornell University in 1874, fifty years ago. Having no sons to carry on the business, when his daughters were old enough to go to college he was easily induced to join the teaching staff of Cornell University. In 1901 he rented his farm and sold his herd to A. F. Siegfried who also took over his interest in the Lackawanna Breeders' Association and continued to be a member of that organization for several years.

Edwin G. Carpenter owned a farm about a mile from Clarks Summit. He, too, was born in this neighborhood in 1840. His grandfather, Joseph C. was born in Rhode Island but settled in Scott Township when a young man. Joseph C. lived to be ninety-five years of age but his son Earl, father of Edwin died when forty years old. In 1869 Edwin G. purchased one hundred and eighty acres to which he added more before he died. He was the father of George M. Carpenter also a Cornell University man, and was for a time, manager of the Scranton Dairy Company and a director of the Lackawanna Breeders' Association. George Carpenter's mother, that is Edwin G. Carpenter's wife, was a sister of J. W. Miller. Afterwards George Carpenter had a herd of his own and exhibited

for several years at a number of great fairs. He died in 1919 at his home near Wilkes-Barre.

John W. Miller, the fifth member of the Lackawanna Breeders' Association, was a grandson of John Miller who was born in Connecticut and settled on the Miller Farm then primeval forest in 1802. Despite the hardships of pioneer life he lived to be eighty-two years old. His son Benjamin was born on the home farm March 4, 1809. Benjamin Miller was ordained in the Baptist Church and was the first minister of that denomination in his section of the country. Besides attending to his duties as clergyman, he was a farmer and with his son John W. became interested in the Scranton Dairy Company. John W.'s wife was Frances Carpenter, a sister of Edwin G. Carpenter, and they were the parents of Harry B. and Arthur J. Miller, the present owners of Mapleway Stock Farm. There has been a herd of Holstein-Friesians on this farm since 1880 and the present members of the herd have descended from the original foundation stock.

It is more than forty years ago since the first purebred Holsteins came into Northern Pennsylvania. We

MAPLEWAY EEKE LYONS

First prize aged cow at the 1923 and 1924 Lackawanna County Fairs. Winner this year of the champion rosette given by the Pennsylvania Federation of Holstein-Friesian Clubs.

find in Volume 1 of the Dutch-Friesian Herd Book that J. L. Stone owned the purebred bull, General. General was number 9 in the Appendix Registry of Volume 1 of the Dutch Friesian Herd Book. He was born February 1878, the exact date not being given. General was bred by the Unadilla Stock Breeders' Association. His sire was Burgomaster of Beemster No. 1 Main Registry of the Dutch Friesian Herd Book. His dam was Maartje Korndyke No. 8 in the same book.

The Lackawanna Breeders' Association imported a large number of Holsteins, dealing directly with the men and even women who raised them in Holland. Thus we find them importing a large number which were registered in Volume 2 of the D-F Herd Book. In 1882 they imported stock from K. N. Kuperus and Minnie S. Veeman, both of Marssum, Friesland and from C. K. DeGroot, St. Anna, and J. S. Stienstra, Dronrijp, Friesland. Beginners often ask the origin of names commonly used in Holstein-Friesian nomenclature. All four of these breeders, the lady included, had animals named after them by American importers. In this importation of 1882 were the cows, Tietje 2d, De Groot, Dijkstra 2d, and Klassje. Many animals in Northern Pennsylvania herds trace to one or more of these great cows.

George M. Carpenter successfully exhibited a bull

of the Dijkstra strain at the 1908 New York State Fair. Among the animals competing against him were Colantha Johanna Lad, King of the Pontiacs, King Segis, Korndyke Abbekerk, Aaggie Cornucopia Johanna Lad, Jr., King Segis Pontiac and Dutchland Sir Pontiac Rag Apple, the greatest collection of A. R. O. sires that ever came together in one show ring.

Importations were made several different years. In 1884 the animals brought to this country included Vander Lei 3d and Vander Lei 4th. The herd book shows that Vander Lei 3d was born in 1881, month and date not given. Vander Lei 4th was born March 1882. Her dam was Vander Lei 2d and the only information as to their sire is "Purebred bull of breeder." The breeder was J. P. Jasma of Marssum. In the same importation was Eeke 2d, born February 26, 1883. She was bred by L. A. Kooistra, Goutium, Friesland. Mapleway Eeke Lyons, the cow with which the Miller Brothers carried off the grand championship at the Lackawanna County Fairs of 1923 and 1924 is a direct descendant of Eeke 2d.

Some of the earlier importers seem to have done more dealing than they did actual breeding but the Millers seem to have been an exception. They raised cattle, year after year, bought no females, occasionally bought a bull for a herd sire and made dairying their business, simply selling surplus stock as when people came to the farm in need of animals. Many herds were built upon foundation animals from the Lackawanna Breeders' Association herds and particularly the Miller herd. A few official records were made but it was early recognized that the making of records was very different from genuine dairying and as intimated before, the Millers were dairymen and cattle breeders and not cow racers or cow jockeys.

Good bulls have headed this herd, good not only because of their ancestry but also because they themselves were capable of winning in almost any show ring. The present head of the herd, King Beauty Sylvia Lyons, is by Echo Sylvia Model and from A Beauty Lyons, a cow in the Hartshorn herd with a record as a junior three-year-old of 26.13 lb. butter, 570.5 lb. milk. She is from a daughter of Beauty Pietertje Prince 5th and her sire, Colantha Pietertje Lyons was by King Lyons. This young animal, not quite three years old, is a real show animal. Exhibited at the New York State Fair when a calf, he won second in a strong class. Had he been older he might have carried off the blue.

The Millers never exhibited to amount to anything except at the Lackawanna County Fair. Whenever animals came from this herd they could be depended upon to render a good account of themselves. As an example we might mention that, of the ten cows consigned by Mapleway Stock Farm to the coming sale of the Lackawanna County Breeders, four of the animals have been prize winners at the county fair during the past two years and that one, Mapleway Eeke Lyons, was winner of first prize in the aged cow class both years and this year won the premium ribbon for champion Holstein female given by the Pennsylvania Federation of Holstein-Friesian Clubs. The ribbon for the best male went to King Beauty Sylvia Lyons in which the Millers own an interest.

Animals descended from stock purchased from the Millers since they have been doing business individually or from the Lackawanna Breeders' Association time are found in practically every large herd. To give the names of the herds, past and present, who purchased their original stock from this establishment would require a long list.

It was the work of the Holstein-Friesian cow at the Miller establishment and the other herds of Lackawanna Breeders' Association that first induced George E. Stevenson, formerly vice-president of the National Association, to take up the breeding of purebred Holsteins. The Stevenson herd rapidly became world famous, not alone from the fact that he was breeding polled Holsteins but also from the fact that the cows in his herd made state and even world's records in their respective classes in yearly work. In fact, the work of his most noted heifer, Keystone Beauty Plum Johanna, has never been equalled in strictly official test by any other animal under full age.

The Miller herd is located in the strictly Holstein dairy section of Lackawanna County and the growth and development of the Holstein breed in that county has radiated from that vicinity and largely from this herd. The fact that the herd was established in 1880 and has continued up to the present time would indicate the quality of the herd and the integrity of the men who have had charge of it.

The herd has always been maintained from the standpoint of milk production, the selling of purebred cattle being secondary. The influence of this herd has been out of proportion to its size for it was never very large and at the present time contains around fifty head. The farm only contains around 175 acres and is known as the Mapleway Stock Farm. It is located near Clarks Summit, within a few miles of Scranton.

A Hoosier Editor in Holland

TOM WHEELER, editor of the Indiana Farmer's Guide, was one of the party of American editors that recently toured Europe studying agricultural conditions. In the September 20 issue of his paper, Mr. Wheeler tells some of the things he saw in Holland. For the benefit of our readers we are taking the liberty of "lifting" a few extracts from his story.

"The farmhouse of C. Neefjes is near the village of Westwoud and is more than seventy years old, being built in 1853. The barn, cow stables, and the dwelling are all under the same roof.

"The cowstable was of the old type, and as the cows were on pasture, the stalls had been painted and decorated with rugs and various ornaments with lace curtains in the small windows at the front of the stalls. At the rear of each partition between the stalls was placed a large Delft plate, of peacock design, very old and worth more than \$100 each, as much as the cow that stands in the stall during the winter months. At other places about the stables were other valuable pieces of china, vases and shells from the seashore. An old cheese press used in 1872 and a card table dating back to 1744 were other curiosities in this cow stable, one of the most ornate and interesting we saw in Holland. The servants slept in this part of the

building, their beds being in small closets or berths in the wall back of the cows.

"The dwelling quarters of this house were equally as interesting as the cow stables. They were furnished in real old Dutch style, simple but substantial and presenting much that would delight the heart of the hunter of antiques. The fireplaces were of blue and white tile, each tile bearing a characteristic Dutch scene and in the center above the fireplace was a large scene made by the grouping of a number of the tiles. There was a real art represented by these fireplaces, which we learned were rather common in the homes of this part of Holland.

"We next stopped at the farm of Cort Posch, who owns 75 acres and has a good herd of Friesian cattle. He proudly took us through his house and out into the barnyard where he showed us his herd bull. A large manure heap was piled in the back yard upon a cement foundation which drained into a cistern. The liquid manure was saved and applied to the pasture fields from a spray tank.

"Another farm visited was that owned by Ruyter Bros., who have 75 acres on which they keep a herd of 50 Friesian cows. We looked at these cows and listened to their energetic young owners expound on their merits and then continued our way to Hoorn. In one of the villages we passed through we had our first sight of a stork. There was a nest on the peak of the roof of a house and two lusty young storks were receiving attention from their mother. A stork's nest is a crude affair of straw and sticks standing out in the open, subjecting the mother bird and her young to the elements. We were told that a householder deems himself lucky indeed if he can induce a stork to build her nest on his housetop. To make conditions favorable he places an old wagon wheel on the highest point of his roof for the bird to use as a foundation for her nest.

"Hoorn is a charming old town rich in old houses with fine facades and finely carved doors. In many houses in this part of Holland the front door is never used except for weddings and funerals. There are no front steps to it, they being supplied when the proper occasion arrives. The family at ordinary times goes in and out at the back of the house. One of the interesting sights of Hoorn is the old harbor gate dating back to 1587. Not far from it are some bas-reliefs on an old house which commemorate a famous naval battle which took place in the Zuider Zee in 1573, when the Dutch patriots defeated the Spaniards, made the admiral a prisoner and captured his flag ship. Another landmark is the Doelen Hotel with a carved figure of St. Sebastian, the patron saint of Archers, over the doorway. This hotel is 330 years old.

"I was much impressed with the Dutch people, with their industry and thrift. There is probably no other nation in the world that has done what Holland has. They have driven back the sea and have succeeded in making a place for themselves among the other nations in spite of great handicaps. They have contributed their share to the art, the science and the business of the world and are entitled to the wholesome respect that is accorded them by all who visit their unusual country and see what they have done."

The Kansas Dairy Congress

By THEODORE W. MORSE.

NEW officers, the first permanent staff, were chosen at the closing session of the Kansas Dairy Congress, held during the Kansas Free Fair at Topeka. They were: president, I. D. Graham, assistant secretary of the Kansas State Board of Agriculture; vice president, Ira Romig, a Topeka dairyman and prominent in the state as a Holstein cattle breeder; secretary, H. T. Morrison of Topeka.

The new "Dairy Congress" although operating under only temporary organization until this meeting, proved itself of value to Kansas and the Kansas Free Fair, by bringing to the state some of the best thinkers on farm matters, to study Kansas conditions and give the benefit of their observations and conclusions to the thousands who heard or read them in connection with the Free Fair. The shortcomings of the state, as well as its advantages, were pointed out in no uncertain way by one of the speakers and the tenor of all discussion was constructive and toward some definite objective.

Hon. Frank O. Lowden, president of the Holstein-Friesian Association of America was the leading speaker on the opening day. Following him during the three midday programs were such other men of agricultural prominence as Hon. M. D. Munn, president of the National Dairy Council; Dr. C. W. Larson, head of the newly created Dairy Division on the U. S. Department of Agriculture; Pres. William Jardin of the Kansas State Agricultural College; Hon F. T. Meredith, formerly secretary of the U. S. Department of Agriculture; Senator Arthur Capper, head of the "Farm Bloc" in Congress; Jos. H. Mercer, livestock sanitary commissioner of Kansas and Gov. J. M. Davis, the first real farmer governor Kansas has had in over a quarter of a century.

Keeping Records of Production

THE most satisfactory way to find out the value of each cow is to weigh and record each milking from every animal. This does not require much work, if a convenient spring balance and handy milk sheets for the entry of the records are provided. Such daily individual records make possible the feeding of each cow with the greatest economy, enable the herdsman to detect sickness quickly by the decline in milk flow, and aids in judging the efficiency of the different milkers. Where the weight of each milking is recorded, it is sufficient to take a sample covering 3 to 5 days of each month for the butterfat determination.

Those that feel that they cannot take the time to weigh each milking may obtain reasonably satisfactory records by weighing and sampling the milk of each cow regularly on three consecutive days each month throughout the year. The average yield of milk and fat for this period is taken as the average for the month. Another method of less value, but better than no testing, is to record the production of each cow for 7 consecutive days at intervals of three months.

Tests covering a week or only a month of the year are far less reliable than yearly tests, for cows differ widely in difference of milk yield. A cow which gives

a good flow of milk for a time but goes dry relatively soon may be much less profitable than a persistent milker that never yields as much fat in any one week as does the first cow.

For example, Glover reports that during three years the best weekly record of one cow in an Illinois dairyman's herd was 309 lb. of milk and 10.5 lb. of fat. In her best lactation period, which lasted 266 days she produced 5,355 lb. of milk and 184 lb. of fat. The best weekly record of another cow was 197 lb. milk and 10.2 lb. of fat, less than the first cow. During her best lactation period (315) days) this cow however, yielded 7,190 lb. of milk and 367 lb. of fat. This well shows the unreliability of short tests. Time, the scales, the Babcock fat test, combined with good judgment, are all essential in determining the true value of dairy cows.

HENRY AND MORRISON, *Feeds and Feeding...*

Milk Sterilized by Ultra-Violet Rays

INTEREST in Germany attaches to a so-called Scheidt process, named after the inventor, for the sterilization of milk by a system of producing ultra-violet rays in vacuum pipes made of thoroughly transparent quartz, employing at the same time the so-called Moore light, states Trade Commissioner Fayette W. Allport in a report to the Department of Commerce. The milk is run in a thin layer along pipes so that it will be completely subjected to the rays. In order to be certain that the milk is uniformly distributed over the pipes, funnel apparatus is placed at certain locations where the milk is collected for re-distribution on the pipes. The process does not involve production of heat waves, nor is it alleged to alter the chemical composition of the essential ingredients of the milk. When the apparatus has been used for milk sterilization, it can be washed automatically with water. The water is in turn sterilized, and if it emerges from the apparatus in a clear state, it can be further used for spraying milk cans or other containers.—*Pacific Dairy Review.*

The cows and heifers in this herd are bred to a son of KING SEGIS PONTIAC KONIGEN and DUTCHLAND PIETERTJE BEAUTY, an A.R.O. granddaughter of DUTCHLAND SIR PIETERTJE HENGERVELD and BEAUTY PIETERTJE BUTTER KING.

The first twenty-two sisters of my bull, tested for a year, average over 20,000 lb. milk and more than 900 lb. butter.

The Junior Breeder and Dairyman

A Calf Story

Seventy-two head were exhibited in the Sheboygan County Calf Club competition held in connection with the Sheboygan County Fair. They were judged by Prof. George Humphrey of Madison, who said it was the best group of calves he had ever judged at a county fair. Some amusing things were found in the record books, one club member in his story saying, "Every other day I brushed her teeth and toenails."

Nora Stolper of Random Lake, Wis., won fourth prize for her record book and fourth prize with her junior heifer calf. Her written story is a little out of the ordinary and is as follows:—

"One morning several months ago several girls came into the stable. One girl came up and petted me as she had often done before. Turning to the others she said, 'This is the calf which I selected to take to the county fair. Isn't she a dandy?' I certainly felt dandy although I did not know what it meant to be taken to the county fair. In subsequent discussion I heard that my mistress as well as many other boys and girls were members of the calf club. Each member has a calf which will be taken to the county fair where a judge will decide which are the same type. My mistress is anxious to have me win so she has been giving me the best care. I am fed skim milk, grain mixture, oats, silage and alfalfa hay. I am usually called Lassie, although I heard my registration name is Highland Johanna Prilly 2d. I was born February 1st and I weigh 500 lbs. One day my mistress put the halter on me as she said it was time to train me. It was a new experience which I did not like as I had been lying comfortably on the straw in the pen. While the halter didn't exactly hurt, it nevertheless was a source of annoyance. When I got out into the yard I bolted suddenly and ran away. I managed to keep free for

quite a time but finally my mistress came along with a brush. She had often brushed me before and I liked the sensation so I stood still. After this she trained me almost every day and soon I minded it no longer. I certainly join in with the hopes of my mistress that I will come back from the county fair a blue ribbon prize winner."

Feeding Calves Is a Joy

Leon Baldwin of New Hartford, Iowa, submitted a story on the feeding and care of his animal in the G & B Dairy Calf Club competition which was held during the dairy heifer and cooperative creamery program held at New Hartford. Leon's story was scored 94% and won first prize. It was as follows:

"Feeding calves to most people is annoying, but to me it is a joy. To see the calves, at the first call of 'Come boss' put their heads up and come running to their feed is a feeling I will never forget. Since joining the G & B Club, to see my heifer plunge her nose into a pail of warm milk gives me the satisfaction of ownership along with the joy of feeding her.

"I would have missed all this had I not been informed by C. M. Reeves of his intentions of organizing a dairy calf club.

"The day of the drawing I was in high spirits to think I would be the owner of a calf in a few hours. On first seeing the calves I was somewhat disappointed in regard to their size but when I was told their ages I felt a lot better.

"I drew a ticket and got one of the calves for \$34.35. With the money I had saved from doing janitor work at the schoolhouse and other odd jobs I purchased a Holstein. We loaded her into a truck to haul her home. On the way it began raining. By the time we finished our journey the calf was dripping wet.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO
NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

Her hair clung close to her body and I could see the heifer was in poor condition, needing a great deal of care.

"I was rather downhearted, but with a week's care and a ration of two parts of ground corn, one part of ground oats (four quarts of the mixture being fed with 16 quarts of skim milk and mixed hay each day) I could see a great change.

"Although she seemed to gain flesh, her hair lacked a glossy appearance. Closer inspection revealed lice were the cause. I soon got rid of these with a dip solution that father made for me.

"July 20 she weighed 432 pounds. Nine days later I took her to Cedar Valley fair, where I won third prize. On August 20 she weighed 480 pounds, a gain of 48 pounds in a month. I thought that was good, considering two days at the fair. My calf is gaining faster than ever at the present time and I hope she will make a real sized milk cow that will produce better than my father's.

"I call her Donna Blanchard Ormsby."

Minnesota's Grand Champion Girl and Calf

Three 10-year-old calf club girls won the championships of the three principal dairy breeds at the Minnesota State Fair this year. Evelyn Leinenweber of St. James, Watonwan county, Minn., not only had the champion purebred Holstein calf but also the grand champion for all breeds. Nearly 2,000 Minnesota boys and girls enrolled in dairy calf clubs this year and 172 calves were shown in the boys' and girls' show at the fair.

Evelyn's calf, Sizerholm Sadie Vale Homestead, was born November 13, 1923. "She is a nice, gentle calf," says Evelyn, "and I fed her three times a day equal parts of ground oats, corn, and bran and one part oil-meal, about two pounds to a feeding, with all the clover hay, salt, and clean drinking water she wanted. I brushed her every day and washed her once a week.

I led her around every day and made her stand still and hold her head up so as to train her to show to the best advantage for the fair."

Evelyn owns two other heifers, one a grade Hol-

EVELYN LEINENWEBER, ST. JAMES, MINN., AND HER GRAND CHAMPION HOLSTEIN CALF

stein, and with the increase and products of her little herd expects to pay her way through the School of Agriculture at University Farm which she purposes to enter, she says, just as soon as she has finished the eighth grade.

Don't get an original idea, unless you have the courage to face those who call originality lunacy.

How Do You Like Her?

Profit Producers

My cows, while possessing individuality of a high order, are making a nice profit over the cost of feed and labor.

The herd is headed by KING ORMSBY VEEMAN KORNDYKE.

His dam is a good record daughter of King Korndyke Sadie Vale.

His sire is the 1,346 lb. yearly record bull, King Ormsby Ideal.

This herd is ACCREDITED and has never housed a reactor.

CLARENCE H. TITUS,
R. D. 2 Tunkhannock, Pa.

PROMISING—but we have others that look just as nice. The daughters of our herdsire

KING ONYX PLEDGE ORMSBY inherit the blood of many of the greatest producers of the breed.

His three nearest dams average 977.66 lb. butter, and over 23,000 lb. milk in long time test, his dam's record being for only 305 days and as a junior four-year-old.

Let me price you something from our ACCREDITED Herd.

John H. Howard, R. D. 5, Wyalusing, Pa.

Maryland Boys at Eastern States Exposition

By J. A. GAMBLE, University of Maryland.

Three stalwart Maryland boys and their coach have just returned from the Eastern States Exposition which closed at Springfield, Massachusetts on Saturday, September 20, with added laurels for Maryland. These three young men comprise the Dairy Cattle Judging Team representing the Dairy Husbandry Department of the University of Maryland at the Collegiate Dairy Cattle Judging Contest and were Wilbur Pearce of Sparks, E. J. Smith, Riverdale, and L. S. Stuart, College Park, competing against eight teams representing as many states in the eastern part of the United States.

These men brought back highest team honors in two divisions, the judging of Holsteins and the judging of Guernsey cattle. Here is reflected the training that comes with seeing and knowing the splendid black and white cattle so prevalent in this State.

The team ranking of all colleges were as follows:

New Hampshirefirst	3,706 points
Marylandsecond	3,678 points
Connecticutthird	3,604 points
Cornellfourth	3,532 points
Massachusettsfifth	3,513 points
Mainssixth	3,481 points
New Jerseyseventh	3,435 points
Pennsylvaniaeighth	3,279 points
Rhode Islandninth	2,846 points

It is noted from this list that strong dairy schools were represented.

In addition to dairy cattle the team brought back one of the four gold medals for Judging Dairy Products. Great credit is due not only these boys, but to L. W. Ingham who has coached the Dairy Cattle Judging Teams during the past two years and on both occasions at the Eastern States Contest has swung his team up into second place on all breeds, winning first in one or more of the breeds on both occasions. It should be said in passing that no little part of the showing Maryland boys have been able to make in these contests has been due to the hospitality and the willingness of Maryland breeders of purebred cattle to open their herds for the training work given these young men. The boys were made to feel entirely at home and that they were a part of the industry. This, of course, begets enthusiasm not only for the breeders of purebred cattle but for the dairy families of purebred cattle developed by Maryland breeders.

Fairs and Expositions THE FIFTEENTH DAIRY CATTLE CONGRESS

Special Correspondence.

The Dairy Cattle Congress is unique in its influence upon the dairy progress and development in the greatest agricultural section of this country.

The Mississippi Valley has been so rich in farming possibilities that the dairy cow was neglected for years. Such is always the case. When a country is prodigal with its harvest, the farmer is content to plow and reap. When he must replenish the fertility of the soil he turns to the dairy cow. That is the reason so many of the richest dairy sections of to-day were impoverished territory years ago.

Because of these conditions the Cattle Congress is of greater importance to the industry than any other show. It is a safeguard against soil robbery.

Fifteen years ago the Iowa Dairy Association brought fifteen cows to its annual meeting, for demonstration purposes. The innovation was so well received that the plan was repeated year after year. Soon competition between the classes began and the Congress, the fifteenth annual session of which closed its doors Sept. 29, was organized in that way. From this small beginning the event has grown until the entries this year numbered 900 cattle from all the dairy breeds and from all sections of the country.

The Judges of the different breeds were lavish in their praise of the show. The quality of the stock and the large number of entries called forth many comments. "I have never judged better classes," was frequently remarked by the judges.

The "Waterloo Way" has helped make the show what it is. Disappointments are inevitable in a show of these proportions. Minor misunderstandings will arise, and, while they are insignificant in themselves they irritate. The Waterloo Way, which is famous everywhere, tends to soothe these differences, leaving a more generous feeling of good will on the part of all concerned. It is not at all unusual to hear exhibitors say, "We like to come to the Cattle Congress because of the treatment we receive." All these are little things but in the aggregate they help to make a great show.

The Cattle Congress has shown unusually good judgment in its treatment of the children. No other show in America pays so much attention to the dairyman of the coming generation. This feature has sprung into popularity very rapidly, and still its growth has been perfectly healthy.

Calf Club work has been consistently fostered by the Iowa Dairy Association. Its possibilities are so vital that a man has been engaged to devote his entire time to it.

Mr. F. E. Ferguson has been in charge since its inception. He is particularly adapted to his work and his success has been remarkable. Two years ago he put on his first Calf Club show at the Congress. The state was elated with his success. There were 47 entries. Last year the number grew to 76 and this year it was 149.

The first day of the show was given over to the young folks. All the dairy breeds took part but the Holstein entries outnumbered the others by a wide margin. These dairymen and women of tomorrow feel keenly the responsibilities that rest upon them in connection with their show. Their work is strenuous, their activities are sincere and the result is something of which any community may be proud.

The entries are limited to purebred heifer calves or yearlings. Anything born between August 1, 1922 and August 1, 1923 comes in the yearling group which is intended to provide for the calves shown the previous year. There were twenty-four in this class. It will be remembered that Miss Verna Peterson of Fort Dodge, Iowa, was the winner of first place last year. Pictures of herself and her calf was freely published in the farm press and her success was widely commented upon. She exhibited the same heifer, Pauline Champion Hartog, again this year but had to content herself with third place. The young lady's brother took first and two other brothers took fourth and fifth places.

The younger class was more largely filled. It represented this season's recruits to the number of 62.

A healthy rivalry between counties was another encouraging feature. Clubs of different sections assembled groups

(Continued on page 644.)

The Holstein Breeder and Dairyman

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

October 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Transfer Fee

MUCH discussion has arisen with reference to the fees collected by the Holstein-Friesian Association for transferring animals.

At Philadelphia in June 1919 the fee for transferring to members was 25 cents and to non-members 50 cents, double the fee after a six months period.

Notwithstanding the fact that the Association with the small 25 cent transfer fee had accumulated a surplus of \$340,000.00 there were those among its officers who wished to increase the transfer fee to four times what it was then, or from 25 cents to \$1.00 to members and 50 cents to \$2.00 for non-members and a double fee after a six months period, or \$2.00 to members and \$4.00 to non-members. History shows that they were successful in bringing about this increase.

At the Syracuse Convention in 1921 where the membership voted to reduce the transfer fee from \$1.00 to 50 cents, a discussion arose on the floor of the Convention; James A. Reynolds of Cleveland, Ohio, arguing in favor of the \$1.00 fee, made the following statement as recorded in the official minutes of the meeting.

"Do you want to pass a resolution that the cost of transfer should be 50 cents when you know from the Secretary's office that it costs 72 cents to make it?"

It is true that at Syracuse the Secretary, stated that it cost the Association 72 cents to issue a certificate. For example, it cost 72 cents for the Association to issue a registration certificate and it cost 72 cents to issue a transfer certificate or it cost \$1.44 to issue the two certificates, a certificate of registration and a certificate of transfer.

If it was possible for the Association to furnish definite figures on the cost of issuing each one of the certificates separately, we would naturally conclude

that it would cost more to issue a registration certificate than to issue a transfer certificate because before a registration certificate can be issued it is necessary to look up the facts regarding the animal's breeding, which must involve time and expense, while in issuing a transfer certificate it is only necessary to look up the record as to the former owner of the animal.

Therefore, we would conclude that if the cost of issuing a registration certificate could be definitely determined that it would be more than 72 cents and that the cost of a transfer certificate would be less than 72 cents. In other words, we do not believe the expense involved in issuing both of these certificates would be equal.

Let us accept the statement that it costs the Association 72 cents to issue a certificate and let us assume that it costs just as much to issue a transfer certificate as it does to issue a registration certificate and then let us refer to the Association's record for the year 1921, when this subject was being discussed at Syracuse, and see what the Association received for issuing each one of these certificates.

During the year 1921 the Association was receiving \$1.00 for the registration certificate from a member for a female and \$2.00 for a male and these fees were doubled if the application was not made within one year from date of birth, or the fee after one year would be \$2.00 for females to members and \$4.00 for males and \$4.00 to non-members for females and \$8.00 for males.

During the year 1921 before this matter was being discussed at the annual Convention, the Association issued 127,850 registration certificates and collected \$233,519.00 or, for each certificate issued the Association received \$1.826 (One dollar and eighty-two and six-tenths cents).

As it cost 72 cents to issue a registration certificate and the Association received \$1.826 (One dollar and eighty-two and six-tenths cents) the Association was making a profit of \$1.106 (One dollar and ten and six-tenths cents) on each registration certificate.

The cost of transferring a female was \$1.00 to members and \$2.00 to non-members and the fee was doubled after a six months period, or \$2.00 to members and \$4.00 to non-members.

The Association issued, during the year 1920-21, 128,615 transfer certificates for which they received \$182,260.00 or for each certificate issued they received \$1.419 (One dollar and forty-one and nine-tenths cents). According to the Secretary's statement, it costs 72 cents to issue each transfer certificate or the Association was making a profit of \$.699 (Sixty-nine and nine-tenths cents) on each certificate.

For issuing a registration certificate and a transfer certificate which cost the Association \$1.44, they received, according to the above set of figures, \$3.246 (Three dollars and twenty-four and six-tenths cents).

The average fee collected for registering animals at \$1.00 to members and \$2.00 to non-members, a double fee on males and a double fee after one year, was \$1.826 (One dollar and eighty-two and six-tenths cents) more than a sufficient sum to cover the cost of issuing both the registration and transfer certificates.

The average transfer fee collected at \$1.00 to mem-

bers and \$2.00 to non-members and double fees after a six months' period is \$1.419 (One dollar and forty-one and nine-tenths cents). It lacked two and one-tenth cents of covering the cost of issuing both the registration certificate and the transfer certificate.

From the above figures it conclusively proves that it was perfectly just and reasonable for the breeders to reduce the transfer fee from \$1.00 to 50 cents at the Syracuse Convention. In fact, as far as covering the cost of issuing a transfer certificate was concerned, the fee collected for a registration certificate was more than sufficient to cover the cost of issuing both certificates.

It also shows the injustice of the present high transfer fee of \$1.50 to members and \$3.00 to non-members and a doubled fee after a three months period, or \$3.00 to members and \$6.00 to non-members.

If we accept the statement of the Secretary that it costs the Association 72 cents to issue a certificate, the profits over and above actual cost of issuing certificates would be 78 cents on a transfer application to members if filed within three months, and \$2.28 if filed after three months. On each transfer application to non-members if filed within three months, the Association would make a profit of \$2.28, and on each transfer application filed after the three months, the Association would make a profit of \$5.28.

The Holstein-Friesian Association is known as a membership corporation not organized for profit, yet it collects a profit of 108½% for the simple service of issuing a transfer certificate to one of its members. The maximum profit which it collects is from a non-member and if he fails to transfer his animal within three months of the sale date the Association collects a profit from him of over 700%.

If it is a non-profit organization the question naturally arises, What becomes of this vast sum of money that is collected in unnecessary fees?

During the time that the transfer fee has been increased from 25 cents to \$1.50 to members and from \$3.00 to \$6.00 to non-members, the Association's operating expenses have increased from \$256,811.37 in 1919 to \$586,736.22, or an increase of \$329,924.85. Thus the expense of managing the Association has more than doubled.

WHAT HAVE YOU AS A MEMBER OF THE HOLSTEIN-FRIESIAN ASSOCIATION OR AS AN OWNER OR BREEDER OF HOLSTEIN CATTLE RECEIVED FOR THIS ENORMOUS INCREASE IN THE ASSOCIATION'S OPERATING EXPENSES?

In 1919, when the transfer fee was 25 cents, the Association's managing expenses were \$256,811.37. It showed a profit of \$60,784.40.

In 1923, when the transfer fee was \$1.50 to members and \$3.00 to non-members, the Association's operating expenses were \$586,736.22. It was operated at a loss of \$60,819.55.

The expense of operating the Association has not only increased but there has been a falling off in its patronage as shown by the number of members joining the Association which was 3,198 in 1919 and 1,754 in 1923 or a decrease of 1,444. The number of transfer certificates issued in 1919, when the transfer fee was

25 cents, was 97,392. In 1923, after the Association's operating expenses had increased \$329,924.85 (more than double), it transferred 91,665 animals or it issued 5,727 less transfer certificates than it did in 1919.

THE ABOVE CONDITION WILL BE CORRECTED WHEN EACH MEMBER OF THE ASSOCIATION IS GIVEN A DIRECT VOICE IN THE ASSOCIATION'S MANAGEMENT. IT WILL STAY CORRECTED WHEN THE DIRECTORATE IS COMPOSED OF MEN WHO ARE HERD OWNERS AND WHO FOLLOW DAIRYING AS THEIR MAJOR BUSINESS AND OCCUPATION.

The Passing of the So-Called Breeding Plants

DURING the first quarter of the twentieth century there has been established in various sections of the United States what is known as breeding plants. Usually these establishments were located on the estates of the wealthier class. A few have been established with expensive buildings and equipment but without the costly or beautiful setting that the wealthy estate gives such a breeding plant.

Previous to the establishing of these so-called breeding plants the breeder of purebred dairy cattle had based his breeding operations on economical dairy production. With the coming of these breeding establishments the official test was substituted as an indication of a cow's dairy ability and breeding qualities in lieu of her record in a working dairy. Little or no attempt was made to keep the expense of operating the breeding plant within the proceeds from the sale of milk.

The cost of making official tests as a substitute for economical dairy production has been too great. The expense of feed and labor and official supervision has exceeded the value of the milk produced by three or four hundred dollars on a single animal in a single year. The extra cost was due largely to the effort to force the animal to produce milk and butterfat beyond her normal, hereditary, milk-and-butter producing qualities.

It has been contended by those who were promoting the official test and the so-called breeding plants that the value of the offspring from an animal with an official record would more than equal the cost of making the record, based on the theory that if a cow on official test could give 30,000 lb. of milk in a year she was worth a great deal more than the cow that was capable of producing only 12,000 or 15,000 lb. of milk in a working dairy.

Many of these so-called breeding plants have also made an attempt to market the milk which they produce as a Special product at increased prices, contending that it was superior to other milk. Their effort to market milk at special prices has failed more often than it has been successful.

Notwithstanding all the arguments put forth by those who were promoting the so-called breeding plants and the making of official records, the breeding stock produced at these plants have failed to show that they

possess any superior qualities to those raised and developed in the working dairies by men who base their breeding operations on economical milk and dairy production.

Analyzing the situation one finds that the seemingly superior milk and butter producing qualities of the Advanced Registry animals has largely been brought about by special fitting and forced feeding, and represent the owner's expense and the skill of the herdsman as well as any particular superior quality that might be possessed by the animal in question.

It is only natural that so many of the so-called breeding establishments have gone and are going out of business because they fill no worthwhile place in economical dairying or breed promotions.

The Holstein Friesian cow has demonstrated her superior qualities as an economical milk and butter producer. She has gained this reputation in the hands of the plain breeders and dairymen. Our paper has pledged and still pledges its support to promote her and promote the interests of those who breed her for economical and profitable dairy production, and we believe the time is near at hand when they alone will be regarded as the leaders of the purebred Holstein-Friesian breeding industry.

A Holstein As a Parlor Ornament

MR. FRED KOENIG, who holds the position of Director of the Extension Department of the Holstein-Friesian Association of America with offices at 216 East Ohio Street, Chicago, Illinois, and who reported the expenditure of \$202,387.69 of the breeders' money for the year ending December 31, 1923, has involved another scheme to help the Holstein breeders who, for each transfer certificate they obtain, are paying an extra dollar transfer fee, part of which goes to paying his salary and defraying his office expenses.

For only \$15, if you and ninety-nine others place your orders right away, you can obtain a "True Type Model Cow," just one sixteenth the actual size, something you can place on your table or writing desk or even in your bedroom where you can see it on cold mornings when you rise by the light of the lantern. You can even install it on the hood of your faithful Tin Lizzie and so advertise your business as you journey to and from the factory or shipping station. It is so much more esthetic than a load of milk cans filled with lacteal fluid.

Now the Breeder and Dairyman is going to offer a suggestion. Instead of buying a white metal image, why not train one of your own purebreds to live in the house so that your business will be forever before your eyes as well as in your thoughts.

So teach your bossy to be neat,
And how to be polite,
And teach her how to chew her cud
And brush her teeth, at night.
So she will be a model cow
A well-bred household pet,
Then she can live right in your home
And in the parlor set.

Foot and Mouth in Texas

THE report that foot and mouth disease has been found in a large herd near Houston, Texas, September 27, comes as a shock to cattle owners all over the country who hoping that with the stamping out of the trouble in California this country would continue to be free from the disease for many years.

The cause of the new outbreak is believed to be infection carried by cattle coming into Texas from South America. Our latest information is that the disease has been confined to two herds and the veterinarians in charge are hoping that it will not spread.

Meanwhile practically every state has established a rigid quarantine against livestock, poultry, dressed carcasses, forage of all kinds, wool, hides and even dairy products coming from anywhere in Texas. So many of the animals slaughtered at the great slaughter houses of the central west and southwest come from Texas that the state authorities are taking no chances. The effect of the quarantines will be felt more in the beef industry than it will in the dairy industry but every one concerned is hopeful that the menace will soon cease to exist.

Fearing the introduction of foot and mouth disease, the Governor General of Australia has issued a proclamation prohibiting the importation of cattle from the United States. During the past three years considerable numbers of purebred animals have been shipped from the Pacific Coast States to Australia.

Ever Breeze Herd

is consigned to the

Lackawanna County Breeders' Sale

held October 20, on the County Fair Grounds near Clarks Summit, Pa.

For three years animals from this herd have been prize winners at the County Fair, despite hot competition.

A number of my cows have each produced 12,000 lb. milk in a year and the average for last year, including several two-year-old heifers, was over 9,000 lb. milk.

Several of my cows and heifers are due about sale time by the great 30-lb. sire,

KING HENGERVELD HARTJE

one of whose daughters made a world's milk record producing 26,223 lb. milk, 960.60 lb. butter in the ten months division. All the females, old enough, are bred to him.

My reason for selling is that I am taking a course at the New York State College of Agriculture. I believe purebred Holsteins are the best of all dairy cattle and the future will see me back in the business.

Remember, my herd is ACCREDITED, are producers and show ring winners.

GEORGE LIGHTBODY,

Dalton, - - - - - Pennsylvania

NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

Halloween

OF all the seasons of the year for giving a party, none is better than Halloween, no matter for children or for grown ups. This is the one time of the year when older folks can forget their dignity and enjoy a romp and frolic such as will make them young again—if for one night only!

For a Halloween party there are so many clever decorations, and nothing quite "makes" an occasion as much as a good color scheme well carried out, or the use of decorations peculiar to that season. Black and yellow form a splendid color combination and can be carried out by the use of the witch and her broom stick, the black cat, the pumpkins and corn.

The party may be given as a masquerade, and thus give an opportunity to those who like to "dress up"—and who does not! Prizes may be given to those guessing the identity of the greatest number of the masked, also for the prettiest and for the most grotesque costumes. The discovery of who's who upon unmasking ought to provide another half hour's fun.

No Halloween party is complete without the fortune-telling witch, who should be a vivacious personality. Then there are a number of games which have long been peculiar to this one evening of the year—the bobbing for apples—throwing apple skins over the shoulder to see what initial is formed, and many others. If held out of doors, a good bonfire with a marshmallow roast—a wienie roast or just a menu of pumpkin pie and cheese, doughnuts and coffee. Anyone who couldn't enjoy such an affair would surely have an ingrowing disposition.

A Famous Step-Mother

THE much maligned order of step-mothers might well erect a memorial to one of the most famous in history, Sally Bush, the step-mother of Abraham Lincoln. The shiftless father neither finished nor furnished the log cabin in which the family dwelt, illclad, untaught and harshly treated. About a year after the death of the future president's own mother, the step-mother arrived from Kentucky with what seemed boundless wealth to the almost destitute family. She promptly made the idle husband finish the house, she put up warm beds for the Lincoln children and clothed them with goods from her own wardrobe. She taught them habits of cleanliness, and opening her heart to them, treated them as she did her own. She took a peculiar liking to little Abe who was then utterly ignorant but good humored and affectionate. Being now decently clothed he could go to school, walking miles to do so. His gratitude to his step-mother was unbounded, and to the day of his death he always spoke of her in the most glowing terms as the woman who first made him feel like a human being.

Amusement

THERE is a genuine pleasure that comes from a couple of hours of entertainment at the end of a day. Amusement is one thing the average person cannot very well get along without.

Any community that desires entertainment has within itself latent talent that may be developed. Properly managed it is an incentive to better living and a panacea for the dull hours that come to everyone.

Motion pictures can be brought to any community in the country and should be a worth while part of any program.

Debating schools, singing societies with games and music for young and old offer vital opportunities for all.

With broadminded leadership it is possible to be of great service not only for small groups here and there but for larger numbers and the common good.

Why not organize? You may have but a few in number to start but if you develop the real community spirit the interest and numbers will grow.

Mrs. L. D., Illinois.

County and Town

THE past has proven that country and town can and will work together. A country town and the surrounding community should be as one big family, their interests are mutual and they should work and play together for one is dependent upon the other. Some country folks are not willing to mingle with town people. They believe they are more friendly, have better habits and do not smoke as many cigarettes as some town people.

Some town people are not willing to mingle with country folks. They are selfish, "stuck up" and think they are better than farmers. But reasonable provision should be made for all. There should be a place where everyone may meet socially in a spirit of harmony and good will. Probably there is not a country town and its surrounding community but what would be benefited with a spirit of good will, good fellowship and real brotherhood.

Mrs. L. D., Illinois.

It would be much better to produce a small quantity of butter of high quality which would top the market, than to produce an immense quantity of poor quality butter which would be penalized on the market, for not only is a low quality butter penalized in price but is often hard to market at all.

These last two weeks have flown on wings
So overfull with many things,
There's been no time for writing rhymes
Let's hope for some in future times.

THE FIFTEENTH DAIRY CATTLE CONGRESS

(Continued from page 639.)

of five calves each. The judging was based on uniformity of type and excellence of finish. There were thirteen contestants.

In all these exhibits the individuality of the entries, the fitting which reflects the care, and the manner of showing are all decidedly creditable, and in not a few instances the child is teacher of the man. The boys and girls influence their parents far more than the latter are willing to admit. Liberal premiums are provided but the experience is far more valuable to the child than the money awarded.

The county and state exhibits were more numerous this year. This is highly encouraging for it is a commendable plan of attracting attention to the success of any community or section. It is a splendid line of publicity and it boosts dairy,

JOHANNA RAG APPLE PABST

First prize three-year-old; senior and grand champion at the Wisconsin and Illinois State Fairs and the Dairy Cattle Congress.

as well as breed, sentiment. There is no reason why it should not be more widely encouraged.

Following the judging the Iowa Holstein Breeders' Association held its annual banquet and election of officers. Z. C. Thornberg, of Des Moines was reelected president, O. E. Hatch, Davenport, vice-president, E. Peake of Mason City, field secretary.

The classes, especially those for heifers, were large and the quality excellent, making plenty of work for the judge, R. E. Haeger of Algonquin, Ill.

Both the male championships went to Wisconsin. Johanna Rag Apple Pabst repeated his triumphs at the Wisconsin State Fair, winning first in his class and being made senior and grand champion. North Star Joe Homestead was the winner in the aged class. It will be remembered that Ward Stevens who judged at the Wisconsin event placed these two bulls exactly the same way. Mr. Haeger evidently did not think as much of the Minnesota State champion female as did judge Elder for he placed her in tenth place, making Zwingara Segis Clothilde, the great Modern Woodmen show cow, senior and grand champion. At the Minnesota State Fair, Madam Artis Wayne was in sixth position and Lady Johanna Aaggie Fayne was fifth. Here Mr. Haeger put them in fifth and eighth places respectively with Prilly Tirania barely in the money. If the true type models are to be the basis of judging in the ring it looks as though some of our judges need a few more lessons.

Madam Artis Wayne Denver headed the three-year-old class but the judge preferred the big white cow for senior and grand champion. There must have been quite a question in his own mind for these two have been, for a long time, numbered among his bovine sweethearts. At the Illinois State Fair, Axel Hansen judged the pair in a similar manner.

The junior male champion was King Richmond Pontiac, owned by Fred Gurr, Lake Mills, Wis. The Mudcura Farms junior yearling, Oakwood Piebe Ollie, was the junior champion female.

May Walker Ollie Homestead took first in the A. R. O. class for cow with two of her progeny. She competed with Tillamook Lola May De Kol of Carnation Farms and Iowana De Cola Ollie of Iowana Farms. The awards were in the above named order.

The State herd class made an imposing display and the inter-

est was keen while the judging was being done. Herds came from Minnesota, Wisconsin, Washington and Iowa, and the awards were in the same order. The premiums for this class total \$600. First wins \$300, second, \$180, and third, \$120.

The Congress was host to a number of distinguished guests from other states. One of the most enthusiastic was Governor Hart of Washington. In his address at the breeders' banquet he said that he considered his success in starting purebred Holstein herds at the state institutions of Washington one of the most gratifying and far reaching achievements of his term in office.

The Cattle Congress owns its own home. In this it is more fortunate than some other dairy shows. It is building more extensively and permanently each year. This season, two fire proof barns were completed, one for the Calf Clubs.

New attendance records are being made. The high mark this year was 30,000 for one day, which is certainly gratifying for a dairy show.

When the organization closed its grounds September 29, 1924, the management was justified in its feeling of satisfaction with its most recent chapter in the history of dairying in the middle west.

THE AWARDS.

Aged Bulls:—1st, North Star Joe Homestead, Baltz Hoesley, Monticello, Wis.; 2d, Sir Aaggie Colantha Korndyke, South Dakota State College, Brookings, S. D.; 3d, Maple Row Sarcastic Lad, Jefferson County Asylum, Jefferson, Wis.; 4th, King Canary Oak De Kol Fobes, J. E. Mack, Ft. Atkinson, Wis.; 5th, Lyndale Pietje Pontiac Echo, Woodlawn Dairy, Lincoln, Neb.; 6th, Sir Pietertje Pontiac Victoria, Mudcura Farms, Shakopee, Minn.; 7th, Cherokee Ormsby Piebe, Board of Control of State Institutions, Des Moines, Ia.; 8th, Minnehaha Sir Pietertje Ormsby; 9th, Matador Segis Walker 6th, Carnation Milk Farms, Seattle, Wash.; 10th, Mankato Ruby Marathon Ormsby, Marlow & Randall, Mankato, Minn.

Bulls, three years and under four:—1st, Johanna Rag Apple Pabst, J. E. Piek, Hartford, Wis.; 2d, Corwin Wimple De Kol Ormsby, Modern Woodmen of America Sanatorium, Woodmen, Col.; 3d, Duke Pietertje Korndyke Ormsby 31st,

ZWINGARA SEGIS CLOTHILDE

So far undefeated this year. Grand champion at the Nebraska, Missouri, Iowa and Illinois State Fairs and the Dairy Cattle Congress.

Mudcura Farms; 4th, Dodge County Homestead Boy, H. A. Brace & Sons, Lone Rock, Wis.; 5th, Count Inka Homestead Segis, Minnesota Holstein Co., Austin, Minn.

Bulls, two years and under three:—1st, Forum Ormsby Perfection, Hanson, Gilley & Knief, Maynard, Ia.; 2d, Tritomia Pietertje Ormsby Lad, Iowana Farms, Davenport, Ia.; 3d, Duke Ormsby Piebe De Kol, Taylor & Christgau, Owatonna, Minn.; 4th, Sandy Segis Walker Matador, Carnation Milk Farms; 5th, Mankato Ormsby Mercedes Lady, Marlow & Randall.

Senior Yearling Bull:—1st, Harvest Jewel Matador, Carnation Milk Farms; 2d, Woodcraft Pontiac Champion Star, Modern Woodmen; 3d, Ormsby Mechthilde Lad, H. Umlandt, Muscatine, Mo.; 4th, Tritomia Pietertje Ormsby Buckeye, Hanson, Sauerbry & McLawry, Oelwein, Ia.; 5th, Millercrest Fayne Johanna, Geo. E. Cunningham, Waterloo, Ia.; 6th, King

Piebe 16th, Ernest Melberg, Norway, Ia.; 7th, Mankato Floa Ormsby Korndyke Lad, Marlow & Randall; 8th, Prince Acme Creamelle Vale, John Piper, Watertown, Wis.; 9th, Beauty Ormsby Pontiac De Kol, Board of Control; 10th, Marathon Ormsby Fobes Hartog Mudcura Farms.

Junior Yearling Bulls:—1st, Sir Inka May, Minnesota Holstein Co.; 2d, King Mutual Fan, Jefferson County Asylum; 3d, Tritomia Veeman Ormsby, Webster County Calf Club, Ft. Dodge, Ia.; 4th, King Homestead Fobes Gewina, Emil Funk, Watertown, Wis.; 5th, College King Akkrummer Ormsby, Union College, College View, Neb.; 6th, Matador Segis Walker 12th, Carnation Milk Farms; 7th, Iowana Fayne Burke, Iowana Farms; 8th, Tritomia Butter Boy Lad, P. P.

MADAM ARTIS WAYNE DENVER

First prize three-year-old senior and grand champion at the Wisconsin and Illinois State Fairs and the Central States Exposition. First in class at Dairy Cattle Congress.

Stewart, Maynard, Ia.; 9th, King Pietertje Ormsby Piebe 47th, W. B. Loveland, Janesville, Ia.

Bull Calf, bred by exhibitor:—1st, King Richmond Pontiac, Fred Gurr, Lake Mills, Wis.; 2d, General Homestead Mercedes, 5th, Piebe Ormsby Homestead Boy, and 6th, Unnamed, H. A. Brace & Sons; 3d, Sir Star Laura Segis, Minnesota Holstein Co.; 4th, Alfred George Matador and 9th, Walker Lilith Colantha, Carnation Milk Farms; 7th, Sunny Knoll King Piebe, Fred Pieplow, Aurora, Ia.; 8th, Iowana Oak Hamilton, Iowana Farms; 10th, Mankato Ruby Marathon Ormsby 18th, Marlow & Randall.

Senior and Grand Champion Male, Johanna Rag Apple Pabst, J. E. Piek.

Junior Champion Male:—King Richmond Pontiac, Fred Gurr.

Aged Cows:—1st, Zwingara Segis Clothilde, Modern Wood-

men; 2d, Hazelwood Heilo Ormsby Mercedes, Carnation Milk Farms; 3d, Aaggie Mechthilde Mudcura Girl, Mudcura Farms; 4th, Clothilde Topsy King, University of Nebraska, North Platte Substation, North Platte, Neb.; 5th, Madam Artis Wayne, Jefferson County Asylum; 6th, Maud Inka Ormsby De Kol, and 9th, Alba Mead Fannie, South Dakota State College; 7th, Dorothy Eggler Mercedes, H. A. Brace & Sons; 8th, Lady Johanna Aaggie Fayne, Iowana Farms; 10th, Prilly Tirania, Glantz Bros., Park Rapids, Minn.

Cows, four years and under five:—1st, Mankato Segis Ormsby Bess, Marlow & Randall; 2d, Dolly De Kol Tirania Fayne, Fred Waldman, Janesville, Wis.; 3d, Carnation Matador Addie Segis and 7th, Carnation Matador Leda Ormsby, Carnation Milk Farms; 4th, Blue Eye Lady Johanna De Kol, Fred Gurr; 5th, Iowana DeCola Ollie 2d, Iowana Farms; 6th, Charity Canary Denver, Jefferson County Asylum.

Cows, three years and under four:—1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Maudlene Ollie Homestead and 9th, Ideal Inka Homestead Segis, Minnesota Holstein Co.; 3d, Mankato O. K. L. Blanche, Marlow & Randall; 4th, Lady Bracelet Matador and 5th, Carnation Matador Ourville, Carnation Milk Farms; 6th, Iowana Ona Homestead De Cola, Iowana Farms; 7th, Woodcraft Johanna Champion De Kol, Modern Woodmen; 8th, Pietertje Korndyke Ormsby Julie, Mudcura Farms; 10th, East Troy Ollie Maud, South Dakota College.

Heifers, two years and under three:—1st, May Pietertje Homestead Ormsby, 3d, Star Segis Homestead; 4th, Miss Inka Segis, and 9th, Miss Mechthilde Segis, Minnesota Holstein Co.; 2d, Carnation Matador Mercedes Selah, Carnation Milk Farms; 5th, Sadie Cornucopia Gelschecola, Mudcura Farms; 6th, Mankato O. K. L. Tritomia, Marlow & Randall; 7th, Happy Home Daisy Johanna, South Dakota State College; 8th, Iowana Ona Fayne Dora, Iowana Farms; 10th, Julia Creamelle De Kol Denver, Jefferson County Asylum.

Senior Yearling Heifer:—1st, Johanna Wayne Rue 3d, 5th, Creamelle Princess Denver, and 6th, Mutual Calamo Clothilde 2d, Jefferson County Asylum; 2d, Carnation Pauline Matador, Carnation Milk Farms; 3d, 4th, Fannie Macduff Janzen, Dorothy Hanson, Randalia, Ia.; 7th, Bessie Fobes Ormsby Homestead, Donald Peterson, Ft. Dodge, Ia.; 8th, Mankato Ruby Ormsby Pauline, Marlow & Randall; 9th, Riverdale Ota Van Friesland, Gerald Peterson, Ft. Dodge, Ia.; 10th, Woodcraft Gerben Chiron, Modern Woodmen.

Junior Yearling Heifers:—1st, Oakwood Piebe Ollie, Mudcura Farms; 2d, Carnation Matador Aaggie Colantha, Carnation Milk Farms; 3d, Jessie Pet Pontiac Homestead, Bryant & Thompson, Mason City, Ia.; 4th, Iowana Homestead Segis, Iowana Farms; 5th, Nettie Korndyke Inka 2d, 8th, Lady Johanna Pontiac Rag Apple 3d, Philip Linker, Hartford, Wis.; 6th, Mankato Miss Ormsby and 7th, Mankato Ormsby Pet,

YOUR HERD NEEDS

King Alcartra Wayne Pontiac

Born November 20, 1920

He is one of the best sons of King Alcartra Rag Apple Posch grand champion at the Susquehanna County Fair for three years.

His dam is a splendid producer and a daughter of Irene Wayne Hartog De Kol, one of the greatest cows of this county.

King is a show bull in every way. Exhibited three years at our county fair, he won first prize in his class each year and twice was Junior Champion.

Priced Right for Quick Sale.

G. P. SPROUT & SONS
R. D. 5 MONTROSE, PA.

Head Your Herd With Hillside Volunteer

Born March 21, 1924

Sire: King Pontiac Maple Knoll Ormsby that great son of King of the Pontiacs from a 33-lb. sister to Ormsby Korndyke Lad. Dam: Hillside Rosemary, 460.8 lb. milk, 30.74 lb. butter.

This young bull is full brother to Hillside Pontiac Rose, 474.5 lb. milk, 25.24 lb. butter in 7 days; 2,011.7 lb. milk, 102.80 lb. butter in 30 days at 25 months old, a showing not equalled in this country last year by any heifer of her age.

Hillside Volunteer is extra-well grown, 75% white and only \$400.

Hillside and Springbrook Farms
TRUCKSVILLE, PA.

Herd recently passed another Clean Test.

OUR AIM

Type and Production

yet breeding has not been overlooked for our cattle are of Korndyke, Copia, Johanna, Hengerveld and Pontiac blood—a number of granddaughters of the famous world's champion Keystone Beauty Plum Johanna.

Come and take YOUR Pick. Prices reasonable. Herd under State and Federal Supervision.

S. R. ELLSWORTH
R. D. 5 MESHOPPEN, PA.

Marlow & Randall; 9th, Miss Pontiac Pietertje, P. P. Stewart, Maynard, Ia.; 10th, Miss Mechthilde Homestead Segis, Minnesota Holstein Co.

Heifer under one year, bred by exhibitor:—1st, Empress Susie Waldorf, Jefferson County Asylum; 2d, Ormsby La Vie of University of Nebraska, University of Nebraska; 3d, Mankato Lassie Ormsby 2d, Marlow & Randall; 5th, Woodcraft Zwingara Julia Pontiac, Modern Woodmen; 6th, Martyholm Mechthilde, Dorothy Hanson; 7th, Iowa Fayne Dorothy 4th, Iowa Farms; 8th, Carnation Walker Bessie, Carnation Milk Farms; 9th, Mankato Ruby Karen Mercedes, Marlow & Randall.

Cow having official yearly record begun at five years or over:—1st, Clothilde Topsy King, University of Nebraska, N. Platte

OAKWOOD PIEBE OLLIE

Junior champion female at the Iowa and Minnesota State Fairs and the Dairy Cattle Congress.

Substation; 2d, Lady Johanna Aaggie Fayne, Iowa Farms; 3d, King Korndyke Pontiac Lass, Minnesota Holstein Co.

Cow having official yearly record begun under the age of 5 years:—1st, Aaggie Mechthilde Mudcura Girl, Mudcura Farms; 2d, Mankato Segis Ormsby Bess, Marlow & Randall; 4th, Iowa Ona Homestead De Cola, 6th, Iowa Watson Hengerveld, and 9th, Iowa DeCola Ollie 2d, Iowa Farms; 5th, Far Oaks Inka Homestead, Minnesota Holstein Co.; 7th, Queen Bonheur Pontiac De Kol, Carnation Milk Farms; 8th, Madam Artis Wayne Denver, Jefferson County Asylum; 10th, Ursena Hengerveld Hillside, Woodlawn Dairy, Lincoln, Neb.

Senior and Grand Champion Female:—Zwingara Segis Clothilde, Modern Woodmen.

Junior Champion Female:—Oakwood Piebe Ollie, Mudcura Farms.

Graded Herd:—1st, Jefferson County Asylum; 2d, and 9th, Carnation Milk Farms; 3d, Mudcura Farms; 4th, Minnesota Holstein Co.; 5th, Modern Woodmen; 6th, and 7th, Marlow & Randall; 8th, Iowa Farms.

Breeders Young Herd:—1st, Carnation Milk Farms; 2d, Modern Woodmen; 3d, Minnesota Holstein Co.; 4th Marlow & Randall; 5th, Jefferson County Asylum; 6th, Washington County Holstein Assn., West Bend, Wis.; 7th, H. A. Brace & Sons; 9th, Iowa Farms.

Breeders Calf Herd:—1st, Marlow & Randall; 2d, and 10th, Carnation Milk Farms; 3d, H. A. Brace & Sons; 4th, Jefferson County Asylum; 5th, Fred Pieplow; 6th, Iowa Farms; 7th, Modern Woodmen; 8th, Washington County Holstein Assn.; 9th, Minnesota Holstein Co.

Get of Sire:—1st, Get of Piebe Laura Ollie Homestead King, and 2d, Get of Sir Inka Superior Segis, Minnesota Holstein Co.; 3d, Get of Dutchland Creamelle Denver Prince, Jefferson County Asylum; 4th, Get of Matador Segis Walker, Carnation Milk Farms; 5th, Mudcura Farms; 6th, Get of Ormsby Korndyke Lad 8th and 7th of Mankato Ruby Marathon Ormsby, Marlow & Randall; 8th, get of Tritomia Pietertje Ormsby, P. P. Stewart, 9th, Get of King Pontiac Parthena Champion, Modern Woodmen; 10th, H. A. Brace & Sons.

Produce of Dam:—1st, Produce of May Walker Ollie Homestead and 9th, Produce of Miss Mechthilde Homestead, Minnesota Holstein Co.; 2d, Produce of Hazelwood Bracelet Mercedes, and 10th, Produce of Princess Adelina Segis, Carnation Milk Farms; 3d, Produce of Varsity Derby La Vinnie, University of Nebraska; 4th, Produce of Mankato Lassie Ormsby and 7th, Produce of Johanna Tritomia Mercedes, Marlow & Randall; 5th, Jefferson County Asylum; 6th, Produce of Madame Artis Wayne, Jefferson County; 8th, Produce of Kilbroc Blossom, Kilpatrick Bros. Co., Beatrice Nebr.

Cow with two of her progeny:—1st, May Walker Ollie Homestead, Minnesota Holstein Co.; 2d, Tillamook Lola May De Kol, Carnation Milk Farms; 3d, Iowa De Cola Ollie, Iowa Farms.

Cows in milk:—1st, and 8th, Carnation Milk Farms; 2d, and 3d, Minnesota Holstein Co.; 4th, Mudcura Farms; 5th, Marlow & Randall; 6th, Jefferson County Asylum; 7th, Iowa Farms.

CALF CLUB CLASSES.

Yearling Heifers:—1st, Riverdale Ota Van Friesland, Gerald Peterson, Ft. Dodge, Ia.; 2d, Fannie MacDuff Janez, Dorothy Hanson, Randalia, Ia.; 3d, Pauline Champion Hartog, Verna Peterson, Ft. Dodge, Ia.; 4th, Bessie Fobes Ormsby Homestead, Donald Peterson, Ft. Dodge, Ia.; 5th, Lady Bee

Nellie Mechthilde Pontiac

In four months she has produced 300 lb. butterfat, 7,946 lb. milk and is due to freshen again before her year ends. She is one of the fine matrons in our Accredited Herd.

Can spare a few good ones. They are bred to a splendid bull.

Group of five calves from one county or club:—1st, Webster County Number One; 2d, Fayette County Number One; 3d, Fayette County Number Two.

TEXAS HOLSTEINS AT NORTHERN FAIRS

By THEODORE W. MORSE.

Not only does Texas lead all other states in its provision of beef for this nation, but it rapidly is taking prominence in the production of dairy cattle.

Although the Jersey was the first breed to engage the atten-

CASTINE SIR JOHANNA NIG ORMSBY

First prize two-year-old, senior and grand champion bull at the Kansas State Fair at Hutchinson. Owned by F. E. Prince, Princedale Holstein Farm, Pittsburg, Texas.

tion of Texas land owners who sought to aid improvement in dairy animals, the Holstein now is participating, in a prominent way, in the notable dairy advancement the state is making. This is indicated by the important part taken this season by comparatively young Holstein herds from Texas in the state fairs of the big circuits.

In what is known as the Southwestern Circuit, winding up

with the big state fair at Dallas, at least three excellent Lone Star State herds have taken part, and before the Dallas show opens will have competed in a half dozen of the larger fairs farther north. They are: the Holtex Farms, Inc., Dallas; Princedale Holstein Farm, Pittsburgh, and the Rainbow Farms, Waco.

At the recent Kansas State Fair, the last named two herds were prominently "in the money" and fixed Texas as a Holstein state indelibly in the minds of many followers of this breed. The two year old bull, Castine Sir Johanna Nig Ormsby, shown by Princedale Holstein Farm, was made grand champion and other members of the herd several times were in the money.

Although winning no championships the Rainbow Farms made a wonderful record in first prizes, only one other herd beating it in blue ribbons, and that by a margin of one. The first six prizes won by Rainbow Farms included the much coveted prizes for produce of cow, for calf herd and for young herd bred by exhibitor.

These winnings of Texas breeders were made against representatives of some of the best herds of Wisconsin and Iowa as well as other state nearly as prominent in the Holstein industry.

HOLSTEINS AT DELAWARE STATE FAIR

The special Holstein show held in connection with the Delaware State Fair at Wilmington, September 9 to 13 brought out one of the best Holstein exhibits ever seen in this section. An entry list of approximately one hundred and thirty head represented Pennsylvania, New Jersey, Delaware, Maryland, Massachusetts and Virginia.

Frank P. Knowles of Auburn, Mass., was the largest individual winner, the younger members of his herd being particularly strong. The junior champion female, Pearl of Highlawn, of this herd, proved one of the outstanding individuals of the show.

J. M. Paxton & Son, Houston, Pa., was a strong contender in nearly every class. Their mature cow, Dasie Dalzell Mercedes Belle 4th was placed first in her class and later was awarded senior and grand championship honors in the female class.

The four-year-old bull, Winterthur King Ormsby Accrue, owned by the Winterthur Farms, won first prize in his class and was also the grand champion male. This bull was bred at Winterthur, his sire being King of the Ormsbys and his dam Bess Mercedes Korndyke.

Ormsby Accrue Segis, a son of Winterthur King Ormsby Accrue, shown by Charles J. Garrett, West Chester, Pa., won first in the two-year-old class and was a strong contender for senior championship honors. A slight lameness the day of showing detracted from his otherwise splendid appearance.

H. E. Robertson, of York, Pa., came up from Timonium

R. D. No. 1 THOMPSON, PA.

with a strong show herd. His mature bull, King Piebe of York 3d, won third place in the mature bull class while his two-year-old bull, King Piebe of York 13th, was awarded second position in his class. King Piebe of York 13th has been a consistent winner at many Holstein shows for the past two years but was a trifle out of condition at Wilmington, otherwise he would no doubt have been placed higher. Robertson's young cow, King Piebe of York Annabelle was awarded first position in the three-year-old class. This heifer is a splendid, deep-bodied animal and is able to give a good account of herself in strong competition.

Over twenty heifers faced Judge Moscrip in the junior yearling class. The blue was finally placed on Winterthur Ormsby Emiss, a particularly fine heifer sired by King of the Ormsbys. In the senior heifer class, there were twenty-seven entries and this was one of the strongest classes which was led out for Judge Moscrip's inspection. Pearl of Highlawn, Highlawn Margaret, and Queen Margel Ormsby were awarded first, second and third prizes respectively. All three entries were from the Knowles herd. In the Breeder's Young Herd, Knowles won first, Winterthur second, and Robertson third. This same order prevailed also in the Breeder's Calf Herd. Knowles showed four very uniform animals in the Get of the Sire class and was awarded first place on the get of Overhill Cornucopia and Winterthur won second on the get of King of the Ormsbys. Winterthur also won first, second, third and fourth in the senior A. R. O. class while in the junior A. R. O. class Robertson won first, Brentwood Farms second and Seward Stock Farms, Petersburg, Va., third.

The exhibitors were:—

Frank P. Knowles, Auburn, Mass.; Thomas H. Vansant, Newark; Winterthur Farms, Winterthur; University of Delaware, Newark; John W. Banks, Stanton, Delaware; M. L. Jones, Russell B. Jones, M. L. Jones, Jr., all of Westtown, Pa.; Brentwood Farms, Abington, H. E. Robertson, York, Pa.; Charles J. Garrett, West Chester, James M. Paxton & Son, Houston, and E. P. Allison, West Chester, Pa.; and Seward Stock Farms, Petersburg, Va.

The detailed awards are:—

Bulls, three years or over:—1st, Winterthur King Ormsby Accrue, Winterthur Farms; 2d, King Echo Sylvia Alcartra Lad, Paxton; 3d, King Piebe of York 3d, Robertson; 4th, Colantha Sir Aaggie Hartog Lad, Seward Stock Farms.

Bulls, two years and under three:—1st, Ormsby Accrue Segis, Garrett; 2d, King Piebe of York 13th, Robertson; 3d, Highlawn King Ormsby Cornucopia, Knowles; 4th, King Ormsby Bess Burke Luna, Winterthur Farms; Fanchon Dalzella Spofford, Paxton & Son.

Yearling Bulls:—1st, P. C. King Korndyke, Knowles; 2d, Colantha Sir Walker Pietertje, M. L. Jones; 3d, Winterthur

King Ormsby Echo, Winterthur Farms; 4th, Towns End Royal Ormsby, E. Page Allison; 5th, King Piebe of York 24th, Robertson.

Senior Bull Calf:—1st, and 4th, King Ormsby Enthusiast and King Ormsby Jo Especial, Winterthur Farms; 2d, King Alcartra Abbeckerk, Paxton & Son; 3d, Brentwood Champion Alcartra, Brentwood Farms; 5th, Blanche Margo Duke, Knowles.

Aged Cows:—1st, Dasie Dalzell Mercedes Belle 4th, Paxton & Son; 2d, Dulcina Johanna Korndyke, Brentwood Farm; 3d, Blanche Marge Pontiac, Knowles; 4th, Zor Pauline De Kol Hartog, Seward Stock Farms; 5th, Loyalsok Korndyke Witra, Robertson.

Cows, three years and under four:—1st, King Piebe of York Annabelle, Robertson; 2d, Sadie Lyons Abbeckerk 3d, Paxton & Son; 3d, Westtown Belle Beauty Colantha, M. L. Jones; 4th, Westtown Pauline Colantha, M. L. Jones, Jr.; 5th, Westtown Aaggie Colantha, Mrs. M. L. Jones.

Cows, two years and under three:—1st, 2d, and 4th, Sylvia Rosewood, Highland Segis Cornucopia, and Highland Blanche, Knowles; 3d, Westtown Pauline Fayne Colantha, M. L. Jones, Jr.; 5th, King Piebe of York Sunbeam, Robertson.

Senior Yearling Heifer:—1st, Harriet Champion North Star, Knowles; 2d, Winterthur Best Segis Dalice, Winterthur Farms; 3d, Westtown Lady Beets, M. L. Jones; 4th, Crystal Farm Johanna Piebe Beryl, Chas. J. Garrett.

Junior Yearling Heifer:—1st, and 4th, Winterthur Ormsby Emiss, Winterthur I. P. S. Ormsby 2d, Winterthur Farms; 2d and 5th, Cornucopia Clay and Highlawn Enda, Knowles; 3d, King Piebe of York Segis Julia, Robertson.

Senior Heifer Calf:—1st, 2d, and 3d, Pearl of Highlawn, Highlawn Margaret and Queen Margel Ormsby, Knowles; 4th, Winterthur Ormsby Segis Eador, Winterthur Farms; 5th, Dairy Show Prilly, Brentwood Farms.

Senior and Grand Champion Male:—Winterthur King Ormsby Accrue, Winterthur Farms.

Junior Champion Male:—P. C. King Korndyke, Knowles. Senior and Grand Champion Female:—Dasie Dalzell Mercedes Belle 4th, Paxton & Son.

Junior Champion Female:—Pearl of Highlawn, Knowles. Exhibitor's Herd:—1st, Knowles; 2d, Robertson; 3d, Paxton & Son; 4th, Seward Stock Farms.

Breeder's Young Herd:—1st, Knowles; 2d, Winterthur Farms; 3d, Robertson; 4th, Seward Stock Farms; 5th, University of Delaware.

Get of Sire:—1st, Get of Overhill Cornucopia and 4th, get of Highlawn King Ormsby Cornucopia, Knowles; 2d, get of King of the Ormsbys, Winterthur Farms; 3d, get of King Piebe of York, Robertson; 5th, Seward Stock Farms.

Progeny of Cow:—1st, Produce of Harriet of Grayfields 2d,

and 3d, produce of Highlawn Rosewood, Knowles; 2d, produce of King Piebe of York Annabelle, Robertson; 4th, produce of Mayflower Segis of Pontiac and 5th, produce of Bess Mercedes Korndyke, Winterthur Farms.

Best four cows two years or over, bred and owned by exhibitor:—1st, Winterthur Farms; 2d, Seward Stock Farms.

Senior A. R. Cow. Record begun at five years or over and having produced at least 600 lb. butterfat in one year:—1st, 2d, 3d and 4th, Winterthur Farms.

Junior A. R. Cow. Record begun under five years of age and having produced 400 lb. butterfat in one year:—1st and 4th, Robertson; 2d, Brentwood Farms; 3d, Seward Stock Farm; and 5th, Winterthur Farms.

J. R. DANKS, Secretary.

Delaware Holstein-Friesian Association.

BUCKS COUNTY HOLSTEIN FIELD DAY

Walter Gross exhibited his twin heifer calves, daughters of his calf club heifer at the Bucks County Holstein Field Day. Walter gave a very interesting calf club demonstration, says County Agent P. H. Sprengle and had kept a very accurate

A COMING PENNSYLVANIA HOLSTEIN BREEDER
Walter Gross of Plumsteadville, Pa., and two of his Holsteins.

and interesting record of production and feed costs. His heifer produced 10,285 lb. milk during her first milking period and her product brought in \$223.55. As the feed cost was \$115.92 he had for his labor \$107.61 besides her twin heifer calves.

The picture shown on page 612 of the September 22 issue of the Breeder and Dairyman shows Walter with his twin heifers when they were young. The picture herewith shown in this issue depicts Walter with one of the calves by the side of the calf's mother. The photograph was snapped as Walter, who

SOME PRIZE WINNERS AT THE BUCKS COUNTY
HOLSTEIN FIELD DAY

is son of the president of the Bucks County Club was telling the assembled party, how he cared for his animals. The other picture depicts some of the prize winners at the Bucks County Holstein Field Day. We regret that we do not have the names of all in the group but we do know a few; the second man from the right is Claude Bryan of Perkasio, one of the Bucks County Dairy Judging Team that will represent Pennsylvania

in the junior judging contest at the National Dairy Show. Mr. Bryan is holding the prize he won, a milking stool. The fourth man from the right is Isaac Gross, president of the Bucks County Holstein Association and standing next to him is Newlin Brown, well known auctioneer of Wycombe. Mr. Brown won fourth prize in the class for adults.

The event was staged at "Circle View" Farm, Solebury, the establishment owned by C. J. Koller who besides furnishing the grounds and the animals to be judged also donated \$50 for the purchase of prizes. The animals were judged passed upon by Prof. E. B. Fitts, State College Leader of Dairy Extension work and his placings were the basis upon which the prizes were awarded.

HOLSTEINS AT THE READING FAIR

Owing to health restrictions, the Holstein showing at the Reading Fair was very much smaller than it has been for a number of years. As there was no exhibits from the Deysher herd, many of the animals being in test, competition was limited to the herds of H. E. Robertson of York, Pa., and James M. Paxton & Son of Houston, Pa. What the show lacked in numbers it made up in quality for both breeders had strings of show cattle that were fitted to show at state fairs; in fact, they had already met at the Delaware State Fair.

Prof. E. B. Fitts of Pennsylvania State College was the judge and the type of the Robertson herd certainly appealed to him for he gave them first in every female class, first in exhibitor's herd, first for get of sire, and first for produce of dam. This herd was placed second for breeder's young herd and also second in the senior heifer calf class. Robertson's bulls carried off first in the two-year-old and yearling classes as well as second for senior calf.

In the aged cow class there was a startling reversal of judging. At the Delaware State Fair Judge Moscrip placed

KING ECHO SYLVIA ALCARTRA LAD
First prize aged bull at Reading Fair, second at Delaware State Fair. Owned by James M. Paxton & Son, Houston, Pa. Mr. Paxton is holding his herdsire.

Paxton & Son's cow, Dasie Dalzell Mercedes Belle 4th at the head of the aged cow class and then awarded her the senior and grand championships, placing Robertson's cow, Loyalsok Korndyke Witra, in fifth position. Judge Fitts placed Loyalsok Korndyke Witra at the head of the aged cow class with the Paxton cow second.

Paxton & Son's three-year-old bull, King Echo Sylvia Alcartra Lad was placed at the head of the aged bull class and one of his sons was first in the senior calf class. The rosettes given by the Pennsylvania Federation of Holstein-Friesian Clubs went one to each exhibitor. Mr. Robertson taking the one for females, he having all the first prize winners and Paxton & Son obtaining the ribbon for males on their splendid bull, King Echo Sylvia Alcartra Lad.

"A Republican is a person who thinks a Democratic Administration is bad for business; a Democrat is a person who thinks a Republican Administration is bad for business; both are right."—Prize-winning definition in a competition held by the Baltimore Sun.

CLUB ACTIVITIES

MARYLAND STATE DAIRYMEN'S ASSOCIATION

During the past business year of the Maryland State Dairymen's Association, the seventh of its existence, 20,815,467 gallons of milk were marketed, an average of 57,028 gallons daily, giving shippers receipts amounting to \$6,475,000. The average basic price for 4% milk received during the year was 31 5/6c per gallon. During 1923 the average price was 28 11/12c per gallon and during 1922 the price was 25 3/4c per gallon, f.o.b. Baltimore.

Secretary-Treasurer I. W. Heaps says, "There has been an over supply and at least three million gallons of basic price milk had to be manufactured into dairy products, besides the natural farm products. A fair standard price was maintained during the last year and all milk was marketed in an orderly manner."

During the year 364 new members were taken into the association. Part of these were men just going into the dairy business, part were men who had been shipping milk but recently became members of the association. Although some of the surplus troubles were caused by production of the new shippers yet the records show that old members increased their supply when the price was increased a year ago and Mr. Heaps points out that the shippers are producing about 10,000 gallons more milk per day than the market will consume in a fluid form. Mr. Heaps says that the association members are not willing to admit that the present price is enough to induce increased production or even maintain production when cost of feed, labor and other producing costs are considered, but he asks the members to get rid of boarder cows, cut down production to an economical basis and promises them that if they do so they will have more clear money at the end of the year.

GIRL IS BEST SHOWMAN

At the Columbia County Holstein Picnic, held at Wyocena, Wis., August 15th, Professor Humphrey, of the State College of Agriculture, selected three calves to represent the county at the State Fair, and while doing so gave an interesting and instructive talk explaining the strong and weak points of each individual.

The calf selected as the best is owned by Bryan and Esther Kamrath, of Pardeeville, and comes from the herd of W. W. Bird, of Cambria; the second calf chosen was owned by Dorothy Dalton, of Marcellon, and was purchased from Wm. Manweiler, of Cambria. She is full sister to the 1923 prize winner who was sold last fall for \$365. After a lengthy inspection the professor chose a calf owned by William Waugh, of Poynette, for the third place. She came from the Wm. C. Lange herd at Columbus.

The best showman was not a boy at all but was Esther Kamrath, showing Dorothy Dalton's calf, Dorothy herself being at home sick in bed.

Owing to the rain there were no speeches made although a number of solos were given by the Rev. Hoekstra.

CALIFORNIA ASSOCIATION ELECTS OFFICERS

At Sacramento, on September 1st, at the annual meeting of the California Holstein-Friesian Association with an average attendance, Fred Hartsook of Lankershim was elected president; R. E. Longwell, first vice president; E. S. Hass, second vice president; C. L. Hughes, secretary-treasurer. W. J. Higdon, F. L. Morris, F. M. Helm, W. G. Clark, H. V. Bridgford, F. W. Kiesel, R. A. Condee, Wm. R. Harriman, Fred Hartsook, H. Michel, J. W. Snodgrass, E. N. Brown and R. E. Longwell were elected directors for the coming year.

The signing of the cooperative agreement with the extension Service Department of the National Association was authorized by the Board of Directors which also endorsed all the completed provisions of the proposed California Bovine Tuberculosis Bill as drafted by the Committee of Twelve which was given a vote of thanks for its work in drafting said bill.

PENNSYLVANIA FEDERATION HONORS PRIZE WINNERS

When the Pennsylvania Federation of Holstein-Friesian Clubs decided to present rosettes or ribbons to the best male and the best female of the breed exhibited at the leading fairs of the state they made a move which was greatly appreciated by Holstein owners. Later in the year a full report will be given of the prize winning animals but Pennsylvania breeders will be interested to learn where some of the ribbons have already been bestowed.

Sands Brothers of Tunkhannock, R. 1, had the best male exhibited at the Wyoming County Fair and Ralph Traver of Noxen had the best female.

The winner of the Federation ribbon at the Allentown Fair was King Piebe of York 13th, owned by H. E. Robertson of York and the ribbon for females went to Beauty Walker Zillah, a daughter of Beauty Walker Pietertje Prince 2d and Zillah Winona 2d. She is a member of the herd at Saucona Farms, Bethlehem, Pa.

Miller Bros. of Clarks Summit won both ribbons at the Lackawanna County Fair, their well known show cow Mapleway Eeke Lyons, last year's champion, being again female champion this year, while the rosette for males was awarded to King Beauty Sylvia Lyons, owned by a syndicate in which Miller Brothers are included. This bull as a calf won second prize in his class at the New York State Fair.

At the Hartford Fair, Wm. Benning of Kingsley won the ribbon for best male with his yearling bull, King Ideal Ormsby by Fayne and C. L. Snyder also of Kingsley took the one for females with his four-year-old, J. S. H. Pietje.

At the Reading Fair, the ribbon for the best male went to James M. Paxton & Son of Houston, and for the best female to H. E. Robertson of York. Messrs. Paxton were represented by their handsome three-year-old bull, King Echo Sylvia Alcartra Lad. The Robertson herd won first in every female class, but Loyalsock Korndyke Witra, the first prize aged cow was considered as the winner of the Federation rosette.

GOOD CROWD AT PICNIC

It is estimated that there were in attendance at the Robert Ryan Farm at DePere, Wis., where the Brown County Holstein Breeders held their picnic, Sunday, August 17th, at least one thousand people.

Mr. Ryan made an address of welcome. His seven-year-old daughter, Kathleen, gave a recitation which was greatly applauded, and Jerry Riordan, of Mayville, gave an address and also a judging demonstration, using Sir Calamo Wayne to illustrate his remarks.

During the day twenty-five gallons of ice cream were disposed of, as well as a large quantity of lemonade. The West Side Team won the tug of war. Musical selections were given by the Melody Boys' Orchestra of Green Bay.

LEAGUE'S POOL PRICE FOR AUGUST

Checks have been sent out by the Dairymen's League Cooperative Association, Inc., for milk delivered by its members during August.

The gross pool price is \$1.72 per 100 pounds for 3 per cent milk of the 201-210 mile base freight zone. This is an increase of 22 cents over July.

Deductions for expenses in August amounted to 8 1/2 cents and for certificates of indebtedness 10 cents. The net pool price, therefore, is \$1.635 and the cash distribution is \$1.535.

Bo—"She screamed for help when I kissed her."

Bimbo—"Did you run?"

Bo—"No, I gave her another helping."

A GOOD BULL IN A GOOD HERD

King Mead Segis Pontiac is the handsome bull heading the herd at Lenkerbrook Dairy Farms. His sire is by King Korndyke Hengerveld Ormsby so that he is brother to Ormsby Korndyke Lad. His dam, Mead Vernon Pontiac has a seven-day official record of 25.52 lb. butter.

KING MEAD SEGIS PONTIAC

Herd sire at Lenkerbrook, Harrisburg, Pa.

539.5 lb. milk made in the Polk Asylum herd. She is a granddaughter of King Pontiac Champion and has more than 75% the same breeding as Melina Vernon De Kol 4th, 31.60 lb. butter and over 700 lb. milk in seven days.

The Lenkerbrook herd is on the accredited list, in fact, it was the first accredited herd in Dauphin County. It is owned by Dr. Jesse L. Lenker, one of Harrisburg's leading physicians, in partnership with his brother William D. Lenker, who resides on the farm.

A large proportion of the milk sold specifically for the use of babies in Harrisburg is produced by the Lenkerbrook herd. Yet, although, utility is ever in mind, type, breeding and symmetry are not lost sight of and managers of the local fairs around Harrisburg always endeavor to have the Lenkers show some of their cattle at these events. At the Pennsylvania Farm Products Show, held in Harrisburg last January, one exhibit which attracted a lot of attention consisted of a Lenkerbrook cow and her calf, the latter being sired by King Mead Segis Pontiac.

ABOUT SUNNY SLOPE FARM

For more than forty years C. W. Fish has owned the farm at Wyalusing, Pa., on which he and his family reside and for more than a dozen years they have been breeding purebred Holsteins. Sunny Slope herd has been on the accredited list for at least three years.

A number of good bulls have headed this establishment. The present herd sire, King Pledge Pontiac, is a son of Maplebrook Susie Pontiac, a cow that as a junior four-year-old heifer, produced 525.7 lb. milk, 25.18 lb. butter in seven days. In cow testing association work she produced in eleven months 12,367 lb. milk and she has a full sister that made over 13,000 lb. milk in ten months.

The sire of King Pledge Pontiac is King Onyx Pledge Ormsby a son of Ormsby Lilith Clothilde and Onyx Pledge Segis, 789.5 lb. butter in ten months, 19,851.8 lb. milk. Her dam is the 32 lb. cow, Onyx Pledge Dawning with over 1,100 lb. butter and nearly 27,000 lb. milk in a year in strictly official test.

While no official testing has ever been done at Sunny Slope farm, whenever a cow testing association was operating in the neighborhood the animals on this farm were enrolled and have always made a splendid showing. The cows are large, well grown and in good condition. Perhaps the fact that before Mr. Fish became a dairyman he fattened steers is one of the reasons why he likes to see his animals in good flesh and that, besides being pleasing to the eye, they repay him for his care by their work at the pail.

DOG TAXES PAY INDEMNITIES

Receipts from dog taxes in the small towns and rural districts of Pennsylvania are used for the support of state-wide Tuberculosis Eradication and for the payment of indemnities for animals slaughtered because of reaction to the tuberculin test. The experiment has been successful and the result is that a steady income is received for the purpose mentioned and the worthless stray dog menace is kept pretty well under control. During the first seven months of 1924 no less than 27,122 more licenses were issued than there were for the entire twelve months of 1923, the figures being 432,926 during the period from January 1st to August 1st this year and 405,804 for the full year 1923.

The license fee is One Dollar for males and Two Dollars for females. The money is used to enforce the dog law and to pay for the damages done to livestock and poultry by dogs. This work has the first call on receipts.

FOWLER HERD WINS PRIZES

Frank T. Fowler, of Lake Villa, Ill., won a number of prizes at the Waukegan County Fair. His animals won first in the three-year-old and two-year-old classes; first in the aged cow and two-year old heifer classes and Fowler's Holsteins carried off the get of sire, produce of dam and breeders' young herd group prizes. The senior and grand champion bull and the senior and grand champion cow both belonged to the Fowler herd. The junior champion female was owned by Carl E. Rudolph of Deerfield, Ill., and the junior champion bull was owned by J. L. Nicholson & Son of Ingleside. Rudolph owned the prize winning group in the breeders' calf herd competition and his animals won first as yearling heifer and as junior and senior heifer calves.

ONE JOB FOR FIFTY-FIVE YEARS

The Agricultural Gazette, probably the leading English farm journal, reports that Samuel Powell employed on a farm at Newbridge-on-Wye has just retired after 55 years service with one family. At an early age Mr. Powell went into the employ of Colonel Llewellyn to take charge of the milking dairy. For the entire 55 years he has not missed one day from his work, either week days or Sundays and although he could take a day off when he wanted it he always attended to his work morning and evening.

QUALIFIES IN TEN MONTHS DIVISION

Aralia De Kol Mead 2d, owned by the A. W. Morris & Sons Corporation at Woodland, California, after breaking the world's record in Sub-Division B by producing 22,485.8 lb. milk, 1,072.08 lb. butter in a year on two milkings a day, qualified in the 305 day division by dropping twin bull calves. She produced, in the 305 days, 20,589.1 lb. milk, 972.04 lb. butter.

As the twin bull calves were sired by Sir Aaggie De Kol Acme they are full brothers to Prince Aaggie of Berylwood and so share with that noted sire the honor of having the highest average for the yearly records of their seven nearest dams.

Two advertisers in the HOLSTEIN BREEDER AND DAIRYMAN were glad to learn this news. These two are L. L. Allis, of Rummelfield and Jas. R. Eastman, of Rome, Pa. who own the bull Berylwood Prince Aaggie Chicago in partnership. He is a son of Prince Aaggie of Berylwood and his dam is Hartwood Netherland Segis, 1,145 lb. butter and over 27,000 lb. milk in a year. For two years this great cow averaged 1,124 lb. butter, 26,978 lb. milk.

OTTO'S JUNIOR HERDSIRE

Bonair Colantha Ormsby Champion is the junior herdsire at Boiling Springs Farm. His sire is a son of Hartog Gerben Hengerveld 3d, 721.9 lb. milk, 30.67 lb. butter in a week as a junior four-year-old and 19,197 lb. milk, 774 lb. butter in a year. The dam of Bonair Colantha Ormsby Champion is Bonair Beechwood Ormsby 4th, 570.8 lb. butter in seven days and 828.17 lb. butter with over 21,000 lb. milk in ten months. This cow held the world's record in ten months test for both milk and butter in subdivision B, although her butter record has been surpassed her milk record we believe is still at the head of the list. This great cow only went below 50 lb. milk in a day twice in the ten months she was on test and she freshened again in the 13th month.

The senior sire of the Boiling Springs herd is Lothian DeKol Korndyke whose daughters have made splendid records especially in the Dairymen's classes. The daughters of this bull are being bred to Bonair Colantha Ormsby Champion and the resulting calves show promise of developing into animals of superior individuality and of possessing great powers of production when they come into profit.

Boiling Springs Farm is located a short distance from Carlisle, Penna., and is owned by Ivo V. Otto, who recently was elected president of the Cumberland County Cow Testing Association. Mr. Otto's herd is accredited and besides being healthy always stands near the top of the list of herds enrolled in the Cumberland County Association.

Georgia.—Ma, if the baby was to eat tadpoles, would they give him a bass voice like frogs?

Mother.—Good gracious no, they'd kill him.

Georgia.—Well, they didn't.

LAST CALL

Lackawanna County Breeders Consignment Sale at Lackawanna County Fair Grounds, Clarks Summit, Pa., October 20th.

HOLSTEINS SELL IN CUMBERLAND COUNTY

That there is a demand for purebred Holsteins that are both producers and good individuals and whose health is backed by the state and federal veterinary authorities was evidenced when the Fred C. Lehman herd was dispersed September 23 on his farm, located between Carlisle and Newville, Pa.

At the time the catalog was compiled, there were only fourteen members in the herd but three calves were dropped after that time and were less than three weeks old when they were led into the ring. The average for the entire seventeen animals was \$201.50, the total being \$3,426. If the usual custom is followed of listing each very small calf with its mother and counting the pair as one lot or offering, the average would have been \$244.71. There were three males, the herd sire, Dulcevista Echo Sylvia Ormsby, brought \$200, a low price for a bull of his individuality. He was bid off by Sam. U. Lear of Carlisle and will again head an accredited herd. Mr. Lear certainly purchased a bull of which he has no reason to be ashamed. A son of this bull from his first A. R. O. daughter, Mabel Walker Sylvia Ormsby, 10,055 lb. milk in the first six months of her lactation period, calving as a yearling, went for \$65. The only other male of any age in the sale was a grandson of the 29 lb. cow, Dutch Corner Fayne Walker, and a double grandson of King Lyons 3d. He went for \$100 to L. D. Weary of Carlisle. Mr. Weary is a beginner in the purebred Holstein business and is a member of the Cumberland County Cow Testing Association. His herd includes several big producers and he usually is represented by one or more animals in the list of the ten highest producers in this association which is one of the very best in the state of Pennsylvania. This bull started at a low price and there was spirited bidding on him, the figures mounting rapidly.

HERDSIRE FOR SALE THREE-YEAR-OLD SON OF KING OF THE ORMSBYS

KING ORMSBY CRIJNTJE is 3 years old, a good individual and guaranteed sound in every way.

His sire is King of the Ormsbys, Winterthur Farms' senior sire, a son of Sir P. O. M. and Spring Brook Bess Burke 2d.

His dam, a 30-lb. daughter of Pietertje Hengerveld Segis, produced 971 lb. butter, 21,627 lb. milk in a year as a four-year-old.

We are selling "King" because we are discontinuing the breeding of purebred Holsteins.

Write for pedigree, price, etc., or better still, come and see him.

Allendale Farms, Inc., Williamsport, Pa.

A Pair For \$100**Bull born Dec. 26, 1923**

Dam is a daughter of King Pontiac Jupiter, a son of King of the Pontiacs from a good daughter of Hengerveld De Kol.

Heifer born Dec. 3, 1923

Dam is an A. R. O. daughter of King Pontiac Jupiter and from a record cow with three tested daughters.

Calves sired by Maple Grove Ybma Glista, whose dam produced 27 lb. butter, 641.3 lb. milk in seven days. His sire is from a 34 lb. Glista cow and was by a noted show bull.

This herd is Accredited and the calves as well as the price, are right.

Maple Grove Stock FarmF. JONES, Mgr.
R. D. 4 CENTERVILLE, PA.

The top price in the sale was \$540 and was realized for Ideal Winkje Korndyke. This cow, now six years old, had a record made as a junior four-year-old of 30.54 lb. butter, 719.6 lb. milk. Her best day was 108.3 lb. and in ten months she produced 15,144.3 lb. milk. She was purchased by E. E. Reick of Pittsburgh, Pa. Her daughter, Beauty Konigen Korndyke, sired by King Diana Konigen was struck off for \$450 to the purchaser of her mother.

Dutch Corner Fayne Walker, 29.71 lb. butter, 656.5 lb. milk in a week went for \$385 to J. Harry Rakestraw of Williamsport, Pa. This cow in 300 days produced 16,250.4 lb. milk. Mr. Rakestraw took her daughter, Miss Fayne Walker Lyons, a daughter of King Lyons 3d, for \$300 and Snowball Walker Korndyke, a three-year-old daughter by a son of Korndyke Abbekerk for \$290. Mabel Walker Sylvia Ormsby, the record daughter of the herd sire and Dutch Corner Fayne Walker went for \$315 to Mr. Reich. J. H. Lear of Carlisle took Westtown Pearl De Kol Korndyke, a daughter of Fairview Klaver Korndyke for \$205 and S. W. Ziegler of Mechanicsburg, Pa., a member of the county cow testing association, made a start with purebred Holsteins by buying a nice daughter of the herd sire from a 21-lb. ten-year-old cow for only \$95, securing a real bargain.

The only out-of-state buyer was L. S. Hook of Trone, Va., who took several of the younger animals. Other buyers were P. L. Coner of Walnut Bottom, and A. C. Fritt, of Dickenson, Pa.

The auctioneer was George Fry and the pedigrees were explained by A. A. Raudabaugh, the popular tester of the Cumberland County Cow Testing Association.

ARALIA NOT THE WORLD'S CHAMPION

On page 550 of the August 22 issue of the BREEDER AND DAIRYMAN we reported the milk record of Aralia De Kol Mead 2d, owned by Morris & Sons Corporation of Woodland, Cal. This cow produced 22,485 lb. milk in 365 days and the statement was made that her record was the world's record on twice a day milking.

We do not know that Aralia was milked twice a day for the whole year but simply that she was milked twice a day from the forty-fifth day after freshening, and so her record is reported in Sub-Division B commonly called the Dairyman's Division.

Mr. George Hobson, Secretary of the British Friesian Cattle Society, points out that Aralia's performance is not a world's record as the British-Friesian cow, Eske Hetty, produced 24,135 lb. in 365 days on twice a day milking and made this splendid showing in twelve months during the years 1917-1918.

We are all too prone to claim too much and to call performances world's records when they are simply the highest thing we know of in our own state or country. While giving Aralia and the Morris & Sons Corporation full credit for the showing made by the California cow, we doff our hats to the British champion with the knowledge that, she, as far as we know, holds the world's record for twice a day milking. Our consolation is that

she is of the same breed as our own black and white cows even though she is termed a Friesian and Aralia a Holstein-Friesian. THE HOLSTEIN BREEDER AND DAIRYMAN goes all over the world. That fact, if no other, makes us study more carefully claims made by interested owners and we often find it necessary to scale down some of the statements sent us. The utmost care is taken to have articles appear in the BREEDER AND DAIRYMAN tell the truth and nothing but the truth but we acknowledge that we made a mistake in this instance. We appreciate our readers calling us to account for it shows that they read our paper carefully and that they believe the statements we make are what we believe to be the truth and we always stand ready to make any necessary corrections.

SOMETHING NEW IN CATTLE FEEDS

Locust meal is used as a cattle feed in South Africa, a factory being established at Johannesburg. This is poetic justice as in several parts of South Africa the livestock industry has been practically ruined many times by swarms of locusts descending apparently from the skies and eating every living green thing. The supply seem practically inexhaustible. The locusts are dried and ground and the meal is said to keep for a long time. It is high in protein. It is reported that animals soon learn to eat it, poultry especially are very fond of it.

Every Animal

in my herd of 60 head with the exception of my young herdsire has been raised on

FEEDS AND THEIR PRICES

Dairymen who failed to lay in a supply of feed last summer have to face conditions with prices higher and naturally want to know which are the most economical feeds to use and what to buy. Dr. W. P. Nevins, Asst. Chief of Dairy Cattle Feeding at the University of Illinois, gives some good advice in the State Dairy Extension Service News Letter for September.

A hundred pounds of ground shelled corn, the price of which has taken an upward trend, may be replaced by 109 pounds of ground barley, 101 pounds of hominy feed or 122 pounds of ground oats without any loss of feeding value. In fact, the barley and oats contain slightly more protein than the corn. Using these comparative feeding values and figuring corn at 84 cents a bushel dairymen can afford to pay 67 cents for a bushel of barley, 39 cents for oats and \$29.70 a ton for hominy feed. With corn at \$1 a bushel, barley is worth 79 cents a bushel, oats 47 cents and hominy feed \$35.35 a ton. These prices do not take the cost of grinding the grains into consideration.

Likewise it is possible to substitute some of the cheaper protein feeds for the higher priced ones. Usually the protein concentrates having the highest percentage of protein are the cheapest sources of this element. However, when corn is high in price, the value of the lower protein feeds increases, because they can furnish some of the same feed constituents that are obtained in corn. The constituents other than protein in these lower protein feeds have a feeding value equal pound for pound to the same constituents in corn.

For this reason when corn is 84 cents a bushel and choice cottonseed meal is worth \$50 a ton, the dairyman can afford to pay \$27 a ton for wheat bran, \$45 a ton for linseed oil meal, \$47 a ton for soybeans and \$39 a ton for gluten feed and still get protein as cheaply as he would in the cottonseed meal. With corn at \$1 a bushel and cottonseed meal at \$60 a ton the dairyman can afford to pay \$54 for linseed oil meal, \$32 a ton for bran, \$57 a ton for soybeans and \$47 a ton for gluten feed."

FOR POISON IVY

At the John Hopkins Hospital, Baltimore, Md., they are treating poison ivy infection with a serum or extract of the plant itself. A dose injected into the patient brings a quick response. The itching and feeling of tenseness usually disappears in from six to twelve hours and sometimes in three hours. Another new remedy is tincture of jewel weed sometimes known as lady slipper or wild calendine, a plant that is often seen in swampy or damp shady places.

Dr. George A. Bunting, secretary of the Maryland Board of Pharmacy has been using this treatment for several years. Sometimes a tea is made with the leaves. For mild attacks the bruised leaves of jewel weed are rubbed on the irritated parts.

DOWN IN VIRGINIA

Cheney Brothers & Jones of Roanoke Plantation, Randolph, Va., are owners of a purebred herd that has been on the accredited list for several years. The cows are kept for strictly dairy purposes and the Roanoke Dairy has an enviable reputation for the producing capacity of the animals therein.

At the head of the herd stands the good bull, Ormsby Korndyke Hockster Lad. He is a son of Ormsby Korndyke Lad and therefore brother to cows that have made tremendous records in both official and long time test. If one hundred Holstein breeders interested in A. R. O. work were asked to set down the name of what they believed to be the greatest A. R. O. sire of recent years, we believe there would be more votes cast for Ormsby Korndyke Lad than there would be for any other bull.

The dam of the Roanoke herd sire is Shady Maple King Pontiac Hockster. She is the foundation animal of a direct descendant strain of three 30 lb. cows. Her own record is 35.14 lb. butter, 636.3 lb. milk in a week. Her daughter, Beaver Dam Hockster Pontiac as a four-year-old made 30.10 lb. butter, 584.5 lb. milk in seven days. Tested for the full year, she is credited with the record of 20,200.5 lb. milk, 1,014.7 lb. butter and she is the dam of O. K. L. Hockster Pontiac, 30.4 lb. butter, 577.5 lb. milk in seven days as a senior-four-year-old. This last mentioned heifer is by Ormsby Korndyke Lad and therefore carries 75% the same breeding as Ormsby Korndyke Hockster Lad.

During the coming year we shall have much to say about this Virginia herd. It is well known that Virginia, for a long time, led in tuberculosis eradication work and number of accredited herds. So prevalent is the state wide spirit to "clean up" that, if Virginia had as many herds as do some of the great northern cattle states, we believe she would still stand at the head of the list and, despite the fact that she is not generally considered as a cattle state, Virginia still holds a very prominent position in the list of federally accredited herds. Cheney Brothers & Jones are strong believers in preserving the health of their cattle and so this herd was federally accredited several years ago.

SOMETHING TO THINK ABOUT

Some good advice is appended to the newsletter issued from the New York State College of Agriculture under date of August 25. After a few words acknowledging that dairymen realize that there is considerable inequality between the cost of milk and its selling price and so are inclined to refrain from buying grain feeds, it adds these sage words "Feed prices, however, are not responsible for scrub bulls, poor cows surplus milk, or low price for milk. Think it over."

As a ration to be fed with good pasture or legume hay, the following is recommended: 300 lbs. middlings, 200 lbs. bran, 200 lbs. barley or hominy, 100 lbs. cottonseed meal, 200 lbs. oil meal.

HOLSTEINS AT THE HARFORD FAIR

Holsteins made a good showing at the Harford Fair, one of the oldest fairs in Susquehanna County. The Pennsylvania Federation of Holstein-Friesian Clubs ribbons for the best male and the best female exhibited were awarded to Wm. Benning of Kingsley and C. L. Snyder

KING IDEAL ORMSBY FAYNE

Winner of the champion ribbon donated by the Pennsylvania Federation of Holstein-Friesian Clubs at the Harford Fair.

of the same town. Mr. Benning's herd sire, King Ideal Ormsby Fayne a senior yearling was judged to be the best bull at the fair. He is a son of King Ormsby Ideal and his dam is a good record daughter of King Sadie Vale Hengerveld. The champion ribbon for females was won by J. S. H. Pietje, Mr. Snyder's four-year-old heifer. She is a daughter of Johanna Segis Hengerveld and Mapleway Iduna Pietje and was bred in the Snyder herd.

The boys judging contest at this fair was one of its most successful events. There were eighteen contestants. The prizewinners received small gold badges. They were James Hill, Rexford Appleman, and Charles Oakley.

DESIRABLE IN EVERY WAY

Hillside Volunteer is the name of a young bull at the Hillside and Springbrook Farms situated at Trucksville, not far from the city of Wilkes-Barre.

Hillside Volunteer is a son of King Pontiac Maple Knoll Ormsby whose dams have all ready made quite a reputation for production. He is a son of King of the Pontiacs and his dam is Maple Knoll Helen, a daughter of King Korndyke Hengerveld Ormsby and therefore a sister to Ormsby Korndyke Lad. As a junior four-year-old Maple Knoll Helen made 30.97 lb. butter in a week and as a six year old she made an official record of 33.16 lb. in seven days; each time testing over 5% fat.

The dam of Hillside Volunteer is Hillside Rosemary 30.74 lb. butter, 460.8 lb. milk in seven days made after this calf was born. She has a tested daughter Hillside Pontiac Rose full sister to Hillside Volunteer. Tested when only twenty-five months old, she made a seven days record of 474.5 lb. milk, 25.24 lb. butter and a 30 day record of 2011.7 lb. milk, 102.80 lb. butter. To fully appreciate the size of this record it is only necessary to say that neither the seven

day or the thirty day record were equaled in the United States last year by any other heifer of so tender an age.

In selecting a herd sire some men lay most importance on the sire and what his daughters are doing, others emphasize the dam, considering that a bull transmits the producing capacity of his dam to his daughters. But there are others that pay more attention to a combination of bloodlines and its results and would sooner have a full brother to a big producing cow than have her son. In Hillside Volunteer these three classes of men could surely agree. His sire is a bull who combines a number of blood strains noted for large and persistent production and is also a bull whose daughters are making good. The dam of Hillside Volunteer is a cow that has demonstrated in official work her capability to produce and she too has a daughter with an outstanding record. The sire and dam together have already produced a heifer whose work in official test stands at the top. When in addition it is said that the young bull is a good individual, that he is extra well grown, nicely colored and then comes from a herd that has repeatedly shown its freedom from disease, what more can a herd owner ask?

SWAP PUREBREDS FOR GRADES

When the Burlington Dairy Sire train pulls out of Lincoln, Nebraska, on Monday morning October 6th, it will have on board thirty-one young purebred bulls which have been furnished by Nebraska breeders of purebred dairy cattle and which will be traded even up to thirty-one farmers in as many different counties for scrub bulls which they have been using. This train will be run over the Burlington Lines in Nebraska by the railroad company, co-operating with the Dairy Development Society, the Nebraska College of Agriculture and numerous local organizations along the route for the interests of better dairying in Nebraska.

One car of the train will be filled with high producing cows. Two coaches of exhibits are arranged by the Dairy Department of the Agricultural College. There are several novel and entertaining features to be included in each days program. The train carries a broadcasting and receiving radio, a saxophone sextette and a mystery cow. No details of this have as yet been received, but it is said to be something new in the list of dairy instruction.

The train will stop at Seward and York on October 6th and its last stop is Milligan, Thursday, October 23.

The city kid was roaming about in the country when he came upon a dozen or so empty condensed milk cans. Greatly excited, he yelled to his companions: "Hey, fellers, come here quick! I've found a cow's nest!"

Make milk the National Drink, dairymen are urging. We had the impression that milk always has been the First National Drink.

LOG CABIN HERD

has been

ACCREDITED

for years

It has never been the home of a Reactor or a Suspect.

It has always been headed by good bulls and is strong in the blood of King Segis and the Pontiacs.

The Quality is the Highest—the prices reasonable. Better investigate.

BUSY AT IDEAL FARM

September 29, Cecil Resseguie of Kingsley, Pa., hurriedly dashed off a letter to the advertising department of the Breeder and Dairyman in which he says that he is quite busy as he had three cows freshen since 5 p. m. the previous day. Five of the animals at Ideal Farm have freshened this fall and three of them dropped heifers. All are sired by a good son of Walker Korndyke Copia, a bull with a large number of good daughters and granddaughters in northern Pennsylvania.

Mr. Resseguie aims to carry out the idea implied by the name of his establishment, Ideal. Type, beauty and producing capacity are combined in the animals. To these three points are added health for the Ideal herd has passed three clean tests.

At the head of the herd is King Ideal, a son of Dutchland Konigen Creamelle Boy and Pietje Alcartra Fayne, the highest record daughter of King Pontiac Alcartra Pietje. She has made a number of large officials records in this herd and as an eight-year-old averaged 101 lb. milk a day for the fifteen days she was on test and made a seven day record of 707.7 lb. milk and over 30 lb. butter.

As a three-year-old in Cow Testing Association work, she produced 718 lb. butter, 17,168 lb. milk in a year. Dutchland Konigen Creamelle Boy is a son of King Segis Pontiac Konigen from Dutchland Creamelle Colantha Vale, 881.21 lb. butter 21,701.5 lb. milk in a year. She is a maternal sister to the great record cow, Dutchland Pietertje Vale. Their dam, Dutchland Colantha Vale has a year record of 27,625 lb. milk, 1,082.32 lb. butter and was by Colantha Johanna Lad from Creamelle Vale, 1,155.85 lb. butter, 29,591.4 lb. milk in a year, world's record at time of making, a daughter of the famous De Kol Creamelle, over 26,000 lb. milk in a year.

KING ORMSBY CRIJNTJE

Few establishments that produce certified milk operate with a purebred herd for any length of time, especially if records are made. This is true of any and of all breeds. To make large records—outstanding records—the cows are fitted before they freshen and then fed heavily after freshening. Many times, when seven day records are made, the cow, during the week of her largest fat production, is in a fevered condition and consequently her milk is abnormal. Certified milk really means milk carrying a certain amount of fat and a low bacteria count which varies very little from day to day. The making of large records and the producing of certified milk requires different conditions. Perhaps Mr. Koenig does not realize this but it is true just the same and is one of the reasons why his suggested White Nectar idea fails to "catch on" with Holstein breeders.

Several years ago the Allendale Farms located near Williamsport, Pa., operated with a purebred herd of Holsteins and

Guernseys. They have a big demand for their certified milk. They use as a motto: The Milk That Puts The Roses Into The Kiddies' Cheeks." But we were not surprised when we heard that the Allendale farms were going out of the purebred business. The great Walker-Gordon Company, undoubtedly the largest certified milk establishment in the world, had a similar experience. They found that high grade Holsteins, cattle that were practically purebred but lacked the registry papers, when managed from a purely dairy standpoint, were invaluable for the production of certified milk especially if a few members of the Channel Island breeds were added or part of the milk was skimmed and the resulting cream added to the remainder so as to bring up the fat contents to the certified standard.

The Allendale herd has been headed by a bull of fashionable breeding obtained from Winterthur Farms. This bull is King Ormsby Crijntje, born Feb. 13, 1921. His sire is King of the Ormsbys, a bull with a long list of good record daughters, a son of Sir Pieterje Ormsby Mercedes and Spring Brook Bess Burke 2d, and therefore a full brother to Bess Burke Ormsby.

The dam of this herd sire has a seven day record of 30.40 lb. butter with an average test of 4.63 lb. fat. She is from a good record dam and her sire was Pieterje Hengerveld Segis with over a hundred tested daughters, a son of King Segis and the 33 lb. cow Blanche Lyons DeKol. The dam of King Ormsby Crijntje made a year record, tested as a junior four-year-old, of 971.86 lb. butter, 21,627 lb. milk. This bull is closely related to a large number of high record animals, and Allendale Farms should have no difficulty in finding buyers for him.

Little Barbara was out in the country walking with her mother.

"Gracious!" exclaimed mother, "What is that noise?"

"Oh, that's nothing but a cow mooing trying to sell her milk," said Barbara.

SALES FROM MAPLE GROVE STOCK FARM

Three nice sales are reported from Maple Grove Stock Farm. This establishment is located at Centerville, Crawford County Pa., and for several years has been on the Accredited list. On September 5, Dr. Henry Wilson, superintendent of the Somerset Home and Hospital at Somerset, Pa., purchased the two-year-old heifer, Maple Grove Retta Clever Glista. The sire of this heifer is Clever Model Glista, a son of Model King Segis Koningen and Glista Coreva, 34.08 lb. butter in seven days as a six-year-old, 31.21 lb. butter in seven days as a seven-year-old. Each time this cow tested well over 4% and came very close to producing 600 lb. milk in the week. In ten months as a seven-year-old she is credited with 13,310.5 lb. milk, 607.30 lb. butter. She has several good record daughters including Glista Dinah, 31.26 lb. butter in seven days when more than eleven years old.

The dam of the heifer sold was Maple Grove Pontiac Clintonia Lady. Tested as a junior two-year-old, she made 304.5 lb. milk, 11.74 lb. butter in seven days. She was sired by King Pontiac Jupiter, formerly herd sire at Maple Grove, a son of King of the Pontiacs from a daughter of Hengerveld De Kol, a combination of blood lines that was greatly in demand in former days, in fact, we do not know of any other combination that was so universally in request.

Just five days later on September 10, James Bower of Tryonville purchased a couple of heifers, one of which was Maple Grove Clever Segis Glista, a heifer that will not be two-years-old until November 22. She, too, was by Clever Model Glista and her dam was Maple Grove Pontiac Glista Girl, a daughter of Model Daniel Glista and Maple Grove Mercedes Pontiac De Kol, 458.6 lb. milk, 21.81 lb. butter in seven days, a daughter of King Pontiac Jupiter from the A. R. O. cow, Maple Grove Mercedes Gene-

vieve. With this heifer, Mr. Bower took Maple Grove Beth Clever Glista, just seven days younger than the other heifer and very closely related to her as she was by Clever Model Glista from Maple Grove Mercedes Genevieve, the granddam of her mate.

On the same day, Archie Barr of Tryonville took four heifers as well as six head of Oxford Sheep, five females and a male, as besides being breeders of purebred Holstein-Friesian cattle, Maple Grove breeds Percheron horses and Oxford sheep. Two of the heifers purchased by Mr. Barr were daughters of Clever Model Glista. One of these was from Maple Grove Mercedes Pontiac De Kol, with an A. R. O. record of 21.81 lb. butter, 458.6 lb. milk. As mentioned before she is a daughter of King Pontiac Jupiter. The other "Clever" heifer was from Maple Grove Model Dinah Glista, 371.3 lb. milk, 16.50 lb. butter in seven days as a junior two-year-old, a daughter of Model Daniel Glista, whose dam was Glista Dinah, the 31.26 lb. daughter of the cow, Glista Coreva. Mr. Barr took two heifers sired by Maple Grove Ybma Glista, the junior sire at Maple Grove Stock Farm, whose dam, tested in this herd, has a seven day record as a nine-year-old of 641.3 lb. milk, and 27 lb. butter. She freshened just a year and a day previous and was then credited with 542.3 lb. milk, 25.04 lb. butter. One of these heifers was from Hillview Retta Veronica, an A. R. O. cow with four tested daughters, one of the foundation cows at Maple Grove. The fourth heifer was from Maple Grove Jupiter Queen, 20.44 lb. butter and an average of over 70 lb. milk a day for the week of her test, one of the nicest daughters of King Pontiac Jupiter.

The four heifers sold to Mr. Barr were all yearlings. A visit to Maple Grove Stock Farm a few weeks ago showed that besides being healthy from a tuberculosis standpoint, there was no abortion in this herd as every pen and almost

every inch of available space was filled with young stock. In an effort to reduce the herd to the capacity of his stables, Mr. Jones is making remarkably low prices on his stock. We congratulate the buyers on securing the animals from such a healthy and well bred herd.

PENNSYLVANIA HOLSTEINS ARE HEALTHY

"One of the most important advancements ever made by the Pennsylvania Livestock Industry is the progress made in the tuberculin testing of Pennsylvania cattle during the past eighteen months," says Secretary Frank P. Willits, of the State Department of Agriculture.

A report on this work has been compiled by Dr. S. E. Bruner who has immediate charge of the Tuberculosis Eradication Campaign in the state. This shows that since April 1st, 1923, in some sections of the state very few reactors were found. In three townships of Clarion County there were 2855 cattle in 552 herds tested and only nine reactors were found. In Elk County there were only ten reactors in 2,606 cattle tested. In addition 145 townships in twenty counties are now making arrangements to test their cattle under the area plan. In three counties, Lawrence, Columbia and Butler, this test will include the entire cattle population.

Secretary Willits, in making out his budget will ask for a liberal appropriation to pay the losses suffered by livestock owners whose cattle reacted. More cattle were tested in 1923 alone than in the entire period from 1920-1923.

A college student was asked by his little brother what a narrative was. The student answered: "A short tale."

The little fellow questioned further: "What's extinguish mean?" "To put out," said his brother.

Little Brother: "Well, James, take that dog by his narrative and extinguish him."

STEFFENSEN'S STOCK ARE SHOWY

W. H. Steffensen, of Good Hope Farm, Appleton, Wis., exhibited three purebred Holsteins at the Seymour Fair and they captured six blue ribbons. One of the heifers was a two-year-old, another a yearling and the third a five months old calf. Each took honors in their respective classes. The two-year-old heifer was made grand champion female. She was exhibited with a yearling brother sold by Mr. Steffensen to Huebner Bros., of Hortonville. The pair took first prize for produce of dam. Get of sire class was also won by the Steffensen animals.

Mr. Steffensen sold a young bull to Frank Tubbs of Seymour. The Tubbs bull won first prize in his class and was made grand champion male and Huebner Bros. young bull won first prize in his class.

FOR FARM SUPPLIES

For nearly forty-nine years the I. W. Scott Company have been selling seeds, poultry supplies and farm implements. Had their goods not given satisfaction for the prices it is very evident that this Pittsburgh firm would not have remained in business. Starting in a small way in 1876 the business of this firm has grown until to-day it handles practically everything needed for the work of the farmer, gardener or poultry man. This old established firm has issued a catalogue, profusely illustrated, telling of the many things carried in stock ranging from silo fillers, threshers and hay presses down to the small tools needed every year in the farm. Better write and get prices on what you need.

TO BE SHOWN AT FAIRS

Freak markings on a Holstein have always been interesting but there are a couple of young men of Erin, Wis., who think they can make a fortune through exhibiting a cow whose markings show two silhouettes. On one side of the cow, in black, is the outline of a woman's face, while on the other side is that of a man. The cow was owned by Henry Dunn, of Holy Hill. A number of people visited his farm to see the peculiar markings and the young men evidently thought that they could capitalize this curiosity.

A GRACEFUL ACT

Moses Frey, of Brown City, Mich., had a large herd and shipped its produce to the Detroit Creamery Company. Recently Mr. Frey's barn burned to the ground and all his cattle were lost. Thereupon the Detroit Creamery Company sent him an invitation to go to their farm at Mt. Clemens and get a purebred Holstein-Friesian cow that was there waiting for him, and which he was to accept with their compliments.

REGISTERED HOLSTEINS. Fifty head. Bred right. Priced right. Accredited herd. Never a reactor. Send for pedigrees and prices. W. M. ACKLEY, Westfield, Pa.

IN FAMILY 100 YEARS

Nearly eighteen years Stewart R. Ellsworth, Meshoppen, Penna., has kept purebred Holstein-Friesian cattle. A number of good bulls have stood at the head of this herd and so we find that the animals now composing it trace to many of the cows and sires prominent in the earlier history of the breed. In this herd are descendants of Sadie Vale Concordia, the first cow that ever made 30 lb. butter in seven day official test; of Pontiac Artis, the highest yearly record daughter of Hengerveld DeKol the first century sire; and also of Keystone Beauty Plum Johanna whose yearly record made in strictly official test as a four-year-old has never been equalled by any other animal under full age.

Meshoppen is near the borderline of Wyoming and Susquehanna Counties and is the center of a great dairy district. The Ellsworths were among the earliest settlers in this region and the farm on which Mr. Ellsworth now resides was cleared by his grandfather. In fact, this farm has been in the Ellsworth family for more than one hundred years.

Stewart Ellsworth's herd is under State and Federal supervision. At the present time it is headed by Harkwin Rag Apple Plum Copia King, whose dam, as a junior three-year-old, made 20 lb. butter, 524 lb. milk in seven days.

NEW MUSHROOM BULLETIN

Recognizing that Pennsylvania produces 85% of the mushrooms commercially grown in the United States, the State Department of Agriculture has issued a bulletin on this great industry. It is entitled The Mushroom Industry of Pennsylvania, is compiled by C. R. Mason and is the result of cooperative studies by authorities connected with the Penn State College and the Department of Agriculture.

The bulletin consists of twenty-eight pages printed on good paper and copiously illustrated. The demand for mushrooms is steadily increasing and the commercial mushroom is for a number of reasons more in demand than its wild relatives. If any of our readers intend to grow mushrooms as a side issue or even for home consumption we advise them to get this bulletin which can be obtained free by writing the Department at Harrisburg.

A USE FOR CRANK CASE OIL

Waste oil from the crank case of tractors and automobiles can be put to good use this fall freeing poultry flocks from mites, advises the Pennsylvania Department of Agriculture.

An oil spray can be used effectively to kill the mites found on and near the roost. Almost any oil can be used but since nearly all flock owners have automobiles the waste crank case oil is the most practical material.

The plaint goes up that girls wanting their hair bobbed are monopolizing the barbers' chairs. If this keeps up the men will have to let their hair grow long.

Orwell Ridge Farm

offers choice bull calves from cows of superior individuality and large producing capacity.

They are sired by
Berylwood Prince
Aaggie Chicago

whose dam produced 53,760 lb. milk, 2,272 lb. butter in two years and whose sire is California's greatest show bull and show sire. You take no chances. Our herd is *Accredited*.

Bonair Colantha Ormsby Champion

my junior herdsire, is from

Bonair Beechwood Ormsby 4th,

21,022.4 lb. milk, 828.17 lb. butter in ten months, Sub-Division B, World's records for both milk and butter at time of making.

The greatest sires of the breed appear in his pedigree. I have two sons of this bull, nearly white in color and well grown.

The dam of No. 1 made 9,927 lb. milk, 368.3 lb. butter in 9 months, showing \$126.33 profit over feed cost as a junior two-year-old and 12,205 lb. milk, 488.9 lb. butter in 11 months—\$173.44 profit over feed cost as a junior three-year-old. Her full sister made a World's record in Sub-Division B.

The dam of No. 2 produced 10,336 lb. milk, 425.8 lb. butter in 11 months as a junior two-year-old, making \$131.07 profit above feed cost. She freshened again in less than a year and is now milking 65 lb. daily.

Her dam, a maternal sister to the first two heifers, has a 10-months' record of 13,462.1 lb. milk, 536.13 lb. butter as a junior three-year-old, Sub-Division B. Her dam, the granddam of the first two mentioned, produced 15,832.6 lb. milk, 685.8 lb. butter in 10 months on twice-a-day milking.

Some of the greatest producing and transmitting blood of the breed is back of these animals.

Boiling Springs Herd is ACCREDITED.

HARRISBURG, PA., OCTOBER 22, 1924

No. 20

Sunny Slope Farm and Its Owner

They Are Always Glad to See You

FOR more than fifty years C. W. Fish has lived on Sunny Slope Farm, a short distance from Wyalusing, Pennsylvania. He was born in Lynn, Susquehanna County, in 1853, and when eighteen years old his parents moved to Wyalusing. He has owned the farm for more than forty years and has been breeding purebred Holsteins for sixteen years, becoming a member of the Holstein-Friesian Association of America in 1912.

There are 125 acres in Sunny Slope Farm. The farm was formerly owned by the Rev. G. M. Chamberlain, who, in addition to performing his clerical duties, did part of the work of clearing the farm and putting up a number of the buildings now existing. Before it was a dairy establishment they fed steers. Perhaps one of the reasons why the animals in the Sunny Slope herd are always in good condition is the experience thus gained by the owner.

her best sons; Pietje Korndyke Netherland, a grandson of Milanhurst America De Kol, 26,433.4 lb. milk, 1,231.35 lb. butter made in a year of strictly official work as a junior four-year-old; and Sir Segis Korndyke Clothilde, a grandson of Prince Segis Korndyke, maternal brother to King Segis.

Then came Ontario Butter Boy Pietje, a son of Fairmont Spofford Pietje and Lady Pearl Butter Girl. This bull has a number of good daughters and granddaughters in Bradford County and is regarded very highly by the dairymen of that vicinity.

A recent herdsire was Crystal Spring Valdessa Boon. His sire was Finderne Sir Valdessa, a grandson of

RIVALS FOR HIS CARESSES
C. W. Fish and two of his sweethearts.

Valdessa Scott 2d, the first 40 lb. cow, and a son of Finderne Lady Fayne 32.76 lb. butter in seven days, 1,075.29 lb. butter in a year as a junior three-year-old.

The other grand dam of Crystal Spring Valdessa Boon produced 838.36 lb. butter, 20,410.7 lb. milk in a year.

The present herdsire, King Pledge Pontiac, traces to many famous animals. His dam, as a junior four-year-old, made an official record of 525.7 lb. milk, 25.18 lb. butter in seven days and in cow testing association work produced 12,367 lb. milk in eleven months.

Her full sister, Maplebrook Susie, made over 13,000 lb. milk in ten months in C. T. A. work. These cows are by Sir Pontiac Artis Count, a son of Sir Korndyke Pontiac Artis from a daughter of Sir Veeman Hengerveld and their dam is by Duchess Korndyke De Kol, a son of Duchess Ormsby Butter King and Susie De Kol Paul, one of the first cows to officially make over 30 lb. butter in seven days.

The sire of King Pledge Pontiac is King Onyx Pledge Ormsby, a son of Ormsby Lilith Clothilde and Onyx Pledge Segis 27.83 lb. butter, 626.9 lb. milk in

THE PERSONNEL AT SUNNY SLOPE

Reading from left to right: O. L. Clarence, Marion, Elbert and C. W. Fish.

The foundation of the herd was laid when Mr. Fish purchased a bull and two heifers from G. N. Philips of Tunkhannock. The first good herd sire was Sir Paul Winkje, a son of Sir Paul Madrigal and Winkje Maid, purchased from the Lackawanna County Breeders' Association at Waverly, Pennsylvania. This bull was close to imported stock and his blood can be traced in many of the animals in the herd at present.

Other herdsires were Lilith Artis De Kol Paul, a descendant of the former world's champion, Lilith De Kol Pauline; Sir Abbie Cornucopia, who traces to Aaggie Cornucopia Pauline Johanna through one of

seven days as a junior four-year-old and 789.5 lb. butter, 19,851.8 lb. milk in 305 days. She was from the 32 lb. cow, Onyx Pledge Dawning with 26,927.5 lb. milk and over 1,100 lb. butter in a year in strictly official test. This cow has five tested daughters, two over 30 lb. and five over 20 lb. She, with her five daughters and one son, brought \$10,680.00 in the Oneida Com-

THE C. W. FISH RESIDENCE

munity Herd Dispersal Sale. He is a very handsome bull and certainly possesses producing blood.

Sunny Slope farm has always been run as a strictly dairy establishment, operating with purebred Holsteins. No official records have been made but for at least three years this herd has enrolled in cow testing association work and again would be if an Association was in operation in that neighborhood. Some very creditable records were made and the Report Books show a nice balance on the right side of the ledger, showing that the cows returned a good profit for their feed.

The family consists of Mr. and Mrs. C. W. Fish, both hale and hearty, and their son, O. L. Fish and his wife. The latter have three children; Marion, age 9; Clarence, age 7, and Elbert, age 6. Although their father is considerable of a mechanic, both boys say that they are going to be farmers like their Grandad, who takes care of the herd books and who enjoys nothing better than to sit down and tell about the herd and its production.

A MEMBER OF SUNNY SLOPE HERD

This establishment, which is truly the home of "A little breeder on the hillside," has many of the comforts that the possession of a purebred herd of high quality makes possible for owners of purebred Holsteins.

Both houses are equipped with hot and cold water and other modern conveniences. A Delco lighting system helps brighten the houses and barns.

The enterprising owners, who attend to practically all the work of caring for the herd and the farm, are believers that machinery lightens labor and so use a milking machine, manure carrier, tractor and ensilage

cuter. The large twin tile silos attract your attention when you journey on the country road which passes between the barn and house of C. W. Fish.

The herd contains over forty head and has been on the accredited list for at least three years. It is one of exceptionally high quality. As no records have been made, no animals are kept because of their work in the past, there are no "has beens" and any of them are capable of going into a herd and returning a substantial profit over the cost of their feed and care.

It is impossible in a story of this kind to bring out the traits of the owners. When you see Mr. Fish or his son you instinctively feel that they belong to the class that is really the backbone of this country, The American Farmer, and that they are strong believers in and practice the spirit of friendliness. If you call on them to look over their herd they make you feel welcome and you go away with the impression that they

STARTING FOR THE PASTURE
The Milking Dairy at Sunny Slope.

consider no amount of trouble would be too much and do not spare anything to make your stay comfortable.

They are worthy members of the American Holstein-Friesian Breeding Fraternity, the backbone of the Holstein-Friesian breeding industry.

Why Georgians Are Short

GEORGIA is a state filled with men who are small physically, says the Kansas Union Farmer. They are all right every other way. They have big hearts, great souls and keen and active minds but their average height, speaking for the present generation, is not much if any more than five feet and eight inches. Why? Why are the Georgians on an average a half foot shorter than the men of Nebraska, Minnesota and Wisconsin?

Answer is easy enough and may be right. The people of the northern and western states raise their children on milk. Three times a day at the table and as often as possible between meals the growing children are filled up with milk. After weaning time there are very few Georgian kids that ever have their tummies full of milk.

Georgia is one of the few states that buys butter from its neighbors and seldom has enough milk for cooking and coffee to say nothing of filling the children with it seven times a day.

Psychiatrists say it is what we don't know that frightens. If they are right it is remarkable that we are not scared half to death.

A Growing Wisconsin Holstein Home

By J. H. Lewis

DAIRY farmers of Iowa County, Wisconsin, are extremely partial to the Black and White dairy breed. Cheese contributes largely to the wealth of its people, and the Holstein cow is very cosily adapted to the cheese factory business. A considerable amount of butter is marketed annually but Iowa County holds a place in the Monroe cheese district, regarded as one of the most important in the state.

Iowa County is in the southwest corner of Wisconsin, and in the extreme northeast corner of Iowa County is found the Hodgson Holstein Ranch, without question one of the finest in the county. The Hodgson farm contains over 900 acres. There is a church, schoolhouse and cheese factory all located on the farm, two large, fine farm homes, barns and outbuildings with

brindle herd. Gradually they weeded out the lowly mongrel, replacing with grade Holsteins until they had built up a fairly good herd. They liked the grades so well they concluded if there were anything better it must be purebred Holsteins, and it was decided to build up with purebreds, inasmuch as the boys were growing up and were becoming interested. "Five years ago," said pere Hodgson, "we bought three head of purebred Holsteins, and one year later we sold our entire herd of grades and replaced them with purebred heifers. Since that time we have purchased a few more from time to time, and have developed the herd we now own. I have never had the slightest reason to regret the change."

The senior herdsire is Antrim Pride Sir Albina No. 256544. His 13 nearest dams have seven-day official records averaging 26.10 lbs. butter. One of his sisters, Wadmantje FINDERNE Pride Pontiac, topped the 1922 National Sale, selling for \$3,200. Another sister, Irene Segis Pontiac, sold for \$1,450, the second highest place paid at the 1923 National Sale. This richly bred bull is sired by FINDERNE Pride Johanna Korn-dyke whose daughters had made remarkable records, three of them exceeding 30,000 lbs. milk in year work. He is a son of the famous FINDERNE Pride Johanna Rue, the first 1,400-lb. cow and the only cow with five granddaughters with 30,000 lb. yearly milk records. The dam of this herdsire is the A. R. O. cow, Prilly Albina Korn-dyke, second prize four-year-old in a strong class at the 1918 New York State Fair. She

THE HODGSON HOME AND FARM EQUIPMENT
In Coon Rock Valley, near Arena, Wis.

each, where every modern convenience it attached, the roadways, yards, barns, buildings and homes being lighted by electricity; running water in homes and barns, crystal pure, from a great reservoir far up on the hillside of what is known as Coon Rock.

The Hodgson Farm is located about five miles southwest of the peaceful little village know as Arena, which is located on the Madison division of the Chicago, Milwaukee and St. Paul Railway. A purling brook, spring fed, flows through the farm tract affording ample supply of water to wash down the juicy and succulent grasses which grow here in luxuriant profusion. Every feature of the establishment seems to blend and dovetail into one another, all combining to furnish a perspective deeply pleasing to the eye and the eternal sense of fitness.

In matter of equipment it would be difficult to locate a better organized Holstein farm. But added to this, and no doubt more fully justified by the fact is the Hodgson herd, clean cut, classy, typy Holstein-Friesians, at times running as high as 100 animals. Good care is one of the outstanding features of the operations of this splendid farm.

On one of the photographs shown here is seen the comfortable farm home, the spacious barns, outbuildings and feeding pens, and the clear, cool stream which flows but a stone's throw from the house. There is good fishing here and it is a real joy to visit the place.

Fifteen years ago the Hodgsons owned a red and

KING GEWINA AAGGIE

Junior herdsire at the Hodgson Holstein Farm.

was from a sister to three 30-lb. cows and was by Albina Butter Boy, a son of the century sire, DeKol 2d's Butter Boy 3d.

Antrim Pride Sir Albina was born September 17, 1918. He weighs over a ton and is a clean, typy individual, now in his prime. His get are all good individuals. One of his sons, King Lyons Pride, was taken by Mr. Hodgson's youngest son, Gordon, in calf club work, and won first place at the 1922 Junior Livestock Exposition held at Madison. The Hodgsons won nine firsts at the Inter-County Fair, held at Spring Green, Wis., in the autumn of 1922.

The junior herdsire, King Gewina Aaggie No. 339494 was born March 29, 1920. His 13 nearest dams average 26.09 lb. butter in 7 days. His sire was Fairlawn Marie King, whose daughters are making very creditable records as two-year-olds. His dam, Heilo Aaggie Gewina, made over 31 lbs. butter in a week from 728 lbs. milk and is from a granddaughter of the great transmitting sire, King Segis.

One of the foundation cows of which the Hodgsons are immensely proud is Bessie Kantje DeKol 2d. She is the dam of Bessie Snowball DeKol, with a record of 40.37 lbs. butter, 720 lbs. milk in seven days and 1,121.88 lbs. butter, 27,617 lbs. milk in 365 days. Fred Hartsook, of Lankershim, California, liked Bessie Snowball DeKol so well that he paid a handsome price for her and shipped her to his place in California where she made her great records and where, unfortunately, she was sacrificed when foot and mouth disease invaded the Hartsook herd.

ETHEL ORMSBY SEGIS

23.42 lb. butter, 523.5 lb. milk in 7 days as a two-year-old.

Ethel Ormsby Segis No. 491035 was the first Holstein heifer tested on the Hodgson farm. She made a record of 23.42 lbs. butter and 523.5 lbs. milk in seven days as a two-year-old, her highest day's milk was 78 lbs.

Flossie Wayne Korndyke has a cow testing association record of 8,982 lbs. milk and 366.5 lbs. butterfat in 10 months as a three-year-old, her average test was 4.08%. She is a daughter of Flossie Korndyke, 27.04 lbs. butter in seven days and 542 lbs. milk.

Mary Sunnyside DeKol Ace was the first purebred heifer developed on the farm. As a three-year-old she made a seven-day record of 21 lbs. butter and 437 lbs. milk. There are many fine cows in the Hodgson herd but this is one of the favorites and much is expected of her in the future.

The father and mother of Walter Hodgson, head of the present Hodgson family, were among the pioneer settlers of Iowa County, coming direct from England in 1845, settling on this very farm in what is known as Coon Rock Valley. High up on the hill shown back of the home and barns is this rock where in early days racoons were plentiful and hunting for them was rare sport.

Walter Hodgson, present owner of the farm, was born here, and he and his good wife have managed the farm for the past thirty years. They now have the help of one daughter, Gertrude, and three stalwart

sons, Allen, George and Gordon. All are deeply earnest in their love for black and white cattle.

There is one element of influence in developing breed and standard characteristics, and that is personality in the farmer-owner and breeder. One thing notable in connection with the development of top class in anything is that there must be invested honest, earnest effort behind the thing that is being performed, or in the calling in which one aims to succeed. The intelligence to undertake and perform a certain business is reflected in the results obtained. It is necessary that a partnership be established between a thoroughbred and a purebred before you can put either into the big show ring. One is essential to the other. The dairy farmer with brains sees and realizes that in the Holstein type of dairy cow he has a chance for better than an even break in his profession. Some are doing better, but without the Holstein it is like the story told in cartoons—"it can't be done without a make-up." Dairy farming with Holsteins insures a large measure of success although other breeds of dairy cattle have their place.

As a rule dairy farmers in Iowa County put hard work behind their vocation. It is a common thing to find boys and girls up long before daylight, working in the cold and wet by lantern light, wet or dry, hot or cold, always the same, abundantly cheerful, utterly regardless where the next big dance is going to be held. Over on the Hodgson Farm they have electric lights, and comfortable homes and buildings, but it was not always thus. They graduated from the old school into

FLOSSIE WAYNE KORNDYKE

8,982 lb. milk, 366.5 lb. fat in 10 months as a three-year-old.

the new. The Hodgsons work fast and to the point. They have built up their fine herd of purebreds in five years. And with the experience gained in that brief span of years may it not be proper here to query what strides will be made in breed and herd development in the next five years? They are still all young folks, even the father and mother, full of energy, good ideas, sober impulses, self-respecting, industrious, Christian people. Kindness, close attention to duty, a tender regard for the rights of others unselfishly devoted to neighbors and friends, theirs is indeed a charming pastoral existence. A visit to the Hodgsons is a rare experience. After you once become acquainted you find it hard to say good-bye and leave.

When taking a man at his face value, be careful of his change of expression.

Uncle Sam and His Holsteins

By M. H. FOHRMAN.

FOUR herds of Holstein cattle in which dairy cattle breeding investigations are being conducted, are maintained by the United States Department of Agriculture and are under the jurisdiction of the Bureau of Dairying. Record is kept of the production of the heifers and cows in order to demonstrate their producing ability. The general plan is to test each heifer in first lactation period and later as a mature cow. In order to permit of fair comparisons between members of successive generations, every effort is being made to maintain uniform conditions for testing. Cows freshen in average condition and during the test are never milked more than three times daily. Grain feeding is regulated according to production, and beet pulp, when available, is fed with the grain. Alfalfa hay and corn silage are given *ad libitum*.

At the Huntley, Montana, station this procedure is varied somewhat, as the test cows are fed on three planes with respect to grain. One group is fed a liberal ration, approximating all the grain they will eat. A second group receive a limited grain ration, and the third group are fed only roughage, consisting of pasture, alfalfa hay and silage.

During six years at the Beltsville, Md., farm, 33 cows completed 47 records which average 17,513 pounds of milk and 595 pounds of butterfat. These records were made by cows in the foundation herd. Table I affords an analysis of these 47 records according to age.

TABLE I.

CLASS	No. RECORDS	AV. MILK LBS.	AV. FAT LBS.	AV. AGE YRS. MOS.
2 yrs. old	20	15,652	532	2 5
3 yrs. old	8	17,987	649	3 7
4 yrs. old	4	17,182	557	4 4
5 yrs. and over	15	19,839	689	6 8

Huntley, Montana, station with a smaller purebred herd had 19 cows which completed 34 records during 6 years. These 34 records average 14,454 pounds of

milk and 503 pounds of butterfat. These figures include those records made on limited grain rations and on roughage alone. Age analysis of the records is given in Table II.

TABLE II.

CLASS	No. RECORDS	AV. MILK LBS.	AV. FAT LBS.	AV. AGE YRS. MOS.
2 yrs. old	5	12,847	453	2 5
3 yrs. old	5	13,753	507	3 2
4 yrs. old	9	13,461	474	4 4
5 yrs. and over	15	15,820	536	7 1

The station at Ardmore, S. D., has tested 20 cows for a total of 28 records during five years. The 28 records average 13,677 pounds of milk and 465 pounds of fat. This number includes six 305 day records. The age analysis of the 28 records is given in Table III.

TABLE III.

CLASS	No. RECORDS	AV. MILK LBS.	AV. FAT LBS.	AV. AGE YRS. MOS.
2 yrs. old	14	12,192	410	2 2
3 yrs. old	4	12,433	431	3 4
4 yrs. old	1	16,135	526	4 3
5 yrs. and over	9	16,267	521	7 2

Ten records have been completed in the most recently established herd at Woodward, Okla. The ten cows tested produced an average of 16,500 pounds of milk and 585 pounds of butterfat. The ten records are summarized by ages in Table IV.

TABLE IV.

CLASS	No. RECORDS	AV. MILK LBS.	AV. FAT LBS.	AV. AGE YRS. MOS.
2 yrs. old	2	14,091	524	2 5
3 yrs. old	4	15,841	547	3 5
4 yrs. old	1	19,419	761	4 8
5 yrs. and over	3	18,012	617	6 7

No selection is practiced in the testing of these cows, as the aim is to test each animal in the herd once as a heifer and again after the age of 5 years. These records are made under a wide range of climatic conditions, and there have been a number of changes in

herdsmen during the period covered by these tests. The primary aim of this testing is to determine the producing capacity of the cows under conditions as nearly uniform and fairly comparable as it is possible to have them. For this reason extremes of feeding and conditioning have been avoided.

To summarize briefly, eighty-two cows and heifers in these four herds during 119 lactation periods of 305 to 365 days have produced 1,862,510 pounds of milk containing 53,647 pounds of butterfat, the average record being 15,161 pounds of milk and 534 pounds of fat, and 77 of the 119 records were made by cows under 5 years of age.

Dairy Buildings at Low Cost

LETTERS to men charged with the enforcement of health and sanitation codes in the dairy business are periodically mailed by the Bureau of Dairying. There are a large number of these letters. One that recently came into our hands on dairy building is of special interest to dairymen.

Production of clean milk is most readily accomplished in satisfactory buildings. Such buildings, to the producer, are a stimulus in his work, from both a sanitary and an economic viewpoint.

Those entrusted with the enforcement of sanitary codes oftentimes are met with the cost factor when discussing buildings with milk producers. This is especially true in the case of farmers who are about to start or have recently started producing milk. The cost of new buildings is also a major factor in old established dairy communities. Rather than erect new structures, old and unsatisfactory ones are made to answer the purpose. Under such conditions the milk inspector finds difficulty in having good dairy barns and milk houses erected, for the idea generally prevailing among farmers is that the cost of satisfactory buildings is almost prohibitive.

Barns which meet the requirements of milk regulations need not be costly. The farmer is usually able, with the hiring of a small amount of labor, to erect his own building. Expensive materials need not be

used. Furthermore, a simply arranged and planned barn is cheaper to build, and is as satisfactory from a sanitary standpoint as one of intricate design.

Milk houses are very essential. In many cases little care is given to this matter. A good milk house, properly constructed and meeting all requirements set down by milk ordinances, can be easily and cheaply constructed.

The following bulletins published by the U. S. Department of Agriculture should be of assistance to those contemplating the erection of dairy buildings. Farmers' Bulletin 1214—Farm Dairy Houses. Farmer's Bulletin 1342—Dairy-Barn Construction. Farmer's Bulletin 1393—Principles of Dairy Barn Ventilation.

Drying Off the Dairy Cow

DAMAGE may result from attempting to dry off a cow too suddenly before calving, especially when the animal is on succulent pasture or a rich concentrated ration. In some cows the instinct for milk production is so highly developed that the function seems difficult to repress, even during advanced pregnancy, and efforts to terminate a milking period forcibly in such animals possibly does more harm than good.

To dry off a cow, it is advisable first to regulate her ration. Allow well-cured hay in place of succulent pasture, silage, or beet pulp. By stages eliminate all concentrates, for at this time they tend to excite a congested condition of the udder, as well as to favor the continuance of milk production. Bran may be given alone or with some middlings. For about a week omit every third milking, and then milk once daily for another week, without stripping. Afterwards it may be necessary to milk only a few streams daily to relieve the tenseness of the udder. A few days later, when it is evident that milk secretion has subsided, no further attention will be required, as a rule. This system may be varied to suit individual cases, as some animals may be dried off in less time, while others may require longer.

NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

Do You Snore?

IS Friend Husband—or horrors—are you one of that vast army of sleep disturbers—a snorer? Not the occasional giving utterance to a guttural snort of which the most self respecting person is guilty at times, but one of those eight cylinder sound producers, which gets down to business every night. It ought to be a cause for divorce but unfortunately is not so rated. Cheer up—there is hope.

Aside from actual nasal trouble there are two causes for snoring, sleeping on the back and sleeping with the mouth open. To prevent the former have a small pocket put on the back of the sleeping garment, fastening with a button, and put in it something hard and uncomfortable to lie upon such as a spool or a small block of wood. This will be found effective to keep one from sleeping on their back. To keep the mouth closed, put strips of sticking plaster across the lips, and proper breathing through the nose will soon result.

The Slacker Vote

THERE are many outstanding obligations resting upon the citizens of a free country—to know the law and respect it; to bear his share of just taxation; to be loyal in every act and thought; to be ready to defend it to the last drop of blood, and to regard and to use the ballot as a sacred right. There are many individuals who will rise to the occasion when some of these duties call, yet are negligent to a fault when it comes to exercising the power of franchise. If this is to continue to be a government of the people, by the people and for the people, certainly more of them must go to the polls next November 4th than have ever gone before. In 1920 less than 50% of the qualified electors, and less than 25% of the whole population voted at the national election. In Pennsylvania, out of a possible list of 4,336,348, a vote of 1,852,616 was cast. Think of a stay-at-home vote in Pennsylvania of 2,483,732! When one reflects upon the years of strenuous effort on the part of the pioneer workers for suffrage, it is an insult to their heroic sacrifices that the right should be so lightly esteemed, nay, even scorned by so many to-day. It is not creditable to American patriotism nor does it augur well for the future of our republic.

One hears much, nowadays, about the menace of the alien population of our country, how these strangers are trying to transplant many of their old world standards of conduct and living. But the indifferent stay at home voter bids fair to become a far greater menace to the stability of the nation. For, sad to relate, the largest number of stay at homes will be found among the better class of people—those who have become discouraged over trying to improve conditions that seem, to them, hopeless. Can you imagine a corrupt city

politician allowing one single vote that he can control to stay at home? Leave it to them to get out the vote, (and we usually do) and they are untiring.

There are many who claim that Woman's Suffrage is a failure because the impossible has not been accomplished in the past four years. In pre-suffrage days, enthusiasts made extravagant claims as to the results that would ensue when women were enfranchised, results that calmer minds know would take years to attain, for it is foolish to expect four years to confer upon women the same understanding and power that generations have given men. But women can be depended upon to do straight, sound thinking as they darn stockings and roll the pie crust. They do study issues and candidates. The next thing is to go out and vote on election day, for all the study and thinking are in vain unless they result in that one expressive act. The way to cure national ills is through national political parties, and women will have to use existing machinery, gradually extending their influence as they begin at the bottom and work up. Those who stay at home on election day forfeit their right to criticize existing political conditions, which will be improved only as more of the good plain American citizens assume their proper civic responsibility.

Two Pickles to Put In Jars

ABOUT this time of year when all good glass jars are full, it is well to have something to put in those that are defective, something which every household accumulates. Here are two good recipes for pickles that will keep for months under such conditions.

PEPPER HASH.

Take six ripe sweet peppers, six green peppers, six good sized onions. Put through food chopper, cover with hot water, let stand five minutes and drain. Cover with cold water, adding a little salt, let stand half an hour, drain. Add one cup of sugar and one and one-half cups vinegar and cook for ten minutes.

COLD CATSUP.

One peck ripe tomatoes	One teaspoon pepper
½ cup grated horse radish	One lb. sugar
½ cup salt	½ cup mustard seed
½ teaspoon each—cloves, cinnamon	One quart good vinegar.

Baked Apples a la Fancy

PARE and core large well shaped apples, and fill with chopped raisings and nuts. Bake. Serve with cream or cover with a syrup made of equal parts sugar and boiling water and boil five minutes, then roll the apples in chopped cocoanut.

"One health authority urges baths once a week." If he means Saturday night he might have said so.

Did You Ever?

CLEAN pongee and other silks by washing them in lukewarm water with a good soap, using a soft brush instead of a washboard, and rinsing in several waters.

Wring out a cloth in hot water and wipe furniture before putting on furniture cream, thus producing a high polish which will not fingermark.

Wring out a cloth in hot water and wipe furniture before putting on furniture cream, thus producing a high polish which will not fingermark.

Add a tablespoon of cornstarch to the fruit pie or tart to keep it from boiling over.

To Cook Rabbit

THOSE who do not usually care for rabbit on account of the game taste, may like it cooked as follows. Cut into good sized pieces, parboil in water to which salt and a half teaspoon of baking soda has been added. Dry, dip in flour and brown in plenty of fat. Cover with water adding one chipped onion, half a teaspoon of cinnamon, same of ginger and a quarter teaspoon of mace. Bring to a boil and skim, adding salt and pepper, to taste and simmer for about an hour.

Cow Most Valuable Animal

VIEWED from a broad economical standpoint, the cow is the most valuable of man's domesticated animals. Beside supplying man with his most nearly perfect food, the cow takes nothing from the farm as does wheat, corn, potatoes or fruit. Instead, the cow is a machine which contributes to the fertility of the land and then at the end of useful milk-giving service can be marketed for meat.

No other animal with the exception of sheep fills a similar dual purpose. The sheep takes nothing from the soil, but produces wool and at the end of wool-giving service the sheep is hustled to market.

In live stock lies the salvation for agriculture. For more than 100 years farm land east of the Mississippi river has been going down hill from the production standpoint. The present problem is to supply the soil with sufficient fertilizer and food to restore the once fertile condition. Western land deterioration can be averted to a large extent by the raising of leguminous plants, by crop rotation and by loyalty to live stock.—*Idaho Farmer.*

Nothing To Do

The canning and spicing and pickling are done
The stuff from the garden brought in;
House cleaning is over, of sewing there's none
And gone are the visiting kin.

From now until spring there is nothing to do
Except to get three meals a day
And washing and ironing and mending, 'tis true,
And keeping the house in array.

The cows must be milked and the chickens be fed,
And this must be done morn and eve,
And—well, why continue? Why should more be said
"There's nothing to do" you perceive.

"Bill" Devaney

ATWO-FISTED hard-headed up-standing dairyman describes William Bell Devaney of Malvern, Pa., able to take the lead whether in the dairy, farm work or in business matters pertaining to the Holstein industry and the men interested therein. Add to these qualities a charm of personality and a reputation for straight-forwardness and you have pretty well summed up the subject of our sketch. Naturally everyone calls him "Bill."

Mr. Devaney has been an owner of purebred Holstein-Friesians for a good many years and became a member of the Holstein-Friesian Association of America in 1908. He owns a large herd of purebred Holsteins that have more than a local reputation for producing ability. When we add that Bill Devaney is

W. B. DEVANEY
Prominent Pennsylvania Holstein Breeder.

considered a capital cattle judge, you can also figure that his herd possesses type and conformation. He is a good caretaker and feeder and grows his young stock so that they make large cows for he believes that it is necessary to have a big machine to handle a large quantity of feed, especially roughage, and return a good profit to the owner.

Mr. Devaney can always be depended upon to do his best to promote the Holstein-Friesian industry from the dairy angle. Recognition of this caused the members of the Pennsylvania Federation of Holstein-Friesian Clubs to elect him one of their directors and he served for several terms.

Picture postcards of a Kansas City hotel carry this message:

"This hotel fully equipped with automatic sprinklers. Statistics show loss of life has never occurred in a sprinkled building. In case of fire you may get wet, but not burned."

To one traveler that brought a wonderful thought and he wrote thereunder the following prayer: "Now I lay me down to sleep. Statistics guard my slumber deep. If I should die I'm not concerned, I may get wet but I won't get burned."

The Junior Breeder and Dairyman

Junior Prize Winners

In December 1923, a Dairy Calf Club was organized in Cabell County, West Virginia. There are now twelve members in the Club and all are members of the Holstein-Friesian Calf Club Association of America and are doing good work towards putting Holsteins on the map in their section.

Four of the members of the Cabell County Calf Club are Levina Dunkle, Vernon Holly, Benson Pyles and Thurman Bolyn. They were the winners at the Tri-State Fair held at Huntingdon, West Virginia, early in August, and they won a trip to the State Fair at Wheeling where they competed with the winners from other counties.

The Cabell County Dairy Calf Club winners at the Tri-State Fair. Reading from left to right they are: Levina Dunkle, Vernon Holly, Benson Pyles and Thurman Bolyn.

Thurman Bolyn won the sweepstakes and a gold medal given to the highest scoring calf Club member in the State, the awarding being on the basis of a complete project. Vernon Holly had the third high score in the State.

To the following particulars of three of the prize winners and another member of the Cabell County Calf Club, we are indebted to Dairy Specialist James V. Hopkins and F. N. Darling, Cabell County Agent.

Thurmon Bolyn placed first at the annual show, held at Tri-State Fair. Thurmon is thirteen years old and is in eighth grade. This is the first year he had belonged to the Four-H-Club. He expects to continue with second year Dairy Calf Project. Thurmon will have to work harder than ever as his little brother and some of the neighbor boys think they can do as well as he.

Vernon Holly, member of the Tassen Four-H-Club, Barboursville, W. Va., has been a member of Four-H-Club for three years. He began with a Poland China pig for his project, at the show in 1923. By winning sweepstakes in the second year pig project, he won a trip to the State Four-H-Camp at Jackson's Mill. With the money he had earned in the pig project he bought a Holstein Calf in December 1923. At the Tri-State Fair, August 4-9, 1924, he placed third in Dairy Calf Project. Vernon was one of the first four winners who were entitled to attend the State

Fair, Wheeling, Sept. 1-6, 1924. Vernon believes in looking ahead so he took corn project this year and will use this in feeding his calf during the coming months. This is indeed an excellent record for a little twelve-year-old boy.

Zorah Pyles is a little eleven year old girl, whose father lives in Wayne County near the Cabell line and markets his milk in Huntingdon. Last December she and her brother bought Holstein calves and joined the Cabell County Dairy Calf Club. During the months she took excellent care of her calf and at the show at Tri-State Fair placed second. Zorah, although very small, went to the State Fair at Wheeling in September 1924 where she exhibited her calf.

Benson Pyles, brother to Zorah, is fourteen years old. He is his father's right hand man on the dairy farm. He says that he is planning to make a dairy farmer out of himself.

"What are you going to be when you grow up, Jennie?"

"I'm going to be an old maid."

"An old maid, dear! Why?"

"'Cause I don't think I'd like to kiss a man a hundred times and tell him he's handsome every time I go shopping. I'd rather earn money and buy things for myself."

While dairy cows do not use telephones they are said to greatly influence the telephone business. In 1919 about 40% of American farms were equipped with telephones but it was found that in Wisconsin, telephones have been installed on nearly 90% of the dairy farms.

(two years \$1) payable in advance.
Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

October 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The New Treasurer

IT has been announced that James A. Reynolds of Cleveland, Ohio, manager of the Daisy Hill Herd until its recent dispersal, has been elected treasurer of the Holstein-Friesian Association of America to succeed the late Wing R. Smith, the honorable and trustworthy treasurer for twenty-eight years.

THE HOLSTEIN BREEDER AND DAIRYMAN was not surprised to learn of the directors' selection for treasurer. Mr. Reynolds has played an important role in the Association's management since he was elected director in 1919.

It was at the meeting in 1919, when Mr. Reynolds was elected director, that the transfer fee was increased from twenty-five cents to \$1.00. It was at the first meeting of the new Board on which Mr. Reynolds sat, that Mr. Aitken was voted his \$12,000.00 salary per year as President and Mr. Reynolds was elected chairman of the Executive Committee and drew \$3,000.00 from the Association's treasury for his services at the end of the year.

Mr. Reynolds was actively in the movement to put into operation the delegate form of government, solicited and voted proxies at the St. Paul meeting on October 11, 1921 when the membership was deprived of their direct voice in the Association's management and a political form of government was substituted for the business form.

It is under this political form of government that the transfer fee has been increased to \$1.50, fifty cents on each transfer going to State Associations to pay the salary and expenses of the State-Paid-Secretaries.

During Mr. Reynolds' tenure in office as director of the Holstein-Friesian Association and chairman of its Executive Committee, the Association's operating expenses have increased from \$256,811.37 in 1919, when

it operated on a 25 cent transfer fee and showed a profit of \$60,784.40 to \$586,736.22 in 1923 on a \$1.50 transfer fee when it showed a loss of \$60,819.55, or the managing expenses during Mr. Reynolds' tenure in office has increased \$329,924.85.

With this enormous increase in the Association's managing expenses there has been a decrease in the number of transfer certificates issued. In 1919, 97,392 transfer certificates were issued. In 1923, after the managing expenses had been increased \$329,924.85 the number of transfer certificates issued decreased 5,727 or to 91,665, despite the natural increase of the breed during these years.

We believe that the members generally would have favored the election of some breeder to the position of treasurer. Some dairyman who had made an outstanding success as a breeder of Holstein cattle and because of his long and faithful service in promoting the breed and the Association be rewarded by being made its treasurer.

In writing this we have in mind such a man as A. A. Hartshorn of Hamilton, New York, a former president of the Association, a breeder, a dairyman, a man of integrity, worthy and capable of filling the position of any Association.

We do not feel that it is necessary for the dairymen to go into the realms of politics to select men capable of managing and directing their affairs.

The Reason Why

ONE of our contemporaries whose title is a synonym for the black and white universe has made a marvelous discovery. This is that the epidemic of dispersal sales at present prevalent among herds whose management is of a speculative variety is due to a revival in the Holstein-Friesian breeding business and a corresponding stiffening of prices.

The journal in question should be in a position to know. Its policy has been to boom the so-called large breeding establishments and the effect of that policy has been to depreciate the efforts of the little breeder and dairyman, the man who cares for his own cows and does part of his own farm work. Although men of the latter class constitute by far the larger proportion of the breeding fraternity and the membership of the National Association, and although, from their herds have come many of the cows that, in other hands, have made large records, the paper in question has subordinated their interests to those of the establishments from which the major portion of its advertising patronage has been received.

These large establishments are, in many cases, owned by men of great wealth who regard the breeding of Holstein-Friesians as a hobby and have looked upon the race for great records in the same light as do wealthy owners of horse racing stables. The cost of winning one of the great races is scarcely considered, the main thing being to own the horse that wins. So the cost of making a big record was overlooked and with many, the value of a cow was gaged by the size of her record rather than her ability to return a profit over the cost of her feed.

Sober men in all ranks of life have from time to

time called attention to the fact that such a procedure was not based upon sound business rules, and that, should the interest of the owner for any reason be turned to another line of business or even another hobby, such establishments would not be considered as profitable business investments but rather as losing business investments and then the herd is closed out at public or private sale.

If the animals in any breeding establishment made a profit for their owner there is no reason why the business could not continue almost indefinitely and be handed down from father to son. This is the rule in other countries and should be in this one. No one thinks that Armours or Swifts would put their various lines of business up to public auction should any member of the family die or become engaged in another line of business.

In the East, at least, you can find many instances where farms have been owned in one family for three or four generations. A number of Holstein-Friesian breeding establishments have passed from father to son without the herd being dispersed. We hope that this will be the custom and that, in time to come, there will be many instances where a number of successive generations have successfully operated such breeding establishments.

If an improvement in the Holstein-Friesian business and a general stiffening of prices for purebred Holstein cattle is responsible for the closing out of concerns whose success has been based upon exploiting rather than developing the dairy cow, we hope that conditions will increase until all such establishments are out of business. Then perhaps our contemporary will realize just what class of breeders constitute the strength of the industry; perhaps, conditions will improve until the paper in question will dispose of its assets at public auction and will claim the reason is the improvement in business.

To the Ladies

MRS. CRAB APPLE HORNDYKE'S page to women struck a responsive cord, judging by the letters already received at this office. The first letter received was so interesting that we are printing it verbatim, also the letter of our editress written in answer.

We shall be pleased to receive other communications from our lady readers voicing their views and want them to feel free to ask Mrs. Crab Apple Horndyke any questions they wish regarding household affairs or other matters.

The letter referred to was dated September 29th and is as follows:

DEAR MRS. CRAB APPLE HORNDYKE,

Such a name doesn't sound quite right, but I'm so glad to see a page for women.

I too, am a farmer's wife, mother and formerly a school teacher.

For many years I have been interested in Farmers Institute and Community work. For the last nine years we have held Community meetings at our one room country school house. At my suggestion last year our County Fair staged a historic pageant with a cast of nearly 1,000 persons, the town and country groups uniting in portraying the history of our Country.

I'm sending these articles, Amusement—Country and Town. (Printed in October 8, issue, page 643.)

If you believe they will be of interest to your readers, use them in any way you wish.

Sincerely, Mrs. L. D., Illinois.

In her reply, Mrs. Crab Apple Horndyke throws light upon a question that many other women have had in mind.

MY DEAR MRS. L. D.,

Thank you so much for your letter. Editing a page is such an impersonal thing, and I sympathize with those who broadcast over the radio and are said to be struck with stage fright because of the apparent lack of an audience. I welcome your letter as an assurance that I have an audience.

Confidentially, about naming our paper and my nom de plume. It was done in a moment of fun. The editors of this magazine said that the fact had been noticed it was entirely about cows, so I thought our page shall be "Not About Cows," and I thought also that Holstein breeders would enjoy the joke in Crab Apple Horndyke. Really, Holstein names used to bother me dreadfully.

The contents of your letter support my contention as to the brains and ability of rural women, and I am so sure that the articles you enclosed will be of interest to our readers that we are going to print both of them, verbatim. I hope others will follow your example and make this page their own. Wouldn't it be great if we could push the cows off still another page?

The Udder of the Dairy Cow

THE dairy cow's udder is an abnormally developed gland, the result of centuries of careful selective breeding. It is complex in its physiology. Functioning as it does, under high tension, for maximum milk production during most of the adult life of the cow, this marvelous structure is subjected to a very great physical strain, with small opportunity for rest or repair. The extra tax on the udder which is involved in the birth of calves and shortly thereafter often counterbalances the rest allowed between milking periods.

The great development of this organ, as well as its complexity, are factors which render most difficult the treatment of abnormal conditions of the udder of the dairy cow.

Fairs and Expositions

ATTENDANCE LOW AT NATIONAL DAIRY SHOW

In point of attendance the 1924 National Dairy Show was a disappointment. As pointed out by the BREEDER AND DAIRYMAN both last year and the year before, the policy of having no fixed home militates against a successful event. The National Dairy Show has been held for the past few years on state fair grounds on which large fairs were staged within a few weeks. The result has been to weaken the attendance at the state fair and also at the Show. The experience of the National Dairy Show has been in marked contrast with the success of the Waterloo Dairy Cattle Congress which has a fixed home and which started from practically nothing and although encountering unfavorable weather for a number of years, has grown until it is as much of a national event as is possible in dairy cattle circles.

The size of this country is against national and international events. The theory of a national dairy show is to be the final meeting place of cattle and herds that have won highest honors on the various circuits. For a show of this calibre, cattlemen would travel hundreds and even thousands of miles but for various reasons the National Dairy Show has usually not proven the success its progenitors hoped for.

The cattle are usually of the highest quality and in this respect the 1924 event was as good as its predecessors. It was expected that the dairymen of Wisconsin and nearby states would turn out in great numbers but they failed to do so.

The ribbons were placed by Judge Moscrip with Tom Elder as Associate Judge. At the Minnesota event, Mr. Elder made Prilly Tirania grand champion and placed Madam Artis Wayne Denver second in the three-year-old class. Here the Madam not only headed her class but went on to senior and grand championship, again defeating the Colorado cow, Zwingara Segis Clothilde as she did at Springfield, Ill., with Hansen Segis Clothilde. Dorothy Ormsby Piebe again took second in class to "The Madam" with Corwin Colantha Florence Ormsby, who beat Dorothy in the two-year-old class at Syracuse last year, was fifth. Florence was on year test and was not in the pink of condition.

Johanna Rag Apple Pabst headed the three-year-old class and was made grand champion. The pictures of this bull and of the Madam were shown on page 644 of the October 8th issue and for that reason are not again reproduced. Sir Inka May, the handsome junior yearling, owned by the Minnesota Holstein Company was again junior champion beating out Triune Ormsby Piebe 27th, who headed the senior yearling class. Johanna Wayne Rue 2d, senior yearling heifer of

the Jefferson County Asylum herd, was made junior champion so that Wisconsin furnished three of the four champions of the Black and White breed.

The state herd competition naturally was won by Wisconsin with Iowa second, Michigan third and Nebraska fourth. The Minnesota Holstein Company carried off the premier exhibitor's banner while the one for premier breeder went to Hargrove & Arnold.

The awards were:

Aged Bulls (12 shown): 1st, North Star Joe Homestead, Baltz Hoesly, Monticello, Wis.; 2d, Walcowis Ollie Hijlaard, Coon, Craig, Post & Jones, Janesville, Wis.; 3d, Sir Aaggie Colantha Korndyke, South Dakota State College, Brookings; 4th, Sir Johanna Pauline Ormsby, Glenn Keyes, Richard Center, Wis.; 5th, Matador Segis Walker; 6th, Carnation Milk Farms, Seattle, Wash.

Bulls, three years old (12 shown): 1st, Johanna Rag Apple Pabst, J. E. Piek, Hartford, Wis.; 2d, King Pietertje Ormsby Piebe Jewel, Hargrove & Arnold, Norwalk Ia.; 3d, Corwin Wimple De Kol Ormsby, Modern Woodmen of America Sanitorium, Woodmen, Col.; 4th, Count Veeman Segis Piebe, Lakefield Farms, Clarkston, Mich.; 5th, North Star Belle Oak Champion, Agricultural School Farm, Wauwatosa, Wis.; 6th, Nockdair Canary Daisy Paul, Baird Bros. and C. F. Limbeck, Waukesha, Wis.

Bulls, two years and under three (12 shown): 1st, Tritomia Pietertje Ormsby Lad, Iowana Farms, Davenport, Ia.; 2d, King Pontiac Champion Parthena, Fred Wiffenback & Son, North Lake, Wis.; 3d, Sir Tritomia Mercedes, Grant Rice, Milton Junction, Wis.; 4th, Sandy Segis Walker Matador, Carnation Milk Farms; 5th, Sir Ollie Lilith Ormsby, Eugene Katzman, Elkton, Wis.; 6th, Duke Ormsby Piebe De Kol, Taylor & Christgau, Owatonna, Minn.

Senior Yearling Bull (8 shown): 1st, Triune Ormsby Piebe 27th, Hargrove & Arnold; 2d, Sir De Kol Ollie, Heck Bros., Lyons, Wis.; 3d, Harvest Jewel Matador, Carnation Milk Farms; 4th, Woodcraft Pontiac Champion Star, Modern Woodmen; 5th, Prince Creamelle Acme Vale, John Piper, Watertown, Wis.; 6th, East Troy Ollie Prince, Katzman.

Junior Yearling Bull (11 shown): 1st, Sir Inka May, Minnesota Holstein Co., Austin, Minn.; 2d, King Mutual Fan, Jefferson County Asylum, Jefferson, Wis.; 3d, King Piebe 19th, Hargrove & Arnold; 4th, Robert Peterson, Ft. Dodge, Ia.; 5th, King Burton Quoique, Carnation. 6th, King Homestead Fob's Gewina, Emil Funk, Watertown, Wis.

Bull Calves (29 shown): 1st, General Homestead Mercedes, Clarence Holle, Plymouth, Wis.; 2d and 3d, King Piebe 28th

and King Pietertje Ormsby Piebe 5th, Hargrove & Arnold; 4th, King Richmond Pontiac, Christ & Hackbarth, Ft. Atkinson, Wis.; 5th, Ollie De Kol Ormsby, Heck Bros. Lyons, Wis.; 6th, Sir Star Laura Segis, Minnesota Holstein Co.

Senior and Grand Champion Male: Johanna Rag Apple Pabst, J. E. Piek.

Junior Champion Male: Sir Inka May.

Aged Cows (38 shown): 1st, Zwingara Segis Clothilde, Modern Woodmen; 2d, Bessie Fayne Johanna, D. E. Waters and M. D. Buth, Grand Rapids, Mich.; 3d, Lady Johanna Aaggie Fayne, Iowana Farms; 4th, Barbetta Hengerveld De Kol, Agricultural School Farm; 5th, King Korndyke Pontiac Lass Arlene, Minnesota Holstein Co.

Cows, Four Years (11 shown): 1st, Dolly De Kol Tirania Fayne, H. E. Dickenson, Oconomowoc, Wis.; 2d, Miss Piebe Fobes, Hargrove & Arnold. 3d, Queen Johanna of Enterprise, Chas. Vander Schaaf, Sparta, Wis.; 4th, Chariy Canary Denver, Jefferson County Asylum; 5th and 6th, Carnation Matador Addie Segis and Carnation Matador Leda Ormsby, Carnation.

Cows, three years old (18 shown): 1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Dorothy Ormsby Piebe, Hargrove & Arnold; 3d and 6th, Maudlene Ollie Homestead and Pelagie Ollie Homestead, Minnesota Co.; 4th, Jessie Hengerveld Segis, Detroit Creamery Co., Mt. Clemens, Mich.; 5th, Corwin Colantha Florence Ormsby, B. S. & S. H. Dragoo, Muncie, Ind.

Heifers two years old (26 shown): 1st, 2d, 3d, and 6th, May Pietertje Homestead Ormsby, Star Segis Homestead, Miss Mechthilde Segis and Miss Inka Segis, Minnesota Holstein Co.; 4th, Happy Home Daisy Johanna, South Dakota State College; 5th, Carnation Matador Mercedes Selah, Carnation.

Senior yearling heifers (20 shown): 1st, and 5th, Johanna Wayne Rue 2d and Mutual Calamo Clothilde 2d, Jefferson County Asylum; 2d, Carnation Pauline Matador, Carnation; 3d, Pietertje Ormsby Piebe Mercedes, Hargrove & Arnold; 4th, Star Homestead Segis, Minnesota Holstein Co.

Junior yearling heifers (16 shown): 1st, Miss De Kol Piebe, Hargrove & Arnold. 2d, and 5th, Cosy Burke Ormsby and Miss Pietertje Ormsby Segis, Glenn Keyes; 3d, Iowana Homestead Segis, Iowana Farms; 4th, Lakefield County Veeman Piebe, Lakefield Farm, Clarkston, Mich.

Heifer Calves (42 shown): 1st, and 2d, Triune Piebe Fobes and Neola Piebe Annie, Hargrove & Arnold; 3d, and 5th, Carnation Matador Lulu Walker and Carnation Matador Lulu Segis, Carnation; 4th, Ormsby La Vie of University of Nebraska, Lincoln, Neb.; 6th, Woodcraft Zwingara Julia Pontiac, Modern Woodmen.

Senior and Grand Champion Female: Madam Artis Wayne Denver, Jefferson County Asylum.

Junior Champion Female: Johanna Wayne Rue 2d, Jefferson County Asylum.

Senior Advanced Registry Cow: 1st, Bessie Fayne Johanna, Waters & Buth; 2d, Lady Johanna Aaggie Fayne, Iowana; 3d, Far Oakes Inka Homestead, Minnesota Holstein Co.; 4th, Maryland Walker Colantha, Waters; 5th, Clothilde Topsy King, University of Nebraska.

Junior Advanced Registry Cow: 1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Maudlene Ollie Homestead, Minnesota Holstein Co.; 3d, Jessie Hengerveld Segis, Detroit Creamery Co.; 4th, Iowana Ona Homestead De Cola, Iowana.

Advanced Registry Cow with two of her progeny: 1st, May Walker Ollie Homestead, Minnesota Holstein Co.; 2d, Miss Piebe Fobes, Hargrove & Arnold; 3d, Tillamook Lola May De Kol, Carnation; Iowana De Cola Ollie, Iowana.

Get of Sire. 1st, Get of Piebe Laura Ollie Homestead King and 2d, Sir Inka Superior Segis, Minnesota Holstein Co.; 3d, Get of Dutchland Creamelle Denver Prince, Jefferson County Asylum; 4th, Get of King Pietertje Ormsby Piebe and 6th, Get of King Piebe, Hargrove & Arnold; 5th, Get of Matador Segis Walker, Carnation.

Produce of Dam: 1st, Produce of May Walker Ollie Homestead and 3d, produce of Star Segis Pontiac Superior, Minnesota Holstein Co.; 2d, produce of Miss Piebe Fobes and 6th, produce of Sita Pauline De Kol, Hargrove & Arnold; 4th, produce of Lady Madge Pauline De Kol, Glenn Keyes; 5th, Tillamook Lola May De Kol, Carnation.

Exhibitor's Herds: 1st, Hargrove & Arnold; 2d, Modern Woodmen. 3d, Jefferson County Asylum; 4th, Carnation; 5th, Minnesota Holstein Co.; 6th, Iowana.

SAVIDGE HERD WINS FEDERATION RIBBONS

Butter Boy Korndyke Johanna and Duchess Pauline Gladi owned by Judge C. R. Savidge, of Sunbury, Pa., repeated their triumphs of last year at the Milton Fair by each winning the grand championship over all breeds.

Butter Boy Korndyke Johanna is a son of Colantha Johanna Lad 8th and May Butter Girl De Kol and has a number of very handsome daughters both in the Savidge herd and in several herds in Allegany County, New York, where he was formerly owned.

Duchess Pauline Gladi is a large handsome cow as her picture shows. These two animals earned for Judge Savidge the premium rosettes given by the Pennsylvania Federation of Holstein Friesian Clubs for the best bull and the best

KING ORMSBY ENDERCAMP

our herdsire, is by King of the Ormsbys—full brother to

BESS JOHANNA ORMSBY the only cow that ever made over 40 lb. butter in seven days test three different years. Her dam made 29-37 lb. butter in 7 days; 904.32 lb. butter in 365 days. Our Herd is ACCREDITED, and our cows are producers. Get our prices on a good young bull.

E. R. GELATT & SON
R. D. No. 1 THOMPSON, PA.

Head Your Herd With Hillside Volunteer

Born March 21, 1924

Sire: King Pontiac Maple Knoll Ormsby that great son of King of the Pontiacs from a 33-lb. sister to Ormsby Korndyke Lad. Dam: Hillside Rosemary, 460.8 lb. milk, 30.74 lb. butter.

This young bull is full brother to Hillside Pontiac Rose, 474.5 lb. milk, 25.24 lb. butter in 7 days; 2,011.7 lb. milk, 102.80 lb. butter in 30 days at 25 months old, a showing not equalled in this country last year by any heifer of her age.

Hillside Volunteer is extra-well grown, 75% white and only \$400.

Hillside and Springbrook Farms
TRUCKSVILLE, PA.

Herd recently passed another Clean Test.

Alcartra Pietje Keyes

One of a number of good young cows sired by KING PONTIAC ALCARTRA PIETJE my senior herdsire.

They are all beauties.

You know how they win in the show ring and also how they produce.

Let me sell you something that you will be proud to own.

A. E. ROBINSON Montrose, Pa.

female of the breed exhibited at the Milton Fair, one of the greatest in Central Pennsylvania.

Prizes were given for the cow producing the most butterfat and for the cow giving the most milk in a day and both of these were won by animals in the Savidge herd. Onyx Pledge Veeman produced 66.4 lb. milk testing 3.75% or 2.49 lb. butterfat and Rosie Canary De Kol produced 60.4 lb. milk, testing 4.1% or 2.4764 lb. butterfat so that Onyx Pledge Veeman was first for both milk and butterfat production with Rosie taking second in each event. The animals were in charge of Leon Gay and it could be seen that they had been given the best of care.

Murray A. Miller, well known Holstein breeder of Milton, was superintendent of the cattle department and attended to the many details with his usual courtesy and efficiency.

DUTCHESS PAULINE GLADI

First prize mature Holstein cow and grand champion over all breeds at the 1923 and 1924 Milton Fairs. Winner this year of the Pennsylvania Federation Prize. Owned by Judge C. R. Savidge, Sunbury, Pa.

NEW YORK STATE FAIR

Big show herds from Iowa and Ohio clashed at the New York State Fair, meeting strong competition from the Yates Farm establishment while Waldo S. Kellogg, Derby, Conn., brought a nice string from New England. King Pietertje Jewel Korndyke again won the blue in the mature class winning over North Star General Champion, last year's first prize two-year-old. The Ohio bull was senior and grand champion. Friend Piebe, owned by Karl Nims, was the first prize three-year-old, but Count Korndyke Posch won for New York in the two-year-old division and King Pietertje Ormsby Piebe 36th placed second for Kellogg. The first prize yearling was Triune Ormsby Piebe 27th with King Piebe 19th, also of the Hargrove & Arnold herd second.

Sale Postponed!

Because of other arrangements the dispersal sale scheduled for early December, of the **LENKER-BROOK** Accredited Herds of Pure-bred Holsteins and Guernseys has been indefinitely postponed.

Lenkerbrook Dairy Farms

Harrisburg, Pa.

Wm. D. Lenker

Dr. Jesse L. Lenker

King Piebe 28th was the best bull calf, the junior championship going to Triune Ormsby Piebe 27th, his older stablemate.

Kismet Fayne of Valley View won the blue in the aged cow class for Pinery Farms; Yates farm being second and third and Kellogg fourth. Dorothy Ormsby Piebe was the first prize three-year-old with Canary Johanna Posch of the Yates string second. Yates Farm, however, captured the blue in the two-year-old class with Pledge Segis Lyons, winning over Piebe Artis Burke. Model Cornucopia Ona won the blue in the senior yearling division for Pinery Farms, Miss De Kol Piebe was the first prize junior yearling and Neola Piebe Annie first prize heifer calf.

Haeger gave the junior championship to the younger Hargrove and Arnold female.

The group competitions were all won by Hargrove & Arnold with two exceptions, Yates Farm had the best four cows over three-years-old and the best exhibitor's herd, Hargrove & Arnold being second each time. The Iowa firm also carried off the premium for largest and best exhibit.

EASTERN STATES EXPOSITION

Holsteins to the number of 144 were shown at the Eastern States Exposition. Far Oaks Sir Homestead Darkness, the handsome Connecticut Reformatory bull, beat out King Pietertje Ormsby Piebe Jewel and King Pietertje Jewel Korndyke as well as last year's National Dairy Show champion, McKinley Pietertje Beets, the latter being in fourth place with the Pinery Farm bull third, his first defeat this year. The winner was lame at last year's National and so was not in the money. He repeated his triumphs here of a year ago by annexing the senior and grand championships. King Pietertje Ormsby Piebe 36th, owned by Waldo S. Kellogg of Derby, Conn., was the first prize two-year-old bull and was made reserve grand champion. Triune Ormsby Piebe 27th, of the Hargrove & Arnold string met with stiff competition in the yearling class, there being little to choose between him and Summit Sir Aaggie of the Summit Lumber Co. King Piebe 28th was the best bull calf with junior championship going to his older stablemate.

It was expected that Kismet Fayne of Valley View would win in the aged cow class for the Pinery Farms but Judge Moscrip gave the blue ribbon to Maggie Ormsby Butter Girl, owned by Amos D. Bridges Sons, Inc. Hazardville, Conn. She was better at the shoulders. First prize in the four-year-old class went to Mt. Hermon Colantha Phyllis of the Mt. Hermon School, Hargrove & Arnold being second and third. Dorothy Ormsby Piebe won easily over Sarah Ormsby Colantha, of the Bridgeport City Farms and again annexed the senior and grand championships. Knowles won in the milking two-year-old class with Sylvia Rosewood.

The cows and heifers in this herd are bred to a son of KING SEGIS PONTIAC KONIGEN and DUTCHLAND PIETERTJE BEAUTY, an A.R.O. granddaughter of DUTCHLAND SIR PIETERTJE HENGELVELD and BEAUTY PIETERTJE BUTTER KING.

The first twenty-two sisters of my bull, tested for a year, average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision latest test CLEAN. Prices Reasonable.

RAYMOND D. STRICKLAND,
Susquehanna Co., R. D., NICHOLSON, PA.

Piebe Artis Burke was first in dry two-year-olds. Bell Hill Mugget, owned by C. P. Farrand, Washington, Conn., was the first prize senior yearling with Mt. Hermon Clarissa first prize junior yearling. The Knowles herd took the first three prizes in the heifer calf class, the winner being Pearl of Highlawn, a daughter of Pearl Asiatic, shown with signal success by Mr. Knowles in former years. This beautiful heifer was made junior champion. Ormsby Holingen Mechthilde of Pinery Farms won first in the senior class for Advanced Registry cows, Kismet Fayne of Valley View taking first in junior division.

Hargrove & Arnold was first and sixth for graded herd, Knowles being second and Mt. Hermon School third and fourth, the young herd prize was won by Hargrove & Arnold with Knowles second and Summit Lumber Co. third. The Mt. Hermon school won the blue for dairy herd with Hargrove & Arnold second and Knowles third. The get of sire competition brought out a strong class, Hargrove & Arnold winning first on the offspring of King Pietertje Ormsby Piebe and fourth on get of King Piebe. The progeny of Overhill Cornucopia won second for Knowles and Mt. Hermon School was third with offspring of Colantha Sir Walker Korndyke. Mt. Hermon School won first in produce of dam with offspring of Miss Gladice Butter Boy.

Competition for state herds were limited to Connecticut, Massachusetts and Ohio, and the prizes were awarded in this order.

WINNING SHOW HERD FROM SOUTH DAKOTA STATE COLLEGE

Winning four firsts, one senior and grand championship, a second and a third, the first dairy cattle show herd ever sent outside the state by the South Dakota State College made a fine showing at the Tri-state Fair held at Sioux City the week of Sept. 14 to 20.

Sir Aaggie Colantha Korndyke, the five year old Holstein herd sire, captured the highest honors of the show when he was awarded the senior and grand champion ribbons following a victory in his class. In the two year old female Holstein class, the college entry, Happy Home Daisy Johanna, won the blue ribbon.

In the Jersey classes, Ralijh's Toga Lady won first as a two year old and Gipsy's Golden Fairy won the three year old class. In the aged female Holstein class, the two college entries placed second and third. Only one of the seven animals comprising the show herd failed to place.

Sir Aaggie, the grand champion, has a fine body, a faultless top line, and the kind of a rump that all Holstein breeders admire. His head and neck carry the desired masculinity, yet are free from coarseness. With his great body and length, he

carries a symmetry and style rarely seen in an aged bull. This bull has never been shown in the ring before this year but his ancestry's records are not devoid of show ring victories. Sir Aaggie has production as well as type to back him. His seven nearest dams average 29.9 pounds of butter in seven days. His two nearest dams average 34.95 pounds of butter in seven days. The granddam on the sire's side has a seven

SIR AAGGIE COLANTHA KORNDYKE

First prize aged bull, senior and grand champion at the South Dakota State Fair and the Tri-state Fair held at Sioux Falls, Iowa; second in aged class at Dairy Cattle Congress.

day record of 41.26 pounds of butter, and a yearly record of 1,263.03 pounds of butter and 25,303 pounds of milk.

ILLINOIS STATE FAIR

Axel Hansen placed the awards at the Illinois State Fair and passed upon some splendid animals, particularly the two dairy queens, Madam Artis Wayne Denver and Zwingara Segis Colantha. This was the first time these two cows came together. Zwingara won in the aged cow class and the Madam in the three-year-old class but when they showed for senior and grand championship, Mr. Hansen gave it to the white cow who has not been defeated this year. Zwingara is smaller than the Madam but is every inch a dairy cow.

Bulls three years and upwards competed in the aged class, Johanna Rag Apple Pabst beating out North Star Joe Homestead with Corwin Wimple De Kol Ormsby third. They are three great bulls but we think the judge's decision was correct. Whitehurst Colantha Artis Lad, owned by A. F. Randolph was the only competitor in the two-year-old class. He is a very fine animal. Woodcraft Pontiac Champion Star of the Wood-

men herd won the blue over King Mutual Fan of the Jefferson County Asylum Herd in the yearling class, while King Richmond Pontiac, owned by Christ & Hackbarth was the first prize senior bull calf. He is a nice calf but the Woodmen bull was made junior champion. The senior and grand championships went to Johanna Rag Apple Pabst.

Randolph had the first prize two-year-old in Colantha Ormsby Artis Lass; Jefferson County Asylum had the first prize yearling in Johanna Wayne Rue 2d and had also the third and fourth prize winners. Whitehurst Artis Colantha being second. The first prize junior yearling was Lady Climax Minita Homestead owned by Carl E. Randolph while Monclova Prilly Royalton of the Monclova herd won the blue in the heifer class division for Ohio. The junior championship was given to Johanna Wayne Rue 2d.

Jefferson County Asylum had the first prize dairy herd, the Woodmen won first in the graded herd competition, Jefferson County Asylum carried off the blue for yearling herd but Monclova Farms won place of honor in the calf herd with Jefferson second and the Woodmen third.

First prize for get of sire went to Randolph and also for produce of cow, Jefferson being second in each instance.

HE DIDN'T FIND OUT

A very inquisitive man, seated at dinner beside a girl in evening dress which displayed her arms and shoulders to excellent advantage, was surprised when she remarked:

"I was vaccinated yesterday, and still feel the effects of it."

The man studied her smooth, shapely arms for a moment, and then asked:

"Where were you vaccinated?"

"In Boston," was the demure and smiling answer.—*Capper's Weekly.*

GENTLY HINTED

A friend of Sam Johnson's met Sam, drowned in gloom, leaving his girl's house.

"What's the matter, Sam?" he asked. "Did yo' girl turn yo' down?"

"No," replied Sam. "Not prezackly she ain't, but Ah's afeard she's gwine to."

"Well, don't get discouraged so easy. Why is yo' afeard she's gwine to?"

"She done married Zack Egg yestiddy."—*American Legion.*

"How's your wife, Blinks?" asked Jinks.

"Her head troubles her a good deal," confessed Blinks.

"Neuralgia?"

"No," answered Blinks sadly, "she wants a new hat."

AMERICAN DAIRY FEDERATION

The first annual banquet of the American Dairy Federation was held during the National Dairy Show. A letter from President Coolidge to the Chairman was read in which he said, "Because the dairy industry had enlisted the best abilities and adopted the methods which specialized experience and scientific investigation have demonstrated, it had come to be one of the most prosperous and stable branches of agriculture."

At the delegate meeting Secretary Loomis reported that only a partial vote had been recorded on the Ice Cream Standard referendum and so this was referred back to the Executive Committee. A special committee, of which Vice-President John D. Miller is chairman, was appointed to propose amendments to the By-Laws on the subject of referendum and voting. The Executive Committee was instructed to take active steps to aid the International Institute of Agriculture in arranging for an international agricultural census.

The banquet was held on Wednesday evening. There was a large attendance with President Lowden in the chair. An address of welcome was given by former Governor Phillip, now president of the Milwaukee Association of Commerce. Secretary of Commerce Hoover spoke on Agricultural coöperation. Vice-President Frankel, of the Metropolitan Life Insurance Company, advocated that the dairy industry informed the world of the valuable properties of dairy products. Dean Russell, of the Wisconsin State College of Agriculture, pleaded for recognition of the fundamental business importance of dairying and urged the necessity for greater efficiency and higher quality. Governor Blaine, on behalf of the State of Wisconsin, expressed appreciation of the honor of entertaining the National Dairy Show and the American Dairy Federation.

TROUBLE IN CO-OPERATIVE ASSOCIATION

George A. Little, a dairyman of Nashville, Tenn., joined the Davidson County Milk Producers' Association and signed a contract agreeing to let that association market the milk produced on his farm. About the first of September, officers of the Association brought suit against Mr. Little, alleging that he had broken his contract. In return Mr. Little brought suit against the Association. He alleges that through mismanagement and extravagant methods, the Davidson County Milk Producers' Association was approximately \$20,000 behind in its payments to its members for milk marketed through it and, in his petition, asked that a receiver be appointed to make a thorough accounting of the books of the association to ascertain what amounts are due to the members and to pay such members, all or as large a proportion of the money due them as can be realized from the property of the said association.

MANUFACTURED MILK MARKETS

A decided improvement was shown in the condensed and evaporated milk markets during the months of August and September. Goods moved freely for both home consumption and for export. The July exports were about three million pounds heavier than they were during the same month of last year, Germany alone taking 2,966,100 lb. of evaporated. With the seasonable increase in production and a slight increased demand, the outlook at the end of September was better than manufacturers have faced for several months. Milk production in condensed territory seems to be running heavier than last year but advantage has been taken of every opportunity to divert milk into other channels.

Fluid milk markets have taken some of this and although butter markets have been unsettled, some condenseries have been skimming some of their receipts and churning their cream.

While there is some difference in demand reported in different places, the opinion seems to be that on the whole demand has increased. There is very little talk regarding export trade, aside from the regular business. Some relief work is still being done. Exports during August totaled 15,900,000 lb., an increase over July of 2,300,000 lb. and also greater than August of last year by more than 4,500,000 lb. Total exports for the first eight months of this year were 137,350,000 lb. as compared with 110,320,000 lb. last year.

The report of September 1 stocks shows a total of condensed and evaporated combined amounting to 241,709,000 lb. This represents a drop of forty million pounds under August 1 and, from the standpoint of statistics alone, the August clearance compares favorably with previous years. As a matter of comparison it may be of interest to note that during August 1923, stocks increased instead of decreased, approximately thirty-three million pounds piling up during the month; in 1922, there was a decrease of 3,500,000 lb.; in 1921 a heavy decrease of fifty-five million pounds; while in 1920 there was a change in the other direction of thirty-four million pounds. September 1 stocks these years were as follows:

1920.....	266,256,000 lb.
1921.....	149,700,000 lb.
1922.....	158,369,000 lb.
1923.....	227,826,000 lb.
1924.....	241,709,000 lb.

The immediate outlook so far as canned milk is concerned shows some improvement but dairy markets in general are entering the fall season with heavy surpluses. September 1 holdings of butter in storage were 156,232,000 lb. an increase of 52% over September 1, 1923. American cheese holdings at 76,431,000 lb. also represented an increase over last year.

amounting to 20%. The increase on condensed and evaporated milk stocks September 1 over 1923 was 7%.

During July the United Kingdom were the largest buyers of powdered milk taking 50,220 lb., while France took 42,157 lb. and Japan 27,700 lb. Germany was by far our best customer during August, taking 234,157 lb., Japan being second with 57,819 lb. and Panama was third with 22,069 lb. While July exports were only 177,808 lb., approximately 58,000 less than they were a year ago, August exports far exceeded those of last year, the total being 444,799 lb. against 99,138 lb.

The exports for the first eight months of the current year were more than 550,000 in excess of those during the corresponding period of 1923.

FOR COOPERATIVES

A coöperative association is safe only so long as it enjoys the absolute confidence of its supporters. Hence it is up to the managers of the association to act always in a manner to inspire confidence and do nothing at any time that is open to suspicion and therefore conducive to the destruction of confidence.

Certain obligations also devolve upon the members of an association, if confidence is to be preserved. Members should never be guilty of perpetuating unfounded rumors concerning the association; nor should they be hasty in their interpretation of the acts of their association officers and speak disparagingly of them. If there is reason to question the acts of officers or if rumor gives rise to doubt, the right and decent thing to do is to seek the facts. And the best way to get facts is to ask for them—to speak frankly one's desires and to ask directly for definite replies. If the facts thus secured do not satisfy, then the next step is to make an effort to correct the conditions within the association which make it possible, or necessary, as the case may be, for the officers to again do those things which have given rise to question or doubt. This is the way to correct evils. The way to perpetuate evil is to indulge in gossip.

Frankness—plain speaking, constructive criticism, fearless questioning, if it appears to be justified—that is the way to help a coöperative to live. If you want to kill it, never speak about it except in a whisper; join with the town loafers in their destructive chatter, and never seek the facts. Such methods mean sure death to any coöperative.

Speak out, if you have doubts about any farmers' coöperative. Let us be frank. Let us get the facts. Let us maintain absolute confidence. There is no other way to success.—*Utah Farmer.*

Bill (teaching her to drive)—In case of emergency, the first thing you want to do is put on the brake.

CONNECTICUT PURE BRED BULL CAMPAIGN ENJOYS SUCCESSFUL YEAR

ARTHUR R. MERRILL, DAIRY SPECIALIST IN CHARGE
The Pure Bred Bull Campaign inaugurated last October in five of the counties of Connecticut has just rounded out a rather successful year's work. This campaign was put on with the idea of eliminating, as far as possible, the scrub bulls that are so much in evidence in this state.

In order that accurate information might be available, surveys were put on in New London, Windham, Middlesex and Tolland Counties. These surveys showed that over half of the bulls in use in these counties were scrubs.

Connecticut has been looked upon as a milk state and few people have ever considered that the raising of calves amounted to anything. The surveys showed that the number of heifers raised annually, in these five counties, ran from 1,150 to 2,700. Still more startling was the fact that at least half of these heifers were sired by scrub bulls.

Connecticut has been importing, in round numbers, about 7,500 cows annually. These cows have not been of a type that has tended to increase the milk production of the state which averages 4,242 pounds per cow.

Considering the number of cows brought into the state, annually, and also taking into consideration the number of heifer calves raised it seemed self evident that the only way to increase the average production of our herds must be by some constructive breeding plan. Since there were so many calves being raised it seemed feasible to believe that the place to start for better production would be through better breeding methods. Naturally the first step would be by the use of pure bred bulls.

Preliminary to this better bull campaign Mr. H. F. Johnson, at that time County Agent for New London County, had during the winter of 1923, carried on a dairy survey to determine the standard of dairying in that county. This survey paved the way, so to speak, for the surveys that were made in the other counties later on. In addition he had, with very little work, placed eighteen purebred bulls. This work seemed so much worth while that at the Extension Conference, held at Storrs, in October 1924, it was decided to put on a campaign for better bulls in the above named counties. Since this was distinctly a dairyman's problem it seemed only reasonable that the parties interested, namely the dairymen themselves, should play an important part in the work to be done. In order that this be brought about systematically the following method for carrying on the work was decided upon. The first step was to secure the approval of the Farm Bureau Directors who appointed a Farm Bureau Dairy Committee. This committee working with the County Agent appointed a County Campaign Committee made up of one member from

each town who was to act as chairman of a town committee to be appointed from each town. These town Committees made surveys of the dairy interests in their respective towns, securing information as to the number of cows and heifers, number of heifer calves raised yearly, and the number of purebred or scrub bulls kept on each farm. After this information had been secured a town meeting of this committee was called, at which time, the information gathered, supplemented with figures taken from Dairy Commissioner Holt's office were discussed. General plans for the carrying on of the campaign were taken up. These plans included the sending out of publicity notes regarding the purpose of the work and stories of actual results obtained, where purebred bulls had been used on grade cows, were written up by Walter Stemmons, Agricultural Editor for the Connecticut Agricultural College.

Cooperative work was taken up with the different breed Organizations, who sent representatives to assist at public meetings, these representatives also assist the County Agent and Town Committees in visiting owners of scrub bulls.

Public meetings were held in different towns throughout the counties and much publicity was given regarding the value of pure bred bulls. The different towns and county publications assisted in this work by printing reports of the meetings and giving other information regarding the work from time to time.

While the campaign has been under way for approximately a year this does not mean that all of the time has been devoted to the bull campaign alone. The County Agent of New London County has made this work the major work of the year and has probably spent about 40% of his time on the campaign. The other County Agents in counties where the work has been going on have spent from 10% to 15% of their time on the campaign. The Extension Animal Husbandman and Dairy Specialist have also given part of their time to the carrying on of the work.

The actual responsibility of the campaign has been taken by the individual County Agents who have been ably assisted by their county and town committees.

There are still many scrub bull owners to be visited in all of these counties, in fact not over half of the scrub bull owners in New Haven, Windham and Tolland Counties have been visited to date.

Up to October 1, 1924, two hundred and fifty three purebred bulls have been placed in these five counties, most of these have replaced scrub bulls.

Probably the most intensive work has been done in New London County. The work in this county has been rather remarkable and has set the record for all county work in the United States. Since the work started a year ago one hundred and twelve purebred bulls have been placed in this one county alone. No other counties in the United States with

Letters to the Editor

Eaton, N. Y., Sept. 29, 1924.
Holstein Breeder and Dairyman,
Harrisburg, Penna.
Gentlemen:

A year ago I ordered 12 Milk Report Sheets for 50 cents. I am now about to begin my last one and they are fine, the best record sheet I ever used.

I have a dairy of 24 head and will milk 19 this next month. They are all Registered Holsteins and all Accredited and I am some proud of them.

Inclosed please find check of fifty cents for 12 more blanks, the same size 25 cows.

Yours respectfully,
EARLE S. MORTON.

PICNICKERS HEAR POLITICS

Candidates of several parties made speeches to those attending the picnic of the Wood County Farm Federation and Vesper Holstein and Guernsey Clubs which was held at Rokus Grove, Wis., early in August. There were more than 500 present. Talks were made by Barney Sheridan, President of the Fond du Lac County Farm Bureau; A. P. Bean, President of the Wood County Farm Bureau; and Professor A. O. Collantine, of Madison. John Tempas was director in charge. Casper Huser, one of the leading Holstein breeders of Vesper, has concocted a number of new milk drinks which were served at a milk bar.

Spring Mills, Allegany Co., N. Y.

the exception of two have ever reached any where near this mark. Blue Earth County, Minnesota placed 106 bulls and a California county placed 104.

The work in this county was directed by Walter T. Clark the present County Agent and he was assisted by John A. Simms, Extension Animal Husbandman. These two men with the assistance of their various committeemen have put across a piece of work that should receive great credit. This county is by no means an outstanding dairy county, consequently the work accomplished is still more noteworthy. These men have been able to show the value of better breeding and the dairymen have profited by their advice.

In all of the work on this campaign it has been up to the individual committeemen to help put the work across. Public spirit has done the work. No paid sales agents have ever been employed, but the actual work has been carried on by enthusiastic dairymen.

In order to help would-be purchasers, different breeders and associations were requested to list available bulls that they have had for sale. The value of production has been emphasized. The minimum limits for production have been set as follows. Holsteins 12,000 pounds, Ayrshires 11,000 pounds, Guernseys 10,000 pounds and Jerseys 9,000 pounds.

Only bulls from dams having such records of production have been recommended.

The actual buying of all bulls has been left to the individual farmer himself, although the representatives of the College Extension Service and the County Agent have given advice, as requested, and have assisted in finding available bulls. The work has been so satisfactory that it will be continued for another year.

Windham, New Haven and Tolland Counties have not been worked to any great extent and the campaign will still be carried on in these counties. In addition Fairfield County will be surveyed and work started there early in November.

Just what this work will mean to the future dairying of Connecticut is hard to say, but it cannot take a great deal of imagination to predict a decided improvement in the dairy industry. Not only should the production per cow be increased but there should be a decided stimulus in all dairy work, since good stock always begets good care and management. There is nothing that is of more value to a dairyman than his pride in good live stock.

Connecticut has started well on the road to successful dairying by the step just inaugurated and it is not hard to believe that 500 purebred bulls will have been placed by the end of another year.

He (ardently)—"Have you never met a man whose touch seemed to thrill every fiber of your being?"
She—"Oh, yes, once—a dentist."

LAST CALL

Consignment Sale of the Montgomery County Holstein Breeders at Rockville, Md., October 29th.

COMING SOUTHERN PENNSYLVANIA SALE

On November 11th at Chambersburg, Pennsylvania, the oldest accredited herd in Franklin County will be dispersed at public auction. This herd is owned by M. W. Hoch.

The Hock Dale herd is headed by Westtown Major Korndyke. His sire, Fairview Klaver Korndyke, is from a 30-lb. daughter of Pontiac Korndyke and carries a large percentage of the blood of this great sire. His dam, Clyde Queen Burke, has an official record of 510.8 lb. milk, 26.28 lb. butter, made in seven days as a six-year-old and a thirty day record of 2,363.3 lb. milk, 103.50 lb. butter made as a seven-year-old.

Westtown Major Korndyke has a number of good daughters that have won high honors at some of the leading fairs in this part of the country.

Hock Dale Farm is situated between Chambersburg and Greencastle, Pennsylvania, and the herd contains five cows, fresh or soon to freshen, and a number of splendidly bred heifers. This herd is noted for individuality and the sire himself is a prize winner.

As the Hock Dale herd is small, there are a number of consignments from nearby Accredited herds.

H. W. Small & Sons have one of the oldest herds in that part of the country and most of their cattle are descendants of King of the Pontiacs. Animals from this herd have been shown with a considerable degree of success. The cows are large and good milkers and also good testers.

There are four animals from the S. R. Miller herd and this statement alone indicates that they will be good animals. One large six-year-old cow will freshen in December by Blood Royal, whose dam is a 28-lb. cow and who has splendid

HERDSIRE FOR SALE THREE-YEAR-OLD SON OF KING OF THE ORMSBYS

KING ORMSBY CRIJNTJE is 3 years old, a good individual and guaranteed sound in every way.

His sire is King of the Ormsbys, Winterthur Farms' senior sire, a son of Sir P. O. M. and Spring Brook Bess Burke 2d.

His dam, a 30-lb. daughter of Pietertje Hengerveld Segis, produced 971 lb. butter, 21,627 lb. milk in a year as a four-year-old.

We are selling "King" because we are discontinuing the breeding of purebred Holsteins.

Write for pedigree, price, etc., or better still, come and see him.

Allendale Farms, Inc., Williamsport, Pa.

A Pair For \$100**Bull born Dec. 26, 1923**

Dam is a daughter of King Pontiac Jupiter, a son of King of the Pontiacs from a good daughter of Hengerveld De Kol.

Heifer born Dec. 3, 1923

Dam is an A.R.O. daughter of King Pontiac Jupiter and from a record cow with three tested daughters.

Calves sired by Maple Grove Ybma Glista, whose dam produced 27 lb. butter, 641.3 lb. milk in seven days. His sire is from a 34 lb. Glista cow and was by a noted show bull.

This herd is Accredited and the calves as well as the price, are right.

Maple Grove Stock Farm

F. JONES, Mgr.
R. D. 4 CENTERVILLE, PA.

breeding. A two-year-old granddaughter of King Segis Pontiac Konigen, formerly at the head of the Dutchland herd, is due to freshen in January by the Miller herd sire, Balsam Veeman Valdessa Pontiac. His dam as a five year old made a seven day record of 36.64 lb. butter with an average test of 5.4%. The sire's dam is a 38 lb. daughter of Valdessa Scott, first cow to make over 40 lb. butter in seven days.

Mr. Miller also sends a well-grown two-year-old, bred to his herdsire and a son of his bull from one of his best cows.

Charles Snively is only sending one cow. She is a good, big animal and a creditable representative of this well-known, high class accredited herd.

As an added inducement, Mr. Hock is allowing four months time to purchasers who will bring the proper references. The sale will be staged Tuesday, November 11th, beginning at 12:30 P. M.

RESULTS OF THE HELP SHORTAGE

Claire Cobb, owner of Millspring Farm, Spring Mills, N. Y., has been breeding purebred Holsteins for about twenty years. He reports that help is more difficult to obtain than it has been at any time during the past two decades and on that account he intends to sell his present herd which consists of fifty heads of well-bred, tuberculin tested, purebred Holsteins.

Allegany County has a splendid reputation for the health as well as for the producing capacity of its animals, and Mr. Cobb's herd has more than a local reputation for both production and type.

LENKERBROOK SALE CALLED OFF

It was planned to hold a dispersal sale of the Lenkerbrook herds of purebred Holsteins and Guernseys on December 11, but owing to new arrangements the sale is indefinitely postponed as told in the advertisement appearing in another column. These two herds owned by the brothers, Wm. D. and Dr. Jesse L. Lenker, were the first two accredited herds in Dauphin County.

Pennsylvania breeders in particular will be pleased to learn that it is not proposed to break up these herds. Dr. Lenker is one of the leading Harrisburg physicians. His brother, William D., attends to the work on the farm and the two make up a splendid team. Milk from Lenkerbrook is in great request in Harrisburg as a food for invalids and children and commands the highest price of any milk sold in the capital city of Pennsylvania.

COMING MARYLAND SALE

On October 29, at Rockville, Md., will be held the second consignment sale of the Montgomery County Holstein breeders. In the sale will be both grades and purebreds and Mr. W. C. Snarr, who is in charge, says that high producing, fresh cows have been selected as well as a few heifers and bulls that are of a quality that will please the buyers. As to the type of these animals, we need only say that County Agent Snarr trained the two teams of Maryland boys who so signally distinguished themselves in the international competitions and brought to this country the Daily Mail grand championship cup.

LANCASTER BUYS HOLSTEIN MILK

J. Lloyd Harnish of New Danville, Pa., has a purebred Holstein herd, the product of which is marketed at retail as grade A milk in the near-by city of Lancaster, and for which there is a big and rapidly growing demand.

The Harnish herd is under state and federal supervision and contains thirty-

one cows and heifers. One member of the herd, Aaba Ormsby, has averaged 1,534 lb. milk, 45 lb. butterfat during the past six months as shown by cow testing association records.

At the head of the herd stands the fine young bull, Lantoga Segis Lad. His sire was a son of Sir Aaggie Mead De Kol and his dam is a descendant of King Segis.

M. W. HOCH DISPERSAL SALE

The oldest Accredited Herd in Franklin County. 25 Registered Holsteins all to be sold.

TUESDAY, NOV. 11, AT 12.30 O'CLOCK

Hoch Dale Farm is between Chambersburg and Greencastle, Pa.

Hoch Dale Herd, sire a 26.27 lb. bull and grandson of Rag Apple Korndyke 8th, a show bull in every sense of the word, a prize winner, 5 cows fresh or soon fresh; 4 heifers, all royally bred.

Also consignments from the Accredited Herds of H. W. Small & Son, 7 heifers; Chas. Snively, 1 cow; J. B. & Frank Keller, 2 cows and 1 heifer; S. R. Miller, 1 cow, 1 bull, and 2 heifers.

This is the best lot of Holsteins that will be sold this fall.

Terms, 4 months time.

Cow Testing Association Reports

SOUTH CAROLINA TESTING

Princess Nell Ormsby, owned by V. M. Montgomery of Spartanburg, S. C., led the list of cows tested in South Carolina during August by producing 72.3 lb. butterfat, 1,713 lb. milk. This represents only twenty-six days' production.

Mr. Montgomery has four cows on the list of the leading ten; in fact, he has the only Holstein cows reported in that list. O. K. L. Aaggie is in fourth place with 64.8 lb. fat, 2,006 lb. milk in her ninth lactation month. Star Segis Pontiac Superior is next to her with 63.2 lb. fat, 1,416 lb. milk and Cedardale Alice Korndyke Posch is credited with 60.8 lb. fat, 1,801 lb. milk. Polly Korndyke Posch, a junior two-year-old heifer in this herd produced 49.2 lb. fat, 1,500 lb. milk in her fifth lactation month.

GOODVILLE ASSOCIATION REPORT

Tilda, a purebred Holstein, owned by Mast Stoltzfus of Morgantown, Pa., led the Goodville Testing Association for the month ending September 15, by the production of 61.7 lb. fat, 1,763 lb. milk. Tilda is followed by five grade Holsteins, one of which is also from the Stoltzfus herd. A grade Jersey is in seventh place, then Marion, a purebred of the Stoltzfus herd follows with 44.1 lb. fat and two grade Holsteins made up the ten highest fat producers of which nine are black and white cows.

The tester, Luke W. Martin, had eleven herds containing 112 cows under his jurisdiction. During the testing month eighteen cows exceeded 40 lb. fat and four produced over 50 lb. while nineteen cows made 1,200 or more lbs. of milk.

PENNSYLVANIA TESTING

Registered Holsteins made a splendid showing in test association work in Pennsylvania. According to the September News Letter the two highest fat producers and the three highest milk producers were purebred black and white cows. O. D. Smith of Meadville had the leader for milk, she producing 2,443 lb. The Rouse Hospital had one with 2,173 lb. A cow owned by the Sacona Farm produced 2,074 lb. Albert S. Sarig, Bowers, owns a purebred with 84.4 lb. fat. C. M. Potter of Crawford County had one with 82.7 lb. and a Jersey was third with 81.3 lb.

Twenty-six associations report August production. There were 518 cows exceeding 40 lb. of fat, 133 exceeding 50 lb. and 379 cows produced 1,200 or more of milk.

SOUTH DAKOTA TESTING

Dakota Byronia Brookings again heads the list of cows tested in South Dakota during the month of September, she producing 2,262 lb. milk, 76.91 lb. butterfat. This cow is owned by the State Penitentiary and is enrolled in the Sioux Falls Association.

The highest averaging herd consisted of 10 grade and purebred Holsteins, owned by A. J. Brandriet of Watertown, and their average was 35.68 lb. butterfat.

A purebred Holstein belonging to F. J. Harder of Chester Association produced the largest income over cost of feed. The gross income amounted to \$17.40. She was charged with a feed cost of \$1.61 for a ration of 180 pounds of corn fodder and was pastured on sweet

clover. After this deduction her net income was \$15.79.

Out of every 2,347 cows tested for production by the nine cow testing associations reporting for the month of September, 66 failed to return an income equal to the cost of their food. There were 67 cows producing in excess of 40 lb. of butterfat for the month, 118 producing more than 1,000 pounds of milk, and 28 herds averaging more than 25 lb. of butterfat per cow. The reports cover tests made in 208 herds.

According to the testers reports the average price of butterfat for September was 34 cents, about the same as for August. The South Dakota State College says the prospects are not bright for a price advance in the near future, therefore this seems to be a poor time to expand the dairy business but a very opportune time to eliminate low producers and make the best possible use of more efficient producers.

POSITIONS VACANT

Pennsylvania State College reports a shortage of testers. In August 14 of the 17 men attending the testers short course were considered qualified to handle the association work and positions were secured for all of them. Another course will be staged at the college October 20th-25th. The only expense is board, room and traveling expenses. Tuition is free. Write the college and they will be pleased to send you an outline of the course. More men are needed to handle the association work, starting November and December.

Some people advertise their education by their ability to listen.

GRADE AND PUREBRED DIVIDE HONORS

A purebred Holstein owned by J. L. Wood and Sons of Red Hill, Pa., leads the Montgomery County Cow Testing Association for the month of September by producing 1,324 lb. milk. In August she was the highest butterfat producer. Her place is taken this month by a grade Holstein owned by Owen Gerhart of Palm, 67 lb. butterfat, 1,242 lb. milk. The second highest milk producer was a purebred Holstein owned by H. D. Allebach, Trappe, Pa., with 1,266 lb. milk. Seven of the ten highest butterfat producers for September were black and white cows. The Wood herd, consisting of 15 purebreds, led for milk production with an average of 82.6 lb. and they were the highest herd consisting of ten or more cows, their fat average being 27.62 lb.

During September 26 herds containing 255 cows in milk were tested in Montgomery County by Carl A. Sager. His report shows that 13 cows each produced over 40 lb. fat, two exceeding 50 lb. and seven produced 1,200 or more lb. milk.

C. A. Wismer and Son, Vincent Alderfer and James Wood recently took a trip through Susquehanna County and purchased a car of purebred Holstein cows from tuberculin tested herds. Susquehanna County is noted for the quality of its cows and the Montgomery breeders secured some good ones.

WISCONSIN TESTING

Two grade Holsteins owned by Casper Klunke led the West Bend Testing Association during September, the leader being credited with 1,497 lb. milk, 65.9 lb. fat and her stablemate with 1,380 lb. milk, 55.2 lb. fat. A registered Holstein owned by Peter Schuman was third with 53.2 lb. fat, 1,296 lb. milk.

Mr. Klunke owned the high herd, his animals averaging 1,008 lb. milk, 42.62 lb. fat while Mr. Schuman's herd was next with 1,083 lb. milk, 39.88 lb. fat.

The tester, Willard Hansen, reports that there were 354 cows tested, thirty of which produced more than 1,000 lb. milk and twenty-two exceeded 40 lb. butterfat in the month.

A purebred herd of twelve black and whites, owned by Paul Bast, Rockfield, Wis., ties with the twenty grade and purebred Holsteins owned by Mrs. Christ Bast, Sr., for high herd average in the Rockfield Testing Association for September. Mrs. Bast's herd produced 923 lb. milk, 34.4 lb. fat while Mr. Bast's herd produced 920 lb. milk, 34.4 lb. fat.

A grade Holstein is the leader of the Marshfield Testing Association for September, her production being 1,752 lb. milk, 63.1 lb. fat. She is owned by Mrs. B. Motl. The outstanding production was 1,530 lb. milk, 59.7 lb. fat made by a two-year-old grade Holstein heifer, owned by August Bubolz, reports L. A. Eggleston, tester.

A dollar is worth one hundred and six cents to a thrifty man.

ILLINOIS COW TESTING

A purebred Brown Swiss cow owned by Hawthorne Farm leads all the cows tested in Illinois during August and has to her credit 94.2 lb. fat, 2,297 lb. milk. Holsteins failed of their usual pre-eminence as they do not get any higher than third place which is taken by a grade owned by the St. Charles School for Boys. She is credited with 72.2 lb. fat and 2,034 lb. milk. The leading purebred Holstein is in fourth place with 72 lb. fat and 1,891 lb. milk. She is owned by J. A. Burr of St. Charles and is followed by another purebred owned by J. A. Rogers of Glenellyn with 70.5 lb. fat, 1,854 lb. milk.

The leading herd for average production consisted of sixteen purebred Holsteins owned by J. A. Burr of St. Charles and enrolled in the Kane County Association No. 3. The average production for this sixteen cow dairy was 40.2 lb. fat, 1,195 lb. milk. Nineteen purebreds owned by A. D. Cornue of Herbon are in fourth place with an average of 38.5 lb. fat, 1,011 lb. milk. Sixteen associations report production. Five of the leaders were purebred Holsteins and in five instances they were grade Holsteins, in at least seven associations the highest averaging herd consisted of black and white cows wholly or in part.

CANADIAN RECORDS

Canadian records reported during July and August include several large ones. Elmerest Ormsby Fayne, owned by W. H. Cherry of Hagersville, Ont., led the seven day list with 728.8 lb. milk, 38.11 lb. butter. Eco-Sylv Pietje Car Born, a junior four-year-old, has 750.9 lb. milk, 30.68 lb. butter to her credit and of the four heifers reported in this class, three were daughters of Champion Echo Sylvia Pontiac and are in the Hardy herd.

The 365 days division is headed by Bonnie Lyons Colantha, 24,112 lb. milk, 926.25 lb. butter. Her owner is Wm. H. Mogk, Tavistock, Ont. In Sub-Division B, Lottie Segis is reported with 15,056 lb. milk, 641.25 lb. butter.

In the 305 days division, Prilly Hartog Abbekerk is reported in Sub-Division B with 18,093 lb. milk, 752.50 lb. butter. Her owner is Archie Muir of Courtice, Ont.

A GOOD PRODUCER

Minnie Ophelia De Kol owned and developed by Fred R. Johnson of Seneca Falls, New York, has produced more than 8,100 lb. milk with an average fat percentage of 3.2 in four months on twice a day milking. She is only one of a number of good cows in the Johnson herd.

Newton's Food Flavors

The old style bottle extracts of our grandmothers' time have been replaced in the modern home by tube flavors, just as the kerosene lamp has been replaced by the electric light. Newton's food flavors are put up in tubes, the modern, up-to-date way of preparing extracts. They are more convenient; they cannot tip over and spill, they cannot break; they are dropped directly into the food instead of being measured out by the teaspoon. They are more sanitary, being put up in air-tight, light-tight tubes—they cannot spoil, they will keep indefinitely. They are much more economical, one 30 cent tube of Newton's food flavor lasting as long as 5 bottles of average alcoholic extract. We make 25 different flavors, every kind for which there is a demand:

ALMOND	CLOVE	PISTACHIO
ALLSPICE	GINGER	RASPBERRY
BANANA	LEMON	ROSE
CELERY	MAPLE	SAGE
CHERRY	MIXED SPICE	SPEARMINT
CINNAMON	NECTAR	STRAWBERRY
PEPPERMINT	NUTMEG	VANILLA
PINEAPPLE	ORANGE	WINTERGREEN
	ONION	

Family size tubes, 30 cents. Bakers' size tubes, 60 cents. (The bakers' size tubes contain about three and one-third times the quantity of flavor contained in the family size tube.) Mail your order today.

Box 930 Milwaukee, Wisconsin

MICHIGAN HOLSTEINS

are Healthy.

MICHIGAN HOLSTEINS

are persistent producers

From this herd you can obtain Heifers sired by a 34-lb. bull from daughters of a 30-lb. bull and bred to a bull whose dam produced 35 lb. butter in 7 days.

Can sell one female or a carload, and a few real good bulls.

DAVID FALCONER

Scottville, - - Michigan.

FEED PRICES GOING DOWN

In his monthly news letter under date of September 25, the supervisor of the New York State Dairy Improvement Association says that a comparison of prices on September 22 with those of the month previous, indicates that in the time covered nearly all feeds reached a high point and have begun to decline. All are lower except barley which has advanced \$2.40 a ton and gluten meal, which has gone up forty cents. The reasons are said to be improvement in general crop prospects together with the refusal of eastern dairymen to purchase while feeds were high and pastures good.

Where all feeds are purchased, a grain mixture consisting of 300 lb. middlings, 200 lb. bran, 200 lb. hominy, 200 lb. cottonseed meal, and 100 lb. oil meal are recommended. The cost of one ton would be \$40.54. This mixture contains 18% digestible protein. Until silage is fed, the proportion of oil meal and cottonseed meal should be 200 and 100 respectively, especially if farm raised oats or barley are used in place of bran and hominy. The present price of these two farm raised grains are such that buying is not advised.

Liberal feeding of springers is advised, as reserve energy stored up before calving pays big dividends afterwards. Such cows should be fed six to eight pounds of a medium grain mixture and an abundance of legume hay. The margin between the cost of production and the sale price is so narrow that it is futile to feed high priced feeds to a run down cow which calved in poor condition and expect to make dairying pay.

JEFFERSON LEADS THE STATE

Jefferson is the first Pennsylvania county to have all cattle tested for tuberculosis and has been recommended to the United States Department of Agriculture as eligible to a place in the Modified Area class in which there are now forty counties in different parts of the United States. In order to be placed in this class, a county must have tested all cattle within its boundaries. The work was started in January, 1924, when 10,797 of the 11,406 cattle were given the test. At that time sixty-eight reactors were found. During May and September, the remaining herds were tested.

In two other counties of Pennsylvania, Mercer and Crawford, all except a fraction of one per cent of the herds, have already been tested.

WANTED—HIGH CLASS DAIRY FARM WORKING MANAGER. One who can put the balance on the right side of ledger; everything to do with and up-to-date; 60 head Holstein-Friesian cattle, certified milk, testing, also chickens and apple orchard. Must board help. Enclose references, salary wanted, size of family in first letter or no attention. P. O. Box 793, Springfield, Mass.

The Ku Klux is a night shirt with a lighted match looking for a gas leak.

WOOD'S HERD IS IMPROVING

The purebred Holstein herd of twenty-two cows owned by H. M. Wood, of Delavan, Ill., stood highest for the past year in the McLean County Dairy Improvement Association, the average production per cow was 12,336 lb. milk, 425.1 lb. butterfat. The animals were cared for and fed by Floyd Washbon.

The highest producing cow in the association was Zozo De Kol Pontiac, a four-year-old owned by Mr. Wood. Her record was 17,458 lb. milk, 699 lb. butterfat, valued at \$349.47. Her feed consisted of 10,466 lb. corn silage, 2,732 lb. alfalfa hay, 2,443 lb. corn and cob meal, 1,243 lb. ground oats, 513 lb. bran, 1,318 lb. commercial dairy feed and seven months on bluegrass pasture. The total charge against her was \$161.76 which leaves a net profit above feed cost of \$187.71. For the first eight months after this heifer was fresh she was milked and fed four times daily.

Woodell Mechthilde Superior, the second highest cow in the association was also owned by Mr. Wood. She started association work in June 1923 when she was a two-year-old and she dropped her second calf April 2, 1924, three months before the end of the testing year. Her record was 17,151 lb. milk, 585.6 lb. fat.

Fifteen of the twenty-one animals in the Wood herd exceeded 400 lb. butterfat in their yearly work.

The herd was milked by hand; part of the cows were milked four times a day for a time and some up to eight months after freshening. Drinking cups kept water before the animals all the time. The feed was of good quality, feed mangers were cleaned after every feeding and the animals watched closely to avoid any danger of over feeding and consequent udder trouble.

There are five generations of purebred Holsteins in the Wood herd. Maud Beets De Kol 2d, a sixteen-year-old cow, has a year record of 285.2 lb. butterfat, her highest single month was 40.8 lb.

Her daughter, Maud Beets Pledge De Kol, a nine-year-old cow, sired by Joe Pledge 7th produced 336.4 lb. butterfat in a year and the fourth month after freshening made 63.5 lb. butterfat in thirty days.

This cow's five-year-old daughter, Brownwood Pledge De Kol, a five-year-old, sired by Ormsby Korndyke Pontiac has a year record of 475.1 lb. butterfat and her best month was 70.6 lb. Notice the steady increase.

The fourth generation animal, Woodell Pledge Superior, was sired by Superior Pontiac and she produced 428 lb. butterfat in a year, starting her record as a two-year-old, a more creditable showing age considered than are the records of her dam, granddam or great-granddam.

The fifth generation is a fifteen months old heifer which, of course, is not yet in milk.

A ranch or plantation in Peru is called a hacienda, in Venezuela it is a hatos, in Chile a rancho, in Argentina an estancia and in Uruguay a finca.

SPRING BROOK FARM

Won Both Grand Championships as well as First Prize in the "Get of Sire" class at the Athens, Bradford County, Pa., Fair.

Accredited Herd

My herd has been Accredited for years and consists of animals that earn a good profit at the pail.

I can spare a few good helpers, bred here, daughters of KING MADALINE BUTTER BOY, whose pedigree shows many big producers.

GLENN C. GERMAN
Allegheny Co., Cuba, New York

My herd in C. T. A. work, cows and heifers included, averaged 9,124.2 lb. milk, 315.6 lb. butterfat, with an average net profit over feed cost of \$75.15 each, handled under everyday, dairy conditions.

For a small investment, YOU can have some of this stock.

RAY J. SABIN

R. D. 2, Spencer, New York
Herd under State and Federal Supervision, last test CLEAN.

IN THE PINE RIDGE HERD

The Pine Ridge herd owned by Dan E. Anderson of Norwich, N. Y., is composed of large, healthy, well bred purebred Holsteins—animals that make a profit at the pail.

At the head of this herd is King Reliance Lockhart Veeman, a bull whose five nearest tested dams have seven-day butter records that average 29.23 lb. His sire King Veeman Pontiac Hengerveld, is by King Segis Pontiac Alcartra from a 29 lb. daughter of Sir Veeman Hengerveld. His dam, Pearl Lockhart Reliance made 26.7 lb. butter in seven days as a four-year-old and 15.837.7 lb. milk, 882.1 lb. butter in a year in the Dairyman's Division. This is the second highest record in this class for milk for a senior four-year-old and the largest ever made in class for butter. Pearl Lockhart Reliance is from a 26 lb. cow and was sired by King Pontiac Reliance a son of King of the Pontiacs from a 33-lb. sister to Ormsby Korndyke Lad. In addition Pearl Lockhart Reliance is a great show cow and, exhibited at the New York Fair in 1920, she won first prize in the three-year-old class.

Mr. Anderson has been a Holstein breeder for more than 15 years. His herd is under state and federal supervision, passing the last test clean.

MILK-FOR-HEALTH POSTERS

As an aid in conducting milk-for-health campaigns, a circular containing reproductions of prize-winning milk posters designed by school children, both city and rural, throughout the country, has just been published by the United States Department of Agriculture. The posters were made in connection with programs carried on by communities in which the children live, with cooperation of the State Agricultural College and of the Federal Bureau of Dairying.

The aim of an educational milk program is to encourage an intelligent use of milk, for the purpose of improving health and reducing undernourishment. The making of posters has been found a helpful feature, and these reproductions are published with the hope that they may be useful as suggestions to persons planning to conduct similar programs.

The name given the circular is descriptive of its contents, although it is so long we doubt whether anyone will ever call it by its proper title. It has been called "Posters Prepared by School Children in the Milk-for-Health Campaign," but you can obtain it free by writing to the Department of Agriculture and asking for Miscellaneous Circular No. 21.

Employees at the Pennsylvania station Express office who did not happen to know that Hell Gate is the term for New York's Shipping Center, were much surprised the other day when a casket containing the body of a man was shipped through here from the west. The name of the man was printed on the shipping tag with the notation "via Hell Gate Route."

CATTLE MARKET FOR FIFTY YEARS

For fifty years the cattle market at Leeuwarden, Holland, has been in regular operation and to celebrate the jubilee a big show of cattle, horses, sheep and swine will be staged October 1st and 2nd. The British Agricultural Gazette reports that there will be eighty-three sections and that in addition to about \$1,500 cash prizes at least two hundred cups and medals will be awarded.

"My dear, these cakes are hard as stone!"

"I know. Didn't you hear her say, 'Take your pick,' when she handed them round?"

BREEDERS OF SHOW CATTLE

James M. Paxton & Son for a number of years, have bred and exhibited purebred Holsteins; in fact, their card says, "Breeders of many Holstein Prize Winners and Still at it."

This year Mr. Paxton has exhibited at the Delaware and the West Virginia State Fairs as well as at a number of lesser events. His three-year-old bull, King Echo Sylvia Alcartra Lad, was first in his class and grand champion at Washington, Pa., and repeated these triumphs at Wheeling, at the West Virginia State Fair. He was second in his class at the Delaware State Fair and was first at the Reading, Pa., Fair.

The Paxtons' great show cow, Dasie Dalzell Mercedes Belle 4th has only suffered one defeat this year and that was at Reading where a cow placed well below her at Wilmington by Judge Moscrip was placed immediately ahead of her by Judge Fitts. Dasie was grand champion at the Washington County Fair, senior and grand champion at Wheeling and senior and grand champion at the Delaware State Fair at Wilmington. This is certainly a splendid showing as there are only thirty-seven animals all told in the Paxton herd which qualified for the state and federal accredited list August 25 of this year. Mr. James Paxton is a director of the state organization, the Pennsylvania Federation of Holstein-Friesian Clubs. His farm is at Houston, Washington County, Penna.

PRESENTS CALF TO UNIVERSITY

A purebred Holstein calf was recently presented to the University of Arizona by the Miller Dairy Company of Phoenix. The calf is from Fytje Mercedes Ormsby a cow that, as a two-year-old produced 16,331 lb. milk, 676.6 lb. butter. She is a daughter of Sir Pietertje Ormsby Mercedes and is from Riverview Fytje DeKol Ormsby, 26,134.2 lb. milk, 1,070.75 lb. butter in a year.

The sire of the calf is King Orndyke Ormsby Korndyke, senior herd sire of the Miller Dairy Company. The Miller Company herd averaged 52.58 lb. butter in the Maricopa Cow Testing Association during the month of July, one of the cows producing 72.2 lb. fat, the second highest record reported.

ON TWO MILKINGS DAILY

Walton Lake Alcartra Schuiling, a two-year-old heifer owned by B. H. Decker of Walkill, New York, recently completed a 305 day test on twice a day milking. Her record is 15,008 lb. milk, 452.98 lb. fat or 566.23 lb. butter. She freshened for the first time September 18, 1923 and at the close of her ten months she was milking around 40 lb. or more daily. She is a daughter of King Alcartra Korndyke Hartog and Maga Schuiling.

The best thing about an office or a farm is an even temper.

JESSIE MAIDA RUTH

is a show cow and a producer.

She has records of

Butter 29.78 lb.; Milk 742.6 lb. 7 Days
Butter 122.05 lb.; Milk 3,118.6 lb. 30 Days
Butter 946.05 lb.; Milk 24,103.1 lb. 365 Days

She is the dam of our herdsire

KING PIEBE OF YORK 14th.

WM. S. GRIMM

YOUR HERD NEEDS

King Alcartra Wayne Pontiac

Born November 20, 1920

He is one of the best sons of King Alcartra Rag Apple Pouch grand champion at the Susquehanna County Fair for three years.

His dam is a splendid producer and a daughter of Irene Wayne Hartog De Kol, one of the greatest cows of this county.

King is a show bull in every way. Exhibited three years at our county fair, he won first prize in his class each year and twice was Junior Champion.

Priced Right for Quick Sale.

G. P. SPROUT & SONS

R. D. 5 MONTROSE, PA.

HOLSTEIN BEEF IN MARYLAND

For many years C. F. Mason supervised official tests made in New York State and is therefore well known to Holstein breeders. For some time Mr. Mason who will be 76 years late in October, has been in ill health but he retains his interest in black and white cattle and their owners. At his home at Andover, N. Y., he spends considerable of his time reading and thinking of matters pertaining to dairy cattle and their owners.

Several articles on Holstein beef in The Breeder and Dairyman have particularly interested Mr. Mason. He says that about a dozen years ago he had a visit with a boyhood friend, J. W. Morris, who some fifteen years before had a farm at Hagerstown, Md. While there are now a number of good dairy herds around Hagerstown a large number of steers are fattened in this part of the country. One summer there was a strike of railroad trainmen and the market men were unable to get their usual supplies so they bought steers from Mr. Morris and although before that time they would not handle black and white steers but only those of purely beef breeds they said after the trial that the Holstein steers made the best beef they ever had. Mr. Morris went out of dairying as he was unable to get foremen who were dairymen and who were also able to handle local help.

GOLDEN RULE STOCK FARM

Golden Rule Stock Farm owned by E. D. & F. H. Jones of Fond Du Lac, Wis., is now on the Federal Accredited list. The Golden Rule herd consists of over fifty head of purebred Holsteins and has been built up during the past eight years. At the head of the herd is Uneeda Polkadot Adventure No. 276761. His seven nearest dams have an average of 31 pounds of butter. The junior herdsire is Harvest Matador Spofford a son of Harvest Matador Segis. This young bull as a senior calf won first prize at the Wisconsin State Fair.

Four-year-old Anne has only seen an airplane when it has been high in the air. A few days ago she was pensively watching one as it soared far above her, when she remarked: "I wish God would come down and take me for a ride."

YOUNG STOCK FOR SALE AT DAIRYMEN'S PRICES
HARRY C. REYNOLDS, SCRANTON, PA.
Herd under Accredited Plan

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published semi-monthly at Harrisburg, Pennsylvania, for October 1, 1924.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared G. H. TRUCKELL, who, having been duly sworn according to law, deposes and says that he is the Editor of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BENN-CHESTER PUBLISHING COMPANY, Harrisburg, Pa.

Editor: G. H. TRUCKELL.

Managing Editor, not any.

Business Manager, E. M. SNYDER, Lemoyne, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

OWNER: THE BENN-CHESTER PUBLISHING COMPANY.

STOCKHOLDERS OF THE BENN-CHESTER PUBLISHING COMPANY are:

EUGENE B. BENNETT, New Haven, Connecticut.

G. H. Truckell, Harrisburg, Pa.

HOWARD C. REYNOLDS, Harrisburg, Pa.

J. H. Campbell, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BENN-CHESTER PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

SWORN TO AND SUBSCRIBED BEFORE ME, this 30th day of September, 1924.

G. H. TRUCKELL, Editor.

[SEAL] ARTHUR LERO, NOTARY PUBLIC. My commission expires at the close of the next term of Legislature.

MILK PROVES BEST FEED FOR POULTRY

Sour skimmed milk fed in unlimited quantities caused pens of white leghorns owned by the University of Idaho to lay large marketable eggs regularly. The largest number of marketable eggs with the least feed cost and consequently with the greatest net profit was obtained by feeding 20% peameal and sour skimmed milk. With this addition to the usual ration only 17% of all the eggs produced were below 22 ounces to the dozen. Peameal alone did not give an increase in the size of eggs produced but when sour skimmed milk was added the results were very striking. When the dry meal contained 10% meatmeal with unlimited sour skimmed milk 85% of the eggs were above standard weight but the cost of production was increased so that it did not pay to use the meatmeal. Milk whey did not contain sufficient quantities of protein to enable the hens to lay extra large eggs.

The Poultry Department of the University of Idaho estimates that approximately one-half of the farm eggs marketed weigh less than 22 ounces to the dozen and they say that this condition can be remedied if more attention is paid to balancing feed rations. For ten years the Poultry Department of Moscow has been conducting feeding experiments with poultry.

ACTRESS OWNS HOLSTEINS

Jessie Pringle, the well-known actress, is an owner of purebred Holsteins. Her farm is named Atlanta and is situated three miles from Arvada, Colo. Miss Pringle made her first appearance on the stage back in 1897. She has been playing in "Lightni" which has been touring the country. The company disbanded about the first of September at Denver, Colorado, after six years on the road with this great play. This is one of the greatest runs known for an original company and there are still branch companies featuring this play.

Maredor Radium Artis It Mercedes

the head of my Accredited Herd, is not only a choice individual but is from a 25 lb. daughter of a 27 lb. cow and was sired by Radium, grand champion at the 1921 New York State Fair, son of May Echo Velle, the greatest transmitting cow of the May Echo Family and the dam of the world champion milker, May Echo Sylvia.

Let me price you some good stock bred to him.

BREEDERS WILL MISS HIM

Holstein breeders everywhere will regret to learn of the death of Frank C. Gaumer, president and general manager of the Gaumer Publishing Company, of Urbana, Ohio. Mr. Gaumer died on September 27, but the news has only just reached us.

A number of years ago, a young printer started business at Urbana, Ohio, with very little capital except brains and ability. Gradually he gathered around him men and women of experience and built up the Gaumer Publishing Co., which, for several years has had the reputation of printing more Holstein sale catalogs than any other printers in the country. The catalog work was not confined to Holsteins; catalogs of other breeds also were handled with efficiency and dispatch. The business grew until the catalog work extended to other branches of livestock as well as several papers, dailies and weeklies.

Mr. Gaumer was not only a master workman but also a financier. He looked away ahead and was willing to take chances if reward for the ventures seemed probable. In later years he branched out into other line of business which were generally successful.

One of his latest ventures was the taking over the business formerly owned by the Liverpool Sale and Pedigree Company.

Mr. Gaumer was not known personally to many owners of Holsteins, but those who have dealt with him or met him acknowledge his unfailing courtesy and attention to business for although a "good fellow," Frank let deeds rather than promises speak for him. Comparatively a young man he was cut down in the midst of success.

BETTER WRITE FOR THESE

Two bulletins interesting to dairymen were recently issued by the United States Department of Agriculture. One on the care and management of dairy bulls, is written by J. R. Dawson who for a number of years was connected with the Pennsylvania State College and is well known as being well versed in the practice as well as the theory of dairy farming. The bulletin which is numbered 1412 discusses briefly the numerous problems bearing on the proper management of dairy bulls, how to handle them safely and how to keep them in good condition. Because of their temperament, dairy bulls are often difficult to handle and consequently they do not always receive the best of attention and as a result of this fail to give best results as herdsires.

The second bulletin, numbered 1422, is by Veterinary Inspector Hubert Bunyea. In the first paragraph occurs this statement: "A dairy cow is no better than her udder." This bulletin touches on common udder troubles and offers suggestions for their treatment as well as for their prevention which is even better than the cure.

These bulletins contain much information that will be useful for dairymen and they can be obtained free by writing the Department at Washington.

No. 21

In the Home of the Breed

By Eugene B. Bennett

RECENTLY I visited the establishment of the great Holstein-Friesian breeding firm of Kuperus & Sons, located near Leeuwarden, Holland. It may be well to say here that the breed of cattle that we call Holstein-Friesians in this country, in England and Holland are never called anything but Friesians. The Dutch breeders do not understand why we use this name for the breed. Several of them said to me, "Your cattle are the same breed as those we breed in the Dutch Province of Friesland."

The firm of Kuperus & Sons has been in the business of breeding Friesian cattle for several generations and has shipped their excellent purebred cattle to all

known in the early history of the breed in this country. A large cabinet in Mr. Kuperus' office contains an imposing number of medals, won by the firm's cattle at fairs and cattle shows.

An accompanying picture presented to me shows the present firm of K. N. Kuperus & Sons, which consists of K. N. Kuperus and his two sons, N. K. and

THE FIRM OF KUPERUS & SONS
Three generations are here represented. The center member of the group and the boy next to him are cousins.

J. D., and two grandsons. All the members of the family are highly educated, speak and write English, and I found them very kind and courteous.

At least one member of the Kuperus family uses an American milking machine and says that it is not only economical in saving time and labor but is also

EUGENE B. BENNETT

parts of the world. Besides their cattle they have three interesting collections: first, a photograph album of pictures of customers, gentlemen of all nationalities; second, a collection of stamps of all countries taken from customers' letters; and third a collection of customers' visiting cards which includes the cards of men so well known to American breeders as Messrs. Wales, Hoxie and the great New York State breeders, Smith & Powell. On the wall of Messrs. Kuperus' office hangs a print presented by Mr. Thomas B. Wales showing several American Holsteins or Friesians, well

PART OF THE KUPERUS HERD AT PASTURE

better for the cows than hand milking as, since the machine has been in operation, he has had less udder trouble in the herd than he had when the entire dairy was milked by hand. This conclusion is certainly important when we remember that the Kuperus family have been breeders of registered Friesian cattle for three generations.

I took a number of pictures but, for various reasons, many of them were unsatisfactory. The owners

were kind enough to give me a number of pictures that they had, one of which taken some time ago shows the herd as it was then. The herd of Kuperus & Sons are like all cattle to be found in Friesland, marvels as to individuality. They are big cows and perfect as to conformation and type.

The first exportation from the Kuperus herd to the United States was made in 1879 by Thomas B. Wales, a former secretary of the Holstein-Friesian Associa-

BUILDINGS AND CATTLE ON ONE OF THE KUPERUS FARMS

tion of America. Accompanying Mr. Wales was Solomon Hoxie, then secretary of the Dutch-Friesian Association. It was the first Holland visit of either of these men. The heifer, Mercedes, from which all American animals bearing this name have descended was purchased by Mr. Wales in his first importation. This same year the Friesian herd book was founded.

The Dutch breeders are breeding to keep their cattle to the right type and for the best individuality. No

THE N. K. KUPERUS COW STABLE
Sirtema State Farm, Engelum near Marssum, Holland.

animal of either sex can be registered until it is two and a half years old and has passed a rigid examination on a scale of points by good cattle judges.

The Dutch Friesian herd book provides one page for every animal of either sex. On this page are enumerated not merely the name of its dam and sire, but a long and detailed summary of the results of the examination of the animal as to how it stands as to individuality as judged by the official scale of points,

and how many points are allowed it for the shape and condition of each part of its body. There then follows a list of the measurements of each part of the animal's body. A list is kept of every animal of which the animal in question is dam or sire. While such a thing as Advanced Registry, as we understand it in this country, does not exist in Holland, nevertheless a record is kept of the amount of milk produced yearly by every registered cow together with the monthly percentage of butterfat content so that they have lifetime records of both production and reproduction.

With us a purebred is an animal whose dam and sire were registered. With the Dutch the system of registration requires that no animal can be registered until it is two and a half years old, has passed a rigid examination and has been judged on a scale of point as to its individuality. A purebred is an animal of uniform or almost perfect individuality.

If one looks over a herd, one likes first to see a great bull and then to see some proof of the value of this bull in the shape of good daughters of his in the herd. This pleased me particularly in the herd of Mr. Kuperus, nephew of the founder of the firm. I took a picture of his great bull, Hans, No. 11,317 Friesian Herd Book. This bull, born February 5th, 1919, has

HANS, FRIESIAN BULL, HEADING ONE OF THE KUPERUS HERDS

already won five prizes for his type and individuality. He is a great bull whether considered from the standpoint of individuality, pedigree or progeny. In his pedigree occurs the names of the great Friesian sires, Wodan Jan, Wodan 2d, Wodan Nico and Jan and such noted dams as Gerard, Nico and Jan, handsome Friesian cows. His own dam, Wodan Jan No. 8,930 is an excellent individual as well as a wonderful producer. She is a large cow with a big barrel, broad back and square rump. Her udder is square and capacious and her teats are well placed. She is a little more white than black, handsomely marked, a very attractive animal.

The daughters of Hans on test all show good averages as to their butterfat percentages. I saw enough of them to know that he is truly a great sire in every respect.

Holland cattle are kept on an ordinary dairy system, grass only in summer and hay and cake meal only in winter; with this the 40 lb. a day of milk containing around four percent butterfat which they produce, is more creditable than the larger amount of milk that our cows produce with a carefully arranged intensive system and large amounts of feed.

There are a number of reasons why the Dutch cattle

should be rated highly. They are bred for individuality, they are handled with an ordinary dairy system, the percentage of fat has been gradually increased by careful, selective breeding, and they are bred and developed by families who have carefully studied cattle breeding for several generations. Dutch bred Friesians have been exported into all parts of the earth and have proved their adaptability in all countries and climates. A picture is shown of a number of cattle exported into Cuba and exhibited there at an exposition at Havana where they won a number of prizes under the care of one of the younger members of the firm. These cattle, he informed me, all did well in the tropical climate of that island.

As to disease among the Dutch cattle, by an organized effort of the breeders, the management of the cheese and butter factories and the registration as-

A GROUP OF PRIZE WINNING CATTLE
At an exhibition held at Havana, Cuba, 1914. In charge of one of the younger members of the Kuperus firm.

sociation, tuberculosis has been reduced to the point where the herds are about 80 per cent free from it. This is most creditable to the Dutch breeders since they have done this themselves by testing and slaughtering, and have accomplished this by themselves while we have had the help of our government.

As to foot and mouth disease, not so much is to be said. A great deal of this disease has gone on among the cattle of Holland. Considering the fine individuality of Dutch Cattle, it seems too bad we cannot import them. But considering how prevalent this disease is in Holland, it seems well that our government maintains a quarantine against the cattle of that country.

The Kuperus family are also breeders of sheep of which the milk is used both on the table and for the making of cheese, the milk of Friesian sheep is very rich.

The cheese consumption in Holland is very much greater than it is in this country. Cheese is served at every meal. Not in the small pieces commonly met with on the American tables as a supplement to pie but in thick generous slices. Cheese was a new kind of breakfast food for me. If we could induce the American people to eat as generously of cheese as they do in Holland, the so-called milk surplus would soon be taken care of, the dairymen would be benefited in pocketbook and I believe the public would gain in health.

In the province of Friesland there are approximately 820,000 acres of which more than two-thirds are in grass. In the northern and northwestern part, the soil is clay; in the southeastern part it is more or less fertile sandy ground; while in the central and southwestern parts the land consists partly of clay and partly of low fen, this being used almost exclusively as pasture. In Friesland there are around 120,000 cows a few of the herds being red and white but practically all are black and white cows. Some of the milk is consumed locally but about 90 per cent goes into the manufacture of cheese and butter, much of which is exported. During the year 1920, the Friesland Coöperative Association for the export of dairy products exported 24,000,000 lb. cheese and 15,468,500 kilograms butter, a kilogram being equal to 2.204 lb.

In the province there are 120 dairy factories of which about ninety are operated by coöperative associations. There is no milk surplus. Friesland warrants the quality, fat percentage and the purity of its butter and cheese. The brands of cheese are Gouda, Edam, Cheddar, Cheshire and Friesian clove cheese. The butter made is tested weekly, special attention is given to the fat percentage, taste and smell. A diploma is given to factories which during the whole year have sent weekly samples of butter coming up to a fixed standard. In 1904, only one diploma was awarded but the number has gradually increased until there were forty-five in 1919. Butter must not contain more than 15.5 per cent of water and all butter, before being marketed, must bear a government stamp.

A LOAD OF HOLLAND FACTORY CHEESE READY FOR SHIPMENT ON A CANAL BOAT

The manufacture of cheese or other dairy products is the principal industry of Leeuwarden, a city with a population of around 25,000. On a previous visit to Holland I took a photograph of an employee in a cheese factory who had just wheeled a load of cheese to the canal bank where it was to be loaded on a boat. Notice the size and shape of this variety of cheese, a type which lends itself readily to cutting for the table of a small household.

Low grade butter discourages butter consumption and encourages an increased use of butter substitutes.

Penn State Will Have Tried Herdsire

LOTHIAN De Kol Korndyke, head of the Boiling Springs herd owned by Ivo V. Otto, Carlisle, Pa., will head the Holstein herd owned by the Pennsylvania State College, the college authorities having leased him for two years for that purpose.

Lothian De Kol Korndyke No. 199322 is a bull with a pedigree representing producing strains. His sire is a grandson of King of the Pontiacs and was from Novelty Fedora Hengerveld, a cow that produced, as a senior four-year-old, 1,022.21 lb. butter, 22,946.9 lb.

LOTHIAN DE KOL KORNDYKE NO. 199322
High class Holstein sire, leased by Pennsylvania State College for use in the college herd.

milk in a year, her butter record being the eighth highest in the senior four-year-old class at time of making.

The dam of Lothian De Kol Korndyke was Lothian Mary De Kol 2d. As a senior three-year-old this cow made 27.03 lb. butter, 594.7 lb. milk in a week, 983.98 lb. butter, 23,581.1 lb. milk in a year, the seventh highest record in class at time of making. She produced 102 lb. milk in a day and, calving as a yearling heifer, is credited with 18,069 lb. milk, 769 lb. butter in a year. Her sire is Pietertje Hengerveld Sir Korndyke and her dam is Lothian Mary De Kol, with a year record of 855.76 lb. butter, 22,377 lb. milk. Lothian Mary De Kol 2d is a full sister to Lothian

Queen Korndyke Pietertje, 30.35 lb. butter in seven days, 961 lb. butter and over 22,000 lb. milk in a year and also to Lothian Lady De Kol Korndyke with a ten months record, made as a senior three-year-old, of 16,832.5 lb. milk, 690.38 lb. butter. The three nearest dams of Lothian De Kol Korndyke have year records averaging 22,968.33 lb. milk, 753.98 lb. butter, a remarkable showing when it is considered that the dam and sire's dam were tested as heifers.

Although the Boiling Springs Herd is operated from a dairy standpoint and the records made therein indicate practically the everyday work of the animals, yet daughters of Lothian De Kol Korndyke have made world's records. These were in the so-called Dairyman's Division. The Boiling Springs herd has for several years been enrolled in the Cumberland County Cow Testing Association and daughters of Lothian De Kol Korndyke have demonstrated in C. T. A. work the value of their sire.

For a long time, Professor Andrew A. Borland, in charge of the dairy at State College, has been looking for a high class Holstein sire, one that had proven his value by the producing capacity as well as the individuality of his offspring. Extensive travel in Pennsylvania and near-by states and even an inspection of the animals exhibited at the National Dairy Show failed to bring out a bull that equalled Lothian De Kol Korndyke and so on account of his good type and the production of his offspring of high quality, this splendid sire will now serve as an object lesson to the students at State College and college professors will discourse to their classes and to admiring crowds of visitors on his type and conformation and the splendid performance of his daughters.

Emerson's famous saying about mouse trap manufacturers seems to be true and Dame Fortune rewards even bovine merit.

The daughters of Lothian De Kol Korndyke, tested under the Advanced Registry system, are

Oldest Accredited Herd in County

AT Sharpsburg, Maryland, is the oldest accredited herd in Washington County. It consists of purebred Holsteins and is owned by J. Fred Roulette, who for ten years or more has been operating his dairy with purebred black and whites. The foundation animals of the Roulette herd were selected from the standpoint of individuality. Good bulls have always headed this establishment and as a result the present members of this herd possess desirable conformation. Mr. Roulette believes that it is not necessary for Holstein milk to test low and the milk of his

AN ACCREDITED FOUR
Owned by J. Fred Roulette, Sharpsburg, Md.

present dairy averages right around four per cent fat in its every day work.

At the head of the herd is the handsome young bull King Tillie Echo claimed to be the only bull of Carnation breeding in the State of Maryland. His sire, Carnation King Tillie Denver, is a son of Carnation King Sylvia from Jolie Tillie Denver, 28.91 lb. butter, 558.3 lb. milk in seven days and 114.67 lb. butter, 3,308.6 lb. milk in thirty days.

The dam of King Tillie Echo is Echo Segis Korndyke Copia. As a two-year-old heifer she produced in a week 468.7 lb. milk. The dam and sire's dam of this young bull have each produced over 35 lb. butter and over 700 lb. milk in seven day official test. Her dam, Princess Echo De Kol 2d made 35.33 lb. butter, 708.9 lb. milk in a week and her sire's dam is Korndyke Queen De Kol 6th, three times over 30

lb. butter and twice over 700 lb. milk in seven days, her top records being 37.26 lb. butter, 781.5 lb. milk. She is the highest record daughter of Korndyke Queen De Kol whose dam, Belle Korndyke, is regarded as the foundation cow of the heavy-producing, long-lived Korndyke family.

Sheets Now Animal Husbandry Chief

ONE of the last official acts of the late Secretary of Agriculture was to appoint E. S. Sheets, Chief of the Animal Husbandry Division of the Bureau of Animal Industry, effective on October 16. Mr. Sheets has been in charge of the work of his division since the resignation of Geo. M. Rommel in 1921, with the exception of fourteen months that L. J. Cole of the University of Wisconsin served as chief.

Mr. Sheets was born and raised on a West Virginia livestock farm. He graduated from West Virginia University in 1912 receiving the degree of Bachelor of Science in Agriculture. The University of Illinois made him Master of Science in 1914, and in 1918 elected him fellow for the completion of his work for a Ph. D. degree but he was called to the Department of Animal Industry for duty in connection with the act of Congress to stimulate meat production in the United States. In 1919 he was placed in charge of the Office of Beef Cattle Investigations, and in 1921 became Acting Chief of the Animal Husbandry Division.

Before going to the Department, Mr. Sheets had for six years been professor of animal husbandry at West Virginia University and animal husbandman at the West Virginia Experiment Station. He is the author of numerous Federal and State publications on livestock subjects and is a member or officer of a number of national, scientific and educational organizations.

The share-rent system, especially on stock farms, and more especially where the land owner furnishes part of the working capital, is growing in favor in many live stock farming sections.

Why Milk is Used

IN coöperation with the Federal Department of Agriculture the Pennsylvania Department made a survey of four hundred representative Philadelphia families in an effort to find out why they used milk, whether because they liked it or because of its value as food.

The four hundred families were divided into eight groups of fifty each according to income, race and nationality. The Jewish group consumed the most milk, the negro and the Italian groups the smallest amount. As a class the Italian group prefer other beverages to milk. The negro group was lowest in per capita consumption of fresh milk but highest in consumption of buttermilk. As a rule the amount of milk consumed increases in proportion according to the increase of income.

Yet the results of this survey indicate people drink milk because they like it not necessarily because they consider it healthful food. For while health and food value made up only 25 per cent of the reasons given no less than 55 per cent said they consumed milk because they were fond of it.

No less than 77 per cent of those questioned said that a fluctuation of a cent or so per quart would not change the quantity consumed. More than 77 per cent said that changing seasons do not effect consumption, but 12 per cent said they use more milk in cold weather for cooking purposes. Ten per cent use more milk in summer than in winter principally for drinking purposes.

The study brought out that 54 per cent of the children were drinking milk in school. The opinion of the mothers was that these children were thereby induced to drink more milk at home.

Canned milk is not used for drinking purposes but 29 per cent of all the families used canned milk, and in the poorer families the proportion was 62 per cent. Except when used for cooking it is considered a substitute for cream rather than a substitute for milk. Many coffee drinkers prefer it to milk.

Causes of Inefficiency of Dairy Cows

OBSERVING the striking difference in the productive capacity of two Jersey cows at the Missouri station, which were raised under the same conditions and were more than half sisters, Eckles and Reed conducted the following trial to find the explanation. During their first two lactation periods the better cow had produced 2.8 lb. milk and 3.9 lb. fat for each pound produced by the other. In the third lactation period the cows calved three days apart and were fed the same feeds supplied in the same proportions, the amount fed being so adjusted that neither cow lost or gained in weight. Neither cow was bred. During the year the better cow consumed 1.75 lb. feed for each pound eaten by the other, but produced 2.67 lb. of milk and 2.77 lb. fat for each pound yielded by the poorer cow.

When dry the better cow required more feed to maintain her weight than the poor one. Her greater efficiency was therefore not due to a lower requirement for maintenance. She digested a slightly larger percentage of her ration, but there was far too little difference to explain her greater economy in production. The real cause of the greater efficiency of the better cow was that she was able to consume and utilize a much larger amount of feed beyond the amount needed to maintain her body, and hence had more feed available for milk production. There was practically no difference in the amount of milk or fat produced by the cows from each 100 lb. of feed which they ate in addition to the maintenance requirement.

The high producing cow secretes an abundance of milk, on account of her strong inherited impulse to milk production. To replace the nutrients she puts into her product she has a keen appetite and consumes much feed.

NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

Hospitality—Its Uses and Abuses

TO this subject, as to many others, there are two sides, and in the discussion of it, as in the practice, both should be considered, in the hope that in pursuing a middle course, a happy solution may be found for what has often proved a vexatious problem.

No one can deny that hospitality stands out as one of the bright and shining virtues of humanity, bringing into play, as it does, so many of the good qualities of human nature. Intrinsically, it is not a matter alone of food and shelter but of atmosphere; not of the material but a thing of the spirit. Unfortunately, many times, we allow the material side of it to submerge entirely the spiritual. There may be a display of the best linen, silver and china and an abundance of rich food, but if there is a reluctant or worried hostess, most of the pleasure is gone from the occasion, not only for those who are doing the entertaining but for the guests.

Owing to the fact that the average American woman does all her own housework, hospitality is not what it used to be, and with good reason. When there was plenty of help in the kitchen what difference did one or two at the table make? All the mechanical helps in the homes of to-day cannot take the place of the good trusty help to whom one could turn over the getting of the meals. Women are kept busy to-day as never before, for life is made more complicated by the claims of new avenues of work and usefulness. The standards of daily living are higher than ever before, and what passed muster in homes years ago would not be tolerated in the homes of to-day. So it is not to be wondered at if there is less of that spontaneous hospitality that used to prevail.

Yet, it is well to bear in mind that thereby one may miss much pleasure and enjoyment. There is nothing that brings people quite so close as the breaking of bread together, and very often, the bond between men who meet only in business is greatly strengthened by social contact. In opening the home to visiting strangers many have been amply rewarded by finding they have been entertaining angels unawares, and have had an enjoyable experience they would not have missed for anything.

Of course, there is always the unexpected guest, who never comes when one has a good dessert or some little extra dish. With that fatal perversity that one usually concedes to inanimate objects, he so often arrives when there are but odds and ends for dinner, or when the cake and pie are minus. Here is a really true story of such a one. A travelling man arrived at a country store about noon and was invited to dinner by the man of the house—and there was only one piece of pie in the house! The host was duly instructed to refuse pie that the guest might enjoy the only piece. But when the time came, the guest firmly but regretfully refused the

proffered dainty, saying he had been forbidden by his doctor to eat such food. So the solitary piece of pie was given to the host and, as it was fast disappearing, the guest eyed it wishfully and finally succumbing to temptation, he said, "Really, Mrs. A—, that pie does look so tempting I believe I shall break rules and have a piece." The hostess left the room, apparently to get the desired dessert—and she never returned, leaving her husband to make the proper explanations. And no doubt many are the housewives who have been in similar predicaments.

In the next issue we shall hope to discuss the emergency shelf for unexpected company, and to have something to say about the abuse of hospitality, from which many people living in the country suffer in this day of automobiles.

TO BE CONTINUED.

Flour Measurements

THE following measurements of flour and liquids are easy to remember and insure good results: To make batter for griddle cakes or waffles, use equal portions of liquid and flour.

To make cornbread or muffins of all kinds, use a measure and a half of liquid to two of flour.

Flours differ somewhat, but it is a good idea to have the fluid a little scant and the flour a little full.

To thicken cream soups, use a tablespoon each of flour and butter to each quart (or four cups) of soup.

To thicken sauces, use a tablespoon each of flour and butter to each cup of liquid.

MAMIE

Mamie never was domestic;

She could neither sew nor bake.
For canning, she'd a scorn majestic,
Sweeping caused her arms to ache.
Washing was not in her routine,
Ironing filled her soul with hate,
But she could run a good machine—
Six cylinder or eight!

Mamie never was artistic;

She could neither play nor sing,
Was not attracted by the mystic,
Never sculpted a single thing,
Never hammered brass nor silver,
Nor on leather worked one speck.
In one thing only was she clever
She could always draw—her check!

Mamie never was athletic;

She could neither swim nor row.
Her golf and tennis were pathetic.
In basket ball, she made no show.
Country hikes got no attention,
Skating but a stony glare
But run—yes, surely, she could run—
Ribbon in her underwear!

The Junior Breeder and Dairyman

Eino Is a Good Judge

Eino Hill, a sophomore at the high school at Ironwood, Michigan, lives near Spring Creek about six miles from the city. For the past two years he has been active in calf club work and is the owner of a purebred Holstein heifer which he purchased in January 1923, earning practically all the money with which to buy the animal. In September of that year, he attended the farm round-up at the Upper Peninsula Experiment Station at Chatham. For his work in stock judging here, he won a trip to the state fair at Detroit, a performance he repeated again this year.

The team of which he was a member took first prize in the general livestock judging. At Detroit the team placed eighth, Eino being first on his own team.

In the contest held at the county fair this year Eino took first place although many of his competitors were very much older than he.

REED VORAN, OF PRETTY PRAIRIE, KANSAS, and his heifer, K. P. B. Pietertje Rosa, first prize in Holstein class and champion over all breeds in the Boys' and Girls' Dairy Calf Club Competition at the Kansas State Fair.

Raised Melons to Buy Holsteins

Waldo Albrecht of Washington township won first prize in the contest for first year members of the Bremer County, Iowa, Calf Club. His prize story follows:

"The way I became interested in the calf club was by seeing the calves at the fair last year and reading about what they did.

"I bought my Holstein calf from C. A. Nelson for \$50. My father gave me about half an acre of land from which to raise melons to sell. The melons that the folks ate at home paid the rent of the land. I bought some baby chicks and raised them. I trapped and made some money that way. I saved my money and put it in the bank. Then I had more than enough to pay for my calf.

"The grain mixture I fed from July 1 to July 15 was 4 lb. oats, 2 lb. corn and cobmeal and a small handful of oilmeal and about 12 lb. hay. From July 15 to Aug. 1 the ration was 5 lb. oats, 3 lb. corn and

cobmeal and a handful of oilmeal and 13 lb. hay a day. From Aug. 1 I fed 6 lb. oats, 4 lb. corn and cobmeal and a handful of oilmeal and 15 lb. hay a day.

"The corn cost 70 cents a bushel, oats 45 cents a bushel and oilmeal cost \$2.75 per hundred pounds.

"I watered and fed my calf twice a day, kept the barn clean and brushed and kept her blanketed.

"When I fitted her for the fair I clipped her head and tail, sand papered her horns and washed her legs and feet."

Waldo's heifer not only won first in her class at the Bremer County Fair but at the Waterloo Dairy Cattle Congress she took second prize in a class of 59. October 10 she was honored by being the only bovine guest at a banquet held in the Guild Hall at Waverly, Iowa, given by the dairy calf club members to the parents, friends and business men who aided to make the club a success. The heifer in question, Lady Velma Segis, was taken upon a platform and her many good points pointed out by the county dairy demonstration team consisting of Lenora Kuethe of Washington Township and Lorenz Strottman of Maxfield. Their talks were both interesting and instructive.

Even with reasonable precautions to exclude bacteria from cream, a considerable number will always be present. If the cream is left uncooled these multiply rapidly, soon spoiling the cream. Dr. H. W. Conn, of Connecticut, has found that one bacterium in milk kept at a temperature of 50 degrees fahrenheit for 24 hours will multiply to seven, while one bacterium in milk kept at a temperature of 70 degrees for 24 hours will multiply to 700. At higher temperatures the increase is correspondingly greater.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

November 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

"A Long Felt Want"

WE have realized for some time that the Holstein-Friesian Association under the present management was spending a lot of money. We have told our readers how the managing expenses have increased \$329,924.85 or from \$256,811.37 in 1919 to \$586,736.22 in 1923 and that the Association was operated at a loss of \$60,819.55 in the year ending December 31, 1923, while in 1919 it made a profit of \$60,784.40, and that it transferred 5,127 less animals in 1923 than it did in 1919 while 1,444 less members joined the Association last year than joined in 1919 but we did not feel that there was "A LONG FELT WANT" for any more money than was coming in through the transfer fee. We did not feel that there would be any "LONG FELT WANT" with the present high fees until the Association's surplus had been exhausted.

Just recently members of the Association have received a price list under the heading of "A LONG FELT WANT" on which are listed application for registry blanks, application for transfer blanks and pasture service blanks put up in pads of 50 each which the Association proposes to sell to the members.

To charge for applications for registry, transfer and pasture service blanks with the present extravagance prevailing in the Association would seem an imposition as well as being unjust and unwarranted.

If the Association has money to send its officers on junket trips to Europe or South America and do a thousand and one other things that are not directly related to the registering and transferring of cattle, why should it charge the breeders \$1.50 for issuing a transfer certificate and then come back at them and try to sell them the different forms which are used in

making the transfer. It would seem that by so doing they are trying to collect twice for the same service.

Letters have come into the office from many States protesting against this movement on the part of the Association to still further tax the members. Here are two samples:

To the Editor of THE HOLSTEIN BREEDER AND DAIRYMAN:

From the enclosed leaflet which is sent to members as a notice of the proposal to in future sell application blanks instead of furnishing them free, you will notice that it is done under the pretense of supplying A LONG FELT WANT and also of providing "an opportunity to secure a convenience we ought to have."

The insincerity of this contention is obvious. The purpose plainly is to strew sand into the breeders' eyes in order to be able to further fleece them.

As a matter of fact the plain breeder feels encroached upon by petty schemes devised in order to make him pay for the benefit received by the rich breeders through the ever multiplying disbursements of the extension department. Moreover from a business point of view the idea is ridiculous. No other business would think of charging its patrons for order blanks, and at that, at the rate of as high as one and two tenths cents apiece for stock that is printed on paper so poor that you cannot write on it with ink.

Verily, I believe the management has overreached itself.

F. W. K.

To the Editor:

I am most emphatically opposed to buying any "Registry, Transfer or Pasture Service Blanks" after paying my fee for registration and transfer as I am, or have been, in the past, instructed, "all blanks furnished by the Secretary free of charge."

It would appear the present management is working on the plan "take all you can get" and now looks as if they were bent on wrecking the association. I can not see where the owner of registered Holstein cattle have been benefited one cent by this "wild cat" expenditure of the association's money.

I am sorry I paid my twenty-five dollars membership fee, and did hesitate a good while.

I. T. S.

The proposal to sell application forms, like the high transfer fee and the political form of government, is only another convincing argument that the time is not far off when the breeders of Holstein cattle will have to unite and organize an Association to register and transfer animals to maintain the purity of the blood, managed by the members for the members at the least possible expense consistent with prompt and efficient service.

There's a Difference

IT is very interesting to hear recitals of the experience that different breeders have with purebred Holsteins. On the same day we met two breeders, one of the dairyman type and one of the gentleman type.

The dairyman began in 1915, investing \$665.00 in six females. To date he has sold some \$4,800.00 worth of breeding stock and has a herd of 26 females left. During this time his milking herd has averaged in Cow Testing Association work better than 12,000 lb. milk with an individual Cow Testing Association record as high as 16,000 lb. This breeder is well pleased and is enthusiastic over his accomplishment with purebred Holsteins.

The second breeder was an admirer of Holsteins who did not live on his farm but relied on hired help. At the outset, he invested upwards of \$2,000 in a herdsire that proved to be a valuable animal, the daughters showing good type and producing qualities. This breeder indulged in the making of short and long time official records, consigning his surplus cattle to public sales of a local and national character. He was disposing of his cattle because he found the purebred Holstein business as he was conducting it unprofitable.

We have heard altogether too much during the past few years about State Records and State Champions, and National Records, and National Champions, and far too little about economic dairy production. Economical dairying is one thing. Cow racing is another. One is a legitimate business, the other is a hobby and a gamble. Cow racing is just as far removed from legitimate dairying as a crap game is from legitimate banking. One is business, the other is speculation.

Long Distance Milk Shipping

ONE of the exhibits at the National Dairy Show may have considerable influence on the milk industry. On September 27 at 10.05 p. m. a truck tank was started from Pittsburgh and traveled by road to Milwaukee. The tank was sealed at Pittsburgh by the health authorities and was opened at Milwaukee by Dr. F. S. Thompson, Commissioner of Health and Dr. S. L. Pilgrim, Chief of the Food Division. An inspection of the milk revealed that it was in perfect condition. The temperature of the milk at the time of starting was 36 degrees F. and on arrival at Milwaukee Tuesday was 41 degrees. The tank contained 1,350 gallons. On arrival at the Milwaukee State Fair Grounds the milk was dispensed free to the public and on Thursday or six days after it was produced it was still in good condition. On Friday an official reading revealed a temperature of 47 degrees F. and an acidity test lower than most market milk.

The experiment indicates that, were it necessary, milk could be transported from the Pacific coast to New York City shipped in glass lined tank cars which are now being manufactured. Motor trucks with similar tanks could reach farmers along hard surface roads, collect milk and deliver it directly to distributing plants in the city. Improved means of refrigeration and transportation lessen the distance from the producer to the consumer. The Pittsburgh-Milwaukee milk shipment may foreshadow great changes in milk marketing.

One Dozen—Count 'Em

IT is with pride that THE BREEDER AND DAIRYMAN calls attention to the new advertisers appearing for the first time in the October 22d and November 8th issues. There are twelve in all, an even dozen. They include what we believe to be the oldest herd of Holstein-Friesians in the state of Pennsylvania, a herd that since its establishment, nearly forty years ago, has never held a dispersal sale and has always been run from the standpoint of production and individuality. The other eleven are reputable herds of

New York State, a state that leads all others in number of Holstein-Friesian herds and Holstein-Friesian breeders.

The owners of these dozen herds are all working farmers and dairymen—men who make their living from the sale of farm products. A majority of these herds are already on the accredited list; two others passed clean the last time they were tested and all have a splendid record for health. Animals from several of the herds have been exhibited at the fairs this fall and have carried off a large proportion of the prizes. This points out that production, profitability, and choice individuality can be combined in one animal and that the working dairymen can and do produce animals that, when given an equal opportunity do fully as well either at the pail or in the show ring as do animals from petted, pampered herds, raised under unnatural conditions.

Each of these herds were inspected by representatives of THE BREEDER AND DAIRYMAN before the subject of advertising was broached to the owners, who are men of reputable standing in their respective communities. Consequently we know whereof we speak and can recommend them as well as their cattle.

"Game" or Business

"LIVESTOCK Game Is Coming Back," was the 4-column head that greeted us when we opened a recent issue of a farm paper. The article underneath discussed the possibility of the return of the purebred livestock industry. If purebreds are to return as a "game" we hope they stay where they are, however, if they are to return as a business we wish them speed. It has been our opinion that the purebred business was a game a few years ago and as a game it lost out. Why belittle a necessary business and encourage a speculative and gambling element that is associated with all pursuits by referring to the production of purebred animals as a "game"? "Game" is one word that we should lose from our livestock vocabulary.—*Dakota Farmer Editorial.*

Cowpox

COWPOX is an acute, contagious disease accompanied by a slight fever and a typical eruption which is usually confined to the teats and udder of the cow. The lesions first appear as small, red papules or nodules, which later resemble blisters and are filled with a clear fluid. The third or pustular stage is marked by the change in the character of this fluid to a puslike appearance and consistency. The fourth stage is that of drying or desiccation of the pustules.

The disease is usually spread by the hands of the milker and may break out on the cow about seven days after exposure. Cowpox is so mild and so lacking in serious consequences that in many herds its presence is either totally ignored or at least is taken for granted. Nevertheless the presence of the sores on the udders and teats renders milking somewhat painful to the cow. To avoid aggravating and prolonging the condition, therefore, the operation of milking should be accomplished with great gentleness, and may be facilitated by the use of the milking tube. The milk should be discarded.

Treatment.—The animal so affected should be isolated and milked last, with usual antiseptic precautions to protect the hands of the milker from the infection. Twice daily the affected area should be bathed with a 3 per cent solution of granular hyposulphite of soda. Once every day or two the pustules may be touched with tincture of iodine or a 5 per cent solution of silver nitrate.—*Farmers' Bulletin 1422.*

Weed Out Unprofitable Cows

EVEN in the leading dairy states, probably one-fourth or more of the dairy cows fail to pay for their care and feed. The chief reason why such a condition is found now, when the principles of successful selection, feeding and care of dairy cattle have long been established by scientists and practical dairymen, is that the owners do not know which of their cows fail to yield enough milk to pay for their

feed and care. They do not realize that though the gross income from their herd would be reduced by weeding out the "boarders," their net profits would be materially increased.

Though good producers are usually of the dairy type and poor producers are not, even experts are often unable to tell from appearance whether a cow is unprofitable or not. The only reliable way of finding this out is from records of the actual amount of milk and fat she yields. Fortunately such records may now be easily secured by the use of the milk scales and the Babcock fat test. Knowing the production of each cow and the approximate amount of feed she has consumed in a given period, the dairyman can discard the unprofitable animals, and gradually build up a herd of high producers at small expense by using a bred-for-production sire and keeping all heifer calves from the best cows. By this means the average yield of fat for the herd can be gradually increased year by year, until it is raised to 250 lb., later to 300 lb., and even higher. As good cows sometimes have "off years" in production, animals should not be discarded after a single year's trial if there is a good reason to believe they will do better in the future.

HENRY AND MORRISON, *Feeds and Feeding.*

In discussions of the farm problem, its economic or business aspects are always emphasized. This is because the economic factor largely writes the history of nations and peoples. The story of the progress of democracy is largely the story of the commoner's revolt against intolerable living conditions incident to economic injustice. Not theories, but the pinch of circumstances moves people to action.—*Senator Arthur Capper.*

Two persons were tried the same day by the same judge in a municipal court in Boston, according to the press. One of them was found guilty and fined for sounding his horn and the other for not sounding it. We understand this experience.

CHEESE WORK BY THE BUREAU OF DAIRYING

Experimental work is being done in the laboratory of the Bureau of Dairying on Swiss and Parmesan cheese. Special studies are being made as to the organisms that are responsible for gassy fermentation and on the different factors that influence eye formation in Swiss cheese.

A number of experimental Parmesan cheeses have been made. Studies are being made as to the methods of manufacturing and curing this variety of cheese, which ordinarily requires from two to three years to ripen.

At Grove City, Pa., experimental work is carried on by the Bureau with Swiss and Roquefort cheeses on a commercial scale. During the last year cooperative work has been carried on with the State of California in an effort to see how far it is feasible to utilize goat's milk in the manufacture of Roquefort cheese.

In the mountainous sections of the South, an effort is being made to extend the manufacture of Cheddar cheese. Assistance is given in the construction of factories and in improving the quality of the product manufactured.

The field work on Swiss cheese consists in supervising the use of special cultures necessary for the proper ripening of the cheese. Assistance is also rendered the cheese maker by the Dairy Manufacturing Agent in standardization, clarification, and improvement in quality of the cheese. Data are collected upon the yield, cost of manufacturing, quality of the cheese, and the best equipment to use. The use of cultures, careful standardization of milk, clarification of the milk, and careful grading of the cheese have resulted in an increased price of the product as compared with those factors not cooperating.

GARDNER REPORTS LARGE RECORDS

Superintendent Gardner has issued notices of large records recently completed. Helm Veeman Woodcrest, No. 486877, bred and owned by F. M. Helm, Fresno, Calif., is credited with a year record of 36,217.7 lb. milk, and fat equivalent to 1,254.82 lb. butter as a senior four-year-old.

Lady Korndyke Canary Johanna, No. 528207, bred by F. S. Kenfield, Augusta, Mich., and now owned by L. B. Van Blaricom, El Monte, Cal., produced 27,274.6 lb. milk, 1,260.12 lb. butter in a year as a mature cow.

Yesletine Piebe No. 409888, made in 365 days, 31,936.3 lb. milk, 1,308.06 lb. butter as a mature cow. Her breeders and owners are A. F. Wendland and Son of Northfield, Minn.

Canary Snowball Gettie 672916 broke the record for fat production in the junior three-year-old class in the ten months division by producing 22,132 lb. milk, 959.72 lb. butter. She carried calf 195 days of the test. She was bred by R. E. Ammeter, Center, Wash. and is now owned by the Washington State Hospital, Ft. Steilacoom, Wash. Her record displaced that of Onyx Lilith, 909.38 lb. butter.

Queen Bessie Pietertje Ormsby, 648084 makes a new high record in the senior two-year-old class by producing 24,587.6 lb. milk, 1,119.53 lb. butter. She was bred by and is now owned by C. L. Spaulding, Warren, Minn. and she displaced for the championship, Pontiac Irene with 1,102.69 lb. butter.

Nooksack Lunde Oregon De Kol, 301119 made 34,510.9 lb. milk, 1,360.26 lb. butter in a year. She was bred by H. J. Evans, Ferndale, Wash., and is now owned by Carnation Milk Farms. Her dam is Empress White Rose De Kol, a cow that has two 30,000 lb. daughters as she is also the dam of Nooksack Empress De Kol Segis, 32,290.3 lb. milk, 1,142.28 lb. butter in a year.

FOR PENNSYLVANIANS ONLY

A meeting of the Pennsylvania Farm Products Show Committee will be held Monday Evening, November 10th at 7:30, in the office of Secretary Willits at the State Capital at Harrisburg, when the program of the coming show to be held during January will be discussed.

On the following morning, that is, Tuesday, November 11th, Armistice Day, at 9 o'clock the directors of the State Council of Agriculture Associations are requested to meet in the same place by Deputy Secretary J. M. McKee. At this meeting suggestions regarding legislation or any other matter in which the various agricultural organizations composing the State Council are interested will be received and considered.

The State Committee of Agricultural Associations is made up of representatives of various membership bodies of the State of Pennsylvania. Each affiliated association has three delegates, two of which are termed representatives and one a director. The director casts one vote for the society. The Secretary of Agriculture believes that many valuable suggestions as well as much good information will be received by him and others influential at the Capital, so that the laws pertaining to agriculture may be made in accordance with the wishes of those interested in farming.

LEAGUE'S NOVEMBER MILK PRICE

The Dairymen's League producers' November price for Class 1 milk for city distribution is \$3.07 per 100 pounds (3 per cent butterfat) at the 201-210 mile freight zone. This is an increase of 1 cent per quart over the October price. The schedule of prices for November milk in the remaining classes follows: Class 2-A (milk for cream) \$1.90, plus skim milk value; Class 2-B (plain condensed and ice cream) \$2.05; Class 2-C (soft cheeses) \$2.05; Class 3-A (evaporated, sweetened condensed) \$1.60; Class 3-B (milk powder and hard cheeses, other than American) \$1.55; Class 4-A (butter) and Class 4-B (American cheese) determined by average wholesale price during November of butter and cheese respectively.

YOU NEED HIS SON

KING ORMSBY ENDERCAMP heads our accredited herd. His sire is KING OF THE ORMSBYS. His dam and sire's dam have seven-day records averaging 33.80 lb. butter 662.95 lb. milk with a yearly average of 1,097.61 lb. butter. Our herd returns a substantial profit at the pail. Get our low prices on good young stock.

E. R. GELATT & SON
R. D. No. 1, Thompson, Pa.

Head Your Herd With Hillside Volunteer

Born March 21, 1924

Sire: King Pontiac Maple Knoll Ormsby that great son of King of the Pontiacs from a 33-lb. sister to Ormsby Korndyke Lad. Dam: Hillside Rosemary, 460.8 lb. milk, 30.74 lb. butter.

This young bull is full brother to Hillside Pontiac Rose, 474.5 lb. milk, 25.24 lb. butter in 7 days; 2,011.7 lb. milk, 102.80 lb. butter in 30 days at 25 months old, a showing not equalled in this country last year by any heifer of her age.

Hillside Volunteer is extra-well grown, 75% white and only \$400.

Hillside and Springbrook Farms
TRUCKSVILLE, PA.

Herd recently passed another Clean Test.

AN ACCREDITED HERD

Tioga Co., Candor, New York

MICHIGAN FARMERS INSPECT DAIRY PLANTS

A group of one hundred and fifty farmers from the Upper Peninsula of Michigan made a tour of the dairy section of Wisconsin. Among the establishments inspected was the Holstein herd owned by Tubbs' Bros. at Seymour. The farmers represented fourteen of the fifteen counties of Upper Michigan and are under the leadership of E. G. Amos, the Michigan state director of county agent work. About one-half of the group are real farmers while one-fifth are boys who are winners in calf club work and are traveling at the expense of the Upper Peninsula Development Bureau.

Before inspecting the cattle on the farms, the visitors listened to a biographical sketch of the Tubbs' family by Mrs. Peter Tubbs, who told when she and her husband, with the aid of a yoke of oxen, started from Dodge County, Wisconsin, and landed in the wilderness out of which Seymour has since been carved. Her son, Frank, told how his father had laid the foundation for modern dairying on the Tubbs farm and how the sons had developed it by the gradual introduction of purebred stock, modern machinery, alfalfa, balanced rations and cow testing.

DAIRYMEN'S LEAGUE REDEEMING MORE CERTIFICATES

Another series of certificates of indebtedness issued by the Dairymen's League Coöperative Association, Inc., will be taken up at 95 cents on the dollar and accrued interest at six per cent to November 1. These are certificates with serial numbers ending in the digit five of series A, that would mature in 1927. Cashing these certificates is purely voluntary on the part of the holders and the association officials report that most holders are preferring to hold their certificates until maturity. Holders of certificates with numbers ending in 0, 8, and 3 have already had the opportunity to cash their holdings but less than one-third have been turned in. Many of the certificates that were turned in had been purchased from members who needed cash and had parted with them at a sacrifice before the association started to redeem these certificates.

THE YORK FAIR

Holsteins of high calibre were exhibited at the great fair held at York, Pa. The best herds were those of Ralph King, Mentor, Ohio. E. T. Etmer and H. E. Robertson of York, and Millard E. Basehoar of Littlestown, Pa. Although the King herd took all the championships, they did not come without strong competition from the others. First prize in the class for bulls, three years old and over, went to King as did the blue for yearling bull; Robertson had the first prize two-year-old bull and Karl Nims the first prize bull calf. King

took first prize for mature cows, three-year-olds, two-year-olds and yearlings, with Robertson second in each event. Robertson took first and third in the heifer calf class with King second.

Robertson did especially well in the groups, winning calf herd, get of sire and first, second and fourth for produce of cow, King being second in the calf herd and get of sire. King took the blue for exhibitor's herd and also for young herd with Robertson second in each event. In the class for senior Advanced Registry cow King was first, Robertson second and Etmer third while for junior Advanced Registry cow, Robertson was first and second, King third and Etmer fourth. Basehoar animals were awarded ribbons in four classes, making quite a showing for such small herd when competing against big herds that have been exhibited at the leading state fairs in the country.

The ribbons given by the Pennsylvania Federation of Holstein-Friesian Clubs both went to King.

R. E. Haeger of Algonquin, Ill., was again the judge.

NOVEL WAY TO START CLUB

The F. A. Buttrey Company of Havre, Montana, donated a pedigree Holstein heifer to be given to some farmer in Hill County on the last day at the county fair. Mr. Buttrey is endeavoring to induce the farmers around Havre to diversify their operations and to raise purebred Holsteins.

Early this year Mr. Buttrey started a boys' turkey club giving units of three hens and one tom turkey to 20 boys in the county. This fall the recipients will return two for one and these will be passed on to other boys.

The new Buttrey plan is to give away one heifer each month for an indefinite period so that by the time the heifers begin producing the club will have attained considerable size.

NATIONAL DAIRY UNION

The annual meeting of the National Creamery Buttermakers' Association will be held at Mason City, Iowa, November 12th, and the annual meeting of the National Dairy Union is held in connection. Reports will be made covering the year's work and the financial situation of the Union and there will be discussion of plans in order to meet aggressive action of the Oleo manufacturers who propose to ask for change of federal legislation at the coming session of Congress. At this meeting both organizations will elect delegates to attend the annual meeting of the American Dairy Federation to be held in Chicago, December 3d.

Alfalfa, the queen of all soil building crops, pumps up plant food from the sub soil for subsequent crops.

HOCH DALE HERD AND ITS HEAD

Westtown Major Korndyke is the name of a very handsome bull now heading the herd of M. W. Hoch, Chambersburg, Pa. Westtown Major Korndyke is from Fairview Klaver Korndyke, a son of Rag Apple Korndyke 8th and Fairview

WESTTOWN MAJOR KORNDYKE
And his owner M. W. Hoch.

Jessie Korndyke, 30.90 lb. butter in seven days, one of the handsomest cows ever sired by old Pontiac Korndyke.

The dam of Westtown Major Korndyke is Clyde Queen Burke, a cow that three different years made over 20 lb. butter in seven days, a daughter of Sir Burke Hengerveld. Clyde

A PAIR OF ACCREDITED MATRONS
From the Hoch Dale herd.

Queen Burke, tested as a senior four-year-old, made 20.42 lb. butter in a week; as a six-year-old, she raised her record to 26.28 lb.; and as a seven-year-old made 24.79 lb. butter in seven days, 103.50 lb. in thirty days from 2,303.3 lb. milk.

Westtown Major Korndyke is siring stock of splendid individuality and offspring of this bull has been shown with signal success at a number of fairs in Southern Pennsylvania and Northern Maryland. One of his daughters, Lady Westtown Segis, now four years old is said to have been exhibited every year since she was a calf and has never yet been defeated. She was a first prize winner at the 1923 Hagerstown Fair.

The farm and herd owned by Mr. Hoch are both known as Hoch Dale. Although the herd is small, it has more than a local reputation for individuality and production and is also accredited.

The cows depicted in the accompanying illustration bear out the foregoing remarks. The entire herd will be dispersed at a sale to be held on the farm November 11th.

COLUMBIA COUNTY FAIR

Competition has never been keener in the Holstein classes at the Columbia County Fair held at Bloomsburg, Penna., reports the Bloomsburg Press. The show was unusually good and the list of exhibitors larger than had been anticipated. The first prize three-year-old bull was owned by Brader Brothers of Berwick and he went on to the senior and grand championships. The junior champion male was a yearling owned by L. E. Hippensteel of Bloomsburg. John Megargell of Orangeville, had the first prize three-year-old bull and Harry Geiger of Bloomsburg, the first prize bull calf.

William Fairchild of Berwick, was one of the biggest prize winners, taking first and second in the aged cow class, first on a four-year-old, first and second on senior yearling, first on four cows in milk and all three female championships as well as first prize in the advanced registry class. Clarence Reece of Berwick, took first, second and third on three-year-old females, second on junior yearling heifer and second on four cows in milk. The premium rosettes given by the Pennsylvania Federation of Holstein-Friesian clubs for the best Holstein male and the female at this fair were awarded to Brader Brothers and William Fairchild.

LEAGUE SEPTEMBER POOL PRICE

The Dairymen's League Coöperative Association, Inc., announced that its gross pool price for September for 3 per cent milk at the 201-210 milk freight zone is \$1.93 per 100 pounds, or 21 cents more than for August. The deduction for September expenses is 8.5 cents and in addition 10 cents per 100 pounds is deducted for certificates of indebtedness so that the cash distribution is \$1.745.

With some people honesty is the best policy only when everything else fails.

A Member of my Accredited Herd.

This herd has never housed a reactor.

My cows make good for me and they would for you, too. I can spare a few.

Bainbridge R. D. 4 Chenango Co., N. Y.

MILK SUBSTITUTES FOR CALF FEEDING

Strong, healthy calves are more likely to be dropped by well-nourished cows than by poorly-nourished mothers, say W. K. Brainerd and H. P. Davis, of the Dairy Division of the Federal Bureau of Animal Industry. Often times the high price of milk is responsible for the cattle owner marketing most of his product and attempting to raise the young animals on milk substitutes. The investigators recommend feeding whole milk for the first two weeks; feeding three parts whole milk and one part substitute for two weeks; feeding equal parts of milk and gruel for two weeks and at the start of the seventh week eliminating the milk entirely.

The following receipts for milk substitutes are given in Farmers' Bulletin 1336:

Bean Soup.—Bean Soup for calf feeding is prepared as follows: Parboil the beans in soda and drain water off, add water and boil the beans until soft, then press through a colander. A quarter of a pound of beans in four pints of water constitutes one feed at first. This should be gradually increased until the calf consumes one pound of beans at a feed, on the basis of two feeds a day.

English Preparation No. 1.—Wheat flour, one pound; ground flaxseed, two pounds; linseed meal, one and one-half pounds. Stir one-fourth pound of the mixture into six pints of boiling water for one feed (twice a day) at first. Gradually increase until the quantity is doubled.

English Preparation No. 2.—Linseed meal, two pounds; oatmeal, two pounds; ground flaxseed, one pound. Mix one pound with seven pints of boiling water, and allow to stand over night. Next morning take one-half of the mixture, add water enough to make five pints, boil for ten minutes, and add one-fourth teaspoonful of salt and two teaspoonfuls of sugar. This makes one feed for the first few days that the calf is put on this ration and fed twice a day. Gradually increase until quantity is doubled.

Hayward's Calf Meal.—Flour, thirty pounds; coconut meal, twenty-five pounds; nutrium or dried skim milk, twenty pounds; linseed meal, ten pounds; dried blood, two pounds. One-half pound of this mixture is stirred into three pints of boiling water, and when sufficiently cool constitutes one feed when the calf is fed twice a day. This is the ration at the start; the quantity is gradually increased as with the English preparations.

One of the objections to this mixture is that some of the ingredients are not readily obtained in all sections of the country.

Lindsey's Calf Meal.—Prepared and used by J. B. Lindsey at the Massachusetts Agricultural Experiment Station, Amherst, Mass. Ground oat flakes, twenty-two pounds; flaxseed meal, ten pounds; flour middlings, five pounds; fine corn meal, eleven pounds; prepared blood flour, one and one-half

pounds. The gruel is prepared in the usual way, by adding a little cold water to the dry meal and then about five pints of boiling water for each half pound of meal. The mixture should be allowed to stand until cool, and always warmed to ninety degrees or 100 degrees F. before feeding. The directions for feeding are the same as for Hayward's Meal.

Skim Milk Powders.—One pound of powder is mixed with a small quantity of cold water to prevent the formation of lumps, then stirred into nine pounds of boiling water and fed in the same proportion as milk.

The quantity of this powder available for calf feeding at a cost within the reach of the farmer is limited. First grade skim milk powders cost too much to feed to calves. In the manufacture of skim milk powders, however, a limited quantity of low grade product is made, not good enough to sell for bakers' or confectioners' use, which usually can be purchased at a price that permits its use in calf feeding. Under present conditions it is questionable whether these powders have wide use in calf feeding.

Beltsville Calf Meal.—The following mixture has been devised as the result of experience at the experimental farm of the Dairy Division at Beltsville, Md.:

Take fifty parts finely ground corn, fifteen parts linseed oil meal; fifteen parts finely ground rolled oats; ten parts dried blood flour; ten parts skim milk powders; one-half part salt. Stir up with warm water at the rate of one pound of meal to nine pounds of water. Increase gradually as whole milk is decreased, until at the time the calf is about fifty days old it should be getting only the gruel. At this time one and one-half to two pounds of the meal mixed with water will constitute a day's feed.

NEW YORK DAIRY TRAIN

Starting October 20, a dairy demonstration train is being run over lines of the New York Central. The train consists of five cars containing a big agricultural exhibit. Coöperating with this great railroad is the State Department of Farms and Markets, the College of Agriculture at Syracuse University, the four breed associations of New York State and the Dairyman's League Coöperative Association, Inc., which is represented by A. L. Stoughton, of Newark Valley, N. Y., who is urging upon the dairy farmers the importance of daily weighing the milk and the elimination of the boarder cow.

The owners of boarders not only suffer a loss for labor and feed and investment but the milk produced at a financial loss also adds to the dairyman's surplus problem by depressing the price of all milk.

Plentiful bedding saves the liquids which are the most valuable part of the manure.

MANUFACTURED MILK MARKETS

There has been a reduction in the canned milk surplus and the October report shows that for the first time since June, 1923, the amount on hand was less than the corresponding month of the previous year. This is a remarkable showing as weather conditions have been favorable for production and condenseries have had to divert receipts to other products whenever possible. Butter prices are actually lower than they were in June and the storage report of October 1st shows a surplus of more than 68 per cent over the corresponding period of 1923.

Germany and the United Kingdom were the principal importers, taking 7,088,681 pounds and 4,108,028 pounds, respectively. Organized efforts to stimulate domestic demand is still under way. Exports for the present year exceed those of the corresponding period of 1923 by more than 10,000,000 pounds condensed, 20,000,000 pounds evaporated. The same condition exists in the powdered milk market, for the exports of the first nine months of 1924 are more than 700,000,000 pounds over the amount exported during the corresponding period of last year. During September alone there were 81,000 pounds more powdered milk exported than there was during September, 1923. The principal consumer was the Netherlands, which took 135,003 pounds, the United Kingdom being a bad second with 29,643 pounds.

THE MILKMAID'S LAMENT

Where are you going, my pretty maid?
To fix the darn milker, sir, she said;
The tubes are cracked and the teat cups bent,
The pipe line is fouled or full of cement;
So now in place of pails and stools,
She goes to the barn with a bag of tools.

"I have kleptomania."

"What are you taking for it?"

"Everything I can lay my hands on."—Yale Record.

TRAVERSE ECHO SYLVIA KING

the head of our ACCREDITED Herd, is not only a bull of splendid individuality but is also backed by Wonderful producers.

His dam, (twice over 30-lb.) has a 7-day official record of 33.27 lb. butter, 736.4 lb. milk averaging 102 lb. for 30 days. She has a 32 lb. and a 35 lb. daughter.

Five of his 7 nearest dams have one or more 30-lb. daughters. His dam and both his granddams have daughters that each averaged 5 lb. butter a day for a week's time.

His three nearest dams have 7 day records averaging 33.03 lb. butter; his seven nearest dams average 32.72 lb.; his fourteen nearest tested dams average 30.175 lb.

And he heads a herd of producers, cows that make good returns for their care and feed.

Come and look him over and you will want one or more of his offspring or else a good cow bred to him.

W. B. KENNEDY & SON,
Bradford Co., WYALUSING, PA.

TALE OF TEN FARMERS

Ten little farmers working all the time.
One started a factory, then there were but nine.
Nine little farmers working very late,
One became a contractor, then there were but eight.
Eight little farmers thinking thoughts of heaven,
One opened up a bank, then there were but seven.
Seven little farmers got in a dreadful mix,
One became a lawyer, then there were but six.
Six little farmers saw the others thrive,
One became a railroad man, then there were but five.
Five little farmers thought they'd start a store,
One had to manage it, leaving only four.
Four little farmers all anxious to be free,
Another studied medicine, then there were but three.
Three little farmers had so much to do,
One began to corner food, then there were two.
Two little farmers worked from sun to sun,
One retired wealthy, leaving only one.
One little farmer tried to feed them all,
He worked himself to death, long before fall.

DAIRY LEGISLATION

During the short session of Congress which will commence December 1st and end about March 4th, efforts will be made to clarify the butter standard act and set a maximum moisture content. There will also be some consideration of coöperative legislation.

The dairy interests are watching the Oregon election as the Oleo interests are endeavoring by referendum to defeat the oleomargine law passed last year by the Oregon Legislature. The Oleo interests are making an active campaign and are using billboards, newspaper advertising and direct appeal to advance their cause. Although the Oregon dairymen are handicapped by not having a large fund at their disposal they are putting up a gallant fight.

PROFITABLE IN THE HANDS OF ANY
PRACTICAL FARMER

1918		1921
1919		1922
1920		1923

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

SALE POSTPONED ONE WEEK

Postponement of the Western New York Breeders' Sale scheduled to take place at Lockport, New York, November 14, is announced by the sale manager R. Austin Backus. The sale is to be held at Lockport, November 21. A large number of good Holsteins had their origin in western New York and the forthcoming sale will comprise many good descendants of these foundation animals.

M. W. HOCH DISPERSAL SALE

The oldest Accredited Herd in Franklin County. 25 Registered Holsteins all to be sold.

TUESDAY, NOV. 11, AT 12.30 O'CLOCK

Hoch Dale Farm is between Chambersburg and Greencastle, Pa.

Hoch Dale Herd, sire a 26.27 lb. bull and grandson of Rag Apple Korndyke 8th, a show bull in every sense of the word, a prize winner, 5 cows fresh or soon fresh; 4 heifers, all royally bred.

Also consignments from the Accredited Herds of H. W. Small & Son, 7 heifers; Chas. Snively, 1 cow; J. B. & Frank Keller, 2 cows and 1 heifer; S. R. Miller, 1 cow, 1 bull, and 2 heifers.

This is the best lot of Holsteins that will be sold this fall.

Terms, 4 months time.

Send for catalog to

R. D. 8

M. W. HOCH

CHAMBERSBURG, PA.

A REAL DISPERSAL SALE

An average of \$105 was received for the twenty-three head sold at the dispersal of the Hubert Stuckart purebred Holstein herd held at Gilbertville, Ia., October 23. The highest price was \$252.50 for White Belt Fobes Molly, a daughter of Sir Pietertje Geneseo Alcartra, with a year record of 543 lb. butter. Her purchaser was G. C. Van Nice of Vinton, Iowa. A January calf brought \$110.

All of Mr. Stuckart's stock was sold as he is moving to a farm near Aberdeen, South Dakota. There was a big crowd in attendance. Corn brought from \$10 to \$19.75 per acre. Purebred Poland China boars sold from \$28 to \$32.

Among the purchasers of cattle were:—H. E. Bonorden, Nick Ehr, Frank Kies and Nick Terns, Jesup; Craft Bros., La Porte City; H. R. Brock, Brandon; L. A. Orth, Raymond; R. H. Detrich, R. C. Thompson and G. C. Van Nice, Vinton; Peter Schares, Gilbertville; and John Mangrigh, Waterloo.

ECHOES FROM THE SALES

A good demand for purebred Holsteins is evidenced at sales held in various states. While prices have been fairly satisfactory, the purchasers have demanded good value for their money. There were about 350 people present at the Hickory Grove Stock Farm Sale held by Walter Beilke at Fairwater, Wis., October 8. There were 53 head sold at an average price of \$120 which included a number of young animals and bulls. Minnehaha Queen Homestead, a six-year-old cow with a calf by her side, brought \$300, the purchasers being Dr. H. F. Eckert & Son of Markesan, Wis. The highest price for a male was \$135 for a son of King Bess 10th also from the Beilke herd, there being fourteen young bulls from this establishment.

Twenty Holstein bulls averaged \$165 at Paul P. Stewart's sale held at Maynard, Ia., October 15. Most of the animals were sired by either Tritomia Pietertje Ormsby, grand champion at the 1921 National Dairy Show or by Paul Aaggie Butter Boy, now at Iowana Farms. The top price was \$312.50 for Ormsby Pietertje Joe, a son of Tritomia and Josie Pietertje Aaggie, 815 lb. butter in a year.

Seventeen females, all but one from Iowana Farms, averaged \$115, the highest price was \$200 paid for a former calf club heifer that stayed in a herd near home. Several of the offerings went to Wisconsin.

There were sixteen Holsteins sold at the eleventh annual sale of the Columbia County Farm held at Wyocena, Wis. Four cows averaged \$125, four heifers averaged \$100 and eight bulls ranged from \$175 to \$120. Several Columbia County farmers bought their first purebred females at this sale.

The Irvin Kruger herd, consisting of thirty-four head of purebred Holsteins were sold October 7 at his farm near Twin Brooks, S. D. The top price was \$195 for a cow and the average for the cows was \$147. Three bulls were sold, the top price for a male being \$150.

At the dispersion sale of the herd of Howard & Son, held at Redfield, South Dakota, September 27, the average for eleven head was \$127.50, the top cow bringing \$156. Four head exceeded \$150. There was a small attendance but most of those who did attend were bidders.

Wm. L. Dietz's herd of Holstein cattle was dispersed near Montgomery, Minn., October 4. The total receipts were \$4,025, the top price being \$225 for a cow. All the animals remained in the state, most of them going to dairymen around Montgomery and New Prague.

At the consignment sale held at the Logan farms, Seward, Ill., October 15, nearly \$6,000 was taken in, the average price being \$140. A bull which had been a state fair prize winner brought \$267.50 while the top price for a female was \$200.

WILL SHIP HOLSTEINS TO DENMARK

Among the eighty-five head sold at the Waukesha Sales pavilion October 6, were a number of animals that had won prizes at state and national shows. The average price was \$233. George N. Householder manager of the Wisconsin State Institution herds purchased thirty-three head. One animal will go to Denmark being purchased by Axel Nissen who will buy a number of others before loading for shipment. This is said to be the first shipment ever made from the United States to Denmark.

Carl Rudolph of Deerfield, paid the highest price, \$710 for a bull consigned by Heck Bros., Lyons, Wis., while another show bull brought \$625. The top price for a female was \$550, paid for Queen Johanna of Enterprise, a winner of third place at the National Dairy Show and was consigned by Chas. Van der Schaaf of Sparta and was purchased for the State Home for the Blind at Janesville.

The following notice appeared recently in an Arkansas newspaper:

"Zeke Barrow has accepted the appointment of revenue officer for this district. He leaves a wife and three children."

A village parson's daughter eloped in her father's clothes.

And the next day the village Blatter came out with an account of the elopement, headed: "Flees in her father's pants."

**ONE OF OUR MILKERS**

This cow and 21 of her stablemates of all ages, averaged 10,782 lb. milk in a year of Cow Testing Association work.

You can obtain good stock at farmers' prices here. Then, too, this herd is ACCREDITED.

MAPLE GROVE STOCK FARMF. JONES, Manager
R. D. No. 4 Centerville, Pa.**Westside King Vale 4th**

Herd sire at Early Rise Stock Farm is from a daughter of

**KING PONTIAC HILLDALE**

She produced 20.17 lb. butter in 7 days as a yearling heifer averaging 68.3 lb. milk daily. Her dam was a 31.29 lb. daughter of King Burke Hengerveld.

A Few Heifers carrying this blood would do well in your herd.

MENZO A. BROOKER

R. D. 2 South New Berlin, N. Y.

Chenango County

Under State and Federal Supervision

**SHOWY AND A PRODUCER**

She is a member of our Accredited Herd and is bred to our herdsire, **KING ONYX FLEDGE ORMSBY**, whose three nearest dams average 977.66 lb. butter, and over 23,000 lb. milk in long time test, his dam's record being for only 305 days and as a junior four-year-old.

Will be pleased to give you description and prices on a few good ones.

JOHN H. HOWARD

R. D. No. 5 Wyalusing, Pa.

Cow Testing Association Reports

FIVE YEARS OF PROGRESS

For five years A. A. Raudabaugh of New Kingston, Penna., has been tester in charge of the Cumberland County Cow Testing Association which ended its fifth year of operation September 8th. The energy of Mr. Raudabaugh and his knowledge of dairying are brought out in the report of the five years showing which have resulted in an increased production of 2,654 lb. milk and 103.8 lb. fat per cow. Better feeding, selection of the better animals in the herd, and getting rid of the poorer ones are some of the reasons for this increase which is shown by the following table:

Year	Lb. Milk	Lb. Butterfat
1919-1920	7,325	244.6
1920-1921	8,355	287.4
1921-1922	8,578	309.3
1922-1923	8,713	312.6
1923-1924	9,979	348.4
Increase in five years	2,654	103.8

This association is the highest in production of milk in Pennsylvania for two years in succession and it stands as number two in production of butterfat. It also shows the highest increase in production of both milk and butterfat made in any association in Pennsylvania.

During the past C. T. A. year there were 51 cows in the association that each produced over 400 lb. butterfat, the four highest cows being purebred Holsteins. In first place stands Martha, an eleven year old, owned by A. N. Lehman, Carlisle, with 17,061 lb. milk, 579 lb. fat. Becky, a six-year-old, owned by I. V. Otto, Boiling Springs, stands 2d for fat with 539.5 lb. from 14,835 lb. milk. Adeline, a ten-year-old, owned by David

Gibble and Son of Mechanicsburg, has 535.8 lb. fat, 16,498 lb. milk to her credit. Roselinde, owned by W. W. Pepper, is 4th with 532.6 lb. fat and 16,196 lb. milk. The highest producing herd consists of purebred Holsteins owned by W. H. Wertz of Mechanicsburg with the splendid showing of 435.5 lb. fat. The average number of cows on test was 10.75 per month. The dairy of David Gibble and Son averaged 421.6 lb. fat, 12,662 lb. milk while the Pepper dairy averaged 12,652 lb. milk and 412.4 lb. fat. The Strock dairy averaged 12,061 lb. milk and exactly 400 lb. fat. The I. V. Otto herd averaged 11,839 lb. milk, 397 lb. fat. There were 19 herds with an average production of over 300 lb. butterfat, a remarkable percentage for there are only twenty-two members in the association. Their herds contain 337 cows of all ages.

One of the features in the report is the phenomenal increase in the herd of Wallace Pepper, Hockersville. The actual number of the pounds of milk sold from thirteen cows purebred and grade Holsteins, in Mr. Pepper's herd to the milk receiving station at Longsdorf was 69,291 pounds during the year previous to the date he joined the association. As a member of the association, from the same thirteen cows, the following year, 1922-1923, he sold 122,020 lb. milk. Both figures were taken from the receiving station receipts. The increase of 52,729 lb. milk at the price prevailing last year of \$2.00 per hundred weight would amount to \$1,056. This is an increase of 4,056 lb. of milk per cow which should be credited to the Cow Testing Association work, improvement in feeding, herd management, etc. The increased cost for feed was \$200 making a profit above feed costs of \$856.

BIG RECORD ON HOMEGROWN FEED

One of the highest producing cows in the state of Montana is Pleasant Grove Snowflake owned by E. T. McDermand of Huntley. In semi-official test she produced 27,124.7 lb. milk, 1,069.5 lb. butterfat in 345 days. Part of this period she was milked four times a day and part three times.

The feed of Snowflake during the test period was all home grown. During the winter months she was given all the alfalfa she could eat, forty or fifty pounds of corn silage and fifteen to twenty pounds of grain, consisting of ground corn, oats and barley, with a small amount of linseed oil meal of which she did not receive more than 250 pounds during the entire period.

While this cow was on test Mr. McDermand cared for eight to ten other cows besides doing his ordinary farm work. She was kept in a shed roof barn which is said to have cost only \$50 to erect.

INDIAN INSTITUTION HAS HERD

Among the twenty-three members that have organized a cow testing association in Tama County, Ia., is the Sac and Fox Indian Sanitarium and W. C. McCornack, who took out a membership for the Traer State Bank. The association started operations the tenth of November and the tester will spend two days of the month at the Sac and Fox Indian Sanitarium on account of the number of cows there to be tested and the fact that they expect to make some official records.

R. C. Wood, well known Holstein breeder of Traer with the assistance of the local county agent has been prominent in working up the association.

ILLINOIS TESTING

Again a Brown Swiss cow, owned by the Hawthorne Farm, leads the list of cows enrolled in the Cow Testing Association of Illinois during the month of September. She produced 2,307 lb. milk, 83.1 lb. fat. A stablemate was in seventh place with 1,539 lb. milk, 70.8 lb. fat and with these two exceptions the ten highest cows producing were black and white cows.

A grade Holstein, owned by the State School for Girls, Aurora, is second with 1,890 lb. milk, 79.3 lb. fat. O. E. Pritchard has a purebred enrolled in Kane County Association No. 2, with 1,632 lb. milk, 76.7 lb. fat. A grade Holstein, owned by George Kuger of the Jo Daviess Association No. 4, is fourth with 1,455 lb. milk, 72.7 lb. fat. Two purebreds in the Rock River Farm herd, owned by Medill McCormick of Byron, stands next with 71.2 lb. fat each, one averaging 1,977 lb. milk and the other 1,779 lb. A purebred of Sinnissippi Farm is eighth with 1,415 lb. milk, 69.9 lb. fat. Frank Flack of the Jo Daviess Association has one with 1,935 lb. milk, 67.7 lb. fat and J. H. Burr, St. Charles, has a purebred in tenth position 1,782 lb. milk, 67.3 lb. fat.

The Burr Herd occupied the place of honor. The 17 purebreds averaging 1,106 lb. milk, 39.6 lb. fat. A. D. Cornue, Hebron, has 13 purebreds, they average 970 lb. milk, 36.4 lb. fat and the 10 best herds included four composed of purebred Holsteins, one of grades.

Eighteen associations report production. Seven testers say that purebred Holsteins head their association, five report a grade Holstein leading and two simply say Holsteins not telling whether the cow is a purebred or a grade. In four instances the highest producing herd in the association reporting consisted of purebred Holsteins, in three instances the largest herd contained both purebreds and grades. One of the leading herds was entirely grade Holsteins and two are mixed.

WISCONSIN TESTING

Purebred Holsteins stand 1st, 2d and 4th in the list of the Wisconsin cows tested during September. In first position is a cow owned by H. A. Brohmer of the Amery Association, with 138.2 lb. fat. Second is a cow from the Makida Farms. Her production of 110.6 lb. fat leads the Tomahawk Association. A grade Guernsey is third with 98.8 lb. fat, while in fourth place is a purebred owned by S. H. Bird, South Byron, with 92.2 lb. fat to her credit.

The leading herds are small, consisting of less than ten cows, and for that reason are not reported. There are 137 associations sending in particulars of production and of this number 44 are headed by grade Holsteins and thirty being registered Holsteins.

S. H. Bird of Byron, owned the registered Holstein which led the Byron Testing Association during September, she being credited with 92.2 lb. fat, 2,394 lb. milk.

The high herd was owned by F. H. Boyle, of Peebles, the thirty-five registered Holsteins in this herd producing an average of 1,012 lb. milk, 33.3 lb. butterfat.

A purebred Holstein owned by Tolock Bros., led the Norwalk Testing Association by producing 53.2 lb. fat, 1,521 lb. milk during September. A stablemate was second with 50.4 lb. fat.

Twenty grade and purebred Holsteins owned by Harry Vieth carried off herd honors with an average production of 28 lb. fat.

A two-year-old registered Holstein owned by the Rock County Farm, Janesville, led the Clinton-Rock Testing Association during September. She is credited with 66.3 lb. fat, 1,842 lb. milk. Second to her was another purebred, Rowena, owned by John Wehinger & Son, Janesville, she being credited with 63.2 lb. fat, 1,374 lb. milk on two milkings a day.

The herd of twenty-one black and

whites, owned by Wehinger and Son produced an average of 35.4 lb. fat, 1,007 lb. milk, the highest herd average for the month.

All the cows producing 40 lb. fat or more were black and whites and nineteen of these were registered animals, reports the tester A. W. Schmidt.

Ten grade Holsteins formed the honor list of the Muscoda Testing Association. The leader was owned by Ben Seiger and had 56 lb. fat, 1,648 lb. milk to her credit. Twenty-four grade Holsteins owned by Orchard & Schlump produced an average of 963 lb. milk, 35.8 lb. fat, leading for herd average.

HOLSTEINS LEAD

Nine of the ten highest producing cows in the Goodville Cow Testing Association for the month ending October 15, were black and whites, the exception a grade Jersey being in 8th position. A grade Holstein owned by Ira M. Eby was first with 1,687 lb. milk, 60.7 lb. fat. Zuba, a purebred of the Eby herd was third with 1,589 lb. milk, 57.2 lb. fat. While another grade of this herd was 9th with 45 lb. fat to her credit. In second position was a grade Holstein owned by B. L. Blank, credited with 1,446 lb. milk, 57.8 lb. fat. Mast Stoltzfus, of Morgantown, Pa., has three in the honor list, a purebred Holstein being 4th with 1,650 lb. milk, 56.1 lb. fat. A purebred owned by M. V. Brubaker, New Holland, produced 44.1 lb. fat.

Luke W. Martin, tester in charge, reports that he has eleven herds containing 102 milking cows under his supervision. During the past month 14 produced over forty lb. fat, and 18 over 1,200 lb. milk.

A country paper in its description of a local social event said that "The roses were punk." The editor endeavored to correct the mistake and the next week the compositor made him say that "The noses were pink."

KING SYLVIA PONTIAC PIETJE

combines individuality of a high order with remarkable breeding. His sire is Champion Echo Sylvia Pontiac and his dam, who made 659.8 lb. milk, 28.23 lb. butter in 7 days as a junior four-year-old, is a granddaughter of May Echo Sylvia and the 33-lb. cow Alma Clyde.

The only reason I would sell him is that my herd of 60 purebreds contains many of his daughters.

Come and see him and my herd which is now on the ACCREDITED list.

MRS. MAUD DWIGHT,

Sherburne New York

MARYLAND TESTING

A purebred Holstein from the herd owned by Louis E. Lambert of Baltimore, led all the cows tested in the state of Maryland during September by the production of 74.4 lb. fat, 2,067 lb. milk. Car View Parana Netherland, owned by W. R. Whittingham of Corbett was second with 66.8 lb. fat, 1,995 lb. milk. Another Lambert cow, the August leader, was in fifth place with 63.8 lb. fat, 1,449 lb. milk. J. B. Diamond of Gaithersburg, had a purebred in seventh place with 60.5 lb. fat, 1,635 lb. milk. Holsteins were prominent in several of the county associations.

WHAT TESTING SHOWED

Just one year's experience with cow testing association work has led Mr. and Mrs. Bert TerHarr of Moline, Michigan, to be enthusiastic believers in association work. Several years ago the TerHarrs had two purebred Holstein cows. They bought one of the best young sires they could find. A number of the daughters of this bull have freshened and show that the TerHarrs made a good investment. Despite the fact that his oldest daughter, a grade, freshened three months before she went on test she produced 13,293 lb. milk containing 497.5 lb. butterfat. Her two-year-old daughter, by the same sire, produced in her first six months of testing 6,600 lb. milk, 238 lb. fat.

Princess, another two-year-old grade, produced 9,411 lb. milk containing 353.4 lb. fat, in nine months. Vera, a two-year-old purebred daughter of the bull is credited with 7,300 lb. milk, 242.3 lb. fat in her first six months of milking.

Another daughter to freshen, a pure-

bred cow, has made 3,857 lb. milk, 131.8 lb. fat in three months, almost as much as her dam made in the same period as a mature cow.

The TerHarr herd leads in the Allegan County association with an average production of 12,006 lb. milk, 421 lb. butterfat and the association leader was a member of this herd.

STATE OWNED HERD FIRST

A remarkable showing is made by the purebred Holstein herd owned by the Western State Hospital, Steilacoom, Washington. The September report issued by the Western Office of the Bureau of Dairying shows that the 77 cows in this dairy averaged 1,450 lb. milk, 52.4 lb. fat and thereby heads the list. Donnybrook Cornucopia, a member of this herd, is credited with the production of 100.4 lb. fat and 2,576 lb. milk.

The 47 associations under the jurisdiction of the Western Office contain 30,969 cows in milk, several of the California associations not being in operation. The average for the entire number was 30.24 lb. fat.

Donnybrook Cornucopia also headed the list for October by producing 98.5 lb. fat, 2,403 lb. milk. A Holstein owned by R. W. Jessup of Burbank, California, was second with 85.3 lb. fat, 1,740 lb. milk. A registered Ayrshire was third, and the next eleven cows were black and whites, five of them being registered animals.

The list of herds containing fifteen cows or more was headed by three registered Holstein establishments. In first place is the herd of twenty-four cows owned by A. G. Lawson & Sons, of Blanchard, Washington, with an average of 51.8 lb. fat, 1,639 lb. milk. The

LOG CABIN HERD WIN PRIZES

W. E. Mapous, superintendent of the Log Cabin Herd, took ten animals to the fair at Stoneboro, Pa., and took ten first prizes, four seconds and two thirds in addition to the female grand championship. We are reproducing a picture of five senior yearling heifers exhibited at this event which shows something of the quality of the Log Cabin herd which is owned by Ralph C. Jackson, Commissioner of Crawford County. Mr. Jackson is chairman of the board of commissioners.

The Log Cabin herd has been accredited for two years; in fact, Mr. Jackson was one of the prime movers in the enter-

prise. He went to Harrisburg and conferred with the state veterinary authorities assuring them of the coöperation of the board of commissioners in having every bovine in Crawford county tested. A sum of \$5,000 was appropriated by the county to carry on the work in coöperation with the state veterinary authorities.

The Log Cabin herd has been tuberculin tested once a year since it was started twelve years ago and no reactor or suspect has ever been found. Mr. Mapous has been superintendent for the past one half dozen years and to him is due much of the credit for the splendid condition of the present herd which numbers nearly fifty head.

FIVE SENIOR YEARLING HEIFERS FROM THE LOG CABIN HERD
Exhibited at the Stoneboro Fair, Owned by Ralph C. Jackson, Conneaut Lake, Pa.

NEARLY THIRTY YEARS OLD

For twenty-eight years, Holstein-Friesians have been bred on the farm owned by Amsden Bros. at Cuba, New York. Late in the fall of 1896, the Amsdens purchased from Senator F. N. Godfrey, a bull calf and a heifer calf and about a year after at the Godfrey dispersal sale purchased three head. From this foundation stock the present herd has descended.

The Amsdale herd has always been noted for individuality and production. Stock has gone into other hands and made good, the greatest recommendation any herd can have. In this herd was raised Amsdale June Colantha No. 324,294. Sold from here when young she was purchased later by Abner S. Deysher of Reading, Pa. and in the Berks herd, she was put on long time test in which she made 21,142 lb. milk, 1,084.36 lb. butter.

A large number of Holstein breeders in southern New York and northern Pennsylvania have secured their foundation stock from this establishment. The Amsdens are dairymen and critical judges of a cow, ever keeping in mind that the true work of the dairy animal is gauged by her performance at the pail and her ability to earn a substantial profit over the cost of her feed and labor. Working over a period of thirty years, it is no wonder that they have at Amsdale a herd of high quality.

The Amsdens were pioneers in Allegany County in the work of tuberculin eradication work and their herd has been under state and federal supervision for a long time. The herd has a history of health as well as production and at the annual test passed clean. In subsequent issues we shall have more to say about this high class dairy establishment.

The subscription manager of the BREEDER AND DAIRYMAN wrote to a southern Wisconsin subscriber named John Jeffrey, advising him that his subscription had expired. A few days later the manager received his own letter across the bottom of which was scribbled, "So's John." He remarked "That's the only reason why they quit."

A preacher is not responsible for all his people's faults.

Western State Hospital was second with 50.9 lb. fat, 1,357 lb. milk for seventy-eight cows and the Miller Cattle Co. of Buckley, Ariz., was third, their average being 48.2 lb. fat, 1,455 lb. milk.

During the month 1,571 herds containing 34,778 cows were tested in the fifty-two associations in nine states, there being no report from the Wyoming associations. California is chiefly responsible for the gain in number of cows tested. The average for the entire number was 28.43 lb. fat.

C. T. A. WORK AROUND PITTSBURGH

The ten largest milkers in the Montour Valley Cow Testing Association during September were all black and white cows and nine of the ten were registered animals. Eight of the leaders for butterfat were black and white cows, although the one in first place was a registered Jersey. She had 60.53 lb. fat to her credit. She is followed by a registered Holstein and a grade Holstein, both owned by McPherson Brothers, Bridgeville, Allegheny Co., Pa., and the next five cows are all registered Holsteins. The Allegheny County Home has a number of good animals, the three leading milk producers being purebred black and whites of this establishment. The grade Holstein herd owned by Dr. George W. Ely led for milk in July and August but is second for September, the A. N. McClinton herd being first with an average of 676 lb., the Ely herd averaging 650 lb. The registered Holstein herd of Bell Brothers consists of 16 cows with an average of 23.15 lb. fat, the McClinton herd averaging 22.7 lb. and the Ely herd 21.80 lb. These three herds occupied the three leading positions for fat last month, the only difference being that the McClinton herd was first, Bell Brothers second and Ely third.

During September, tester L. M. Stark had twenty-four herds containing 345 cows in milk under his charge. There were four cows that each produced over 40 lb. fat and twenty one that exceeded 1,200 lb. milk.

First they vaccinated girls on their arms; then, when short sleeves came in, on their legs. Now there's no place to go but the anti-vaccination society.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

Prices Reasonable

HARRY C REYNOLDS

Scranton

Pennsylvania

HARRY REYNOLD'S HERD ACCREDITED

The herd of Harry C. Reynolds has passed another clean test and is now on the accredited list. This herd is located near Scranton, Penna., where Mr. Reynolds who is one of the leading lawyers of Scranton, makes his home. The Reynolds herd has a remarkable history. Although it has been established for many years there has never been a case of abortion therein. With such a history it is no wonder that the animals of this herd are in good demand.

No official records have ever been made at this establishment, the owner believing that the work of the cows at the pail under everyday conditions is the best evidence of their value either as producers or profit earners.

He—"You should see the new altar in our church."

She—"Lead me to it!"

WE BREED HOLSTEINS

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building, Scranton, Pa.

OBITUARY

HENRY C. WALLACE

Henry Cantwell Wallace, United States Secretary of Agriculture, died at the Naval Hospital, Washington, D. C., October 25. Mr. Wallace had been suffering from sciatica and rheumatism for a long time and underwent an operation in the hope of relief. His death was due to toxemia poisoning.

Mr. Wallace was fifty-eight years old at the time of his death, being born October 11, 1866. He was educated in the public schools at Winterset, Ia. While attending school, he learned type setting and other details of the printing business in his father's newspaper office. He entered Ames College, 1885, but after two years, when he was about 21, he married Miss May Brodhead, of Muscatine, Ia., and rented one of his father's farms. Four or five years later, his former professor, James Wilson, afterwards Secretary of Agriculture, urged him to return to college which he did and completed two years work in one, graduating in the winter of 1892. The next spring he was chosen assistant professor of agriculture at the college and had charge of the dairy barn until the fall of 1894. That year he became interested in the *Farm and Dairy*, a rural publication, and the next year with his father, Henry Wallace, and his brother, John P. Wallace, purchased the paper. After a short time they changed the name to *Wallace's Farmer*.

In March 1921, President Harding offered him the portfolio of Secretary of Agriculture. Although he had not been in good health for some time, his death was unexpected. His brother and older sons did not have time to get from Des Moines to Washington before his death.

Henry C. Wallace was always a fighter for what he believed to be right, and the fact that his opponents were in high offices was only a spur to his efforts. He actively aided Governor Pinchot of Pennsylvania in the Bellinger controversy when Taft was president and although he was in the same Cabinet, he was an open enemy of Secretary Fall. He was a product of the great corn-growing and meat producing regions of the country rather than dairying and he fought vigorously and persistently for the industry for which he stood.

The funeral services were held in the East Room of the White House. He rests beside his father in the family burial ground at Des Moines, Ia. Besides his widow, three sons and three daughters survive him.

MRS. ELIZABETH C. REINHOLD

Mrs. Elizabeth Charles Reinhold died at St. Joseph's Hospital, Lancaster, Penna., following an operation. In 1919 she was married to Clarence H. Reinhold of East Petersburg and in June of that year was one of the soloists at the banquet given by the breeders of Pennsylvania, Maryland and near-by states to the Holstein-Friesian breeders and their friends at the time of the Philadelphia

National meeting. She sang each year at the annual banquet of the Penna. Federation of Holstein-Friesian Clubs. Mrs. Reinhold was possessed of an exceptional voice which she had carefully cultivated. Her vocal offerings were greatly appreciated by Holstein breeders and their friends and Mrs. Reinhold was

THE LATE MRS. ELIZABETH CHARLES REINHOLD.

a general favorite not only because of her talent but also for her geniality. She was prominent in musical and social circles wherever she resided. At the time of her death she was president of the Musical Art Society of Lancaster. Mrs. Reinhold is survived by her husband and a four year old daughter, Marian Louise, as well as by her parents Mr. and Mrs. Aldus M. Charles of Lancaster, a sister and a brother.

JAMES GILLETTE

It is with deep regret that we announce the death of James Gillette, a nationally known Holstein figure. After his retirement from Moyerdale, Mr. Gillette with a few of his friends invested a considerable sum of money in a tract of timberland in the Adirondacks. A summer camp had been built at this place where Mr. Gillette was in the habit of spending his spare time. A body of water, G. Lake, is near the camp. Mr. Gillette, who was on a vacation, went fishing and as he did not return, search was made and, after three days, his body was found in two feet of water. It is believed that he was standing in his boat, suffered a heart attack and fell overboard.

For many years "Jim" Gillette was prominent in Holstein circles. Before H. A. Moyer was in the Holstein business, he was interested in horses and Mr. Gillette was with him as farm foreman. When Mr. Moyer started in the Holstein business, Jim took charge of the cattle and the majority of the great records made at Moyerdale were made by cattle under his care. After working for nearly

forty years for Mr. Moyer, Jim said he had done enough midnight milking and quit, greatly to the surprise of his many friends, but he couldn't stay away from the black and white cattle. He became a stock owner but after a year or two sold out, then had charge of Ralph Stevens' establishment at Liverpool for a year or more and then went to Bell Farm where he has been most of the time for the past two or three years.

As a result of many years of hard work, Mr. Gillette was in comfortable circumstances. He attempted to retire several times but his love for the business and the importunities of men who understood his knowledge would call him back to work.

Mr. Gillette is survived by his widow, two married daughters and his son, Harvey. He was buried near Liverpool, New York, his old home town, October 27.

SMALL BUT GOOD

Maple Corner Supreme, now owned by L. A. Fisher of Spencer, N. Y. headed a number of herds around Candor and has left a number of good daughters. The accredited herd owned by E. R. Gridley of that town contains ten heifers by this bull and they show that he has transmitted individuality of a high order. Mr. Gridley, who is known to his neighbors as Bert, has a herd of twenty head and none of the animals are over seven years old. Maple Corner Supreme is a son of King Sadie Vale Supreme and Albina Butter Girl Pontiac with a record of 32.63 lb. butter, 629.6 lb. milk in seven days, 126.59 lb. butter in thirty days, 12,715 lb. milk in one hundred ninety-two days. She is a daughter of Spring Farm King Pontiac 6th and Albino Butter Girl De Kol, a 29 lb. four-year-old. King Sadie Vale Supreme is by K. K. S. V. Topsy a 40 lb. daughter of a 33 lb. cow. Mr. Gridley has been on his present farm, which contains 125 acres, five years. His wife's father had been on the farm seven years previous. The herd was started more than twelve years ago by W. K. Hart and although small has always been noted for the quality of the animals.

ARTESIAN WELL IN BARNYARD

Not many Holstein breeders have a flowing artesian well right in their barnyard, a convenience owned by C. F. Reynolds of Woodhull, N. Y. This well is eighty feet deep and Mr. Reynolds told us that at one time it gave a big stream but is gradually diminishing. Mr. Reynolds has an accredited herd of thirty head of which twenty-one will freshen between now and spring, eight of these are heifers which will freshen for the first time. His herd is headed by King Pontiac Jessica whose four nearest dams have seven day records averaging 31 lb. He is a son of King Segis Pontiac Climax and Jessica De Kol Segis.

"Is there any particular sport you are fond of, Miss Effie?"
"No—but—er—I like you very much, Mr. Snaggs."—*Scribner's Magazine*.

Herd under State and Federal Supervision, last test CLEAN.

RO-AN HERD

RO-AN herd, owned by Roy W. Chamberlain of Canadea, N. Y. has been on the accredited list for two years and is regarded as one of the best producing herds in Allegany County. Mr. Chamberlain has done some official work and one of the cows raised on this farm, Inka Veeman Artis, has two different years, made over 31 lb. butter. Tested as a junior four-year-old, she made 29.47 lb. butter in a week; as a five-year-old she made 31.83 lb. and as a six-year-old 31.30 lb. Her three records made three consecutive years average 30.86 lb. certainly a great showing as Mr. Chamberlain has to look after his own farm and the other members of his herd as well as attend to his cows on official test. In this herd we saw four generations in the pasture, the 31 lb. cow Inka Veeman Artis, her dam Josie Inka De Kol 3d, Johanna Veeman Artis Lass, a 19.6 lb., senior yearling daughter of Inka Veeman Artis and a young daughter of this heifer.

Mr. Chamberlain has rented from J. B. Harbeck & Sons of Black Creek the splendid bull, Royal Johanna Korndyke, a son of Colantha Johanna Lad 8th, from a 24 lb. two-year-old daughter of the 30 lb. cow, May Butter Girl De Kol, a cow that has three daughters that have made wonderful records both as milk and butter producers.

RO-AN herd has been accredited two years. It has had three annual clean tests and the owner proudly boasts that he has never owned a reactor. In offering animals from this herd, there is every reason for the purchasers as well as Mr. Chamberlain to believe that they can go anywhere and make good.

HOLSTEINS HELP LIFT DEBT

When John Adkins of Ringwood, Oklahoma, died six years ago, there was a debt of \$3,500 against the Adkins estate and his affairs were so tangled that it cost his widow practically \$1,000 in litigation fees before the courts confirmed her ownership of the farm and herd, which consisted of a few purebred Holsteins.

To-day Mrs. Adkins is out of debt. For six years she has operated her farm practically alone. Twice daily she milks her cows and also attends to the farm work. She now has fourteen head of purebred Holsteins. Mrs. Adkins has been practically a recluse during the past six years as she has no family and has attended strictly to her farm business, going to town only to market produce or buy needed supplies.

INSTITUTION BUYS HOLSTEINS

Two good Holstein heifers were recently purchased from C. D. Fausch of Morristown, Minn., by A. D. Grant, Superintendent of the State School for the Deaf. He also purchased a line bred Ormsby bull, a grandson of Sir Pietertje Ormsby Mercedes 37th and of King Korndyke Colantha Ormsby.

All men are born free and equal, but afterwards some of them get married.

FOR SALE—Registered Holstein bull nine months old; one heifer; two heifer calves; cow to freshen Dec. 28th. Accredited. MRS. I. T. SHADE, Harris Station, Ohio.

WARNER SELLING 30 lb. BULLS

One of the good accredited herds of Allegany County is owned by Glenn L. Warner of Cuba, N. Y. The herd has been accredited for more than a year and is noted for both individuality and for production. Three different cows of this herd have made over 30 lb. butter in seven days and the second prize cow at the 1924 New York State Fair came from this establishment.

At the head of this herd is the handsome young bull, Sir Champion Sylvia a son of Champion Echo Sylvia Pontiac and of Belle Model Champion Sylvia, 30.29 lb. butter in a week. Her dam Belle Model Johanna 2d, has two different years made over 37 lb. butter in seven-day test and she has three daughters that each have made over 30 lb. butter in a week.

Mr. Warner recently sold three good young bulls all from cows with records of 30 lb. or more butter in a week. One of these was to a new man, Chas. B. Philips, of Addison, N. Y. It is seldom that a new herd is started with a 30 lb. bull at its head and all Holstein breeders will be wishing Mr. Philips success for his courage and enterprise.

A LITTLE ABOUT WESTVIEW

We do not know whether it was because Merle W. Ongley of Centerville, Pa., married a daughter of Frank Jones, manager of the Maple Grove Stock Farm, that he became interested in purebred Holstein-Friesians, but the fact remains that Merle has a real good herd of his own and he secured some of his foundation animals from the Maple Grove Stock Farm. One of his great old cows is Maple Grove Pontiac Fanny, a large handsome, light-colored cow that has produced 92 lb. milk in a day and has an official record of 25.39 lb. butter, 629.8 lb. milk. This cow has at least one daughter in the Advanced Register, a 21 lb. two-year-old.

The Ongley herd goes by the name of Westview. It is under state and federal supervision and has passed one clean test. All the cattle in Crawford County has been tested at least once and this area has a fine record for health.

The present head of the herd is Maple Grove Clever Konigen Glista. His dam, Maple Grove Lady Fairview Spofford, as a junior four-year-old made 20.6 lb. fat in seven days averaging practically 70 lb. milk a day and in cow testing association work made over 10,000 lb. milk in a year with an average test of 4.1% fat. Her sire is a grandson and her dam a granddaughter of King of the Pontiacs who leads all other bulls in the number of tested daughters.

Maple Grove Clever Konigen Glista is a grandson of Glista Coreva a twice thirty-pound cow with a seven-day record of 593.5 lb. milk 34.08 lb. butter and made in ten months a record of over 13,000 lb. milk and more than 600 lb. butter. She has at least one 30-lb. daughter and is one of the best cows ever in the Cornell University herd.

OUR AIM

Type and Production

yet breeding has not been overlooked for our cattle are of Komdyke, Copia, Johanna, Hengerveld and Pontiac blood—a number of granddaughters of the famous world's champion Keystone Beauty Plum Johanna. Come and take YOUR Pick. Prices reasonable. Herd under State and Federal Supervision.

R. D. 5 MONTROSE, PA.

DAM OF 14 CALVES

Fifteen years ago, the herd at Maple Grove Stock Farm, Centerville, Pa., was established by the purchase of several good heifers and the good bull, Star Farm Mercedes Elgin Cornucopia. It has always been run as a dairy establishment and for a number of years was in cow testing association work, where twenty-two milkers of varying ages averaged 10,782 lb. milk in a year. Some of the mature cows made records ranging from 15,000 to 18,697 lb. milk.

A few official records have been made at this establishment. Maple Grove Spofford Princess twice made over 25 lb. milk in a week and has a seven-day record of 641.3 lb. milk and over 27 lb. butter.

One of the original animals was Hillview Retta Veronica. This seventeen-year-old cow was a yearling heifer at

HILLVIEW RETTA VERONICA
AND CALF

This cow, now nearly 17 years old has dropped fourteen calves.

the time she was purchased and has dropped fourteen calves in this herd. Several of her offspring have won honors in the show ring and one of her daughters took grand championship at the Titusville Fair.

The second sire at Maple Grove Stock Farm was King Pontiac Jupiter, a son of King of the Pontiacs from a good record daughter of Hengerveld De Kol. This bull was exhibited for five years at local fairs and was unbeaten.

The two present herdsires as well as another one that has gone where good bulls go are of the Glista family. The first of these three bulls was Model Daniel Glista, a son of Glista Dinah, 31.26 lb. butter in seven days as an eleven-year-old, 16,138.5 lb. milk, 745.93 lb. butter in a year as a nine-year-old. She is by Woodcrest Pietje Ormsby and from Glista Coreva, a cow with two seven-day records above 31 lb. and credited with a record of over 34 lb. butter and nearly 600 lb. milk in seven days as a six-year-old. She has a ten months record made as a seven-year-old of 13,310.5 lb. milk, 607.30 lb. butter.

Clever Model Glista, the second bull of the Glista family at Maple Grove Stock Farm was a son of Glista Coreva herself and, in passing, we may say that Glista Coreva is a half sister to the famous Cornell University cow, Glista Ernestine, and the barn books of the Cornell University herd show that this great cow has produced over 101 tons milk in her lifetime and well over 9,000 lb. butter.

The junior sire in this herd is Maple

Grove Ybma Glista, whose dam is Maple Grove Spofford Princess and whose sire was Model Daniel Glista, the son of Glista Dinah.

At least one member of this herd has made over 100 lb. milk a day for Maple Grove Mercedes Glorinda produced 100.3 lb. in twenty-four hours while on test. She has a cow testing association of 14,955 lb. but she was beaten by her stablemate, Clearview May Spofford, 18,697 lb. although May's best day was 87½ lb.

The herd at Maple Grove Stock Farm is accredited. Frank Jones, the manager, is a working dairyman and he and his son, LaVerne, not only do most of the farm and herd work but Mr. Jones told us that all the buildings with the exception of the house had been built by the Jones family. Animals from this herd have been used for foundation stock by a large number of Holstein owners in Crawford and surrounding counties.

PERHAPS

Butter will sell at a low price this coming winter according to W. P. Moore, manager of the National Butter Producers' Educational Committee. Mr. Moore advocates an advertising campaign in order to draw the attention of the consumer to the value of butter as food and its low price. Twenty ads, each containing about four hundred lines, will be run two per week for ten weeks in a number of daily papers and funds for such a purpose are appealed for, the subscriber to designate the city or cities in which he wishes his subscription spent. Ten percent of each subscription received is to be set aside for general expenses, but if sufficient funds are not received from any city to pay for ads charged to one paper in that city the subscribers' checks will be returned.

COLLEGES SWAP BULLS

Montana State College and Iowa State College have swapped bulls. Both institutions have used their sires as long as they could without practicing too close inbreeding. Both sires were of good quality and were of the same age and a trade was arranged on even terms so that Aaggie Ondine Grahamholm Lad is now in Iowa and Iowana Mercedes Homestead is in Montana.

Iowana Mercedes Homestead is a son of Oak De Kol Ollie Homestead. He was shown at the National Dairy Show in 1919 and was second in his class but defeated by his half brother, Iowana Sir Ollie. He was first prize two-year-old at the 1917 Waterloo Dairy Cattle Congress and the National Dairy Show and a member of the winning get of sire class at both shows.

BRING CATTLE TO FEED

California cattle are being brought into Nevada from counties near the state border as the alfalfa weevil quarantine prevents the shipment into California of alfalfa raised in the irrigated sections of Nevada.

TO PREVENT IVY POISONING

Remedies for ivy poisoning are always plentiful but the Fisheries Service Bulletin, a government publication, evidently realizing that prevention is better than cure offers a suggestion for preventing poisoning.

To equal parts of alcohol and water or glycerin and water, add sufficient ferric chloride to make a 5 per cent solution. Ferric sulphate may be used, but the ferric chloride is preferred. If one bathes with this solution before going into the woods such plants as poison ivy and poison oak may be touched or handled without fear of poison. If poisoning has already occurred, the parts should be bathed with this solution and dried thoroughly with a fan. Quicker results may be obtained by coating the poisoned parts with paraffin, on which should be laid a thin layer of cotton and a coat of paraffin put on top of the cotton. This excludes the air, prevents scratching, and allows the new skin to be more quickly restored.

SLAUGHTER YOUR OWN BEEF

Slaughtering of unprofitable cows will benefit the dairyman-owner in two ways, by eliminating the non-earning animal and by reducing the output which in turn helps to elevate the price. Too many dairy farmers, particularly those living close to the towns, sell their discarded animals on foot for a low price and buy their meat from the butcher at a greatly increased figure. In many of the strictly dairy sections there is very little beef butchered on the farm. To help remedy this state of affairs the Federal Department of Agriculture has published Farmers' Bulletin 1415, entitled "Beef on the Farm." The bulletin contains directions for slaughtering, cutting and curing. The latter section includes directions for corning or pickling beef, smoking as well as drying beef and also for preparing a number of beef by-products.

NEAR TO HEAVEN

With spring chickens by the millions ready for the frying pan, with millions of acres of corn just at the roasting ear stage, with home-grown watermelons and canteloupes galore, with orchards yielding the most succulent of pie filler, with strawberries growing right next to the ice house where the cream from our Holsteins sits around in crocks and waits, with tomatoes glowing red on the vines, with bean vines prolific and new cabbage galore—say, what preacher could interest you in a talk about heaven while this state of affairs prevails in good old Nebraska.—W. M. Maupin.

Fair Shopper to Grocer: "Can you tell me if there are any vitamins in lettuce?"

Grocer: "Well, mum, there's bound to be a few insects on garden truck, but there ain't no reason in the world why you can't wash 'em off if you're a mind to."

TEAT TRIEVE Saves Teats
From Going Blind
For Spider, Infectious Scabs,
Frosted and Injured Teats.
Teat Trieve applied when a cow's teat have orifices scabbed over or ball-like swelling near the end, quickly restores to normal before the udder becomes affected. Invaluable to all Dairymen. Prevents contagion, saves time, trouble and losses. \$1.00 per bottle, postpaid, also C. O. D. Satisfaction guaranteed.
HICKOK PRODUCTS CO., N-22, Owatonna, Minn.

WANTED—HIGH CLASS DAIRY FARM WORKING MANAGER.

One who can put the balance on the right side of ledger; everything to do with and up-to-date; 60 head Holstein-Friesian cattle, certified milk, testing, also chickens and apple orchard. Must board help. Enclose references, salary wanted, size of family in first letter or no attention. P. O. Box 793, Springfield, Mass.

CRYSTAL SPRING STOCK FARM SALES

M. E. Basehoar, owner of Crystal Springs Stock Farm, at Littlestown, Penna., reports a number of good sales.

To Clarence Melinger, of Ronks, Penna., a bull from Lady Korndyke Pontiac Segis 2d, a cow now owned by John Bair and milking 100 lb. a day. He is a son of the Crystal Springs herd-sire Finderne Sir Valdessa who was by

FINDERNE SIR VALDESSA

Herd sire at Crystal Spring Stock Farm, M. E. Basehoar, owner.

King Valdessa from Finderne Lady Fayne, a daughter of King Hengerveld Aaggie Fayne with 532.1 lb. milk, 32.76 lb. butter in a week and 18,523.5 lb. milk, 1,075.29 lb. butter in a year as a junior three-year-old. The two nearest dams of this good bull have seven-day official records averaging 37.34 lb. butter.

John W. Keister of Lamar, Penna., purchased his second bull. His choice was a son of K K Ruby Beauty whose fourteen nearest dams have seven-day records averaging 31 lb. butter. Mr. Keister said he wanted a good bull and he certainly secured one as this young fellow won first prize as a yearling at Hanover Fair.

G. Park Book of Ronks, Penna., took a son of Finderne Sir Valdessa and Countess Concordia Pontiac, a 17 lb. two-

year-old whose dam was a 27 lb. cow and whose sire was from a 30 lb. cow. Mr. Book is very pleased over this herd sire who is a real show bull and just about perfection in every way.

Guy Snodgrass of Woodbine, purchased a son of Echo Netherland Korn dyke a granddaughter of the well known sire King Korndyke Sadie Vale. This young bull is a big rugged fellow and Mr. Snodgrass says he likes the big ones.

Frank Krall of East Berlin, Penna., took a son of Crystal Springs Hengerveld De Kol, a twenty pound junior two-year-old that is on year test and is now averaging 78 lb. milk a day and testing 4% fat. She weighs over 1,600 lb. Mr. Krall is more than pleased with his new bull.

E. R. Loy of Loysville, Penna., took another son of Finderne Sir Valdessa

YEARLINGS AT CRYSTAL SPRING STOCK FARM

and Crystal Springs Hengerveld De Kol. This young bull, called "Sparky", is just going to make a wonderful animal and Mr. Loy is very much pleased with his purchase which he took right home with him when he made the deal.

FOUR REGISTERED HOLSTEIN HEIFERS, eighteen (18) months old, for sale. BOYS' INDUSTRIAL HOME, Oakdale, Pa.

BIG HOLSTEIN SHOW AT FREDERICK

The majority of blue ribbons as well as all six championships in the Holstein classes at the Frederick, Maryland Fair were taken by representatives of the Springfield State Hospital herd. Beauty Hope was the first prize aged cow but the winner of the senior and grand championships was Eli Hope Prilly first prize three-year-old at this event as she was at Taneytown, Bellaire and also at

Home of Champions

COLONEL JOH LYONS

was first prize aged bull, senior and grand champion male at the famous Susquehanna County Fair and also headed the champion herd.

He is by KING JOH from a 33.63-lb. daughter of King Lyons and his ELEVEN nearest dams average 32.15 lb butter in A.R.O. work.

COLONEL JOH LYONS heads our herds which number 120 head and are under State and Federal Supervision.

Let us sell you one of his sons or some good females bred to him.

L. N. MACK & SON and FLOYD E. MACK
Montrose, Pennsylvania

PINE RIDGE HERD

PEARL LOCKHART RELIANCE

882.10 lb. butter in 365 days in the Dairyman's Division as a senior four year-old, is the dam of our herdsire **KING RELIANCE LOCKHART VEEMAN**. Besides being a wonderful producer she is a show cow and was a first prize winner at the New York State Fair.

The five nearest dams of KING RELIANCE LOCKHART VEEMAN average 29.23 lb. butter in seven-day work. Let us sell you one of his sons or a few good cows and heifers bred to him.

This large herd, which has been established 16 years, is under State and Federal Supervision. The last test gave us a Clean Bill of Health.

DAN E. ANDERSON
R. D. No. 3 Norwich, N. Y.

Virginia Holsteins for Health

Ormsby Korndyke Hockster Lad

heads our herd which has been *Federally Accredited* several years.

His sire was the great Ormsby Korndyke Lad. You all know about him.

His dam is a cow that produced 636.3 lb. milk, 35.14 lb. butter in 7 days and is the dam of a 30 lb. four-year-old that produced 1,014.7 lb. butter in a year and she in turn is dam of a 30 lb. four-year-old. There's transmitting ability for you.

WE OFFER TWO MORE SONS OF OUR HERDSIRE

No. 3. Dam: *Korndyke Aaltje It* 25.06 lb. butter, 578.8 lb. milk in 7 days as a three-year-old. She is by a son of It from a granddaughter of Pontiac Korndyke.

Calf born Feb. 16, 1924, is a fine individual. Price, \$250.

No. 4. Dam: *Korndyke Aaltje Susie* 16.87 lb. butter, 465 milk in 7 days on three times a day milking. Under ordinary dairy conditions, twice a day milking she has produced over 10,000 lb. milk a year for three years.

Calf born June 20, 1924, is a very nice individual. Price, \$125.

We can also spare a few good heifers.

Bonair Colantha Ormsby Champion

my junior herdsire, is from

Bonair Beechwood Ormsby 4th,

21,022.4 lb. milk, 828.17 lb. butter in ten months, Sub-Division B, World's records for both milk and butter at time of making.

The greatest sires of the breed appear in his pedigree. I have two sons of this bull, nearly white in color and well grown.

The dam of No. 1 made 9,927 lb. milk, 368.3 lb. butter in 9 months, showing \$126.33 profit over feed cost as a junior two-year-old and 12,205 lb. milk, 488.9 lb. butter in 11 months—\$173.44 profit over feed cost as a junior three-year-old. Her full sister made a World's record in Sub-Division B.

The dam of No. 2 produced 10,336 lb. milk, 425.8 lb. butter in 11 months as a junior two-year-old, making \$131.07 profit above feed cost. She freshened again in less than a year and is now milking 65 lb. daily.

Her dam, a maternal sister to the first two heifers, has a 10-months' record of 13,462.1 lb. milk, 536.13 lb. butter as a junior three-year-old, Sub-Division B. Her dam, the granddam of the first two mentioned, produced 15,832.6 lb. milk, 685.8 lb. butter in 10 months on twice-a-day milking.

Some of the greatest producing and transmitting blood of the breed is back of these animals.

Boiling Springs Herd is ACCREDITED.

The Keeneys and the Keeney Herd

A Story of American Aristocracy

WHEN election time approaches the papers, especially those circulating in the rural districts, are full of patriotic allusions and appeals to patriotism. Candidates for various offices refer to the heroism and industry of the pioneers who settled this country. Just how effective these appeals are as vote-

story of Fred B. Keeney and the Keeney herd is an instance of this kind.

In 1786, Thomas Keeney, a native of Connecticut, came from New York State and erected a shack near the present Keeney farm but across the Susquehanna River. The same fall he built a log house on the farm side of the river near Braintrim, now Laceyville, and this was the first settlement in the township west of Skinner's Eddy. He operated a ferry which was owned continuously by the family until four or five years ago and which still goes by the name of Keeney's Ferry. His daughter and only child, Mercy, married Richard Keeney, a distant relative, in 1788. This was the first marriage performed in the community and the first recorded birth was that of Chester Keeney, their son, December 10, 1789. Fred B. Keeney, the present owner of the farm, is a great-great-grandson of Thomas Keeney.

FRED B. KEENEY AT HOME

getters is debatable but there is a reason for their use. A very large proportion of folks now living in the country are lineal descendants of the men and women who settled in the wilderness, cleared up the farms and laid the foundation for modern American agriculture. Many owners of Holsteins are descendants of

IN THE "DRY" PASTURE

pioneers. In our series of stories of Holstein dairymen we find a number of instances where the farms have been owned by one family ever since the land was first settled and the men now living and working on the farms are direct descendants of the men and women who first reclaimed land from primeval forest. The

SOME OF THE OLDER COWS ON THE KEENEY FARM

About twenty-five years ago the father and brother of Fred B. Keeney purchased the first purebred Holsteins ever on this farm from a New York breeder, C. H. Warren, buying two heifer calves for \$12.50 each. One of these calves is ancestress of all the females in the present herd, so it is evident that the Keeneys are breeders and not dealers.

The present Keeney farm consists of about 70 acres of which practically all are tillable. The land is very fertile and large crops are grown. A number of years ago Mr. Keeney was induced to grow vetch which was sown as a cover and soiling crop and also as a soil improver. It did so well that it has practically become a weed and is found in the meadows as well as in the fence corners. Vetch is rich in protein and so saves heavy expenditures for high protein concentrates. Being a legume, it draws nitrogen from the air and

whether plowed under, or eaten by the cattle and returned to the soil in the form of manure, adds to soil fertility. Mr. Keeney is an enthusiastic believer in this plant and recommends all owners of Holsteins to give it a trial and if it does not do so well the first year, try it on a small scale year after year. As with all legumes, the soil has to contain certain bacteria before the crop will do well. In some soils this bacteria occurs naturally, in others it can be introduced by inoculation.

While the Keeney herd is small, containing less than 30 head, the animals are of high quality. Whenever

DWIGHT KEENEY
The real cowman at this establishment.

a cow testing association has been operating in this neighborhood the Keeney herd has been enrolled and nearly all the cows have good records as profit producers. One cow as a four year old made a profit over cost of feed of \$115.17 in a year while a maternal sister made \$211.19 as a mature cow. Another cow returned a profit of \$165.29. A daily record of milk production is kept whether the cows are in association work or not, as Mr. Keeney believes in keeping close tab on his herd operations. Several good seven-day records have been made under farm conditions. Johanna Cornucopia Colantha 3d produced 21.08 lb. butter, 522.7 lb. milk in seven days. In December of

last year she produced 1,869.3 lb. milk. Her maternal sister, Clover Johanna of Riverview, as a two-year-old heifer made 18.25 lb. butter in seven days. Freshening for a second time as a four-year-old she averaged 1,700 lb. milk a month for several months. Another sister, Johanna Cornucopia Colantha 2d, as a four-year-old made 20.63 lb. butter in a week and she was the dam of King Johanna Korndyke Cornucopia a former herd-sire sold several months ago to O. C. Ferris who has a large producing purebred and grade herd and is located near Skinner's Eddy.

King Johanna Korndyke Cornucopia, the former herdsire, is a much better individual than his picture indicates. His dam, Johanna Cornucopia Colantha 2d, is a granddaughter of Woodcrest Nig De Kol one of the best sons of the great Hengerveld De Kol. King Johanna Korndyke Cornucopia was by Korndyke Abbekerk Netherland a son of the famous Korndyke Abbekerk and Milanhurst America De Kol, a cow famous for both individuality and production. As a junior four-year-old she is credited with official records of 651.1 lb. milk, 34.08 lb. butter in seven days, 2,533 lb. milk, 125.60 lb. butter in 30 days and 26,433.4 lb. milk, 1,231.35 lb. butter in a year, all made in strictly official test. Her year butter record was the world's record for strictly official work by a junior four-year-old at time of making. This cow has a number of other large records and is credited with making over 28 lb. butter in a week in special test eight or more months from freshening and as a six-year-old has a seven day official butter record of 33.07 lb.

The present herd sire, Model Darius King Segis, was purchased from Forsgate Farms and was from their famous heifer Clara Clothilde Lyons, who as a two-year-old is credited with a production of 639.8 lb. milk, 23.50 lb. butter in a week, 2,658.4 lb. milk in 30 days, 4,872.8 lb. milk in 60 days and no less than 7,183 lb. milk, 254.8 lb. butter in 90 days. She was continued on test for ten months and has a record of 20,771.2 lb. milk, 723.40 lb. butter for this period. She made a number of world's records and was a remarkable producer. Her pedigree shows wonderful producing lines. Her sire, Judge Lyons, is a son of King Lyons and Betty Lyons Walker, 661.4 lb. milk, 28.39 lb. butter in a week as a senior three-year-old, Betty's dam and dam's dam each have seven-day butter records above 34 lb. The dam of Clara Clothilde Lyons was Clara Colantha Clothilde, 669.1 lb. milk, 30.30 lb. butter in seven days, a daughter of King Colantha Clothilde and Clarissa Clothilde Pietertje, 679.5 lb. milk, 32.52 lb. butter in a week.

A TYPICAL KEENEY COW
Notice the depth of body, straight back and evident constitution.

MODEL DARIUS KING SEGIS
The senior herdsire.

KING JOHANNA KORNDYKE CORNUCOPIA
A former herdsire. Most of the young heifers are by him.

Model Darius King Segis is by Model Darius Glista, whose sire, Model King Segis Koningin, was a show bull and a New York State Fair prize winner and was from Annie De Kol Koningin, a cow that two different years made over 30 lb. butter in a week and was also a first prize winner at the New York State Fair. Glista Draba, the dam of Model Darius Glista, was bred in the Cornell University herd and has a seven-day record of over 30 lb. butter with 645.8 lb. milk, averaged 82.7 lb. milk a day for over 30 days and has a year record of 650 lb. butter and over 15,000 lb. milk.

The six nearest dams of Model Darius King Segis average in seven-day official work 29.26 lb. butter, 645.2 lb. milk. Despite the fact that his dam was tested as a two-year-old his seven nearest dams average 27.83 lb. butter, 618.2 lb. milk.

With Mr. Keeney is associated his son Dwight now about twenty years old. Dwight graduated from the Laceyville High School in 1922 and since that time has had charge of the herd and so is more or less responsible for its high production. His mother, Mrs. Keeney, is very much interested in the stock, knows considerable about blood lines and often assists her son at milking time. The herd is accredited.

Mr. Keeney is a firm believer that a man should have a good education in order to understand and carry on the business of farming. He is a graduate of the high school at Laceyville and also of the Keystone Academy located at Factoryville, and was a schoolmate of the famous baseball player Christy Mathewson.

This farm is as much or even more of a fruit as it is a dairy farm. About 100 bushels of cherries are grown annually as well as peaches and other fruit. The Keeneys are up-to-date farmers and believe in modern conveniences. Their house has a bathroom with hot and cold water and is heated by a furnace. The barn has steel stalls and stanchions and water buckets and a milking machine is used. A tractor helps materially in lightening the labor of plowing and harrowing.

The Keeney family are typical Americans, business-like, hospitable, good neighbors, well educated, just the kind of folks you would like to have live near you and your family. Many are the stories they can tell of early pioneer days, stories in which their own ancestors were often the central figures. If you are ever anywhere near "Keeney's Ferry," be sure and call on this truly American-Holstein family.

The Riverside Dairy Farm

A Tennessee Herd of Milk Producers

ABOUT ten years ago, J. A. Kreis, a successful business man of Knoxville, Tenn., started building a purebred Holstein herd. In answer to a question as to why he selected this breed, Mr. Kreis wrote, "I had heard much of their high milk production and, as we had no Holsteins in this immediate vicinity, I thought I would try them out." Evidently they

obtained marble of high quality which is used in many great buildings. Capitol buildings in several states contain marble taken from Knoxville quarries.

Animals from the Riverside herd were exhibited in 1920 at the Eastern Tennessee Division Fair, held at Knoxville. At this fair, Clementine Pontiac Chesterfield No. 224356 was first prize aged cow and captured the senior grand championships. Risinghurst King Maxie Hope No. 164407 won first prize in his class and also the championship. At this fair, the Riverside Dairy won six first premiums, six seconds and three third prizes.

Risinghurst King Maxie Hope, the senior herdsire, is backed by high record animals. His dam, Crown Princess Maxie De Kol 2d, as a senior four-year-old, is credited with 599.1 lb. milk, 36.28 lb. butter in seven days; 2,501 lb. milk, 142.27 lb. butter in thirty days. His sire, Risinghurst Johanna Ormsby Hope, is by a grandson of the former world's champion, Colantha 4th's Johanna, and was from Lindenwood Hope, 566.1 lb. milk, 30.61 lb. butter in seven days, 2,463.7 lb. milk, 125.17 lb. butter in thirty days and a year record of 1,164.31 lb. butter. The two nearest dams of Risinghurst King Maxie Hope average 33.44 lb. butter in their seven day work. He is a large, handsome, light-colored bull and, as said before, a show-ring prize-winner.

Zeldenrust Pontiac Segis, the great show bull owned by the University of Tennessee, is also in service in this herd, having been leased for that purpose. Zeldenrust Pontiac Segis is nearly all white in color and has a remarkable show-ring record. Exhibited as a senior calf in 1919, he was first in his class at the Indiana

CLEMENTINE PONTIAC CHESTERFIELD
95 lb. milk in a day. One of the great cows in the Riverside Dairy. A former State Fair Champion.

passed the trial successfully for on Riverside Dairy Farm Mr. Kreis now has one hundred and three milking cows, probably the largest Holstein herd in the state.

Mr. Kreis and his brother Sam, who also owns a large Holstein herd, are interested in the great marble quarries around Knoxville. From these quarries is

State Fair and first prize senior calf and junior champion at the Tennessee State Fair held at Nashville, at the Tri-State Fair held at Memphis, and at the Chattanooga Interstate Fair, thus winning at the three leading Tennessee fairs and, in addition, was first in his class and junior champion at the Southeastern Fair held at Atlanta, Georgia, the Georgia State Fair and the Alabama State Fair, thus winning at five state fairs and three other fairs of practically equal calibre.

Zeldenrust Pontiac Segis was from Zeldenrust Cornucopia Segis, a granddaughter of King of the Black and Whites. His sire was a son of It and was from K P Mona, a daughter of King of the Pontiacs

DIANA DE KOL BELLEROPHON
612.6 lb. milk, 20.30 lb. butter in seven days. A member of the Riverside Dairy.

with a record of 23.09 lb. butter, 481.6 lb. milk made in a week as a junior four-year-old.

Some official records have been made at this farm although the herd is operated as a producing dairy rather than as a hobby. The show cow, Clementine Pontiac Chesterfield, produced 578.5 lb. milk, 18.11 lb. butter in a week. She has produced as high as 95 lb. milk in a day. Her half sister, Diana De Kol Bellerophon, is credited with 612.8 lb. milk, 20.30 lb. butter in seven days. These two cows are daughters of Pontiac Bellerophon, a sire bred in the great herd developed by the Eastern Michigan Asylum at Pontiac. Mattie Ross De Kol made 468.1 lb. milk, 21.04 lb. butter in a week and Queen Mercedes Josephine, calving at four years and one month old, made 522.5 lb. milk, 20.60 lb. butter.

A few other good records have been made in this dairy under the care of Manager Stephenson but the establishment is maintained for milk production rather than for record making.

The milk produced is marketed in the rapidly growing city of Knoxville, one of the fastest growing cities of the country. Knoxville advertises itself as the one hundred and fourteen per cent city. In the decade between 1910 and 1920 the census figures of this city increased 114%. Naturally there is a tremendous and rapidly increasing demand for dairy products.

Knoxville is one of the great jobbing centers of the South and salesmen from firms having either branch or main offices located in this city, travel from it to many parts of the country, some even going to the

Pacific Coast. The city is beautifully located on the banks of the Tennessee River. Riverside Dairy Farm lies along the river. Mr. Kreis' house is on an elevation overlooking the river and from the house a number of magnificent scenes can be seen.

Some idea of the size of this dairy establishment can

THE SILOS AT RIVERSIDE DAIRY FARM

be obtained from the picture of the four massive concrete silos. It takes a pile of feed to care for over one hundred milking cows, and this great battery of silos will hold a lot. Notice the circular concrete drinking trough in the barnyard. A plentiful supply of crushed stone helps keep the barnyard dry and such a pile is seen close by the drinking trough.

Firmness in Foreign Butter Market

AMERICAN butter markets have strengthened to some extent in recent weeks, at least partially as a result of the situation in British markets where butter prices were higher in the middle of October than at any time since the post-war decline in prices began. As between London and New York, comparable butter quotations have shifted from about 13 cents in favor of New York, in the early months of the year, to fully 10 cents in favor of London at the present time.

The strong tone prevailing in British markets, while due partially to German demand, is largely the result of seasonal scarcity in supplies from the Southern Hemisphere. British markets since the war have usually exhibited a rather feverish rise in price in the months immediately preceding the arrivals in quantity from New Zealand and Australia. These "spring" supplies are now about due. Reports as to prospects for production in New Zealand, Australia, and also in Argentina, are such as to indicate that British prices will not long be maintained at a level above those in American markets. Competent observers, on the other hand, have also expressed the opinion that Germany, particularly since the success of the Dawes plan seems assured, will continue to absorb foreign butter in increasing quantities. It is doubtful, however, whether German consumption will offset increased production from exporting countries during the season of heavy production.—Bureau of Agricultural Economics.

The completion of a new power unit at the Roosevelt dam brings the amount of current generated to 23,000 horsepower, as against 13,000 horsepower, the previous output.

Holstein Cow Raises Orphan Lambs

SOMEONE with a happy trick of coining striking and appropriate phrases said that "The cow was the foster mother of the world." Wm. B. Morgan of Piscataway, Maryland, has found that a purebred Holstein cow is a profitable and labor saving foster mother of a flock. If you were to walk across his pasture you might find anywhere from one to four lambs tagging one of the Holstein cows. Perhaps you might think the lambs were stealing the cow's milk.

In February 1913, Mr. Morgan accepted an opportunity to sell the farm he then owned at a good price and gave immediate possession. The farm he went onto had just shelter enough for his cows and horses, his sheep had to be turned outdoors. The following December he moved to his present location which did not even have a good shelter for the family let alone for the stock. The sheep took shelter in the pine forest where they did so well that, since that time, Mr. Morgan has wintered them in the open fields and woods. The lambs come in January and February and there are often one or more orphan lambs to raise. Mrs. Morgan and the two boys had considerable fun in

HOLSTEIN FOSTER-MOTHER AND NURSING LAMBS
Owned by Wm. B. Morgan, Piscataway, Md.

raising the orphans on the bottle but as the lambs grew older they became pests around the house and yard. To keep peace in the family, Mr. Morgan promised to take care of the lambs in the barn which he did by milking a cow into a bottle and letting the lambs nurse it out. This took time and the bottles had to be washed, another extra job.

Mr. Morgan says, "As the Holstein cow is unequalled in many ways and as mine are very gentle, I took a rather low or short legged purebred Holstein to mother my lambs so that 'Bill' did not have to wash the lambs' nursing bottles.

"I first took the little lamb on my lap and put the cow's teat in his mouth, then a gentle squeeze on the teat and the milk was flowing direct into the lamb. After two or three times, I had the lamb grabbing for the milk and the cow content with the lamb. In a few days there was a second lamb and he was put on with the first, only he was started on the cow. Then came the third lamb and finally the fourth orphan, or deserted twin lamb. These were also put on the cow in place of her own calf. In a few days these lambs learned to look for their cow and she would stand quietly for them.

"As the front legs of the lambs were a little too short for them to reach their dinner I turned a half-bushel measure up-side-down, the lambs would put their front feet on the measure and then their head was in easy reach of the fountain of milk so freely given by the Holstein Cow. This cow was so gentle and kind to her charges that she never once stepped on them nor did she ever kick at them. As the lambs grew they could reach their dinner without the half bushel measure.

"When our ten cows came to the barn at night the four lambs were turned loose. They would run to their foster mother, the cow would smell them over as you so often see a cow smell her own calf and all four would adjust themselves to a teat and nurse their fill.

"This treatment has been continued each winter when we have orphans or deserted lambs. These lambs grow and fatten as well as any on the farm. We now have a sheep raised on this cow that insists on staying with the cows. Last spring this sheep raised two lambs and when they grew up they went with the other lambs on the farm while the mother sheep continued to follow the herd of dairy cows. The only danger in feeding a lamb in this way is overfeeding when the lamb is very hungry. I lost one last winter from above cause."

That the Morgans are successful sheep raisers can be seen when we learn that there was eighty-seven lambs born on the farm last winter and the total lost was only four, eighty-three being raised.

The Morgans have been raising Hampshire sheep, Holstein cattle, horses and mules, and hogs for twenty-four years. They are located only sixteen miles from Washington, as the owner says, "Under the very dome of the capitol of the United States."

Dairy Imports and Exports

CONTRARY to the general belief imports of dairy products are less than they were the corresponding period of last year. The official figures for September 1924 show that 105,057 pounds of butter were exported during the month while for September 1923 the figures were 1,712,313 pounds. There is not very much difference in cheese in fact there is a gain of over 700,000 pounds. During the past September 5,763,913 pounds of cheese were imported into the country. In the official statement condensed, evaporated and powdered milk are totaled, a rather unfair and unenlightening classification. During the September of a year ago 876,323 pounds of milk was imported in one of these forms, while for the past September the total amount imported was 367,400 pounds. The export figures for the first nine months of the fiscal year are more reassuring as the following figures show.

JANUARY TO SEPTEMBER, 1924

Condensed milk	15,304,176 pounds
Evaporated milk	107,139,771 pounds
Powdered milk	2,517,980 pounds

JANUARY TO SEPTEMBER, 1923

Condensed milk	40,232,432 pounds
Evaporated milk	84,541,859 pounds
Powdered milk	1,792,664 pounds

Public Consume More Dairy Products

ACCORDING to statistics compiled in the United States Department of Agriculture butter consumption in this country increased more than fifty million pounds during the past nine months of 1924 as compared with the same period of 1923. The figures for the first nine months this year show consumption of 1,516,690,000 pounds as compared with 1,476,043,000 pounds last year.

Of the increased quantity consumed approximately 18,000,000 pounds is accounted for by the normal increase in population.

Per capita consumption of whole milk has increased more than 23 per cent in the past three years. Each person on the average in 1920 consumed 43 gallons of whole milk, whereas per capita consumption in 1923 was 53 gallons. Buttermilk consumption during the same period has gone up from 14.7 pounds per person to 17 pounds, and consumption of condensed milk increased from 6 pounds to 13 1/4 pounds. Only slight increases are shown in the consumption of cheese and ice cream during the period covered.

Something Doing in the Sugar Business

PREVIOUS to 1870 indigo was one of the great crops of India and the southern United States. In that year two German chemists, Baeyer and Knep, working in their laboratory, by synthesis obtained indigo from naphthylene. Many Indian growers of the indigo plant were practically put out of business and indigo immediately ceased to be grown commercially in the United States.

It is possible that a discovery recently made in the Government laboratory at Washington may similarly revolutionize the sugar industry. It has long been known that many plants contained a sweetening element other than that contained in our common cane sugar but until this recent discovery no means of crystalizing

such element into sugar had been known. Many plants contain forms of sugar. One of the richest is the Jerusalem or tuber artichoke, a plant well known to most farmers which produces its fruit below the ground in the form of small tubers similar to potatoes.

The sweetening element in the juices of sugar cane and sugar beet is technically known as sucrose. The corresponding element in the artichoke is known as levulose. To crystalize sucrose in order to make our common granulated sugar a high temperature is necessary, but all attempts to crystalize levulose failed until a Dr. Jackson in his Washington laboratory experimented with low temperatures and found that levulose would crystalize at a temperature from 26 to 50 degrees.

The new sugar possesses one and one-half times the sweetening powers of cane sugar and dissolves much quicker than that product. Dr. Jackson says artichoke sugar will dissolve as readily in iced tea as common sugar in hot coffee. Much of the equipment now used in the sugar beet factories can be used in the manufacture of the new sugar and the cost of manufacture is lower.

The process of crystalizing levulose has been patented by its discoverer. A few sugar manufacturers in the western states will experiment with it gradually so that, if it is proven commercially successful, the sugar beet industry will not suffer the disastrous effects which other industries sometimes feel when improved methods supplant older ones. It is expected that the growing of sugar beets and Jerusalem artichokes for sugar production may be carried on on the same farm.

The foregoing is no wild dream of the editor. The information comes from Dr. W. J. Spillman, chief agrostologist of the United States Department of Agriculture.

"Isn't it wonderful that when we lose one of our five senses, one of the others gets better? When a man goes blind he hears better, and when he loses his hearing—"

"Sure!" said Pat. "And when he has one leg shorter than the other bedad, why the other one's longer!"

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

A Profitable Business—Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

Production Increasing

NEARLY 25 per cent increase is expected this year in the production of creamery butter in the Canadian province of Alberta. Last season the production was 17,750,000 pounds while this year it is estimated at approximately twenty-two million pounds.

Standardization and quality produce promise permanent progress in the dairy industry in Alberta. During the first seven months of the year there were nearly nine million pounds of cream graded by the government graders, an increase of more than 20 per cent over the amount graded in the same period of last year. There was an increase of 40 per cent in the quantity of creamery butter graded under the government grade system. Last year 4,600,000 pounds of butter were graded during the seven months, while this year the figures are 6,900,000 pounds.

Despite the foot and mouth disease outbreak butter-fat production also increased in California during the fiscal year 1923-1924. According to figures compiled by the chief of the State Bureau of Dairy Control there was an increase of five million pounds. The increase for 1922 was fifteen million pounds but besides the disease trouble the cows were handicapped during the past year by an exceedingly dry season. Butter will show an increase of about one million five hundred thousand pounds. Evaporated whole milk increased fifteen million pounds, ice cream manufacture has increased more than a million gallons. Ten million more gallons of market milk and cream were distributed than in the previous year, but the cheese output shows a falling off from the previous year when the figures were 7,888,210 pounds.

Burn Infected Carcasses

INCINERATION is being used in Texas to destroy carcasses of animals slaughtered in the foot and mouth campaign. A herd in Galveston County showed symptoms of the disease on October 27. It consisted of 242 dairy cattle and 27 sheep. The ani-

mals were slaughtered and burned within forty-eight hours. Although burning is not the usual practice in such campaigns there are many laymen that believe in such a process in preference to the usual practice of deep burial.

The present trouble in Texas is confined to a small area in the southeastern part of the state. In all, nine herds containing about 3,000 cattle have been infected since the discovery of the trouble on September 27. In addition, about 4,600 cattle running at large in the infected area have been rounded up and destroyed.

Owing to the rigid embargo which certain states have imposed upon Texas products the vegetable and fruit growers of the Rio Grande and the sheep men of the San Antonio sections as well as many other producers in various parts of the state are experiencing great difficulty in shipping their products. Turkey growers in particular worried about getting their birds to eastern market for the Thanksgiving trade. As some parts of Texas are many hundreds of miles away from the well guarded quarantine zone the Federal Department of Agriculture pointed out to State authorities that they may safely modify their rigid embargoes against Texas. Several western states sent their state veterinarians in person to investigate and in consequence those states have issued new regulations, other states are gradually modifying their trade restrictions.

The Effect of Civilization

The domesticated duck is polygamous while the wild Mallard is monogamous. This, however, is not absolute evidence of a different origin as it has been noted that, after a few generations in domestication, the Mallard, becoming civilized, begins to consort with a number of females.—*Everybody's Poultry Magazine*.

In the past ten years, it is said, farmers have paid in as membership fees nearly \$25,000,000 for "organization" expenses—salaries, commissions, office rent, propaganda and other overhead.—*Stuart Hay, in Country Gentleman*.

Royal Johanna Korndyke

Heads RO-AN Herd, which has been established 15 years. He is by COLANTHA JOHANNA LAD 8th, from a 24-lb. two-year-old that produced 602 8 lb. milk in 7 days. Her dam, a 30-lb. cow, made 690.8 lb. NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

Thanksgiving

THANKSGIVING! What memories the word recalls! What visions of home, of family gatherings, of well filled pantries! With the exception of Christmas, there is no holiday that centers so much around the family circle. Of late years there has been a tendency to use the most sacred of holidays as one more opportunity for sports of some sort that take people away from home and cause them to lose sight of the real object for which the day is set aside. Thanksgiving is a time when everyone, who possibly can, goes back home for at least the day and counts himself unfortunate if unable to do so.

And, if at times, it seems that too much attention is paid to the dinner and not enough to the church service at which formal thanks are returned to the Almighty God, when the origin of the day is recalled, the feasting will be found to be not so much out of place.

In the Plymouth colony, in that first dreadful winter of 1620, nearly half the Pilgrim company perished. But renewed hope grew with the next summer, and after the crops were gathered, Governor Bradford decreed a day of thanksgiving. Great preparations were made, and for days beforehand the women baked and boiled and roasted. Among the guests were some friendly Indians who brought wild turkeys and venison as their share of the feast. The tables were set outdoors and the company sat down as one family, the first "community" dinner in America. There were sermons, prayers and songs of praise, and the celebration lasted for three days, during which all unnecessary labor was omitted.

From the Plymouth colony, the custom spread to others, until finally the governor of each, issued an annual proclamation setting aside one day as a day of Thanksgiving. During the Revolutionary War, there were eight such special days observed, by order of congress, for signal victories or wonderful deliverances, and in 1784, for the return of peace. In 1789, President Washington issued a general Thanksgiving Day proclamation. After the adoption of the Constitution, and the same year, the Episcopal Church designated the first Thursday in November as a day for giving thanks, "unless another day be appointed by the civil authorities." For many years there was no uniformity, some states had an annual Thanksgiving Day, some had not, and not every year was a day set aside by the President.

But Mrs. Sarah Josepha Hale, editor of Godey's Lady's Book, took an intense interest in the subject, and for twenty years, sent out pleas in the columns of her paper for a nationally observed Thanksgiving Day. She wrote letters to the Presidents and finally, in 1863, her efforts were rewarded, for President Lincoln designated the last Thursday in November as Thanksgiving Day, and since that time, the Governors of the

states have issued proclamations calling upon the people to observe the day. It is not a national legal holiday, but almost every state has legalized it by legislative act. Throughout the country, but especially in New England, where it originated, the day is observed with great reverence—a day devoted to God, home and country.

Hospitality—The Emergency Shelf

MUCH of the dread of unexpected guests can be avoided by equipping an emergency shelf, on which are kept a few extras to round out a meal to which numbers are added without warning. In addition to some choice things of one's own canning there should be canned soups, canned corn beef, crab meat and shrimps, and even canned clams and oysters. A bottle of salad dressing, junket and pudding powders should be there, to say nothing of olives, jellies and conserves. With a good cream sauce as a basis there are many appetizing dishes that can be evolved which are a great addition to any meal. A little whipped cream will dress up cake that might be considered too stale to serve otherwise, or dessert can simply be omitted. No one ever died yet from the lack of it. It is not a bad idea to keep handy a list of dishes that can be made at a few minutes notice, for the sake of suggestion, for after it is over one can often recall additions that might have been made to the meal.

And with the advent of the automobile, the need of planning for unexpected guests seems multiplied a hundred fold. And this brings us to the other side of the subject—the abuse of hospitality. That there is such a thing no one will deny, whether it arise from pure planned selfishness or from the heedlessness of a light heart and a desire to go somewhere. Let me relate what happened about a month ago to a woman of the middle sixties living just outside a good sized city. She had just settled her house which had been torn up for the making of some improvements, and thoroughly tired out, was planning a rest over Sunday. Beginning on Saturday, about noon, car load after car load drove up, until by Tuesday, she had fed thirty-five different people, some staying for more than one meal. Incredible as this sounds it is absolutely true, and was told to me by her daughter, a minister's wife. Can you imagine the horror of the city dweller should the tables be turned and all the country cousins arrive in like fashion? And can one blame women, who, though naturally of a most hospitable nature, feel like pulling down the shades and locking the door every fine Sunday. To have a reputation for always being prepared is to bring about one crowd of people who must have somewhere to go when the weather and freedom from duty permit and it is just such things that have caused the lack of the whole souled hospitality that used to prevail.

Junior Department

Champion of the Club

Last spring a boys' and girls' dairy calf club was organized in Laurens, Iowa, by County Agent J. L. Dolan and the First National Bank of Laurens. The calves were exhibited at the livestock show held at Laurens, October 4. Harold Davidson won the championship with his animals. Carl Hertz was second, Raymond Davidson, third and Harold Aschenbrenner was fourth. All the prize winning animals were Holsteins.

Professor Happy's Rules

Professor "Happy" is traveling around the country telling school children how to preserve their health and keep in good condition. Prof. "Happy's" real name is Clif Goldsmith and he is a real professor and is employed by the Child Health Association of New York. These are some of his rules:—

"Eat green vegetables and reach the pink of condition."

"There is no pot of gold at the end of the rainbow—it's a pail of milk."

"Let your family tree be a fruit-tree. By the way, there should be a cow at the foot of your family tree."

"Have horse sense and eat oatmeal."

"Run your engine on four cylinders of water per day."

"Just because you take a bath in private, don't think the public can't tell whether you've had one."

"He who cleans his teeth has good taste."

"See that your two feet make a mile a day."

"The best way to improve your memory and keep wide awake is not to forget to go to sleep."

This bit of advice he gives to high school girls:

"Use a silver spoonful of red beets for a lip stick, let your rouge be concocted of creamed carrots, and get your vanishing cream from a cow—that's the way to be beautiful."

Lenore Lost Out

Carl G. Kuethe of Waverly, Ia., donated a purebred Holstein bull calf for the most deserving calf club member in Bremer County during 1924. This calf was won by Oscar Kries of Jefferson Township with a score of 93.8, Mr. Kuethe's own daughter, Lenore, being second with a score of 92.8 and Horace L. Loveland took third place with 86 points.

Among the Junior members, Waldo Albrecht of Washington Township led with the score of 91.7 while Lorenz Strottman of Maxfield Township was second with 91.5.

Although most of the club members had Holstein calves, there were Brown Swiss, Ayrshires, Guernseys and Jerseys among the competing animals.

Running water in the house and a drain for carrying off waste water will save the housekeeper many steps, many hours and many aches.

Inexpensive Things Count

IT is the inexpensive things which are often neglected in dairy farming. Milk is approximately 87 per cent water which is evidence that cows need a large amount of water when producing milk. A large cow producing a heavy flow of milk will drink 200 to 300 pounds of water daily while the same cow when dry will not drink over 50 to 70 pounds of water daily. If ice has to be chopped from the trough before the cows can get a drink, cattle will not drink all the water they need and milk production is lowered. A system of watering whereby cattle will drink heavily is important. If the trough is outdoors some hot water will remove the chill sufficient to allow the cows to drink more. Individual drinking cups are, no doubt, the best system of watering. This does not mean an expensive system but a good practical system that can be placed in any kind of a barn where the water is available. In this way cows have access to water at any time and the increased production will pay for the cups.

A group of big business men in Washington were talking one evening about Government taxation.

"There is no telling where we will land by the time the tax bill is settled," said one. "Our status is as uncertain as that of an old Negro slave I once heard of. Somebody asked him whom he belonged to. 'I don't know, suh,' he replied. 'Old Marse, he's upstairs playin' pokah.'"

The young mother asked the man who supplied her with milk if he kept any calves, and seemed pleased when he said that he did.

"Then" she continued brightly, "bring me a pint of calf's milk every day. I think cow's milk is too strong for the baby."

Address

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc.,
Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year,
(two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

November 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Optimism of the Cowman

IN a speech before the House of Representatives, last spring, Congressman Claude B. Hudspeth gave a vivid yet humorous description of the optimism of the cattlemen and, although Mr. Hudspeth had in mind the Texan cattle owner when he spoke, his word picture will also fit the dairyman whose troubles during the last three or four years have strained him almost to the breaking point. Mr. Hudspeth said:

"My friends, the cowman is the most optimistic creature on earth. You may bend him in every direction, but he seldom breaks, or, to use the vernacular of the section, 'loses his grip.' Under his broad brimmed Stetson hat he whistles 'Dixie' as he rides around his farm to his work. And about her daily affairs his helpmeet, under her sunbonnet, sings, 'How firm a foundation, ye saints of the Lord, is laid for your faith in His excellent word,' although at that moment the very roof may be sagging from the weight of the mortgage due in thirty days, and no visible means of meeting it."

Protest Against High Fees

WE are advised that the action brought by Mr. George E. Stevenson and forty-six other breeders against the directors of the Holstein-Friesian Association under Section 32 of the Membership Corporation Law will be argued sometime during the week of November 17th.

It should be remembered that, in the George case and the Brady case, the questions at issue were not decided.

They were disposed of by the court ruling that Mr. George or Mr. Brady had forfeited their right to bring the action.

Let us hope that some of the forty-six signers on the present action have not forfeited all their rights or jeopardized their interests and that the management of the Association may eventually be placed in the hands of its members.

It is encouraging when capable and intelligent men like Mr. Stevenson and forty-six other breeders will stand up and fight for honest principles, and yet they represent only a small nucleus of the same sentiment that prevails generally among the breeders and owners of Holstein-Friesian cattle.

We are continuously receiving letters of protest from breeders living in all parts, and we do not believe that we would be fair to the cause or fair to our readers unless we publish some of these letters. So we have selected a letter from a former President of the Association, a lawyer by profession. His thorough knowledge of the law and his knowledge of the Holstein affairs gained from being President of the Association, places him in a position to render intelligent judgment in the matters in question.

Worcester, Mass., Sept. 17, 1924.

Editor of *The Holstein Breeder and Dairyman*,

Dear Sir: I am in entire sympathy with the attitude of your paper relative to the present form of government of our "Holstein-Friesian Association of America." To deprive members of a voice and vote in our annual Convention is no better than stealing and, I believe, is prompted by same motive.

I declared the whole change illegal when first suggested. The plan could never have been inaugurated but for the neglect of our members and, when properly brought to a court of proper jurisdiction, the evil will be and should be corrected. So far as I am informed, my good friend Ex-Vice-President Stevenson is on the right track.

Quite likely you may not have watched the drift of things in the Association and I think it may not be uninteresting to you to read the first five pages of the enclosed. I am not a prophet, nor the son of a prophet, but I certainly tried to save the organization its deplorable fall from usefulness to avarice.

When restored to its honorable pursuit in accord with the ambition of wise and good men I shall again seek to be of service in it but not under present conditions for, if we had not had a few faithful officers, the organization would now be extinct.

I trust you will continue your able and courageous expositions of the manifest evil purposes as they appear. Very truly,

C. W. WOOD.

Misplaced and Wasted Energy

WE are publishing the following correspondence to show the ridiculousness of the work that Mr. Koenig's Department is doing along the lines of assisting breeders to dispose of milk.

Why should Mr. Koenig, situated in an office at Chicago, feel that he was in a position to advise breeders living in New Haven, Connecticut, or any other distant city for that matter, regarding the particulars of a project such as the building of a hospital?

Mr. Bennett has so ably handled the subject in his answer to Mr. Koenig's letter that further comment is unnecessary.—THE EDITOR.

November 7, 1924.

Mr. Eugene B. Bennett,
423 Prospect St.,
New Haven, Conn.

Dear Sir:—

Our Association is getting information every month now on new hospitals which are being planned. We assume that there is an opportunity for someone to furnish milk to these hospitals. The following information has come to us in regard to New Haven, Connecticut:

"ST. RAPHAEL'S HOSPITAL, 1422 Chapel St. Private; 200 beds. Ground broken September 8th; new nurses' home for this hospital; 4-story fire-proof construction. Superintendent, Sister Superior."

The above information has been sent to one other breeder in your section: Harold M. Howard, 250 Boulevard.

By getting in touch with him you can perhaps decide on who is to approach this hospital in regard to their milk supply, or if you wish, pool your milk and furnish them or recommend them a reliable source for Holstein milk. Possibly arrangements have already been made to supply this institution with Holstein milk. Our records, however, do not show this to be the case.

Will you kindly let me know whether you are interested in doing this?

Sincerely yours,

EXTENSION SERVICE,
FRED. A. KOENIG, Director.

New York, November 12, 1924.

Mr. Frederick A. Koenig, Director,
Extension Service,
The Holstein-Friesian Association of America,
230 East Ohio Street,
Chicago, Illinois.

Dear Sir:—

Your letter to me of November 7th, 1924 was forwarded to me from New Haven, Connecticut, where I have not lived for fully three years. It was very kind of you to attempt to furnish me the business information that you did. However, such information is absolutely useless to me. I am very glad to receive your letter because the Extension Department of the Holstein-Friesian Association of America seems to me to

be misplaced and wasted energy and useless expense. To some extent I feel that I can prove this to you by your own letter.

In the first place, consider my address. At the time that I was an active breeder of cattle I was located near to Easton, Pennsylvania, where I bred cattle and sold milk for about eight years. At present I am located, temporarily, in New York City, but I own a farm at Allamuchy, N. J., and keep forty head of Holstein cattle and sell all the milk that I can produce to the Reid Ice Cream Company. I have had considerable experience with farming, but my present farm is the most satisfactory that I have ever owned and the most encouraging, and it is so because I am looking out principally for milk production and am not going into any of the fads and fancies that go with purebred cattle breeding, although at this time I do own a few purebred cows. I furthermore wish to say that in the last twenty years I have lived less than four years in New Haven and at the time when I have been there have been entirely out of the dairy business. I am surprised that you did not know my address. Certainly Mr. Houghton must have it, as several applications for the registration of calves have been made to him lately.

Now as to the information that you have sent me, I know this: St. Raphael's Hospital in New Haven has been in existence for at least fifteen to twenty-five years. The building that you have heard of is nothing but an addition to the present hospital service. St. Raphael's Hospital doubtless has an arrangement with some good sanitary milk producer or dairyman in the neighborhood of New Haven, and probably would not consider any change. I cannot understand why your information was not sent to more persons than Mr. Howard and myself. There are at least two or three other milk producers in the neighborhood of New Haven, Connecticut, whose cattle are mostly Holsteins, who could handle this business, if it was open to anyone, just as well as anybody.

I cannot understand just what the extension service has to do with the registering of pure-bred cattle. It seems to me that the matter of helping dairymen find a market for their milk could be done to better advantage by some other organization than a registering association. Why could it not be done by some organization of dairymen whose object is to regulate the price of milk for the benefit of the producer. I have known of one such organization in Pennsylvania to very profitably arrange for the placing of dairies. By starting an Extension Service and doing this kind of work, it seems to me that we are doing work that we are not called upon to do, and could be better done by other organizations who specially exist for that purpose, and in that way we are adding to the expense of registering cattle. It moreover seems to me that we should not be making any attempt to simply get in arrangements to place Holstein milk. It would be better if we acted in conjunction with dairymen having other breeds of cattle. As it is, by a severe campaign to advertise and promote the sale of Holstein milk, we have offended Guernsey cattle breeders who have influenced milk-dealers in Pennsylvania against Holstein milk, and in that way we have injured the sale of milk of our own cattle. Such work as this should be done

by some organization that represents dairymen having cattle of all breeds.

In short, it seems to me that extension work, as shown by your letter, would seem like misplaced energy and unnecessary expense. At this time there are too many organizations and institutions trying to do the same kind of work and overlapping each other. The thing for the Holstein-Friesian Association of America to do would not be extension work of this kind but some kind of work to improve the registration system and make it more like the registration system in vogue in Holland. In my opinion, the money that is going for this large extension service would be better applied if used for a registration system such as there is in Holland, where cattle are inspected and none but those of good individuality are registered.

Thanking you, however, for your letter, and for a chance to express my opinion, I remain,

Very faithfully yours,

EUGENE B. BENNETT.

Facts, Not Opinions

THE HOLSTEIN BREEDER AND DAIRYMAN has repeatedly contended that the present policies being pursued by the Association in the matter of Extension work, is a wasteful expenditure of the breeders' money and, if anyone is benefitted, it is the wealthy breeder; that any benefit the wealthy breeder receives is largely at the expense and to the detriment of the breeders and dairymen who are dependent on the returns of their dairies to feed and clothe their families and educate their children. To force them to contribute to the wasteful expenditure of the Association through its Extension Department is an unjust and unwarranted tax.

The stand which THE BREEDER AND DAIRYMAN has taken with reference to the Extension Department is not a matter of opinion. It might have been an opinion when the Extension Department at Chicago was first started but the records since Mr. Koenig's tenure in office conclusively proves that the stand which we

originally took and have since maintained is not an opinion but a fact as proven by the Association's reports of last year.

In 1923, the Extension Department, under the supervision of Mr. Koenig, expended \$202,387.69 of the breeders' money, contending that the expenditure of this vast sum was to assist the breeders by creating a market for surplus cattle.

The reports of the Secretary show that the Association transferred 5,727 less animals during that time than it did four years previous, in the year 1919; that 1,444 less breeders joined the Association than in 1919 and that the Association's operating expenses had increased \$329,924.85 and it was operated at a loss of \$60,819.55.

The falling off in the amount of business which the Association is doing in the matter of registering and transferring cattle is not an indication that the breed is not multiplying, it is merely a barometer which registers the disapproval of the breeders of Holstein-Friesian cattle of the manner in which the affairs of the Holstein-Friesian Association are being administered.

Holstein Milk

GEN. CHARLES W. WOOD in his address as president of the Holstein-Friesian Association at its annual Convention summed up in a nutshell the injustice of the efforts that have been made to discriminate against the milk from Holstein cows because it carried a low percentage of butterfat, in the following language:

"I venture here a statement: The Holstein-Friesian cow is the only creature of her kind legislated against. Just think of this folly. So foolish that it is absolutely wicked, with nothing but jealousy and avarice behind it. If, by some superhuman power, these creatures were obliterated, famine and death would afflict the country. Blot out any other breed of purebreds and the event would hardly affect the milk market, and its evil consequences would soon be overcome by the Holsteins."

Corning and Drying Beef

IN former years, most of the meat consumed on the farm was home-slaughtered. We have gotten away from this state of affairs, many think too far, and there are signs of a return to the practice of older days. The following recipes from *Farmers' Bulletin 1415*, are worth saving and using:

The cheaper cuts of meat, such as the plate, rump and chuck, are generally used in making corned beef. Meat from fat animals makes better corned beef than that from thinner animals.

Cut the beef into pieces five or six inches square. These pieces should be of uniform thickness so that they may be packed in even layers in the barrel. When the meat is thoroughly cooled it should be corned as soon as possible, for meat which has begun to spoil is unwholesome and will probably sour during the corning process. Under no circumstances should meat be put in cure while in a frozen condition.

Weigh the meat and for each 100 pounds allow 8 pounds of salt; sprinkle a layer of salt one-quarter of an inch in depth over the bottom of the vessel (a stone jar or wooden barrel which has been thoroughly cleaned and scoured preferable); pack the cuts of meat as closely as possible, making a layer five or six inches thick; then add alternate layers of salt and meat, being careful to cover the top layer of meat with considerable salt.

Allow the salted meat to stand overnight, then add the brine. For each 100 pounds of meat use four pounds of sugar, 2 ounces of baking soda, and four ounces of saltpeter dissolved in one gallon of lukewarm water. Mix thoroughly and pour over the meat. Then add three gallons of water. Keep the meat entirely under the brine by using a weighted loose board cover. If any of the meat projects it causes the brine to spoil in a short time.

If the meat has been corned during the winter and must be kept into the summer season, it is advisable to watch the brine closely during the spring, as it is more liable to spoil at that time than at any other season. If the brine appears to be ropy, the pieces of

meat should be removed and vigorously washed with a stiff brush and hot water, then repack and cover with new brine. The brine should be kept in a cool place as the sugar in the brine has a tendency to ferment.

To cure thoroughly the meat should be kept in the brine 28 to 40 days. Meat removed from the brine should be hung up and allowed to drain thoroughly before wrapping and smoking.

The round is commonly used for dried beef, the inside of the thigh being considered the choicest piece, as it is slightly more tender. The round should be cut lengthwise of the grain of the meat in preparing for dried beef, so that the muscle fibers may be cut crosswise when the dried beef is cut for table use. Cure the meat in the same manner as described under corning, with the exception of adding an additional pound of sugar per 100 pounds of meat. After being removed from the pickle, the meat should be smoked and hung in a dry place or near the kitchen fire, where the water will evaporate from it. It may be used at any time after smoking, although the longer it hangs in the dry atmosphere the drier it will become.

Separation of Cow and Calf

ALTHOUGH there are excellent reasons for the common practice of promptly removing the newborn calf from its dam, it is sometimes advantageous to leave them together. The cow often comes to her milk more naturally and easily with the calf present. The calf discovering its own appetite and then the maternal fount at which it is to be satisfied, begins punching and bunting the udder in a manner well calculated to stimulate the flow of milk and at the same time to "break up" the congestion of the organ. Possibly many a case of mastitis in fresh cows might have been avoided had the calf been left beside its dam until the udder was well "broken up."—*Farmers' Bulletin 1422*.

"Cream of quality" should be the slogan of the cream producers.

YOU NEED HIS SON

KING ORMSBY ENDERCAMP

heads our accredited herd. His sire is KING OF THE ORMSBYS. His dam and sire's dam have seven-day records averaging 33.80 lb. butter, 662.95 lb. milk with a yearly average of 1,097.61 lb. butter. Our herd returns a substantial profit at the pail. Get our low prices on good young stock.

Tioga Co., Candor, New York.

WISCONSIN WINS AT PORTLAND SHOW

As was expected, Wisconsin cattle "cleaned up" at the Pacific International, winning twelve blue ribbons and all of the championships, Johanna Rag Apple Pabst, Madam Artis Wayne Denver and Johanna Wayne Rue 2d repeating their triumphs at the National Dairy Show. The shadow of Foot and Mouth was seen at Portland for there were no entries at all from California nor from Canada. From an Holstein standpoint, the show was far from being international as only cattle from three states, Washington, Oregon and Wisconsin

JOHANNA RAG APPLE PABST
First prize three-year-old, senior and grand champion at the Pacific International and National Dairy Show. Owned by Joseph Piek, Hartford, Wis.

were shown. Six of the blue ribbons went to Washington and four to Oregon.

Sir Florence De Kol Soldene, owned by Blair & Sandwick of Redmond, Ore., was the first prize aged bull, last year's champion being in third place. Phymere King Fobes, owned by Dr. W. T. Phy of Hot Lake, Ore., was the best of three two-year-olds. Harvest Jewel Matador, from the Carnation Farms, was the best senior yearling and King Mutual Fan of the Jefferson County Asylum herd was placed at the head of the Junior yearling bull class. King Richmond Pontiac, junior champion at Waterloo, headed a class of seventeen senior bull calves. General Homestead Mercedes, owned by John Zoberlin of Plymouth, Wis., was placed by Judge Ward Stevens at the head of a class of eleven junior calves. It will be remembered this young fellow headed the bull calf class at the National Dairy Show.

It was a foregone conclusion that Johanna Rag Apple Pabst would carry off the senior championship. For the junior championship, four high class young bulls competed. The

judge placed King Mutual Fan at the head and, after some deliberation, gave the grand championship to the older bull.

The aged cow class brought out twenty animals, Barbetta Hengerveld De Kol from the Agricultural School Farm at Wauwatosa, Wis., being placed at the head. Tillamook May Boon De Kol, a Carnation entry, was second and Esther Hengerveld Antonia, owned by Adolph Benter, of Creswell, Ore., third.

Dolly De Kol Tirania Fayne, owned by H. E. Dickinson of Oconomowoc, Wis., was placed first of the thirteen four-year-olds, Bessie Princess Snowball, owned by F. R. Beals, Tillamook, Ore. being second and Charity Canary Denver, third. Madam Artis Wayne Denver won easily in the three-year-old class.

Jennie De Kol Segis Walker won the blue in the class for two-year-old heifers in milk. Antone Vandecoevering of Forest Grove, a member of the Banks 4-H Calf Club, owns and exhibited her. In 1922, Antone's heifer won first and junior championship in the calf club classes while last year she won third in the open class. Nancy Active Tillamook, owned by

MADAM ARTIS WAYNE DENVER
First prize three-year-old senior and grand champion at the Pacific International and National Dairy Show. Owned by Jefferson County Asylum, Jefferson, Wis.

F. R. Beals was second and the well known prize winner, Carnation Matador Mercedes Selah, third.

Queen Pontiac Matador beat a stablemate for first place in the dry two-year-old heifer class. Johanna Wayne Rue 2d won another blue ribbon for the Jefferson County Asylum by heading a class of seventeen senior yearling heifers with Hazelwood Fobes Heilo of the John L. Smith herd, second and a Carnation heifer third. Carnation Matador Adelina

Traverse Echo Sylvia King

heads Merryall Herd. His dam produced 33.27 butter in 7 days and averaged 102 lb. milk daily for a month.

3 nearest dams average 33.03 lb.
7 nearest dams average 32.72 lb.
10 nearest dams average 33.67 lb.
14 nearest dams average 30.18 lb.

That's Transmitted Producing Ability.

and from a 30 lb. daughter of a twice
37 lb. cow.

GLENN L. WARNER

R. D. 5, Cuba, New York.

Segis was in this class but she had to be content with fifth place.

Carnation Matador Aaggie Colantha was the first of nineteen junior yearling heifers with Lady Johanna Pontiac Rag Apple 3d, owned by Philip Linker, in second position and Hazelwood Segis Ormsby, third.

The largest class of the day was furnished by the senior heifer calves of which there were twenty-seven exhibited. Empress Susie Waldorf of the Jefferson County Asylum was placed first with Carnation Matador Lulu Segis second and Hazelwood Segis Ormsby third. Mr. Smith, however, turned the tables in the junior heifer class, winning with Hazelwood Heilo Skylark 2d, Lady Nettie Pontiac Star 2d being next to her and Carnation Prospect Gem third.

Carnation won the blue for Advanced Register cow with two of her progeny with Tillamook Lola May De Kol, Beals being second and fourth with two other Tillamook groups. James

BOY'S HEIFER WINS AT INTERNATIONAL
Antone Vandecoevering, Forest Grove, Ore., and Jennie De Kol Segis Walker, first prize two-year-old in milk at Pacific International. Photo taken about eighteen months ago.

C. Chamberlain of Ceres, Wash., was third with Donnybrook Harriet Waldorf. Jefferson County Asylum, with offspring of Dutchland Creamelle Denver Prince had the first prize get of sire. John L. Smith being second with get of Hazelwood Heilo King while offspring of Matador Segis Walker were third.

With offspring of Hazelwood Johanna Korndyke, John L. Smith had the first prize produce of cow and won the challenge silver tea service which Eastern visitors at the 1921 International purchased for this purpose. As Mr. Smith has now

won this twice, it became his property. Chamberlain with offspring of Donnybrook Harriet Waldorf was second and Carnation third with Princess Adeline of Lulu.

There were six exhibitor's herds shown. Jefferson was first, Carnation second and J. L. Smith third and placings were in the same order in breeder's young herd. Carnation had the winning calf herd with Smith second and Jefferson Asylum third. F. R. Beals sprung a surprise by supplying the prize winning dairy herd and also had the aggregation in fourth place, Carnation being second and H. J. Evans of Ferndale, Wash., third.

State herds were exhibited by all three of the states showing. Of course Wisconsin was first, while Washington was second and Oregon third. Wisconsin cattle got a lot of advertising out of this trip. They were stopped a number of times at various stations while on the journey west and a breed demonstration was staged at these stops. Madam Artis Wayne Denver, Johanna Rag Apple Pabst and other prize-winners were paraded around the stations and George Buckley, who went along on behalf of Carnation Farms, lectured to the onlookers on the good points of the cattle and of the Holstein breed. This was surely taking advantage of circumstances.

PRESIDENT COOLIDGE WILL ATTEND INTERNATIONAL LIVESTOCK SHOW

President Coolidge is expected to visit the Twenty-fifth International Livestock Exposition which will be held at Chicago the first week in December. This is a fitting recognition of the importance of agriculture and the place the exhibition holds in the livestock industry. It is the first time for many, many years that a president of the United States has attended an important agricultural show. This is rather strange as in other countries the occupant of the throne annually attends one or more leading agricultural expositions and the presidents of the French and Swiss republics attend several expositions during their term of office. Let us hope that President Coolidge is setting a precedent which will be followed by future occupants of the presidency.

Holstein breeders will find considerable that will interest them at the International and they will have the opportunity to see Arthur Danks, Manager of the Tranquility Farms at Allumuchy, New Jersey, place the awards in the classes for Dorset sheep.

The Government will be represented by a big exhibit at this great show. There will be a demonstration of the value of good breeding and improved methods in cattle, hogs, sheep, horses and general livestock farming. A miniature 160 acre corn-belt hog farm will be shown in pictures, diagrams and figures. This is an actual owneroperated Illinois farm. The

Berylwood Prince
Aaggie Chicago

is backed by wonderful producing cows. Six of his seven nearest dams have year records averaging 1058 lb. butter, the other is a 40-lb. cow that made world's butter records for 60-day, 90-day, 100-day and 120-day butter production.

He has inherited this producing blood together with the Type and Individuality of his Daddy who is an undefeated Grand Champion show bull.

Herd Accredited

You are invited to come and see him.

L. L. ALLIS

Rummerfield Pennsylvania

ECHO BELLE MODEL KING

Is by Champion Echo Sylvia Pontiac, that wonderful son of May Echo Sylvia.

His dam is a 28.18 lb. cow whose dam and two granddams have seven-day records averaging 35.06 lb. butter.

Our herd, numbering 86 head consists of producing stock of royal breeding. We can supply your needs and our prices are reasonable.

WARD D. LOOMIS

Bainbridge R. D. 4 Chenango Co., N. Y.

demonstration starts with the inventory taken on January 1st, and depicts the entire year's operations. On this farm 78,000 pounds of pork was produced in 365 days, a pound of pork every seven minutes, and an illustrated clock points out this story. The plan of fields on the farm, the arrangement of feed lots and quarters, and the rations are shown. A detailed story of this successful pork factory will be told in pamphlets distributed to visitors.

"Two Steers on the Same Trail" is the title of an exhibit which will interest beef producers. The difference between a good steer and a common steer from the time they start as calves until the time they reach the butcher's block and the consumer's table is shown by live animals, models, paintings and diagrams. Even the roasts on the consumer's table are seen.

The sheep exhibit is along the line of purebred sires. There are two lambs in adjoining pens, one sired by a scrub and one by a high class purebred ram. Enlarged photographs of two lots of lambs shows the same contrast. Actual prices received for the two lots are given, and these will be adjusted to prices ruling in the Chicago markets for the month of October. Representations of two carcasses on the hooks in a cooler and the dressing percentages show why it pays to use improved bred stock.

RECORD COW TO BE SHOWN

At the Pacific Slope Dairy Show to be held at Oakland, California, December 10 to 16 the world's record senior four-year-old heifer Helm Veeman Woodcrest will be on exhibition. This is the heifer who recently completed a record of 36,217.7 lb. milk, 1,254 lb. butter. She is owned by Frank Helm of Fresno.

Information received some time ago indicated that there would not be any cattle exhibited at the California fairs this season. We have not heard that the competition for fair prizes has been resumed so it is probable that this cow is exhibited as a special attraction.

GREAT NORTHERN DISTRIBUTES BULLS

The Great Northern Dairy Sire Special which left Seattle September 28th, completed its tour October 17th at Fargo, North Dakota. The Special consisted of a car of purebred Holstein bull calves, twenty-eight in number, purchased from the Carnation Farms by President Ralph Budd. They ranged in age from two to thirteen months.

The contract the farmer had to agree to is that he shall take care of the animal and keep him three years, allowing his neighbors the use of the animal free or for a charge not more than two dollars. He has the privilege of exchanging

the bull at the end of two years for another bull of like breeding.

The recipients of the calves were: Montana: W. S. Hedge, Havre; Paul Montgomery and Alphonse Vercrussen, Chinook; Brekke Brothers, Harlem; Peter Hoagland, Malta; Iver Harebo, Glasgow; Gustav Applegren, Wolf Point; E. F. Robinson, Poplar; David S. Nelson, Culbertson; Mrs. J. J. Glover, Plentywood; Frank Hughes, Scooby; H. W. Loucks, Redstone; M. C. Mellotte, Bainville; Lower Yellowstone Growers Association, Fairview; Anton Frondsen, Sidney. North Dakota: Howard E. Bell, Croft, R. T. Wices, Williston.

DELEGATE SYSTEM ABOLISHED

At the annual meeting of the Dane County Holstein Breeders Association held October 30th, at Madison, Wis., there were fifty present.

It was voted to abolish the system of locals. Under this type of organization each local organization elected two delegates to the annual county meeting. These delegates elected the county officers and conducted the county business.

A general protest was voiced in the meeting and the system of locals was abolished by unanimous vote.

J. D. Stone of Oregon was elected president of the association for the coming year. John M. Bailey of Stoughton, was elected vice-president and J. E. Stolen of Mt. Horeb secretary-treasurer, in addition seven directors were elected.

Emerson Ela, counsel for the Tobacco pool, read and discussed the constitution and by-laws of the organization. He said that the financial committee appointed at previous meetings had decided to publish a directory of the members of the organization as a means of raising money to defray the debt placed upon the association as the result of taking a show herd to the dairy show at Milwaukee.

State Secretary L. C. Oldham told of ways in which other county organizations in the state were collecting funds.

RED TAPE AND DISEASE

Red tape and railroad regulations are blamed for a recent outbreak of foot and mouth disease near the great cattle district of Norfolk, England. A consignment of Irish cattle on its way to Norwich was unloaded at Derby, a district where the disease still exists. The Irish cattle contracted the disease and it is supposed that they were infected while in the yard at Derby. In order to comply with the law that stipulates that cattle shall not travel for more than twenty-four hours without unloading and feeding they were taken out of their cars. Just who was to blame for this is not stated but it certainly seems that the railroad company's officials should have known better.

Susquehanna Co. Thompson, Pa.

RAILROADS AIM TO IMPROVE QUALITY

Several railroads running through Kentucky have reported to the Dairy Products Association instances of cream swelling and boiling out of the cans in transit. They called the attention of the association's agents to the shipper's name, the date and train on which the shipment moved and made suggestions for the proper handling of the cream. The total number of shippers reported was 1,017 but only 94 individuals were reported more than once. Unless milk or cream or any other dairy products are shipped in good condition it is impossible for them to arrive at their destination in good condition no matter how much care they receive en route.

THEY HAVE THE MONEY READY

In 1919 the British Food Controller levied a tax of four cents a gallon on milk transported to London from the southwestern counties of England. The producers claimed that the Controller had no right to levy such a tax and took the matter to the courts. The British milk selling company, United Dairies, Ltd., through which the levy was paid, recently won its case. The officers of this company now claim that it is almost impossible to refund the tax to the members from whom their supplies came, owing to the many changes in tenants and owners during the past five years, and announce that the United Dairies, Ltd., proposes to set aside a sum of practically \$150,000, the income from which is to provide scholarships for the sons of milk producers in the southwestern counties.

THE DANGER OF SELECTING FOR TYPE

Most breeders, whether of plants or of animals, delight in developing a certain type. Type is looked upon as a trademark of the breeder's skill. Breeding for type has been a popular thing. The agricultural colleges have urged it and the corn shows and state fairs have laid great emphasis upon it. In fact, type is the essence of most of the agricultural competitions.

It is now becoming apparent that breeding for type is a dangerous thing. At the Minnesota station, as a four-year average, they found that corn selected for score card type yielded one or two bushels less per acre than corn which was not selected in any way for type. There was sufficient duplications of plots so that the chances were better than thirty to one that the difference was really significant. The work was not continued long enough at the Minnesota station to fix any definite type. If it had been, we venture to say that the reduction in yield would have been more than five bushels per acre.

Some years ago, at the Wisconsin station, Dr. Cole began an inbreeding experiment in which he selected Rhode Island Reds on the basis of fine color. Within a few years this strain became extinct, whereas another strain which was also inbred but which was selected on the basis of vigor, continued to reproduce in fairly normal fashion.

The important thing in all this so far as the practical farmer is concerned, is to select his plants and animals for health, vigor and fecundity rather than type. This is especially true with corn. This fall and winter we want to urge our readers, when picking over their seed corn, to forget about type. If the ears are solid and well matured and give evidence of having come from healthy plants, and if the shank has broken clean without leaving diseased looking shreds, the chances are the ear is perfectly all right for seed. It makes mighty little difference whether the ear is decidedly smooth or a little rough. Of course, if the ear is very rough, with decidedly narrow kernels of the shoe-peg type, it may be well to discard it. Too many farmers in the past have thrown out smooth ears with a shallow grain because they thought this an evidence that their corn was running out. There is a chance that some of the Illinois corn men are now going to the opposite extreme and throwing out all rough ears because they think roughness means susceptibility to disease. The one safe thing, as we see it, is to pick for germinating vigor and let type take care of itself. If a farmer must pick for type, let it be for stiff, strong stalks which will withstand August windstorms.

With beef cattle and hogs, type means something definite in so far as it has to do with percentage of high-priced cuts and pleasing the packer. But here again the matter is often carried to the extreme, to the neglect of general vigor and fecundity. In the case of hogs, the one most important thing is breeding animals which will produce large litters per sow and litters which gain rapidly and economically. If a sow raises large litters of pigs, we would say keep her, even though she is a little off in type.

It is the old story of function versus form. Heretofore, we have followed the English traditions and bred pretty largely for form. The Americans are traditionally "go-getters." Why not establish an American tradition of function first and form or type secondarily? It is up to our agricultural colleges and our farm papers to lead the way in this reform in plant and animal breeding standards. The research departments of the agricultural colleges have long seen the light, but the extension departments are many of them still out of date.—Wallaces' Farmer.

REORGANIZATION OF FIRST GRANGE

The first Grange ever organized was Potomac Grange No. 1. On October 18 of this year, it was reorganized at the National Grange headquarters in Washington. Its present membership included three members who were members of the same grange and active in the years 1886 and 1888, besides one man who was a member of this Grange when it was first organized in 1868. This is Matthew Trimble, a brother of Dr. John Trimble, one of the founders. The present officers include Dr. C. T. Atkeson, Master; A. M. Loomis, Secretary of the National Dairy Union, is Overseer, while Charles W. Holman, Gate Keeper, is Secretary of the National Federation of Milk Producers and the Steward, E. E. Reynolds, is a well known agricultural newspaper correspondent.

ECHOES FROM THE SALES

The semi-annual Clark County Holstein sale was held on the fair grounds at Neillsville, Wis., October 11. Thirty-five head were sold, the highest cow bringing \$200 and three yearling heifers \$130 each. There was a good demand for yearling bulls, three choice ones bringing \$175, \$165 and \$140 respectively.

At the Kansas Holstein Breeders Sale, held at the Topeka Fair Grounds, October 30, fifty-three head brought \$6,312. The consignments included several small calves and heifers and five bulls.

C. E. Griffith of Big Cabin, Okla. was the heaviest buyer taking ten head for \$2,000. He paid \$395 for a cow and calf consigned by J. S. Artman of Denison.

An average of \$143 was obtained at the Robert A. Ryan dispersal sale held at De Pere, Wis., November 5. A large crowd was present at the sale, a number coming from outside Wisconsin. There were thirty-one animals offered, including Sir Calamo Wayne, third prize aged bull at the 1921 National Dairy Show. The highest price was \$325, for Elmwood Skylark Agnes, a cow with a seven-day record of 19.63 lb. butter.

Ralph Heffron of Mifflin, Wis., bought the top cow in the Iowa County Holstein-Friesian Association sale held at Mineral Point, Wis., October 22 and 23, for \$180 and Andrew Bode of Potosi paid \$105, the top price for a grade. The purebred offerings of all ages averaged \$95 per head, the grades averaged \$75. There were one hundred purebreds and thirty-five grades offered and the total for the two days sale was \$10,600.

The entire herds of M. E. Brown of Jonesville, Mich., and William Bartlett of Plymouth, Mich., were dispersed in the seventh annual consignment sale of the Holstein-Friesian Breeders of Washtenaw County, held October 21 at the Ann Arbor Fair grounds. Wascoe Pride Korndyke Wayne, consigned by Mr. Brown topped the sale at \$350 and was purchased by George Wheeler & Son of Brooklyn, Michigan. Prices ruled low. The auctioneer was Col. Perry of Columbus, Ohio, with S. T. Wood in the box.

Both grade and purebred Holsteins were offered at the Rocky County Holstein Association sale held at Janesville, Wisconsin October 29. The sixty-two head of purebred cattle averaged \$131 and eleven high grades brought \$1,145, an average of \$104. Illinois farmers were the best buyers among the largest crowd in the history of Rock County Holstein sales.

A yearling bull, King Woodbine Prilly Abbekerk, consigned by J. W. Goldthorpe topped the sale, J. W. Martin of Darlington, Wis. paying \$350 for him.

SOUTH APALACHIN

NEW YORK

Prilly Fayne Walker, the highest priced cow was consigned by F. Earl Palmer of Lake Geneva and was sold to S. S. Helgeson. The top grade cow, bred by Funk Brothers, of Janesville went to F. M. Reed of Lilly Lake, Ill.

Thirteen bulls were sold at a Holstein bull sale held at Oshkosh, Wis., November 1, the average price being \$80.15. The highest price was \$115 for a bull consigned by Harold Ellis of Eureka, Wis. and purchased by Oscar Jones of Pickett. The dam of this bull produced 507.50 lb. butter, 11,598 lb. milk in ten months in C. T. A. work. Roger Evans of Pickett consigned a bull which was purchased by A. D. Phillips of Oshkosh for \$102.50.

Eight heifer calves were sold for an average price of \$81. One heifer born last spring, consigned by Earl Hughes brought the top price, \$127.50. Two calves from the Louis Sorenson herd brought \$125. Both were purchased by U. C. Boss, Vinland. The small attendance was attributed to the unusually mild weather, farmers staying home to work.

**DAM OF JERMYN BULL MAKES
ANOTHER BIG RECORD**

At the Dutchland Farms sale held last May, one of the features was the bidding contest between J. J. Jermyn of Scranton, Pa., and a representative of the Stillwood Farms for the young bull, Dutchland Creamelle Denver King. The bull fell to the nod of Mr. Jermyn for \$4,200 and the representative of the Stillwagon Brothers had to be content with the dam of the bull, Dutchland Creamelle Lady Denver.

On the Stillwood Farms at Niles, Ohio, Dutchland Creamelle Lady Denver re-

was from Creamelle Vale, 1,155.85 lb. butter, 29,591.4 lb. milk, world's record at time of making.

Most of the best cows at the Dennington Stock Farm are in calf to "Dutch" as Mr. Jermyn and herdsman R. P. Wilan call the young herdsire. Already a number of breeders have spoken for sons of the young Dennington herdsire. Mr. Jermyn built his herd by purchasing the top animals at a number of high class sales and upon his great farm has given his cows the best of feed and care. To build up both dairying and the Holstein interests in his section he has always set very low figures on his surplus males and frequently says he is not in the business to make money but to do as much good as he can.

J. J. JERMYN
Owner of Dutchland Creamelle Denver King.

cently completed a year record of 1,148.17 lb. butter, 25,131.7 lb. milk. This record was made as a six-year-old. She previously had a year record of 1,134.72 lb. butter, 22,810 lb. milk made as a four-year-old and as a five-year-old made 1,100 lb. butter in a year while as a senior two-year-old she made nearly 17,000 lb. milk and over 800 lb. butter in ten months. She is a daughter of Dutchland Creamelle Konigen Lad and her dam, Dutchland Colantha Denver is the highest record daughter of Colantha Johanna Lad with 1,315 lb. butter credited to her in year test.

Dutchland Creamelle Denver King is by Dutchland Konigen a son of King Segis Pontiac Konigen from the high record cow, Dutchland Pietertje Vale, 1,263 lb. butter and nearly 28,000 lb. milk in a year. Her dam, Dutchland Colantha Vale, is credited with a year record of 1,082 lb. butter, 27,625 lb. milk and she

TO DETERMINE SILAGE PRICE

A good rule to follow in determining the price of silage, says the Pennsylvania State College, is one-third the price of alfalfa or one-third the price of mixed hay plus ten percent. The college experts use a formula which is based on the price of corn per bushel according to the following table:

Price Corn Per Bushel	Value of Silage
\$.70	\$3.96
.80	4.40
.90	4.84
1.00	5.28
1.10	5.72
1.20	6.16
1.30	6.60

CLUB BULLS WIN PRIZES

Members of the Mesilla Valley Bull Association are much elated over the success of the association bulls at the International Fair and Exposition at El Paso, Texas, writes Professor O. C. Cunningham, Head of the Dairy Department at the New Mexico College of Agriculture. One of the bulls was placed first in the two-year-old class and was made grand champion, competing with an aged bull for which a local company paid \$3,000. Another bull owned by the association drew second place as a yearling. The members of the Bull Association are to be congratulated in having such excellent bulls.

Make sure that sour land which is to be seeded to clover next spring is properly limed.

**PRIZE BULL CHANGES OWNER-
SHIP**

About 18 months ago the Ohio Farmer ran a junior essay contest. Loren Steiner of Wapakoneta, Ohio, won the first prize with his essay, "Why Dad Should Use Holsteins." This prize was a young bull, Daisy Hill Iowana Butterboy.

Because of the size of the Steiner farm it was not practical to keep the bull on the place so he was sold to Louis Tange-man of New Bremen and Elmer H. Dammeyer, of St. Mary's, Ohio, who will use him jointly to head their purebred Holstein herds. He will be available for use in the Steiner herd as he will remain in Auglaize County.

Daisy Hill Iowana Butterboy, 405,384, from Daisy Hill Maid Isobel, 625,455, and by Iowana Colantha Burke Fayne, 259,877, was dropped February 11, 1923. When sold October 31, 1924 he weighed 1,525 pounds. He is one of the best bred Holstein bulls in Auglaize County, his 15 nearest dams averaging 25.59 pounds with only one record below twenty pounds. The three nearest dams average 973.4 lb. butter and 23,403.4 lb. milk in yearly tests.

Loren Steiner, the winner of the bull, is now a sophomore at Ohio State University having won one of the scholarships given annually by the College of Agriculture.

DEAR AT ANY PRICE

A fertilizer selling for about \$28 per ton was analyzed by the Pennsylvania Bureau of Foods and Chemistry and the analysis showed that it contained only about \$1.75 worth of plant food per ton. Furthermore over 60% of the material in the fertilizer was either sand or other matter which would not dissolve even in acid. At least 300 tons of this so-called plant food was sold in the state last year. The manufacturer was prosecuted and fined.

RAPID BUSINESS

Theodore Pritzl of Manitowoc, Wis., recently sold a grandson of Sir Pietertje Ormsby Mercedes to a buyer from South America, who called at his farm. The animal was exactly what the purchaser wanted and when Mr. Pritzl named the price, the customer produced the cash with directions to ship the bull to New Orleans and he was on his way by express to that southern city two hours after the transaction was closed.

SHE LIKED HER JOB

A suburban housewife relates overhearing this conversation between her new maid and the cook next door:

"How are you, Hilda?"

"I'm well," said Hilda. "I like my job."

We got cremated cellar, cementary plumbing, elastic lights, and a hoosit."

"What's a 'hoosit,' Hilda?" the puzzled cook exclaimed.

"Oh, a bell rings. You put a thing to your ear and say 'hello,' and some one says 'hello,' and you say 'Hoosit!'"—
United Telephone Voice.

Cow Testing Association Reports

PENNSYLVANIA TESTING

For the month of September twenty-nine Pennsylvania cow testing associations report that 8,586 cows were tested of which 462 made more than 40 lb. fat, 113 exceeded 50 lb. while 318 cows produced more than 1,200 lb. milk. Association members disposed of 152 cows because they were unprofitable.

The big producer in this state was a purebred Holstein owned by O. D. Smith of Meadville, enrolled in the Meadville Association. She is credited with 93 lb. fat, 2,679 lb. milk. The second largest milk producer was a purebred Holstein owned by F. R. Babcock of Gibsonia. In the Butler County association this cow is credited with 2,472 lb. milk. In third position is another purebred Holstein with 2,373 lb. milk. She is owned by Ivo V. Otto of Carlisle.

The Cumberland County leads for the highest ten cow average with 58 lb. butterfat. The best ten cows of the Washington County association averaged 52.2 lb. Venango County's best ten averaged 53.7 lb.

PIEBE LED THEM ALL

Piebe De Kol Inka Leondale, a purebred Holstein owned by Otto E. Lueck, Stetsonville, Wisconsin, was high cow for the last year in the Taylor County Cow Testing Association. She was milked 285 days, during which time also she produced 13,371 lb. of milk and 501.2 lb. butter fat valued at \$251.97. Her product above cost of feed amounted to \$162.79, besides which she brought her owner an exceptionally fine heifer calf. During her nine and one half months' milking period, she averaged 52.79 lb. butterfat a month.

SOUTH DAKOTA TESTING

Purebred Holsteins captured most of the honors in the South Dakota testing associations for October furnishing the four highest producers. In addition the leading herd consisted of purebred and grade Holsteins and the third and fourth herds were entirely purebred Holsteins.

Bess Taconic De Kol owned by Erwin and Peterson of Groton, led the state with the production of 84.94 lb. butterfat. She also led for income over cost of feed, netting her owners \$22.17 after deducting her feed bill of \$8.40. She was fed alfalfa hay, mangels, oats, barley, and bran receiving 15 pounds of the grain mixture per day.

Second to Bess was Soo Alice owned by the Sioux Falls Penitentiary. She has 2,256.8 lb. milk, 83.50 lb. butter to her credit. Ada, owned by Frank Johnson of Hetland, is third with 1,691.9 lb. milk, 77.44 lb. fat. Rigtje, owned by Fred M. Brown of Watertown, is fourth with 56.88 lb. fat, 1,534.5 lb. milk. The list of the ten largest producers contain the names of seven purebred Holsteins.

Fred Reber of Brown County owns the highest averaging herd. His nine purebred and grade Holsteins averaged 46.17 lb. fat, 1,203.4 lb. milk, their test being 3.83%. A grade Holstein herd with an average of 44.90 lb. fat was second. The twenty-four purebred Holsteins at the Sioux Falls Penitentiary averaged 43.55 lb. fat, 1,252.9 lb. milk and was in third position.

The Brown County Association led for production. In this association there are 16 herds containing 202 cows in milk. There were 22 cows that each produced over 40 lb. fat and nine herds that averaged 25 lb. and the tester, F. J. Meade, reports an average production of 685.2

lb. milk, 24.75 lb. fat. In the entire state 226 herds containing 2,409 milking cows were tested. The average per cow was 20.65 lb. butterfat.

Ten associations reported. Another in Beadle County will start testing December 1st, and new associations may be started in other counties before long.

MOOCHY NOW LEADS

Moochy, a purebred Holstein owned by Lou Doeringsfeld and Son of Fennimore, Wisconsin, led the Fennimore-Boscobel Association for September with a production of 92.8 lb. butterfat, 2,379 lb. milk. In her previous lactation period Moochy was the second high cow in the association for the year producing 601 lb. butterfat, but was surpassed by a registered Holstein from Governor Blaine's farm with 669 lb. butterfat.

Second for September was a purebred owned by L. E. Penberthy and Son with 60.5 lb. fat, 1,680 lb. milk. A grade Holstein was third and three other purebred Holsteins were among the ten high producers.

PERSISTENCY AND PRODUCTION

Persistency as well as large production was shown by Rosni Veeman Rag Apple Korndyke, a daughter of Jenningshurst Mutual Rag Apple, owned by Frank B. Walker of Woodbury Forest, Va., and enrolled in the Orange County Cow Testing Association. She produced during September, 1,604 lb. milk, 67.4 lb. butterfat, thus leading all the cows enrolled. J. B. Fink, tester of the Association, reports that this cow was fresh in March and has headed her association several times during her present lactation period.

ILLINOIS TESTING

A purebred Brown Swiss from the Hawthorne Farms led in the Illinois Cow Testing Associations for October by producing 87.2 lb. fat, 2,179 lb. milk. A purebred Holstein from the Rock River Farm Dairy was second with 86.7 lb. fat, 2,982 lb. milk, a grade Holstein owned by O. C. Beatty of the Whiteside association was third with 76.3 lb. fat. Two purebred Holsteins at Simissippi Farms took the next two positions. Then comes two grade Guernseys, then a grade Holstein in the herd owned by the Geneva School for Girls, then another grade of the Beatty herd, while in tenth position is a purebred owned by J. B. Norton. All ten of these cows produced over 70 lb. fat in the month.

Four purebred Ayrshires owned by Deerpath Farms led for herd average with an average of 52.3 lb. fat. Eleven Holsteins, grade and purebred, owned by Frank Flack of Jo Daviess County are in second position with an average of 48.6 lb. fat, 1,430 lb. milk. In addition to these the list of the ten highest contained the names of three entirely purebred herds, two consist of grade Holsteins and one herd consists of both purebred and grades. On one of the Simissippi Farms 27 purebreds averaged 42.7 lb. fat, 1,155 lb. milk while 20 Holsteins owned by F. M. Barber and Son of Woodstock, averaged 1,176 lb. milk and exactly 39 lb. fat.

FIRST REPORT IN STATE

F. E. Hanson, tester for the Kingsbury-Hamlin Cow Testing Association has published what is believed to be the first annual printed report of a South Dakota Cow Testing Association. At Badger on April 5, 1923, twenty-six farmers signed an agreement to organize the fourth cow testing association of South Dakota and the first to be operated in their part of the state. Actual operation was begun May 1st. A number of the cows were slaughtered, five cows died,

and nine cows were sold for dairy purposes. Fourteen cows were purchased. Work started with 326 cows and 62 heifers freshened during the year. At the close of the year there were 346 cows on test of which 270 completed their year. Thirteen cows produced over 400 lb. butterfat while ten produced less than 100 lb.

The association average per cow was as follows: Milk 5,612.1 lb., test 3.84%, butterfat 215.6 lb., price of butterfat 43.7 cents, value of butterfat \$94.11, cost of feed \$35.32, profit \$58.79, returns for \$1.00 expended for feed \$2.66, feed cost per pound of butterfat 16.4 cents, feed cost per 100 pounds of milk 63 cents.

F. E. Marquardt's Holsteins earned on the average \$10.99 per cow more profit than did his common cows. The cows of dairy breeding in the general association averaged 280.2 lb. butterfat and returned an average profit of \$78.24. The scrub or common cows averaged 196.8 lb. butterfat and returned an average profit of \$53.63. During the year five purebred dairy bulls were purchased by members of the association and now twenty of the herds are headed by purebred bulls of dairy breeding.

HOLSTEIN HERD LEADS STATE

E. J. Wylam and Son of Plainfield, Iowa, have the distinction of owning the highest producing dairy herd enrolled in any Iowa cow testing association last year. Fifteen purebred Holsteins in this herd averaged 13,082 lb. milk, 455.2 lb. butterfat. The fourth highest herd consisted of 16 purebred Holsteins owned by Thomas Hansen of Cedar Falls, with an average of 13,399 lb. milk and 440.6 lb. butterfat.

FINE SHOWING IN IOWA

Iowana Fayne Springbrook, owned by the Iowana Farms was high cow for October in the Davenport Cow Testing Association. The Iowana herd averaged 1,069 lb. milk, 34.2 lb. fat and was third high herd in the association.

FIRST, SECOND AND THIRD

Individuality as well as producing capacity are combined in a two-year-old purebred Holstein heifer owned by W. H. Landis of East Greenville, Pa. This heifer has been exhibited at the great fairs at Allentown, Quakertown, and Doylestown, Pa., and at Trenton, New Jersey, and was a consistent winner. The heifer freshened September 28 while on the show circuit. During October, in the Montgomery County Cow Testing Association, she is credited with the production of 1,253 lb. milk, 77.69 lb. fat, heading the list of cows enrolled. A two-year-old stablemate that freshened the following day was second with the production of 1,112 lb. milk, 66.72 lb. fat. In third position was a purebred Holstein owned by C. A. Wismer & Son of Graterford, credited with 1,659 lb. milk, 66.36 lb. fat. Spot, a grade Holstein owned by A. K. Rothenberger of Center Point, was fourth with 60.03 lb. fat and had the highest milk record reported, 1,876 lb. Nine of the ten highest fat producers were black and whites, two were members of the Wismer herd and three owned by Landis.

The Wismer herd had the highest milk average, 1,173 lb. while Landis led for fat with an average of 40.44 lb.

During October, twenty-six herds containing 365 cows were tested by Carl A. Sager. Eighteen cows produced more than 1,200 lb. milk, twenty-nine made more than 40 lb. fat and nine went over the 50 lb. mark.

PROFITABLE STATE OWNED HERD

The State Juvenile Home herd of Holsteins at Toledo, Ohio, is making a fine record. In the last yearly report twenty-one cows produced 197,793 lb. of milk valued at \$5,499.77. The cost of feed was \$2,525.07 making a net profit of \$2,884.70. The average net profit for each cow was \$137.19.

HOLSTEIN HERDS ARE PROFITABLE

A registered Holstein herd owned by the Miller Cattle Company of Phoenix, Arizona led the Maricopa County Cow Testing Association by an average production of 48.2 lb. fat, 1,455 lb. milk during September, while the registered herd of Broussais Coman of the same town was second with an average of 36.4 lb. fat, 1,099 lb. milk. In the herds of fifteen cows or less the Albert Wolf dairy was first with an average of 34.6 lb. fat and 906 lb. milk. Clorinda and Pearl Burke, both owned by the Miller Cattle Company are first and second respectively with a production of 79.4, 70.6 lb. fat. During the month 910 cows were tested. They averaged 665 lb. milk and 24.2 lb. fat. According to the testers, Wallace Robinson and S. C. Minor this low average, the lowest reported for the year, was caused by the exceptionally hot dry weather during the month and the fact that a large number of the association cows are well advanced in their lactation period.

A FEW BETTER THAN MANY

Comparison of cow testing association records bring out some remarkable things. The 36 cows in the two poorest producing herds enrolled in the cow testing association of Stephenson County, Illinois, will lack \$261.25 of returning to their owners as much profit above feed costs as was returned by the ten Holsteins in the leading association herd. The owners of the leading herd received last year \$1,475.20 over and above feed costs from his ten Holsteins while the owners of the two lowest herds received a total of only \$1,213.95 above feed costs from their three dozen cows.

Each purebred Holstein in the leading herd averaged 11,195 lb. milk, 337 lb. butterfat during the year and made a net profit of \$147.52. The average for the two lowest producing herds was \$33.72 per cow above the costs of feed, a difference of \$113.80 per animal.

WIN PRIZES FOR MILK AND FAT

Roy Erickson of Great Falls, Montana, was awarded a silver loving cup donated by the Great Falls Gas Company for exhibiting a cow giving the most milk at the corn show held in that city late in October. She was a Holstein and during the three days of the show gave 233.85 lb. milk. The second cow was also owned by Mr. Erickson. She gave 203.85 lb. milk in the three days. This cow won another cup for the most butterfat, her figures being 8,561 lb. A Jersey cow was second with 8,064 lb.

BUYING BULLS WHOLESALE

V. S. Kutchin of Green Lake, Wis., sold five Holstein bulls to head herds in Dodge County. They were purchased by Louis Nehls of Juneau who represents the buyers. The animals are of Ormsby and Ona blood lines.

NEW YORK FEEDING ADVICE

For a home mixed ration the extension experts at Cornell University suggest 300 lb. middlings, 200 lb. bran, 200 lb. hominy, 200 lb. cotton seed meal, 100 lb. oil meal. This is the same mixture as suggested last month. Oats could be used in place of part of the bran and, price permitting, wheat or buckwheat could be substituted for hominy. They claim this is the cheapest 18% mixture that has been offered based on Utica prices.

During the thirty days previous to October 25, when the news letter was issued there have been no significant changes in prices. Cotton seed meal, linseed oil meal, and gluten feed have remained stationary or sagged a trifle. Other corn feeds are down from \$1.00 to \$3.00. The wheat feeds have advanced, and oats and barley are again the most expensive sources of digestible nutrients listed. It will not pay to buy either oats or barley, but if they are available on the farm they will probably be no more expensive to feed than other feeds, when the cost of preparation and hauling is taken into account.

The above mixture will give the best results when fed with clear or mixed legume hay or silage. With plenty of hay in the mow, and silo filling over, generous roughage feeding of the cows should be the rule. Should the "eat a cow" campaign get well under way soon, it would widen the dairyman's margin considerably. This fact is well shown in the following:

If the members of a certain dairy improvement association in New York had butchered the poorest 27% of their cows averaging 4,682 lb. milk, they would have kept off the market 290,000 lb. milk, saved \$4,524 for feed, saved the labor on 62 cows, and increased their net return \$1,804.

Too many dairymen are buying feed for cows that can never pay. If you have good cows feed them; if they are poor producers, eat them. This is the starting point of economical feeding.

GET A SON OF

Susquehanna Judge Segis Leoraline

whose four nearest dams average 29.75 lb. butter in a week.

Our milking herd is composed of real producers and their individuality is bound to please you.

This Herd is Accredited.

MURRAY A. MILLER

R. D. 3 Sunny Lawn Stock Farm MILTON, PA.

The oldest Herd in Northumberland County.

A PROGRESSIVE BREEDER

Abner Risser of Bainbridge, Penna., is an up-to-date Holstein breeder for his herd of purebreds is on the accredited list and are enrolled in the "Carden Spot" Cow Testing Association which operates in Lancaster County.

Mr. Risser believes that a man who wants to improve and develop his herd along constructive lines must keep records and know what his cows are doing.

He says, "I know no cheaper or more efficient manner in which to keep accurate records than the Cow Testing Association, which gives the member, besides, a good check on the feeding methods he follows."

"The Cow Testing work comes right in line with other progressive movements in dairying and is certainly worth its cost. The dairyman who wants to get all out of his herd that there is in it must keep records, and the logical way for the average dairyman to accomplish this is to join a Cow Testing Association."

In 1920 County Agent F. S. Bucher helped to bring a car load of purebred Holsteins from Michigan into Lancaster County. Two animals went to Mr. Risser in August of that year. Each of these cows have two heifers in the herd and both have milked over 70 lb. in a day. Every calf dropped by one of these cows has been a heifer. One two-year-old heifer in the herd produced 10,331 lb. milk, 338 lb. butterfat in C. T. A. work.

The herdsire is King Ormsby Pontiac Cicero, 436,543, a grandson of King of the Ormsbys. He is a very handsome, low down, blocky bull, a little more white than black in color, handsomely marked and possessing the individuality characteristic of this line of breeding.

Little Willie (laying a quarter on the Counter): "Ma wants a pound of butter."

Grocer: "Not for a quarter, sonny. Perhaps she wants oleo."

Willie: "I dunno."

Grocer: "Go home and ask her if she sent you here for butter or for worse."

LOOMIS WANTS TO STOP AT EIGHTY

Ward D. Loomis of Bainbridge, N. Y. is the owner of a high class herd of over eighty head. His herdsire is Echo Belle Model King a son of Champion Echo Sylvia Pontiac and Belle Model Pietje 2d. This cow is by King Pontiac Artis Canada. Her dam, Belle Model Pietje, three different years made over 33 lb. butter in a week and has a seven-day record made as a four-year-old of 36.13 lb. She is from Belle Model Johanna 2d, a cow that two different years has made over 37 lb. butter in seven days, and that has four daughters, three of which have exceeded 30 lb. butter in seven-day test.

Echo Belle Model King is a bull of pleasing type and conformation. His pedigree shows a combination of large producers for his seven nearest dams average 35.491 lb. butter in seven-day test.

The Loomis herd is under state and federal supervision. Mr. Loomis, who does part of the work on his own farm and manages his own herd, selected his foundation stock with great care and has ever kept in mind that a combination of type and producing capacity is not only profitable but is likely to please customers. The rapid growth of the herd renders it imperative that he sell some of his animals and he is making prices reasonable in order to make quick sales.

FROM IOWA TO CALIFORNIA

A shipment of purebred Holsteins left the Hargrove and Arnold Farm, Norwalk, Iowa, the first week of November, consigned to San Lorenzo, California. Four of them go to F. R. Stenzel of that place as a foundation for a herd. One of them is to be reshipped from there to the Santa Monica Dairy Company, Venice. The five head were sold for \$7,250. They are all descendants of K. P. O. P.

If you do not think your community is a good one, strangers will agree with you.

OBITUARY

NOTED IOWA BREEDER PASSES

C. A. Nelson, who a few years ago was one of the leading dairy cattle breeders of Iowa, died October 28th at his home, Waverly, Iowa.

For a number of years the Nelson show herd was one of the best in his state. After its dispersal in 1918 Mr. Nelson continued farming on a small scale but last March moved to Waverly and practically all of his stock was sold. He started breeding Holsteins in 1902 and became a member of the Holstein-Friesian Association of America three years later.

Besides being a show man Mr. Nelson was a first class dairyman. One of his cows formed part of a dairy demonstration which traveled extensively around the state and was known as "The cow that paid for an automobile." Mr. Nelson was an enthusiastic believer in calf clubs and it was reported that he sold his heifer calves to boys and girls at much lower figures than he asked adults. As a speaker he was in great demand at farmers and club meetings. He was only sixty-six when he died. He is survived by his wife and one daughter.

BUILDING AN ACCREDITED HERD

At the Susquehanna County Holstein Breeders Sale held August 30, 1923, John R. Harshaw of Chenango Forks, N. Y. purchased three heifers. Two of these were bred by B. F. Jones & Son of South Montrose, Pa., and everyone who knows anything about the history of Holsteins in Susquehanna County knows that the Jones herd was noted for individuality as well as production. A heifer calf was also purchased from the consignment of G. Fulmer Decker, brother-in-law of Mr. B. F. Jones and also his partner in ownership of herdsires. Both these herds were accredited and were among the earliest to be accredited in Susquehanna County.

A little later Mr. Harshaw purchased two heifers from H. E. Babcock of Ithaca, N. Y., another herd with more than a local reputation. At the present time Mr. Harshaw owns about twenty head of Holsteins of which seven of the females are purebreds. This herd went on the accredited list last August.

From A. J. Lashbrook, of Northfield, Minn., Mr. Harshaw has just purchased the very handsome bull calf, Sir Walker Lashbrook Homestead, born January 16, 1921. His sire is Sir Walker Segis Homestead, whose daughters include Lashbrook Segis Marie, 961.7 lb. butter, 23,363 lb. milk in 365 days as a two-year-old, the Minnesota State champion of her class. Her sire has thirty A. R. O. daughters and twenty with long time records. He is also a show bull and took first prize as a yearling at both the 1919 Dairy Cattle Congress and the National Dairy Show. His sire is Piebe Laura Ollie Homestead King, whose thirty-eight A. R. S. O. daughters include six with butter

records ranging from 1,013 lb. to 1,523 lb. He has eight daughters that have made from 30 to 38 lb. butter in seven days. One of his daughters is May Walker Ollie Homestead, the American butter champion with 1,523.23 lb. butter in 365 days. The first prize get of sire at this year's National Dairy Show and Dairy Cattle Congress was by this bull.

SIR WALKER LASHBROOK HOMESTEAD
Now heading the Accredited herd owned by John R. Harshaw, Chenango Forks, N. Y.

Sir Walker Segis Homestead was from Beauty Beets Walker Segis one of the best daughters of King Segis Pontiac Count. She has three yearly records of over 1,000 lb. butter, the highest being 1,230.38 lb. as a five-year-old.

The dam of Sir Walker Lashbrook Homestead is Queen Pontiac Oak Marie. Freshening at two years and two months old, she made 18.89 lb. butter, 549 lb. milk in a week. Continued on long time test, she produced 19,199 lb. milk, 681.3 lb. butter in 322 days and freshened three weeks later. As a four-year-old, she made a 305 day record of 640 lb. butter, 19,179 lb. milk, Queen Pontiac Oak Marie was sired by Aaggie Pontiac Grahamholm Lad, a noted show sire and was from Hengerveld Oak Marie, with a record of 1,016 lb. butter, 25,120 lb. milk in 365 days as a senior four-year-old.

FROM WISCONSIN TO OKLAHOMA

Professor O. S. Willham and E. H. Houston were members of a delegation from the states of Kansas, Missouri and Oklahoma which visited the dairy section of Wisconsin last summer. In October they spent a week around Oshkosh and purchased twenty-six purebred and grade cattle which were shipped from that city late in the month.

Professor Willham is a faculty member of the Oklahoma State College and took four purebred and two of the best grades he could find. Mr. Houston bought for the Oklahoma State Penitentiary and took eleven Holsteins and nine Guernseys. The total price for the cattle was \$3,570. For two of the animals they paid \$500 each and also paid \$235 for two grades. All the cattle were from accredited herds.

Don't worry, if you do not have enough money to pay cash for a Holstein bull, write a postal for details of our loan plan. THE DOTYFARM, Geneseo, N. Y.

THE S. R. ELLSWORTH HERD

Although his herd has always been operated from a dairy standpoint Stewart R. Ellsworth of Meshoppen, Penna., has bred up a herd backed by pedigrees showing large producers. Korndyke and Hengerveld blood is found in the herd which includes descendants of Sadie Vale Concordia, the first cow that ever made a 30 lb. seven-day official butter record. There are a number of granddaughters of King Korndyke Hengerveld Veeman, a son of Sir Veeman Hengerveld from a 30 lb. daughter of Sir Korndyke Pontiac Artis. The herd is strong in the blood of Keystone Beauty Plum Johanna, a cow of remarkable individuality, with a strictly official record made as a senior four-year-old that has never been equaled by any other animal under full age in strictly official test.

At the head of this herd is Harkwin Rag Apple Plum Copia King. His sire is a bull of Korndyke breeding from a cow that two different years has made over 30 lb. butter in a week and that has a seven-day record of 33.26 lb. The dam of the Ellsworth herdsire, as a junior three-year-old, produced over 20 lb. butter in a week from 524 lb. milk.

The Ellsworth herd is under state and federal supervision. The animals are given feed and care that can be duplicated on any farm and stock produced in this herd go into other hands and make good.

RECENT SALES FROM MAPLE GROVE.

On October 6, Harry E. Ross of Centerville, Pa., purchased from Maple Grove Stock Farm the cow Maple Grove Dinah Glista, No. 532,583. This heifer has an official record of 443.4 lb. milk, 18.47 lb. butter. Her sire is Model Daniel Glista and her dam is Maple Grove Fairview Lady with an official record of 409.8 lb. milk, 18.53 lb. butter made as a four-year-old. These records were made at Maple Grove Stock Farm and represent practically the everyday work of the animals.

Mr. Ross is a regular customer and has bought quite a number of animals from Maple Grove. Mr. Jones says that Mr. Ross is a capital judge of stock and that when he purchases anything from the Centerville establishment, they always feel that they have bred something that is pretty good.

Just ten days later, on October 16, W. B. McGinnett & Sons also of Centerville, purchased from this farm a two-year-old heifer, Maple Grove Clever Dinah Glista, No. 746,404. The sire of this heifer was Clever Model Glista, whose dam is the great Cornell University cow, Glista Coreva, 34.08 lb. butter, 593.1 lb. milk in a week. This cow transmitted producing ability to her offspring, one of which, Glista Dinah, as an eleven-year-old recently produced 31.26 lb. butter in seven day test. Large milk records as well as a good fat test is characteristic of this family for the milk of Glista Coreva tested 4.6% and her daughter averaged 4.9% fat during the official test week.

The dam of McGinnett's new heifer is Maple Grove Model Dinah Glista. She

has an official record of 370.2 lb. milk, 16.49 lb. butter made as a junior two-year-old. A recent story in the BREEDER AND DAIRYMAN said that McGinnett & Sons had started to build a herd of purebred Holsteins and had selected foundation stock from Maple Grove Stock Farm. This present purchase indicates that the first animals proved satisfactory. Mr. Jones says that this repeated patronage gives them the feeling of personal pride in the success of the McGinnett establishment.

Crawford County was one of the first counties in Pennsylvania to be tested under the area plan and the Jones' are pioneers in the tuberculin eradication movement and started testing a long time ago. Their herd has been on the accredited list for several years.

HARBECK'S HERD

A herd of twenty-four milkers that averaged 11,402 lb. milk in a year is certainly a herd that is in every way desirable, especially when we consider that thirteen or more than half of the herd were two and three-year-old heifers. Such a herd is owned by Jay B. Harbeck & Sons of Black Creek, N. Y.

The young stock in this herd are sired by Royal Johanna Korndyke a bull of splendid individuality. He is a son of Colantha Johanna Lad 8th whose daughters have made tremendous records both in short time and long time test and whose offspring have a great reputation for individuality as well as production. The dam of Royal Johanna Korndyke is Butter Girl Johanna Korndyke, 602.8 lb. milk, 24.23 lb. butter in seven days as a two-year-old, dam of two tested daughters, one of which as a three-year-old heifer produced 25,066.3 lb. milk, 942.88 lb. butter in a year. Butter Girl Johanna Korndyke is a daughter of Colantha Johanna Lad 8th and is from May Butter Girl De Kol, 690.8 lb. milk, 30.92 lb. butter in seven days, and over a thousand pound in a year, a cow that has three tested daughters with large records, all made as heifers. One of her daughters, Butter Girl Johanna is credited with 588.4 lb. milk, 32.54 lb. butter in seven days as a junior four-year-old while another, Butter Girl May Johanna made 659.8 lb. milk, 26.63 lb. butter in a week as a junior four-year-old, 22,823.8 lb. milk, 955.47 lb. butter in a year.

The Harbeck herd is on the accredited list. Before the accredited plan was put in operation, cattle from this herd had been tested and, in the history of twenty years of breeding, there has never been a reactor on the farm.

Owing to the difficulty of obtaining help and the fact that the herd is already of good size, the Harbecks are planning to sell the entire crop of calves born this season and they will contract for the entire bunch or will sell them singly whichever way the purchaser prefers. As mature cows in this herd have produced from 15,000 to well over 16,000 lb. milk in a year in cow testing association work, it can be readily seen that the quality and producing capacity is of the very best.

If You Want Fresh Cows, Springers, Heifers or Young Bulls

Dept. C 10 225 W. Huron St. CHICAGO, ILL.
Listed with Dun and Bradstreet

Los Angeles has an unrepealed ordinance forbidding street car conductors from shooting wild game from the car platforms. And, in Kansas City, a statute reads: "When two cars approach each other at a crossing they shall both come to a full stop, and neither shall start up until the other has gone."

WANTED, Position as superintendent or herdsman on up-to-date farm. Have made good on both large and small propositions. Best of references. Address J. T. Care Holstein Breeder and Dairyman. Harrisburg, Pa.

BULL HAS GOOD RELATIVES

Number 3 of the current number of Reported Tests from the office of Superintendent Gardner is headed by Traverse Colantha Walker with 679.2 lb. milk, 38.48 lb. butter in seven days and 3,148.9 lb. milk, 156.49 lb. butter in thirty days. This cow made her record as an eight-year-old and is owned by the State Hospital at Traverse City, Mich.

Traverse Colantha Walker has a number of large records to her credit. Her previous freshening was four days less than a year ago at which time she is credited with a seven-day record of 37.94 lb. butter, 732.4 lb. milk and a thirty-day record of 146.26 lb. butter, 3,000.5 lb. milk. As a four-year-old she has a record of 535.6 lb. milk, 36.65 lb. butter in a week, 143.30 lb. butter in thirty days and a ten-months records of 20,134 lb. milk, 963.41 lb. butter. This cow has three seven-day records each above 36 lb. butter.

She is a daughter of Admiral Walker Colantha and Traverse Princess Inka, 29.79 lb. butter in seven days, 940.80 lb. butter in a year. Traverse Princess Inka was the dam of Traverse Inka Johanna, a cow that has made over 30 lb. butter in seven days three different years and that has two daughters each above the 30 lb. mark. She is also the dam of Traverse Echo Sylvia King, the handsome young sire heading the accredited herds of A. L. Burlington and W. B. Kennedy & Sons of Wyalusing, Pa. The Kennedys and Mr. Burlington are neighbors, their farms adjoining. Their herdsire is a very handsome animal, and is from lines of breeding that have repeatedly demonstrated producing capacity in test work as well as in the general dairy. His offspring inherit his type and conformation and show promise of also inheriting the producing capacity of their sire's dam and her sisters.

WHAT A SILO IS WORTH

According to computations made by H. S. Sloat, farm cost accountant, each silo in Lancaster County, Penna., was worth \$581 to its owner during the year 1923, there being that much difference in the annual labor income of the farm. In 1922 the margin in favor of silo owners was \$299.

The figures certainly show that the silo is one of the best investments that a farmer can make. While there are a number of good dairy herds in Lancaster County there are many establishments that keep only enough dairy cows to supply the wants of the owners who use silage for part of the rations fed to fatten steers. Ten year's steer feeding records at State College show that one acre of corn in the silo will make one and one half times as much beef as an acre of corn fed dry, in other words ten acres of corn made into silage is, in production of beef, equal to fifteen acres feed in any other manner.

Experiments in Germany have shown that fertilizers poor in ammonia but rich in sodium and potassium tend to keep dandelions and sorrel in check.

ONE OF OUR MILKERS

This cow and 21 of her stablemates of all ages, averaged 10,782 lb. milk in a year of Cow Testing Association work.

You can obtain good stock at farmers' prices here. Then, too, this herd is ACCREDITED.

NEWS FROM A GREAT SHOW HERD

If twenty Holstein owners, picked at random, were asked to name the greatest show herd in the country owned by one firm or breeder, we believe the majority would first think of the Hargrove and Arnold herd. Animals from this establishment have been exhibited at many fairs during the last five years and it would take a whole issue of the BREEDER AND DAIRYMAN to list the prizes won.

The star of the Hargrove and Arnold herd, or perhaps we should say the chief

leads to inquiries and sales. When this firm has sold animals while on the show circuit they have postponed delivery until the herd was back home in order not to break up the show exhibit. We do not know just how many animals this firm sold this fall but we do know that after they returned to Norwalk ten animals were sent east, six of these going to the Baker Farm at Rockingham, New Hampshire.

One of the pictures with this article shows the animals destined for the Baker Farm. The middle four are all noted

A SEXTETTE OF SHOWY HOLSTEINS

Purchased from Hargrove and Arnold, Norwalk, Iowa for the Baker Farm, Rockingham, N. H.

star, is the famous Dorothy Ormsby Piebe. A little more than a year ago when Dorothy was winning championship as a two-year-old heifer, a photograph of her was sent to this office by a leading animal photographer but was rejected on account of being partially "touched up." The fault was evidently in the posing and not in the heifer for any one who has ever seen this heifer knows that she is one of the handsomest specimens of bovine femininity that ever stood in the show ring. Dorothy has won more blue ribbons and championships in the show ring than any other heifer of her age and probably more than any other

prize winners. The second heifer from the small end is Miss De Kol Piebe, the first prize junior yearling heifer at the recent National Dairy Show. Next to her is Pieterje Ormsby Piebe Mercedes, the third prize senior yearling heifer. Then comes Triune Ormsby Piebe 27th, the first prize senior yearling bull at the National. He has never been defeated in his class and will now head the Baker herd. Next to this bull is his dam, Miss Piebe Fobes, second prize four-year-old at the National. She recently finished a record of over 900 lb. butter made in three-year-old form. These four animals won many prizes at this year's fall fair.

FROM IOWA TO THE EASTERN STATES

A recent shipment from the Hargrove and Arnold Herd.

living Holstein. It is therefore with pleasure that we show a snapshot of Dorothy, recently taken. She is due to freshen before very long and her owners are hoping for a bull.

Hargrove and Arnold exhibited this year at some of the eastern and south-eastern fairs, so that many had a chance to see this famous show herd. Showing cattle is a form of advertising which

At the National these four won two first prizes, one second prize and one third prize in the open classes as well as one first prize and one second prize in the group division. Ray Arnold says they are the best animals that were ever sent from the farms. The smallest heifer on the end of the picture was not exhibited this year but she was selected as a foundation animal. Her pedigree

shows two crosses of the blood of K. P. O. P. and she traces three times to the great record cow Rose De Kol Wayne Butter Boy. It would be difficult to produce a pedigree showing more type and production. The older cow, the one on the extreme right, is a 4% foundation cow. Mr. Baker believes there is a growing demand for animals combining type and production and giving higher testing milk. Mr. Arnold says that while showing through the east they noticed the demand getting very strong. "The skim milk strains of Holsteins have no place in many sections and every breeder should try to improve his herd in this respect as well as to eliminate the slopers."

DOROTHY ORMSBY PIEBE

The greatest prize winning heifer in the world.

The third photograph show the entire eastern shipment. There are four head besides the cattle for Baker Farm. Among them is King Piebe 19 h, a consistent prize winner in the east this year and third prize junior yearling at the National. He goes to head the herd of Matthew Suydam, New Brunswick, New Jersey, and will be seen in the eastern show rings next fall. His dam has a record of over 1,100 lb. butter.

Another bull in the shipment is King Piebe 2d, a proven sire of show type. His dam as a three-year-old heifer made over 900 lb. butter in ten months. He will head the herd of George W. Ever-

son, Fort Plain, New York, another breeder who wants type and also wants better testing Holsteins. Cows on each side of King Piebe 2d's pedigree have averaged over 4% fat.

Triune Ormsby Piebe 46th, goes to A. E. Hodges, Fairfield, Maine. He is a splendidly bred animal carrying a double cross of the blood of K. P. O. P. and is three-fourths brother to "27th" the famous show bull which travels east with him and will now head Mr. Baker's herd. The dam of "46th" is a three-year-old heifer that is just finishing a year record of a little under 1,000 lb. butter. This young bull also combines true type with great yearly production and great testing strains. Mr. Arnold has a great deal

of confidence in this young bull and believes that he will develop in a valuable sire.

The little bull at the end of the group is also a grandson of K. P. O. P. and will head the herd of J. A. Boynton of South Hadley, Mass. Mr. Boynton, who is just starting a herd, has a real show bull in this young fellow.

The Hargrove and Arnold Farm expect to start another shipment east a little later and promise us the particulars. By shipping a number of animals together it is possible to save the purchasers considerable in freight charges.

ANOTHER NEW BREED

The Climatic Breeds Association, an organization with headquarters at Wichita Falls, Texas, are endeavoring to develop a new "breed" of cattle. They have attempted to get the quantity characteristic of the Holstein with the fat test attributed to Jersey milk and to do this they have crossed Jerseys and Holsteins. The weight of scientific authority as well as practical experience is against their success. Experiments have shown that instead of the results desired the experimenter is more likely to get an animal with a Holstein test and a Jersey milk flow.

HOLSTEINS FOR PORTO RICO

W. M. Ellison of the Porto Rican Department of Agriculture recently made an extensive trip in Texas buying im-

proved stock for his department. He took eight bulls, four of which were purebred Holsteins from the Texas State College herd. Some of the bulls and all of the cows purchased will be under the control of the health department which is endeavoring to build up a herd to furnish a continuous milk supply for the tuberculosis hospital at Porto Rico. One of the other sires will go to the health department another one to the government experiment station. These Texas cattle are believed to be immune to Texas fever which is very prevalent on the isle of Porto Rico.

Foreigners who say Americans think of nothing but making money should consider that when one has an American wife at home and a son or daughter at college he has little time for thoughts about much else.

HAMPSHIRE

FOR SIX YEARS FOR SIX YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIREs are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—**THE HAMPSHIRE ADVOCATE**—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs.

FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

The Story of Amsdale

Where Holsteins Displaced Purebred Shorthorns

THIRTY years ago one of the leading herds of registered Shorthorns in Western New York was owned by George Amsden & Sons. The Amsdens had a farm of two-hundred and forty acres not far from Cuba, Allegany County, N. Y. They exhibited at fairs, they sold stock from time to time but they were farmers first and last, never paid fancy prices and never charged fancy prices. They milked about thirty cows and they sold about 600 lb. milk daily. Some people would call this successful dairying but the Amsdens were not quite satisfied with their herd earnings.

It is now twenty-nine years ago since the Amsdens purchased their first purebred Holstein-Friesians. At that time Senator F. M. Godfrey of Olean, N. Y. was a prominent Holstein-Friesian breeder. Senator Godfrey was a brother-in-law of Mr. Amsden and the families visited each other. As was only natural, the quality and earning capacity of the various herds were discussed and Mr. Godfrey finally induced his relatives to purchase a young purebred bull and a purebred heifer. The bull was Zara Wood's Sir Jewel Ononis No. 22012. The heifer was Camlot Beauty Jewel, a daughter of Sir Jewel Ononis and Camlot Beauty. As their names indicate, these two animals were very close to some of the great foundation cows imported from Holland.

About a year after, Senator Godfrey dispersed his herd. The auctioneer at the sale was B. V. Kelly of Syracuse, N. Y., and this was about the first large purebred Holstein sale at which "Barney" Kelly officiated. The Amsdens attended the event and Mr. Kelly struck three animals down to them. One was Ononis Francine, No. 55414, a heifer born November 25, 1897. The price for this heifer was just \$25. In due time she freshened with a heifer calf. When Ononis Francine was milking Horace L. Bronson of Cortland, N. Y. purchased her and one of her daughters for \$100 each. Owners of Holsteins today occasionally complain of the prices their animals bring yet the Amsdens say that when it was noised around that they had sold two of their purebred Holsteins and got \$100 each for them, their neighbors wouldn't believe it.

But it was not the price that they were able to obtain for surplus stock that turned Amsdale from a Shorthorn breeding establishment into a Holstein-Friesian home. It was the increased production of the young cows, purebred Holsteins and Holstein-Shorthorns. For some reason, the cross of the Holstein bull on the Shorthorn female has always been very suc-

cessful in this country and many of our best grade animals, particularly in the West, carry a percentage of Shorthorn blood.

The Amsdens gradually turned their herd to purebred Holstein. The thirty purebred Shorthorns had averaged 600 lb. milk daily, the thirty purebred Holsteins averaged from 1,300 lb. to 1,400 lb. daily. The Amsdens were farmers and dairymen and regarded purebred cattle as improved stock with which to work instead of fancy stock to be used as play things. Naturally it was very easy for them to become enthused over the work of their black and whites.

Although many high class animals have been raised on the hills and along the streams of Allegany County, for some reason buyers have never sought stock in this county to any general extent and the surplus was absorbed by dealers—men who bought to sell again. The Amsdens did not advertise, did not buy bulls for long prices from the leading herds of the day; and did not attempt to put high records on their stock, so that the Amsden stock attracted little notice excepting from the men who learned by inspection or hearsay of its value. A Mr. Orr of Rock Stream, N. Y. purchased stock for a big Illinois establishment. He contracted to take the surplus heifer calves at a flat price of \$30 each, which was raised the next year to \$40. A firm of breeders from Kinsman, Ohio, became interested and contracted for the heifers at \$75 and another year another Kinsman firm contracted for the heifers for \$100 per head but never received any, an outbreak of foot and mouth disease preventing shipping. Prices of purebred cattle were on the boom and cattle from Amsdale proved profitable merchandise to the men who were handling them. Finally a party from New Jersey took a bunch of young calves for \$125 per head and this contract continued until the price deflation which came with the readjustment after the Great War. Since that time the Amsdens have sold their surplus stock direct.

A number of good sires have successively headed this establishment. The second sire of which we have record was Fanny Welsrijp's Pietertje 2d, a bull of Pietertje, Jewel, and Ononis blood and so of somewhat similar lines of breeding to the first herdsire.

Then came Oleana 2d's Paul, a bull of Godfrey breeding closely related to a number of famous old time producers. Then came another good bull Amsden Butter Boy, purchased as a calf, a grandson of De Kol 2d's Butter Boy 3d. Then came King Korndyke De Kol Teddy, a name that tells his lines of breeding. Teddy

was followed by Sir Colantha Pontiac, a grandson of De Kol 2d's Mutual Paul and carrying considerable Pontiac blood. We have mentioned these bulls because so many of the animals in the present herd trace to them.

Dutchland Sir Hengerveld Colantha is the sire of the majority of the older cows in the present Amsdale herd and Alva Amsden said he proved to be the best sire they ever owned. He was a son of Colantha Johanna Lad and was from Dutchland Pauline, a daughter of Pietertje Hengerveld's Count De Kol, with a record made as a senior two-year-old of 16.08 lb. butter, 429.5 lb. milk. Her dam was a 20 lb. daughter of old Paul De Kol so that Dutchland Sir Hengerveld Colantha combined the blood of some of the greatest families developed in the Holstein breed. The majority of his daughters were light in color, big, strong, rugged cows carrying splendidly shaped udders. One daughter of this bull went to Ohio as a calf and, after passing through several hands, was picked up by Mr. Abner S. Deysher, owner of Berks Farm, at a very low price. At that time, Mr. Deysher was building his herd and most of his purchases consisted of animals bought at long prices at the leading sales of the country. Amsdale June Colantha at first was not regarded very highly at Berks Farm but finally was put in official test when a number of other cows were being tested and made the creditable seven-day record of 27.43 lb. butter, 512.9 lb. milk. She was continued on test for a year. While not a very heavy milker she was a good tester and was remarkably persistent and she closed her year with 21,142 lb. milk to her credit with an average test of 4.10% fat. Her butter record was 1,084.36 lb. which, we believe, was the largest year record made up to that time at Berks Farm, evidence enough of her quality. Soon after her year test closed, she formed one of the Berks Farm show herd exhibited at the Reading Fair, so you can judge something of her individuality.

Amsdale Daisy Colantha, another daughter of this bull was tested in Ohio and when nearly nine years old was credited with a year record of 18,481.2 lb. milk, 837.85 lb. butter.

King Lyons Clothilde Walker headed this herd for awhile. His sire was King Colantha Clothilde, a son of Colantha Johanna Lad from the famous old Hartshorn cow, Abby Hartog Clothilde. The dam of the Lyons bull came from the Moyer herd. She was Betta Lyons Walker, a daughter of King Walker with a seven-day record of 661.4 lb. milk, 28.39 lb. butter made as a senior three-year-old. Her dam was Betta Lyons Nederland, a 34 lb. daughter of the 34 lb. cow, Blanche Lyons Nederland. This bull combined the blood of some of the greatest producing animals of his day. The younger cows are mainly by him.

The calves at Amsdale are by King Maxie Colantha Segis a son of King Maxie De Kol Segis, he by King Aaggie Segis, from Mapledale Maxie De Kol and so closely related to Fancher Farm Maxie, the cow that now heads the list of cows tested officially for seven days under Advanced Register rules. The dam of King Maxie Colantha Segis was Colantha Korndyke Butter Girl, a 21 lb. three-year-old daughter of Dutchland Sir Hengerveld Colantha from a daughter of King

Korndyke De Kol Teddy. Here the Amsdens seem to have intensified the blood found in their own herd, at the same time introducing a Maxie and King Segis outcross. The results, judging from a trip around the dry pastures, were very satisfactory.

The young bull now at the head of the herd is King Echo Sylvia Colantha Spofford. His sire, Sir Champion Sylvia, is a son of Champion Echo Sylvia Pontiac from a 30 lb. daughter of the twice 37 lb. cow, Belle Model Johanna 2d. The three nearest dams of Sir Champion Sylvia have seven-day records averaging 36.21 lb. and his seven nearest dams average 35.43 lb. The dam of this young herdsire is Sadie Butter Girl Spofford. As a five-year-old she made a seven-day record of 647.6 lb. milk, 29.99 lb. butter and then, calving exactly a year from her previous freshening, made a seven-day record of 700.7 lb. milk, 30.55 lb. butter. Examination of Sir Champion Sylvia and Sadie Butter Girl Spofford shows two splendid animals and it is no wonder that King Echo Sylvia Colantha Spofford is a very handsome young bull. Through his dam he traces to Colantha Johanna Lad 8th while his sire is of the lines of breeding that have made the Hardy herd world famous. He is a handsome young fellow, light in color, with a very straight top line, rather wide horns, and a deep body showing lots of constitution. Some time in the near future we hope to show a good picture of this animal but did not photograph him at the time of our visit to Amsdale because he had been kept in the barn and was badly soiled.

We need say little about the females at Amsdale. The story of the successive herdsires shows the lines of breeding represented because for many years stock have been sold and no females purchased. The pictures of some of the cows snapped while in pasture show their quality. They are well-grown, straight-backed, square-rumped, big-barreled animals, just what you would expect to find in a herd owned by men who formerly were Shorthorn breeders. A few years ago when the Western herds and Western cattle were winning in nearly every class at the National Dairy Show, someone suggested that it was because of the education the Western cattlemen had had with the Shorthorn when first introduced on the Western prairies, that they naturally favored animals with straight backs, straight rumps and big barrels, stock which showed constitution and vigor as well as producing ability.

The present Amsdale herd consists of fifty head or more of which twenty-five are milkers. The herd has a good record for health, is under state and federal supervision and was given a clean bill of health at the last time of testing. Few records if any have been made on this farm. The cattle have been tested in other herds and have made good.

Amsdale has been in the family about sixty-five years. Mr. George Amsden settled on the farm soon after his marriage and he and his wife lived together there for sixty years. His death was the result of a fall. He was a dairyman and cattle breeder, was president of the Cuba Fair for a number of years, was supervisor of the township for seven years and was regarded in his community as one of its leading citizens. The family consisted of two boys and one girl. The boys, Alva and Roy still live on the farm, but you can hardly call

them boys at this time. Roy was a student of the district school at North Cuba and graduated from the Cuba High School, then took a business course at Elmira and made his home on the farm. Mr. and Mrs. Roy J. Amsden have no children. Alva Amsdale studied at the local school and has spent his life on the farm, with the exception of about three years when he was in New York City, holding a political job. For sixteen years he has been one of the township assessors, evidence enough of his popularity and the esteem in which his neighbors regard him as a business man. Alva takes care of the herd books. Mr. and Mrs. Alva Amsden have one daughter, Helen, a student at the local high school.

A number of the best herds in Allegany County secured their foundation stock from Amsdale. For a number of years the establishment was run in the name of George Amsden's Sons but this has gradually changed to Amsden Brothers and now business is conducted under this title. If you go to Amsdale expecting to see a fancy breeding establishment you will be disappointed but if you expect to see good, plain, everyday farm buildings; a herd of Holstein-Friesians capable of making a good profit over feed cost and not only capable but doing it; and meet everyday American farm folks, then call on the Amsdens. They will make you welcome and if you stay to a meal, you will go away feeling better than if you had stopped at a high priced hotel. You may not have as much style but you will get more well cooked, wholesome farm raised food.

Anti-Tuberculosis Vaccine

SENATOR Nathan Straus, Jr., chairman of the New York State Senate Committee on Agriculture recently announced that the anti-tuberculosis vaccine brought to this country through the courtesy of Professor Albery Calmette, of the Pasteur Institute, was to be used here solely in an effort to prevent tuberculosis among animals, especially in dairy cattle.

"I wish to state most emphatically," said Senator Straus, "that the experiments in this country are to be confined to cattle. If this method of immunizing cattle to tuberculosis should prove successful I think that we may confidently expect that tuberculosis in dairy herds will be eradicated in the near future. That would mean, first, the gradual elimination of all human tuberculosis of bovine origin, variously estimated at from 15 per cent to 40 per cent of the cases in mankind, and, second, an annual economic saving of at least \$25,000,000 to the taxpayers and farmers of the United States."

Senator Straus said that when it became known that he had received quantities of the vaccine he had many requests for it from persons suffering from tuberculosis and from doctors. As a matter of fact, the vaccine is not to be used as a treatment for the disease, but solely as a preventive measure. Professor Calmette's experiments in France have covered a period of four years, including inoculation of cattle and of apes. More than 200 children of tubercular parents, but who did not have the disease themselves, also have been inoculated and are expected to develop immunity.

Experiments with the vaccine are being conducted by the United States government at Bethesda, Md., under the direction of Drs. Mohler and Schroeder, of the Bureau of Animal Industry. If these experiments are successful the conquest of bovine tuberculosis will be in sight. Arrangements will be made later, if results warrant, for free distribution of the vaccine.

Russian Taxation

WALLACE'S Farmer editorially gives some information on the agricultural tax program of the present Russian government which shows that the economists of Soviet Russia have been doing some real thinking about land taxation. For a time the Soviet government collected taxes from the farmer in the form of a percent of the crops. Now, however, they collect in cash according to the productivity of the land. Land near the big Moscow market pays a much heavier tax than land away from market and productive land pays a heavier tax than poorer land. This is not much different from our own tax system.

But the really new ideas are that there is no tax on land growing clover and other legumes. Farm families are taxed in inverse proportion to size. Other things being equal, a family of two owning a large farm has to pay about twice as much in the way of taxes as a family of five.

Sucking Other Calves

SOME calves acquire the habit of sucking the udders of other calves, a prank which should never be tolerated, despite the apparent harmlessness of it. The possibility of damage is twofold. In the first place it tends to the formation of an ill-shaped and pendulous udder, and hence may seriously detract from the beauty and value of the animal in afterlife. Furthermore, there is the danger that the heifer, especially if of well-bred dairy stock, may become stimulated to a virgin milk secretion. In the course of events this milk secretion, the presence of which is not suspected, may be left to dry up of its own accord, without the necessary care on the part of the owner, with a ruined udder as the possible result. This fact may, indeed, account for many of the cases of hardened udder reported among virgin heifers, since the description of that condition is strongly suggestive of chronic garget of adult cows. To overcome the vice the milk ration of calves may be followed by a handful of grain fed before they are turned out. This tends to remove the desire to nurse. —Farmers' Bulletin 1422.

The meanest man in the world is the fellow who buys what he cannot afford and charges the bill to his baby in the cradle. How does he know what new financial responsibilities progress and civilization will impose on that child before it grows up? Selling interest-bearing bonds to provide luxuries for this generation at the expense of the next is a mighty sorry and shiftless business and should be stopped.

Blowing one's own horn was a hallmark of the bore, even before the invention of the saxophone.

Silverwood Stock Farm

Where Good Holsteins Thrive

NEAR Thompson, Pa., a pleasant village on the Erie and D. & H. Railroads is Silverwood Stock Farm, owned by H. S. Brown & Sons. The firm name is quite interesting for the junior members are Russell Brown, a son, and Raymond Barnes, a son-in-law of Mr. H. S. Brown. These young men do most of the heavier work on the farm and form a splendid team.

These are two houses on the farm. One is occupied by Russell Brown and his family while in the other live Mr. and Mrs. H. S. Brown and Mr. and Mrs. Barnes. Both houses have modern conveniences. Acet-

RUSSELL BROWN SHOWING HIS PETS

ylene gas furnishes illumination for these houses as well as the other farm buildings.

Silverwood Stock Farm contains about 300 acres of which about one-third is cultivated. It is a typical Susquehanna County Farm, part hilly and part level land. The pastures are well shaded and there is a good supply of clear, cool, sparkling water furnished by springs. This is pumped by a windmill into a reservoir from which it runs to all the buildings.

About twenty years ago, H. S. Brown decided that purebred Holsteins were more profitable for dairying than were common cattle so he purchased four cows as foundation stock from the late Dr. E. W. Downton, who had one of the best herds in Northern Pennsylvania. Some time later two cows were purchased from H. S. Bronson, then one of the most prominent New York State breeders. Practically every member of the present herd, (nearly sixty head) is a descendant of these half dozen foundation animals.

The first real good bull to head this herd was Walker Korndyke Copia. He was a very handsome bull and his daughters were noted for individuality as well as production. He was backed by noted animals of large producing strains. One of his sisters, Frysian Waldorf, averaged 102 lb. milk a day for thirty days and made a record as a junior four-year-old of 1,127.98 lb. butter, 24,648.6 lb. milk. His sire, Walker Korndyke Segis, was by King Segis and from Lillian Walker 3d, one of the greatest cows of her day with an official record of

28.74 lb. butter, 763.6 lb. milk. She was by Sir Korndyke Manor De Kol from the famous foundation cow Lillian Walker.

Walker Korndyke Copia was from Korndyke Butter Girl Copia, 24.41 lb. butter in a week as a junior two-year-old, world's record in class at time of making.

DAUGHTERS OF WALKER KORNDYKE COPIA

Masterpiece, another son of this cow, headed one of the greatest New York State herds for several years. She was by Korndyke Butter Boy from Copia Hengerveld 3d, 27.52 lb. butter in seven days, 107.45 lb. butter in thirty days, both world's records for a senior three-year-old at time of making.

It is no wonder that Walker Korndyke Copia was a bull of splendid individuality, and sired high class stock. His parents and all four of his grandparents were show animals and blue ribbon prize winners at the New York State Fair as were a number of his great-

KING PONTIAC ALCARTRA PIETJE
Senior herdsire at Silverwood Stock Farm.

grandparents. Among the daughters of this great sire is Spring Brook Clothilde 2d, 30.17 lb. butter, 641.4 lb. milk in a week, 122.99 lb. butter in thirty days with an average of over 90 lb. milk a day.

When the herd of Dr. Hand was dispersed, the Browns, together with G. E. Page and Arthur Robin-

son of Montrose purchased the herd sire, King Pontiac Alcartra Pietje. This bull is by King Segis Pontiac Alcartra from Fairmont Zerma Segis Pietje, 608.4 lb. milk, 35.61 lb. butter in seven days, world's record in the junior four-year-old class at time of making.

The dam, sire's dam, and sire's sire's dam of King Pontiac Alcartra Pietje were all world champions of their respective classes. He proved to be a wonderful stock-getter and is today the most noted Holstein sire in northern Pennsylvania. His sons and daughters as well as his grandsons and granddaughters have won high honors in many show rings.

Two different daughters of this bull have each averaged 100 lb. milk a day in official work for seven days

TYPE AND CAPACITY COMBINED
Lady Tula and Pauline De Kol Copsia Korndyke, members of the Silverwood Herd.

or more and one of his daughters, Pietje Alcartra Fayne, has a 30 lb. seven-day record; another daughter, tested in Maine, as a junior-two-year-old produced 15,349.2 lb. milk, 687.06 lb. butter in ten months and became the state champion of her class. When you consider the fact that the daughters of both Walker Korndyke Copsia and King Pontiac Alcartra Pietje have, with a few exceptions, always been in small herds owned by dairymen, and then consider the reputation the daughters of these sires have, you can realize something of the worth of these two Silverwood bulls as sires.

The Browns have more than three dozen daughters of King Pontiac Alcartra Pietje and practically all of them are young heifers. The individuality of this large bunch of heifers with their straight top lines, teat placings and general development, indicate that the enviable reputation already earned by Silverwood Herd will not depreciate but rather, will increase in future years.

Dutchland Konigen Creamelle Boy is another sire in service at Silverwood. He is a son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 881.21 lb. butter 21,701.5 lb. milk in a year. She is from the same dam as Dutchland Pietertje Vale, 35.17 lb. butter, 749.2 lb. milk in a week, 1,263 lb. butter and nearly 28,000 lb. milk in a year. Their dam, Dutchland Colantha Vale, is a daughter of Colantha Johanna Lad with a seven-day record of 30.42 lb. butter, 736.6 lb. milk. She has a year record of 1,082.37 lb. butter, 27,625 lb. milk and, as a junior two-year-old, produced 22,750.2 lb. milk in a year, world's record in class at time of making. Her dam, Creamelle Vale, has a semi-official record of 1,155.85 lb. butter, 29,591.4 lb. milk and was from De Kol Creamelle, the first cow that averaged over 100 lb. milk a day for one hundred

consecutive days. Dutchland Konigen Creamelle Boy is backed by strains of breeding noted for enormous production and the ten nearest dams of Dutchland Creamelle Colantha Vale have year records that average over 27,000 lb. milk, 1,100 lb. butter.

With the exception of the herd sires every animal in the Silverwood herd has been bred and raised on the premises. Members of this herd produced from 16,000 lb. to 17,000 lb. milk in a year while enrolled in cow testing association work. A few official records have been made, several heifers producing over 25 lb. butter in a week.

The farm has been owned by the Browns for many years. The general appearance of the farm and of the buildings indicates the good results that can be obtained by possession extending over many decades and aiming to improve both farm and buildings as fast as possible consistent with business management of funds derived from the sale of farm products.

The farm buildings are in excellent shape. The interior walls of the cow stable are of lath and plaster. The floors are of concrete and James equipment is used. Instead of the conventional gutter behind the cows, there is an iron grating. Under this grate is a deep, wide gutter. The manure falls onto the grate and passes through into the gutter which is cleaned by a plunger device operated by a gasoline engine. A narrow gauge railroad track runs from the barn to a trestle. The manure is dumped by the automatic cleaner into a small box car which is pulled to the trestle and the contents emptied into a wagon or manure spreader and hauled directly to the fields without any other handling. Russell Brown says the grate is a great help in preventing the cows from lying in manure and thus soiling themselves.

The barn is kept in a sanitary condition. The milk is sold to the Borden plant at Thompson where examination and testing has shown that the bacteria count is low enough for certified milk.

Brown & Sons are members of the Dairymen's League and of the Farm Bureau. They are high class

THE BUILDINGS AT SILVERWOOD STOCK FARM

dairymen and farmers and have one of the best herds we have ever had the privilege of examining. They live in the northeastern part of Susquehanna County, a district noted for dairy production. In this district, which is a little off the beaten track followed by most Holstein buyers, there are a number of fine Holstein herds of great producing ability and choice individuality. This district is also noted for the health of its cattle. Silverwood Herd is under state and federal supervision and has a splendid reputation for health as well as individuality and production.

If you suspect a man, don't employ him. If you employ him, don't suspect him.

Why Borden Farms Pay

TEN certified milk farms near New York City are operated by the Borden Farm Products Company. They are run as business enterprises and are distinct from the milk distributing business. The Borden Company buys milk from these establishments at the same price paid to individual farmers who produce certified milk but, unlike the farms of many Borden patrons, the Borden Farms have been showing a profit year after year. The farm managers are paid partly salary and partly percentage of the profits so that each man is encouraged to manage the business as if it were his own.

Strict accounts are kept in detail of the various operations. In the first half of the year 1920 the charge for tractor maintenance on one farm was \$147.62 for the first six months and \$793.96 for the last six or \$941.88 for the year. It was found that it did not pay to use the tractor for the silage cutter and blower. The next year a gasoline engine was hired for this purpose and the tractor expense was reduced to \$585 for the twelve months. Then the style of tractor was changed and the charge for tractor maintenance on the farm for the year ending June 30, 1923 was \$150.13.

During the fiscal year 1920 the cows on the Borden farms required 1.31 lb. of grain to produce each quart of milk. In 1923, it required only 1.25 lb. of grain per quart. This saving in grain was 5% on each quart and helped materially on the right side of the ledger. Vice-president H. H. Cronk, who is general manager of the company, says that account keeping pays the farms and the farms pay the account keeping, for the time spent on the cost records is charged to each farm. "On each of these certified milk farms there are about 100 cows of which approximately one-half are Holsteins and the rest Guernseys. The demand is for 4% milk, Mr. Cronk says. Unless a cow will average a case of milk (12 quarts) daily they cannot afford to keep her. Low producing and low testing cows are sneak thieves constantly draining the farm of its profit. The loss is so small that it is not perceptible in the milk

pail but can be proven by accurate weighing and testing. Bookkeeping has taught them that they cannot, under their conditions, afford to engage in both breeding and milk production so all cows are bought and bought solely on a production basis. The finest possible array of royal ancestors does not influence their judgment when buying a cow, because they are selling milk and not offspring and rear no calves. Yet there are many purebreds in the Borden herds and practically everyone of the other cows is a high grade.

Strict sanitation is the rule. Individual mangers and individual water buckets are used to safeguard the health of the cows. Mr. Cronk believes these two precautions have saved the Borden Company several thousand dollars. In addition every cow is placed on probation before she is admitted into the milking barn.

Each farm superintendent is a well informed farmer who knows what to do and why he does it. What is learned on one of the company's farms or from any other farm, is passed along to the men. The company has not lost money on its farms any year not even during the depression and Mr. Cronk credits this satisfactory state of affairs to these four points: accounts, sanitation, feeding methods, and education of the men. If any one of these four points is greater than the others it is accounts. It will pay any farmer to plan to have less work so as to have more time to keep records. Such records not only enable a farmer to buy his supplies and sell his products at better advantage but also to save time and labor and so lower the producing cost.

The Borden Farm Products Company distributes more than a fourth of the milk used annually in New York City which is approximately one billion quarts. This vast business could not be run without complete and accurate account of every item involved. In consequence the company would not attempt to run their certified milk farms without accounts and Mr. Cronk believes they are even more essential on the individual farm where what a man achieves financially, depends largely upon the degree of business intelligence he uses.

Just a Page of Christmas Goodies

Chipped Ice Cookies

Cream one cup butter and two cups brown sugar; two eggs, well beaten. Take one-half small teaspoon soda, one-half small teaspoon salt, three and one-half cups flour. Sift three times. One cup chopped nut meats.

Pack in molds (baking powder cans or teacups will answer), leave on ice over night. Turn out and cut paper thin. Bake in quick oven. If butter is salty, omit salt.

Walnut Pinoche

3 cups brown sugar Butter size of walnut
1 cup milk Pinch of salt

Boil together until it forms a firm ball in water. Remove from fire. Stir in one teaspoon vanilla, and one and one-half cups nut meats. Stir until it begins to harden. Pour into pans to cool.

Oatmeal Cakes

3 cups oak flake 1 cup butter, softened
2 cups granulated sugar 5 tablespoons milk
2½ cups flour 2 eggs
1 cup chopped raisins 1 teaspoon soda
Almond extract Stir together

Make into small balls and bake in a moderate oven.

Nut Wafers

2 cups granulated sugar 1 teaspoon soda
1 cup butter 2 cups hickory nut meats
1 cup sour cream chopped fine
1 egg

Flour enough to roll thin. Bake in quick oven.

Cocoanut Macaroons

The white of one egg beaten stiff; one can condensed milk (not evaporated); one pound bulk cocoanut. Mix thoroughly. Drop on greased pan and bake in medium oven.

Candied Orange Straws

Wash the fruit well, removing the skin in quarter sections. With scissors cut into strips about one-quarter inch wide. Take enough cold water to cover, and add salt in the proportion of one cup to two quarts of water. Let stand twenty-four hours, drain, rinse in cold water. Cook in water until tender. Take the weight of the peel in sugar, half the weight in the water in which it has been cooked, boil to a syrup, then add the peel, simmering until it is transparent. When cool remove to a plate of granulated sugar.

Salted Almonds

Remove from shell, pour boiling water over them, and let stand about a minute. Remove skin by rubbing between folds of towel. Spread in pan with small piece of butter, put in fairly hot oven. Stir frequently. When done sprinkle with salt. Turn out on paper to remove superfluous grease.

Mincemeat

2 lb. currants 1 lb. seeded raisins
5 lb. peeled and cored ¾ lb. citron
apples 2 tablespoons cinnamon
2 lb. lean, boiled beef 1 tablespoon each mace,
1 lb. beef suet cloves and allspice
2½ lb. brown sugar 1 nutmeg, grated
2 lb. raisins

For the brandy and Maderia wine called for in the original recipe, use boiled cider to make sufficiently moist. Wash and pick currants, stone the raisins. Remove skin from beef and suet. Chop each ingredient very fine by itself, mix thoroughly, and pack in jars. Keep in cold place.

Christmas Plum Pudding

1 cup butter 1 teaspoon salt
1 cup raisins 1½ cup brown sugar
1 cup currants 1 cup flour
¼ cup citron peel 1 teaspoon cinnamon
1/3 cup lemon peel ¼ teaspoon nutmeg
¼ cup fruit juice 1 teaspoon soda dissolved in
1 cup plum jelly small quantity of hot water.
1 cup nut meats
5 eggs

Mix ingredients in the order named and steam in a covered two-pound mold for five hours. Serve with a hot pudding sauce.

Kisses

Take a bit of dark piazza,
Add some moonlight—not too much.
Press in two strong hands, a small one
Add, of coy reserve, a touch.
Sift in just a pinch of folly
Mixed with softly whispered sighs;
Then of romance add two teacups,
And the starlight of her eyes.
Then dissolve some pure emotion
In a longing and a laugh;
Mix a grain of deep affection
With a bit of merry chaff.
Then one ounce of mild resistance,
Two of yielding—then, in mute
Inexpressible enjoyment,
Serve in quantities to suit.

—“Nixon Waterman.”

A Mind-Reading Holstein Bull

By TOM MANN, FIELD EDITOR *Farm and Ranch*

The boys in charge of the herds of show cattle at the fairs usually have a good deal of idle time to “kill,” after the judge has settled the annual disputes in the show ring. This time is more often than not devoted to playing pranks on one another and frequently upon just any victim that “bites” at their bait. They have lots of fun and they spring a lot of clever stuff.

The cleverest thing that has yet been introduced—and this is no joke—is a bull that Bert Kile stoutly declares is a veteran mind reader. This bull is none other than Castine Sir Johanna Nig Ormsby, the undefeated champion of the 1924 Southwestern show circuit and herdsire of the Princedale Farm of Pittsburg, Texas.

To substantiate the claims that Bert makes for his bull, he led the champion out into the aisle of the barn at Wichita Falls and as the crowd collected Bert requested the bull to “show the folks how a scrub bull looks,” and instantly his back sunk, his ears flew back,

CASTINE SIR JOHANNA NIG ORMSBY
Mind reading Holstein bull owned by Princedale Farms, Pittsburg, Texas.

his legs twisted, and he had an air of general dejection that was comical to see.

Then, addressing the bull, Bert said: “Now show the folks how a champion Holstein should look.”

This request worked a complete transformation in the pose. The bull’s back straightened, his head raised, with ears forward, and one by one he placed his feet and legs until he stood squarely upon all four—with feet spaced at exactly the proper angle—and he looked the real champion that he is.

Then Bert put him through a series of changes of position of feet, back and head, and with no apparent guidance other than a verbal request—to move this or that foot, etc.

The exhibition ended with Bert pointing out a lady in the audience and asked the bull if he thought she was good looking, to which the big fellow responded with an unmistakable and emphatic affirmative. When he was asked whether or not he thought her escort was

handsome, the bull gave the fellow a cynical stare that brought laughter from the crowd.

Bert swears that the bull is a mind reader and can tell fortunes, but those who witnessed the test, and who know Bert Kile’s love for, and ability to handle Holsteins, are rather of the opinion that it is he who reads the bull’s mind and who talks to the bull in pure Holstein language.

Appropriate

A. D. Bull of Crawford, Oklahoma, a senior student in the Oklahoma Agricultural and Mechanical College, won the \$400 scholarship given by the Holstein-Friesian Association of America to the student making the highest score in judging Holsteins at the recent National Dairy Show. Mr. Bull expects to take post-graduate work and study for a Master of Science degree.

According to Professor A. C. Baer, head of the dairy department of the Oklahoma College, Mr. Bull is a very active student who is taking part in many student activities outside of his regular school work in spite of the fact that he is working his way through school. In addition to being a thorough and energetic student, he is the founder and president of the National Dairyman’s Club, a dairy student’s organization which is becoming nationally known. He is also an active member of the debating and oratorical societies of the Oklahoma college, is on the staff of the agricultural student publication, and was a member of the judging teams which competed at three leading dairy livestock shows and two horticultural expositions.

Hank says to his wife the other night, “I sure miss that cuspidor.”

“You always did miss it,” says Mrs. Beasley, “that’s why I threw it on the trash pile.”

December 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Coolidge on Education

EDUCATION has come to be nearer to the hearts of the American people than any other single public interest. The plan of maintaining educational institutions from public funds did not originally prevail in most of the States and even where it was in use it was but feebly developed in the early days of the Republic. That plan did not arise spontaneously in the minds of all citizens. It was only when the suggestion came forcefully, convincingly, and repeatedly from a few pioneers that popular interest was fully aroused. Vigorous campaigns were required not only to establish the idea of public education, but also for its maintenance, and for its important extensions.

In the last few years we have placed much emphasis on vocational training. It may be necessary for men to know the practical side of life and be able to earn a living. We want to have masters of our material resources. But it is also necessary to have a broad and liberal culture that will enable men to think and know how to live after they have earned a living. An educated fool is a sorry spectacle, but he is not nearly so dangerous to society as a rich fool. We want the educated to know how to work and the rich to know how to think.

CALVIN COOLIDGE,
President of the United States.

Coming Our Way

THE protest voiced by THE HOLSTEIN BREEDER AND DAIRYMAN against over-emphasizing the value of large milk and butterfat records made without any regard to health of the animal or profit above cost of feed and labor is also being voiced by other progressive agricultural papers.

The leading article in the October issue of *The Field Illustrated* is headed, "The Craze for High Records," and starts out with the following striking sentence, "The craze for record production is a menace to breed improvement." Later in the article appears this paragraph:

"So much stress has been placed upon phenomenal production that during recent years the aims and objectives of constructive breeding have, in many instances, been lost sight of. The record cow has been in the public eye; her progeny have been exploited and sold at high prices because of a pedigree of milk or butter inheritance. Some have gone to extremes in their efforts to compile pedigrees that will show phenomenally high production through several generations, at a sacrifice of type and constitutional vigor. The result has been that the 'art of moulding form and function in the animal kingdom' had been subordinated to the plan of 'beating the other fellow at all costs.'"

Then, bearing out our statements that records are made with very little thought for having the animal reproduce, appears this paragraph:

"The records, by the way, tell an alarming story. It has been estimated that less than twenty per cent of the class leaders in all breeds actually reproduce desirable animals from a constructive breeder's standpoint, if they reproduce at all. Many champions have gone to the shambles after making phenomenal records—burned out from forced feeding. Others have cost their owners more than they were actually worth to get with calf again; and I doubt if the calf was worth much as a breeding animal under such conditions. It is not only the phenomenal record cows whose usefulness is destroyed or impaired by force feeding. The craze for production has caused some to force their cows far beyond their normal capacity in order to increase or maintain a high average in the herd. This has served to increase breeding troubles, notably abortion, which has done and is doing the breed serious and, if long continued, irreparable injury."

The problem is not confined to the dairy breeds. One finds it in any breed of livestock when the passion for outdoing the other fellow seizes the stock owner. In the November 20th issue D. C. W., an editorial writer of the *Breeders Gazette*, has this to say: "During the past ten years hundreds of herds of pedigree cattle have been dispersed. Existing herds, largely in the hands of conservative farmer-breeders, who did not lose their heads in the 'boom' period have been closely culled and thereby improved. These breeders will prosper as the incoming tide of agricultural better times rises. At present they are selling first-class stock at fourth-class prices to beginners, many of whom are wealthy business men who own farms or ranches. As in the past, established breeders will also sell stock to one another. The business will gradually pass into new hands, and undergo a considerable expansion. Speculators will again infest the trade, and hook a new crop of 'suckers.'"

"Every artificial 'boom' in prices is a 'boomerang.' It is a two-edged sword by which the victor who uses it ultimately is slain. Every form of speculation requires a final crop of 'suckers' or ultimate 'holders of the bag.' These are the people who are the last buyers of cattle or commodities that have been toll-gated through many hands."

"Hundreds of well-to-do farmers bankrupted themselves by speculating in purebred cattle between 1914 and 1918. Bankers helped them along toward that fate by the lavish and uncritical extension of credits, which were based largely on prospective profits. These

bankers now condemn purebred cattle-raising as an unsound business. Auctioneers and many others identified with the purebred livestock industry also aided speculative buyers toward insolvency by urging them to purchase with a view of reselling at a profit. Everybody was doing it."

"For a time everybody made money; then the inevitable happened. The war ended, the balloon of speculation exploded, and everybody lost money that nobody had ever earned."

"Purebred stock raising by real farmers who do not indulge in speculative operations is one thing; the buying of cattle or other stock to sell at a profit is quite another thing; it is scalping, speculating or pure gambling. When farmers engage in it they are substituting animals for poker chips, and playing a game in which, in the long run, no one can win. This is the silly game which has discredited purebred stock raising amongst thousands of farmers who mistakenly regard all purebred animals as mere gambling pieces for the rich to play with."

"Much inferior purebred stock has been sold and 'oversold' to farmers. It was less useful than grade stock or scrubs to many farmers who bought it, because it speedily 'went to pieces' under the grade or scrub conditions and treatment to which it was not adapted."

Naturally these articles appearing in agricultural papers of such prominence aroused considerable interest and discussion. But *The Field* followed along the line by the following editorial comment in their December issue: "An impression unfavorable to testing has been created largely by the craze for high records. Breeders have felt the keen edge of competition and in their zeal to beat the other fellow they have disregarded cost altogether, figuring—somewhat loosely—that records make the demand and double the price. The result has been to discourage the men of limited means and make the test a race to be carried on by specialists."

Three letters were published in that issue from prominent stock owners. Mr. Fred Pabst, as a representative of the Holstein breed, acknowledges that "breeders have gone to extremes and have placed too much stress on records and not enough on individuality and constitution." He says that "the model and score card revised by the Holstein-Friesian Association have helped the situation tremendously." In this Mr. Pabst is clearly in error, for the so-called true type models were first shown to the general breeders at the Kansas City meeting, June, 1922, and even then were far from being finished so that not enough time has yet elapsed for Holstein owners to select animals of the so-called "True Type," mate them and develop their offspring to producing age.

But the well-known Guernsey breeder, Louis McL. Merryman, really says something. Study the following:

"If unscrupulous and short-sighted men are allowed to destroy the breeding powers of the best of these cows, they are not only destroying their own property but the property of the whole human race.... The Guernsey breed has seven thousand-pound-cows. Five never bred successfully after their records and one had but one calf. This same general condition will be found in all breeds and all classes. These cattle were

destroyed with no real benefit to their owners and a lasting damage to the human race, as their descendants will never be born to sire economical producers of that wonderful human food, milk."

Reclaiming Fallen Manhood

WE do not wish to tire our readers by continuously referring to the ridiculous projects which the Extension Department of the Holstein-Friesian Association indulges in from time to time, but the last project which they undertake always seems to be the most ridiculous, and we believe breeders generally are interested in knowing how their money is being spent even though it is being wasted.

The breeders know full well that the Extension projects are only "NOM-DE-PLUMES" or cloaks under which the management are spreading political propaganda to maintain themselves in power and possibly on the side advertise the kind of cattle which they own and have for sale.

The latest project that the Extension Department has undertaken that has come to our notice is embodied in the following letter:

230 E. Ohio St., Chicago, Ill.,
Nov. 28, 1924.

Dear Sir:

Mr. F— S—, H. D. T. Box 114, Howard, Rhode Island, is an inmate of the prison at Howard and will be released soon and claims to be a graduate of an agricultural college and is looking for a position somewhere in the field as a herdsman, tester or dairyman.

This information was received from Secretary Houghton's office and we are passing it on to you for any help that you can give this man.

Sincerely yours,
EXTENSION SERVICE.

(Signed) EDW. G. HORST.

Our sympathies go out to those unfortunate persons who, for one crime or another, must serve in our penal institutions. We believe in prison reform. We believe that each and every one of those unfortunate persons should be given an opportunity to redeem their past conduct and in every way should be encouraged to become a useful and law-abiding citizen.

In many states, and we venture to say in all states, there are organizations that devote their whole time and energy to looking after the welfare of prisoners and aiding them in becoming honest, upright citizens after they leave the prison walls. These organizations work intelligently because they make a thorough investigation into all of the facts entering into the case.

Why should the Holstein-Friesian Association, through its Extension Department, duplicate the work that is being done by the various Prison Reform or Prison Welfare Leagues?

Do the breeders of purebred Holstein-Friesian cattle, who are compelled by the nature of their business to work early and late 365 days a year, feel that they would like to do a little special work in reforming criminals aside from that which is being carried on in regular channels and feel this desire to the extent that they are

willing to support an office force and a corps of workers in the city of Chicago or is this piece of misdirected charity forced upon them?

Just why should the Holstein-Friesian Association, through its Extension Department, be recommending a man with a known prison record as herdsman or tester?

Is it not possible that the services of this unfortunate young man could be utilized in the Extension Department of the Holstein-Friesian Association after his prison term expires?

PASS THE WORD ALONG—WE ARE CARRYING THIS MESSAGE FREE OF CHARGE.

Senator Caraway's Plan Not Original

CONSIDERABLE discussion and amusement has been caused by the proposal of Senator Caraway of Arkansas that the campaign expenses of Presidential and Congressional candidates should be defrayed by the National government. It seems ridiculous that men aspiring for offices and salaried positions should have their expenses paid while they were trying to obtain such offices.

However, this plan has already been adopted by the Holstein-Friesian Association of America. The political form of government adopted under President Lowden's administration provides for a plan to keep the administration forces in office at the expense of the members.

In each of the leading Holstein states there is a state paid secretary who draws his salary from the National Association's treasury. He represents the administration in that particular locality. Apparently one of his chief duties is to propose a tentative list of delegates to the National Convention, selected because they are known to be favorable to the administration. The traveling expenses of these delegates to the annual conventions are defrayed by the association from funds collected in registry and transfer fees paid by the rank and file of the breeders.

The state-paid secretary is selected or his selection

is indorsed by the officers of the National Association, and he is paid in part or in full by association funds, and is, therefore, responsible to the Board of Officers for his position.

It is only natural then that the Secretary would endeavor to propose for nomination and election delegates favorable to the administration which employs him. These delegates, elected to attend the National Convention, in turn would vote for the officers that employed the State Secretary responsible for their free trip to the annual convention.

The above plan not only takes care of any campaign expenses of the officers, but it virtually assures their reelection to office indefinitely. Such a form of government manages rather than serves its constituency.

We do not know if Mr. Caraway is a breeder of Holstein-Friesian cattle and is familiar with the well oiled political machine now managing the Holstein-Friesian Association of America, but the HOLSTEIN BREEDER AND DAIRYMAN wants to assure him that he is not the originator of this idea and if his plan, when put in operation, does not work to any greater advantage to the citizens of the United States than the Holstein-Friesian plan works to the advantage of the breeder of Holstein-Friesian cattle, we believe he will be a very unpopular candidate for reelection at some future date.

Should Mr. Caraway's plan be submitted and adopted by the National Government, we will look forward with anticipation to see if the National Government inaugurates an Extension Department as a cloak under which to conduct congressional campaigns.

The life of a husbandman of all other is the most delectable and has ever been the most favorite occupation of my life.

I am become a private citizen on the banks of the Potomac and under the shadow of my own vine and fig tree, free from the bustle and camp and busy scenes of public life.

My greatest pride is to be thought the first farmer in America.—George Washington.

CLUB ACTIVITIES

RHODE ISLAND CLUB MEETING

The Rhode Island Holstein-Friesian Association held its first fall meeting at the Prison Farm, October 16. The State Prison herd consists of 82 head. Five animals from this herd were shown at last fall fairs and won a number of prizes including two silver cups for the grand champion male and the grand champion female at the Rhode Island State Fair.

Luncheon was served with Franklin N. Strickland president of the association acting as toastmaster. Louis H. Putnam, director of state institutions, gave a talk about the institutions under his control. County Agent McLaughlin begged the members to join a cow testing association now forming in Providence County and said such an association would consist of nearly all purebred Holsteins. The breeders were asked to get together to send a state herd to Springfield next year in order to represent Rhode Island.

After luncheon, Professor J. E. Ladd of Rhode Island State College, took four animals, pointed out the difference in type and gave quite a judging lecture. After this a judging contest was staged. The points scored by each contestant will be counted toward a silver cup which will be awarded at the annual meeting next February. H. A. Manchester of Warren made the best score.

CONSIDER TESTING PLANS

The Midwest Holstein-Friesian Association held their annual meeting at Kearney, Nebraska October 31. W. H. Swartsley of Riverdale was elected president, Herman Peterson of Kearney County vice-president, and Joe Clark of Ravenna, secretary-treasurer.

Professor O. H. Liebers, manager of the Dairy Development Association explained cow testing association work as promoted in Wisconsin, also the Crispy plan as advocated by the Nebraska Dairy extension department. He said the expense of testing cows by either of these plans would not exceed \$2.25 per head per year.

Professor H. W. Brokaw of the state extension service gave a talk on the state university work on the production and feeding of dairy cattle, and Professor A. L. Haecker gave a detailed account of the purebred sire train tour.

WILL MEET FARMERS' WEEK

The annual meeting of the Minnesota Holstein Breeders' association will be held at University Farm, St. Paul, Wednesday, December 31, during Farmers' and Homemakers' Week Short Course of the University of Minnesota. E. T. Winship of Owatonna is president of the association and R. E. Geiger is secretary-treasurer.

The Minnesota Livestock Breeders' association, which is the parent organization of all the separate breed associations, will hold its annual meeting at University Farm on Friday, January 2, of the same week. F. E. Millard of Canby is president and J. S. Montgomery of South St. Paul, secretary. The program for the meeting is now being arranged.

Classroom work, lectures by distinguished educators and agriculturists, noon-day mass meetings, and evening entertainments will feature the week at University Farm. Samuel R. McKelvie, former governor of Nebraska; H. J. Waters, editor of the farm edition of the *Kansas City Star*, and C. J. Galpin, from the United States Department, will head a long list of noted speakers. Nearly 100 faculty men and women of the university will conduct the class work of the week.

Special railroad rates on the certificate plan will be available. Good living accommodations can be obtained at University Farm at cost price. A solid week of good fellowship, work recreation, and entertainment is planned.

Growing better crops at less cost is better than growing more products at any cost.

CLUB DISBANDS

Five years ago business men of Emporia, Kansas, together with several farmers located near by, united in an effort to boost dairying in Lyon County. They formed a Holstein-Friesian Club, went to Wisconsin and purchased a bull and some purebred cows which were placed on farms near Emporia. Immediately local dairying took a boost. Then came the agricultural slump. Long prices had been paid for some of the animals and the sale value steadily depreciated. Then the herd bull, Princess Beauty Girl Segis De Kol, died from the effects of a swallowed wire. Another bull was purchased and, for a time, it looked as though the association would be a success but matters went so that at last it was decided to dispose of the herd, which was done at public auction. Practically every animal was bought by farmers in Lyons County.

Prices ranged from \$415 for the herd bull downward. Although from the financial standpoint the association was a failure, yet from the viewpoint of helping the community around Emporia, the money spent was, the leading stockholders say, a wise investment.

TO BOYCOTT OLEO

When the Marshfield Holstein Club held its monthly meeting November 20 at the home of Jake Heinzen, Marshfield, Wis., the members decided to join with other farmer organizations to ask the local merchants to discontinue the sale of oleomargarine. The Marshfield local of the Equity and several breeders' clubs have decided to take this action. Resolutions will be drawn up and mailed to all merchants handling butter substitutes.

John Stauber was the principal speaker at the meeting, giving some interesting figures on farm topics. Musical numbers were furnished by the Merkel and Heizen quartette.

The next meeting will be held December 15 at the home of Mike Redig.

MARATHON BREEDERS HAVE BUSY MEETING

Members of the Marathon County Holstein Association held a get-together meeting at Edgar, Wis., November 15th.

F. C. Holibaugh had purchased a number of cattle for California. As these animals will have to be tuberculin tested it was decided that each breeders' club should take care of its members.

The report of the treasurer showed that the receipts for the year aggregated \$596.46 and the disbursements \$473.55, leaving a balance for the year of \$122.91, which, with the balance left from 1923 made a total balance in the treasury of over \$500.00.

H. E. Keller, R. E. Golisch and H. Ploeger were elected delegates to the state convention. Emil Hermann, Albert Spindler, Harry E. Witter and A. J. McVay are alternates.

As the Marathon Board of Supervisors had appropriated \$1,500 to aid boys' and girls' clubs in Marathon County a resolution was passed unanimously commending the action of the county board. Another resolution requests the management of the Wisconsin Valley Fair to stage the cattle judging contests on Tuesday and Wednesday of fair week and the stock parade on Thursday.

It was voted that, if stock owned by nonmembers was sold through the club that beside the 5% charged members as selling fees, an additional one per cent should be deducted or else a sum equal to the membership fee should be taken from the receipts in addition to the usual 5%. It was also decided that the association would stand the expense of sending a calf club to the 1925 Wisconsin State Fair as the advertising value of such an exhibit would benefit the whole county.

As State Senator Barber has offered a gold watch for the boy or girl making the best showing in club work the association commended the offer of Dr. Barber and a resolution was passed to that effect.

EFFICIENCY IMPERATIVE WHEN FEEDS ARE HIGH

By F. B. MORRISON IN WISCONSIN NEWS LETTER

When concentrates are high in price and milk tends to be relatively low, farmers are naturally eager to cut down their cost of production in any way possible. Therefore many are now debating as to how they can feed their cows so as to cut down their cost of milk production this winter. Some are attempting to do this by feeding but little grain or other concentrates, and letting the cows fill up on all the roughage they will eat. Will this cut down the cost of milk production or not? This and similar questions are important ones for dairy farmers this winter.

This fall and winter is surely no time to waste concentrates. All will agree to that. However, dairyman must be careful not to be "penny wise" and "pound foolish."

We must remember that a good dairy cow when well fed needs about half her feed to maintain her body.

If the amount of feed for a good dairy cow is seriously reduced in an attempt to cut down the cost of milk production, the effect will be just opposite to what is desired. If a good cow is fed a three-fourths ration, she still needs just as much feed as ever to maintain her body and can use only one-third of what she eats to make milk.

Filling a cow up on roughage, even good roughage and giving her little or no grain or concentrates has just this effect. She gets plenty of pounds of feed, but each pound of roughage supplies much less digestible nutrients, or real food value, than a pound of concentrates. Hence, the cow gets full before she can secure enough nutrients to produce a good flow of milk. If a cow is of beefy tendency it is easy to overfeed her.

Farmers who have efficient cows in fair flesh which are producing a good flow of milk sometimes are deluded when they cut down on the amounts of concentrates they are feeding. The cows seem to give nearly as much milk on the reduced allowance as they did before, and the farmer feels that he is saving considerable money. It is true that a good dairy cow fed insufficiently will continue for some time to try and give a good flow of milk, for her maternal instinct forces her to do this. However, she can only do this by drawing on her body and running down in flesh. Soon her production will be seriously reduced.

Under conditions like the present it would seem best to continue to feed the good cows a fair, but not excessive, amount of concentrates, so as to maintain a good production. With ordinary kinds of roughage we advise adhering quite closely to the usual thumb rules of feeding concentrates with all the choice alfalfa and clover hay and corn silage the cows will eat twice a day. It may be most economical to reduce the amount of grain or other concentrates about one pound below the amount required by the thumb rules.

Even under normal conditions poor dairy cows are "boarders." Now they are serious liabilities. They had better be sold for whatever can be secured for them instead of feeding them at a loss all winter.

Our advice to farmers is therefore: (1) Cull your herd, and get rid of the boarders; (2) feed your efficient cows good rations; (3) do a little figuring and try and feed as economical a ration as possible. In case of doubt as to what feeds to use call on your county agent or College of Agriculture for advice, state specifically what feeds you have, the local price for purchased feeds, the kind of cows you have and their average production. All these facts are needed to give intelligent advice on the problem.

BALANCED RATIONS BEST FOR CALVES

In a recent test conducted at the South Carolina Experiment Station to determine the value of self-feeding, as a method of feeding calves, some very interesting facts were found. In this experiment three calves were allowed free access to self-feeders, which contained in separate compartments: shelled corn, wheat bran, linseed meal, whole oats, corn meal, ground oats, velvet bean meal, bone meal, salt, and ground limestone. Three other calves were fed a balanced grain ration composed of: 100 pounds corn meal, 100 pounds ground oats, 100 pounds wheat bran, 50 pounds linseed meal, and 3½ pounds of salt.

1. The calves given their choice between whole oats and whole corn and these same grains ground, selected the whole grains.

2. The calves fed by the self-feeder method made faster gains in weight than those fed the calf mixture. However, the calves fed the calf mixture grew faster in height, showing that the self-feeder calves tended to fatten, rather than grow as did the calves which were fed a balanced ration. This experiment shows the importance of feeding young animals a balanced ration to keep them in good growing condition.

3. Although the calves on self-feeder gained more rapidly in weight, these gains were also more expensive, because the calves on self-feeder consumed more feed but did not get a balanced ration.

4. The cost per pound of gain on the self-feeders calves was 12.4 cents, while the cost per pound of gain for calves fed on calf mixture was 10.4 cents.

The cost per inch of gain in height on self-feeders calves was \$7.40, while calves on calf mixture the cost per inch was \$3.20.

All these conclusions are based on a skim milk and hay ration in addition to grain. The self-feeder method as outlined was therefore not profitable, because calves did not select a balanced ration, but tended to select the more palatable grains which produce fat rather than growth.

SIMPLE MILK CAN LOCKING DEVICE

A great deal of interest and comment appears to have been created by a new patented device that has recently been invented for the purpose of quickly locking the lid of a milk can. The inventor of it is a dairy man himself. It is an oil tempered tinplate spring curved at each end so that the ends pass through the holes in the rim of the cover and the corresponding holes in the rim of the can. Here, as in most cases, necessity has been the mother of invention.

Those dairymen having a long haul to market who have seen it have been the quickest to recognize its advantage and adopt its use. When in use and during transportation the cover of the milk can has always been a fly in the ointment to not only the users but to the manufacturers and jobbers as well. This sanitary lid lock is recognized by some of our biggest men as being a step in the right direction. It will have a tendency to bring about a standardization of milk can covers which the Government as well as the manufacturers' association have been encouraging.—*Pacific Dairy Review*.

EASY HAYING

Two Kansas lads have evolved a combination for baling hay or alfalfa from the swarth that has some possibilities for the semi-arid region where the fields are smooth and the hay dries readily. The tractor pulls the baler mounted on a truck with the hayloader just behind to drop the hay into the mouth of the baler, the hay sliding down a chute they constructed for the job. This gives them a pitchforkless handling of the hay that saves just about as near 100% of the valuable leaves as is possible.

The latest hay harvest operations for speeding up the job are described by the Research Department of the National Association of Farm Equipment Manufacturers. The average farm is large enough to make the hayloader pay big returns, the larger ones using two or more to speed the operations. The side delivery rake is also standard equipment where the acreage is more than a mere "patch" that can be handled by hand. Where the tractor is used, a combination in which tractor pulls side delivery rake and loader has been successful with some. One well managed farm of the bigger type finds it economical to throw the hay over in two parallel windrows that can be picked up by two hayloaders, pulled by a single tractor.

Big returns from the alfalfa crop come to those farmers who know how to harvest it with sufficient speed to get all the leaves with the stalk and get them in the early curing stages that will leave them fresh and green looking for Bossy's breakfast. Alfalfa leaves are equal to bran in feeding value, according to the college stations, but too much handling of the hay from time of cutting to the cow's "table" rapidly reduces the feeding value until a third or a half of it is lost.

CAN BORROW MONEY TO BUY COWS

The following paragraph is taken from page 17, Circular 15, which gives the rules and regulations of the Federal Farm Loan Board to August 1, 1924.

Loans Upon Dairy Cows—"The banks are authorized to re-discount notes for farmers upon dairy cows, and to arrange for monthly payments upon such notes. While this may seem to be an evasion of the limitation that loans should not be made for periods of less than six months, it is, in substance, a loan clearly contemplated by the act. Purchasers of such dairy herds, who must pay for the same out of the proceeds of cream checks, must be assured of credit for 18 months to 2 years—a type of credit which country banks should not take with the view of re-discounting through the Federal reserve system. On the other hand in order that intermediate credit bank may make the loan in a maximum amount, it is desirable that payment for the herd shall begin with the first month after the purchase. Due credit, of course, for interest and principal will be given as such monthly payments are made."

MACHINERY CUTS COSTS

That labor saving machinery cuts down the cost of handling milk at city plants is revealed by investigations made by the Bureau of Dairying. This was irrespective of the size of the plants for, in the large plants with receiving rooms so located that the milk cans had to be rolled some distance to the weigh can, the cost of handling was more per can than it was in small plants where the weigh can was near by or a conveyor system carried the cans from the wagon or car to the dumping place. As a general rule, the large plants handled their milk cheaper but this is due to the fact that they usually have better systems of receiving milk.

DON'T FEED MOLDY CORN

Warning against the danger of feeding moldy corn to livestock is given by the Pennsylvania Bureau of Animal Industry. One feeding of moldy corn may be sufficient to poison an entire stable of animals. They say further that forage poisoning and intestinal disorders will likely occur following the feeding of moldy food. Although horses and mules seem most susceptible, all farm animals are subject to these troubles. Affected animals show symptoms of poisoning, stagger, and may finally die. In case such symptoms develop, state officials advise getting in touch with the local veterinarian as soon as possible.

For the same investment good livestock will generally yield greater returns than additional acres.

TRAVERSE ECHO SYLVIA KING

Heads our ACCREDITED Herd.

His dam, a 33-lb. cow, averaged 102 lb. milk for 30 days and has a 35-lb. and a 32-lb. daughter.

Five of his seven nearest dams have one or more 30-lb. daughters.

He is bred to cows that return a substantial profit for the cost of their feed and care.

W. B. KENNEDY & SON,
BRADFORD CO., WYALUSING, PA.

My Herdsire

He is by King Segis Pontiac Konigen, and his dam is an A. R. O. granddaughter of Dutchland Sir Pietertje Hengerveld and Beauty Pietertje Butter King.

His first twenty-two sisters tested for a year average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision and passed clean at last test.

RAYMOND D. STRICKLAND
Susquehanna Co., R. D., Nicholson, Pa.

SADIE BUTTER GIRL SPOFFORD

Others as good in SYLVDAL HERD

which is Accredited and is headed by

SIR CHAMPION SYLVIA

son of Champion Echo Sylvia Pontiac

and from a 30 lb. daughter of a twice

37 lb. cow.

GLENN L. WARNER

R. D. 5, Cuba, New York.

A TYPY PRODUCER

Cows of her type, quality and producing ability are bred to

Model Darius King Segis

son of the famous

Clara Clothilde Lyons

639.8 lb. milk in 7 days as a two-year-old.

Stock from this ACCREDITED Herd will make good ANYWHERE.

Fred B. Keeney

Wyoming County LACEYVILLE, PA.

Only \$40

Bull Calf, Born Nov. 5, 1924.

Large and one-third white.

Sire is from a tested daughter of ORMSBY KORNDYKE LAD and was sired by KING PONTIAC ALCARTRA PIETJE, he a 35-lb. son of King Segis Pontiac Alcartra.

Dam—MOLLIE DE KOL BOON 2d, 298901, has a homemade record of 22.3 lb. butter from 577.5 lb. milk. She is a real good dairy cow with an almost ideal udder and is a granddaughter of Changeling Butter Boy, one of our good century sires.

Herd Fully Accredited

A. Conrad Slifer,

Lewisburg,

Penna.

Daughters of our herdsire,

Echo Belle Model King

are good property, pleasant to look at and profitable to own. They are backed by producing strains for his SEVEN nearest dams have seven-day records averaging 35.49 lb. butter.

Our herd numbers 85 head and is under State and Federal Supervision.

WARD D. LOOMIS,

Chenango Co. R. D. 4, Bainbridge, N. Y.

TO TRY MISSISSIPPI FOR BUSINESS

It is proposed to send a delegation from Winnebago County, Wisconsin, to investigate the capability of Mississippi as a market for the surplus cattle of Wisconsin and adaptability of the state for dairying. A special meeting of the Winnebago County Agricultural Council was held November 10th to consider the matter. Practically all the directors of the Guernsey and Holstein Breeders association were present besides the council members and representatives from different farm groups.

One-half of the expenses of each delegate will be borne by the Holstein and Guernsey associations, the other half will be paid by the individual or from funds derived from some other source.

A committee will go from Sheboygan County on the same purpose and it is expected that the two groups will travel together. The matter is being considered at the present time.

DAIRYMEN'S LEAGUE DOINGS

The directors of the Dairymen's League Coöperative Association Inc., have set the December schedule of producers' prices for 3% milk at the 201-210 mile freight zone. Class 1, \$3.07; class 2A, \$2.10; plus skim milk value; class 2B, \$2.25; Class 2C, \$2.15; Class 3A, \$1.80; class 3B, \$1.75; class 3C, \$1.65. For class 4A and 4B, milk made into butter and American cheese, the price will be determined by the average wholesale price of butter and cheese during December. The price for class 1 is the same as the November asking price but slight increases are made in some of the lower classes.

Checks were mailed to members for October milk for which the gross pool price per 100 pounds for 3% milk at the 201 to 210 mile freight zone was \$1.95. Nine cents per cwt. was deducted for expenses and ten cents for certificates of indebtedness so that the pool price for October was \$1.86 and the cash distribution \$1.76.

DAUGHTERS OF WESTSIDE KING VALE 4th

We are overstocked. Can't you use a few of this Quality?

MENZO A. BROOKER

R. D. 2, South New Berlin

Chenango Co.

Herd under State and Federal Supervision.

MEMBERS OF SUNNY LAWN HERD

which is not only ACCREDITED but is also the oldest herd in Northumberland County. These cows, with the other members of our herd are big producers as our C. T. A. records show. Next time you travel the Susquehanna Trail, stop at our place.

Murray A. Miller

R. D. 3,

Milton, Pa.

MARYLAND DAIRY SHORT-COURSE

The third annual dairy short-course of the University of Maryland begins at College Park, December 29.

Three separate courses are scheduled, the first covering the testing of milk and cream, and continuing for one week; the second devoted to dairy production and lasting four weeks; and the third covering dairy manufacturing practices and running for four weeks.

The purpose of the first course is to train students to become milk and cream testers for milk plants, creameries and cow testing associations. The dairy production course will be particularly valuable to farm boys interested in the care, feeding and management of dairy cows but who lack the time necessary for a more complete course of instruction. The dairy manufacturing course is planned to assist workers in milk plants, receiving stations and in creameries to understand the necessity for improved quality in manufactured dairy products.

There are no charges excepting a \$5 fee to cover the cost of laboratory materials. Room and board may be secured at reasonable rates. No entrance examinations are required but students must be at least eighteen years old and should have a good common school education.

MANUFACTURERS AND C. T. A. WORK

Jerry P. Riordan, for many years manager of the Harvest Farms, is now director of the Agricultural Bureau of the Wisconsin Manufacturers' Association. This association is offering to finance the dues of one member of a cow testing association in each county for a two year period. In explaining the plan Mr. Riordan said that each member receiving association aid must be a new member—one who had not previously belonged to a cow testing association. The member is to agree to test his entire herd and to remove unprofitable animals as the test work points them out.

Mr. Riordan has long been prominent in Wisconsin Holstein politics although he did not become a member of the National Association until 1922, yet for a number of years, he voted all or part of the Wisconsin proxies at the annual meetings of the National Association.

MANUFACTURED MILK MARKETS

Stocks of condensed and evaporated milk show a decrease on November 1 of 14% under the stocks of the corresponding date of 1923. This fairly active movement together with an apparent decrease in production, contributes to a strong market tone. Just how much production has dropped cannot be stated for besides the seasonal drop there has been a good demand for whole milk for city distribution. Price has been an influencing factor for there has been a difference in some sections of from 15 to 20% between condensery prices and market milk prices.

Some buyers of canned milk have begun to withhold purchases in view of the approaching inventory period. There has been an upward trend of the butter market. The higher butter price will permit the utilizing of condensery milk for butter manufacture, at least for temporary periods. The domestic trade continues to be the principal outlet for canned milk.

The latest export figures covering October reveal nothing particularly new. Total exports amounted to 22,599,000 lb. condensed and evaporated combined as compared with 20,083,000 lb. in September and 17,538,000 lb. in October last year. Total exports for the first ten months of the year amounted to 180,043,000 lb. an increase of about 38,000,000 lb. over the same period in 1923. Germany continued to receive large quantities of evaporated, over 6,100,000 lb. in October and a total of close to 22,000,000 lb. since July 1, making Germany at present the source of heaviest foreign demand.

During October of this year 1,262,026 lb. of powdered milk was exported or more than a million pounds in excess of last year, while for the first ten months of the year, the gain is a little over 1,700,000 lb. The Netherlands took 539,285 lb.; Germany, 332,050 lb. and Belgium 180,650 lb. These were by far the heaviest buyers.

One-half the world is engaged in agriculture. That is how the other half lives.

DAIRY IMPORTS AND EXPORTS

Dairy imports during October fell far below the figures of 1923, with the exception of manufactured milk for there was a slight gain as the following figures show.

	1924	1923
Butter	128,188 lb.	1,202,304 lb.
Cheese	7,275,470 lb.	9,609,345 lb.
Condensed, Evaporated and Powdered milk....	922,635 lb.	815,029 lb.

During the tenth month of 1924, 2,646,045 pounds of butter were exported against 343,887 pounds for the corresponding month of last year. Exports of oleo were decreased one-third, the figures for October, 1924 being 60,945 lb. while for October 1923 they were 90,556 lb. There was very little difference in the cheese exported, last month showing a slight gain over a year ago. For the first ten months of the present year a little over 3,000,000 lb. of cheese were exported while last year nearly 8,000,000 lb. were exported in the same period. This condition is exactly reversed in the butter trade as a little more than 7,000,000 lb. has been exported during the first ten months of the year, while the exports for the first ten months of 1923 were just under 5,000,000.

A HOME PRODUCT

Inka Veeman Artis is a purebred Holstein-Friesian cow bred, raised and developed in the RO-AN herd which is owned by Roy W. Chamberlain of Canadea, N. Y. Mr. Chamberlain is very proud of this cow. As a junior four-year-old in official test she produced 29.46 lb. butter, 613 lb. milk in seven days. A year later she freshened again and increased her record to 31.82 lb. butter, 655.4 lb. milk. A little more than a year

INKA VEEMAN ARTIS

Twice above the 30 lb. mark. Three records, made consecutive years, average 30.86 lb. Bred, raised and developed by Roy W. Chamberlain, Canadea, N. Y.

afterwards she was again fresh and when tested she made in seven days, 31.30 lb. butter, 583.9 lb. milk.

Inka Veeman Artis is a very handsome individual. Her dam, several sisters, two or three daughters and a number of granddaughters are in the RO-AN herd. Her sire was Sir Korndyke Pontiac Artis Prince, a bull of high quality whose pedigree combines the blood of Sir Korndyke Pontiac Artis and Sir Veeman Hengerveld, a combination of blood lines found in a number of high record animals. RO-AN Herd is accredited and although it has been tested a number of times there has never been a reactor or a suspect.

FLUID MILK OR CREAM SEPARATORS

About one-third of the farmers in Pennsylvania are using cream separators according to statistics compiled by L. H. Wible, of the State Department of Agriculture. There are already 65,000 cream separators in the state, about two per cent less than the number in use a year ago. As the market for whole milk improves the number of cream separators decreases. There is an increase in the counties remote from the large cities and industrial centers and a decrease in the number used in the counties near these centers.

SUCCESSFUL SHOW SEASON

James M. Paxton & Son of Houston, Pa. report a successful show season. Their great cow, Dasie Dalzell Mercedes Belle 4th, was exhibited at six fairs, Washington, Reading, Ebensburg and Burgettstown, Pa. and also at the West Virginia State Fair at Wheeling and at the Delaware State Fair at Wilmington. With the exception of the Reading Fair, she made a clean sweep, winning first prize in the aged cow class, senior and grand championships at the other five. Although she was defeated at Reading, at Ebensburg she beat the noted show cow, Kismet Fayne of Valley View, who had stood first at the Cork Fair beating Loyalsock Korndyke Witra, the cow that was placed ahead of Dasie at the Reading Fair. At Ebensburg and Burgettstown Dasie won the prize ribbons given by the Pennsylvania Federation of Holstein-Friesian Clubs for the best Holstein female exhibited at these two events. She dropped a very handsome bull calf October 27 and, writing three weeks later, Mr. Paxton says she was then milking 70 lb. a day.

At the Ebensburg Fair, the Paxton herd was awarded a bronze medal, a special prize given by the Holstein-Friesian Association of America. King Echo Sylvia Alcartra Lad, the head of the Paxton herd won Federation ribbons at Reading and Burgettstown and is a splendid specimen of the breed. At the Delaware State Fair against strong competition from some of the largest herds in the country, this bull was placed second in the mature class. Here the Paxton herd won third prize.

NATIONAL DAIRY UNION

The work of the National Dairy Union for the past year was conducted with the expenditure of \$5,206.29. The industry contributed \$5,257.46 in small contributions averaging about \$17 per creamery. It enters its present year's work with a balance on hand of \$3,550.70. Renew your memberships as early as possible.

At the second sale of the Iowa County Holstein Association held at Mineral Point, Wis., October 22-23, the purebreds of all ages brought an average of \$95 per head and the grades sold for an average of \$75. Ralph Haffron, Mifflin, paid \$180, the top price for a purebred cow. The highest price for a grade was \$105 paid by Andrew Bode of Potosi.

On October 31, at Sparta, Wis. there was a sale of ninety-six Holstein cattle under the auspices of the Monroe County Holstein Breeders Association. George J. Weiner, Sparta consigned the cow that brought the top price, \$187.50. She was purchased by G. G. Hilliker of Tunnel City. The top price for a grade was \$117.50. She was consigned by Oscar Gilbertson and purchased by a Minnesota buyer named Oscar Johnson.

A record crowd attended the fourth annual sale of the Troy-Canton Holstein Breeders Association held at Troy, Pa., November 1. The average was \$157, fifty-four head bringing \$8,455. The top price was \$325 for a six-year-old cow sold to the twelve-year-old boy Leon Ballard, Troy, whose father, Ben Ballard, is one of the leading breeders of this district. Not a single blemished animal was sold.

At the November Cattle Fair held at Berlin, Wis., November 19, twenty-five head of purebred Holsteins and five Holstein grades were sold by members of the Green Lake County Holstein Association. Practically all of the purebreds were calves or yearlings and were from clean herds. The top price was \$80, paid by Peter Diarnick, Green Lake for a yearling heifer consigned by Wm. Michaels.

E. H. Zobel of Green Lake sold five head of excellent grade cows which averaged \$68, the top price being \$87.

When the herd of Dr. B. O. Nobles was dispersed at Raymond, Wis., November 22, forty head of purebred Holsteins averaged \$118. Several of the older animals sold near the \$300 mark but a number of calves and young stock brought down the

average. Buyers from a considerable distance were present and the bidding was spirited. Difficulty in securing competent help and pressure of professional duties were the reasons given by Dr. Nobles for disposing of his prize winning herd.

A sale was held at the pavilion at Barron, Wis., November 20, at which ninety head of grade and purebred Holsteins were sold. The top purebred cow sold for \$250 and her six weeks old heifer calf for \$100. A grade Holstein brought \$175. Yearling purebred bulls brought \$90 and \$100 and yearling purebred heifers from \$75 to \$125.

WILL SELL HOME AND HERD

On Thursday, December 18, on the farm three miles from Annville, and four miles from Palmyra, Pa., will be sold the beautiful farm and home owned by Wayne Light, now a resident of Akron, Ohio. This farm is splendidly located as Lebanon Valley College is located at Annville and the farm is only eight miles from Lebanon and eighteen miles from Harrisburg—in easy reach of two thriving cities, one of which is the state capital.

The exact size of the farm is 102 acres and 5 perches and a public road leading from the William Penn Highway bounds it on the east. The buildings are in splendid repair. The house contains eight rooms and there is a story and a half summer house. These with the large bank barn are built of stone. Mr. Light says that the barn, which is as good as new, cost more to build than he expects the farm to bring. The farm is fertile and in a high state of cultivation and consists of gravelly loam and limestone soil. A kiln ready to burn lime is on the farm. This is a real home, with fruit trees—apple, peach, cherry, plum, quince, pear. In addition there are a large number of black walnut trees valuable for lumber.

This farm is splendidly located with a near-by market for dairy products, poultry or vegetables all of which it is adapted to growing. It is a sightly place and is suitable for a country home for anyone wishing to live near a college town or within easy driving distance of the state capital. There are already two large country homes within sight of the farm.

The personal property consists of a complete set of farm implements practically as good as new. The livestock consists of horses, mules, Duroc hogs, poultry of various kinds and twenty-two head of Holstein cattle, ten of which are registered.

Among the registered animals are Queen Sylvia Brookside, an A. R. O. cow tracing to many noted animals including Brookside Pontiac Paul. Another purebred is Model Burke of Baxter Run, a daughter of King Model Korndyke Hengerveld, he by the noted King Model from Woodmont Hengerveld Helen, a 31 lb. granddaughter of Hengerveld De Kol.

Welleson Hengerveld Alcartra is another member of this herd and is a granddaughter of King Segis Pontiac Alcartra. Sisters of this cow have made very large records at least two crossing the 30-lb. mark.

At the head of this herd is the two-year-old bull, Clear Spring Ruth Sadie Vale King, a splendid individual, nearly all white. His dam is a granddaughter of Pietertje Hengerveld Segis while his sire is by King Korndyke Sadie Vale from a 34 lb. daughter of Sir Korndyke Pontiac Artis. All the grades as well as the purebred females are bred to this bull.

Only the fact that Mr. Light is unable to personally operate this farm brings it and the herd into the market. He has chosen to dispose of it at public auction under the management of the veteran Holstein breeder, S. R. Miller. The sale will start at 12.30 p. m. Thursday, December 18. Anyone coming by train to Annville, a station on the Reading Railroad, will be carried to and from the farm. Annville is also reached by trolley running from Palmyra via Lebanon to Myerstown. You can obtain a catalog by writing S. R. Miller, at Chambersburg, Pa., or to the owner Wayne Light, Harbel Manor, Akron, Ohio, but the sale will be held on the farm which is near Annville, Lebanon County, Pennsylvania.

BATTLE CREEK SANITARIUM

For some time the Battle Creek Sanitarium has leased the Lakewood Dairy Farm from its owners, Wentworth and Stewart, but recently purchased this farm as well as another and now owns 783 acres. A new barn has recently been erected, 137 by 38 feet. This is to be the main dairy barn. The dry cows and the young stock will be kept on the Post Farm.

There will be a special milking room. From their stanchions in the main barn, fourteen cows at one time will be ushered into this compartment in which they will be milked. The walls of this room will be of white tile and the floors of black tile and the cows will only remain in it while they are being milked.

At Lakewood Farms it was found that it cost forty-one cents to produce a pound of butterfat and \$1.46 for one hundred pounds whole milk. For each dollar spent for feed produce worth \$2.06 was realized. On Sunday, November 9, the total production of the herd was 2,406.7 lb. milk.

BUYS A SON OF CREATOR

John Mathison of Plover, Wis., recently purchased from C. O. Christ of Fort Atkinson a purebred Holstein bull sired by Creator. Mr. Mathison who is a member of the Plover Cow Testing Association has 39 animals on his farm of 132 acres. Several of his cows have made outstanding records in cow testing association work.

Cow Testing Association Reports

WISCONSIN TESTING

Ninety of the 141 Wisconsin associations reporting October production were headed by black and white cows, thirty-six of which were purebreds. The five highest producers were black and whites, the leader being a cow in the Tomahawk association and owned by Makida Farms. She was credited with 101.5 lb. fat. A grade Holstein owned by F. Chrisler of the Lodi association was second with 83.1 lb. fat. Harry Broughton, of Albany, owned the purebred that was third with 77.5 lb. fat. A registered Holstein in the Marshfield association and owned by Wm. Schimmelpfeg was fourth with 77.2 lb. fat, and another registered Holstein, owned by Gillis and Draxler of Glenwood City was fifth with 76.8 lb. fat. The leading herd consisted of 8 purebred and grade Holsteins owned by Frank Werner of Richfield association. Their average was 47.8 lb. fat.

IN ALLEGHENY COUNTY, PA.

Daisy, a purebred Holstein owned by the Allegheny County Home, led the Montour Valley Cow Testing Association for the month of October by producing 1,556 lb. milk. She did not test as well as some of the others, however, and is ninth place in fat production with 44.95 lb. H. E. Cleland owned the grade Holstein, Maryetta, that led for fat production with the total of 55.56 lb. Fto, owned by McPherson Bros. was second with 54.78 lb. and a ten-year-old registered Holstein owned by L. J. Stewart & Son was third with 54.52 lb. In fourth place was a three-year-old Holstein, Sessie, owned by the County Home with 50.10 lb.

It is rather difficult to say what breed carried off the honors for high herd

average. The leading herd consisted of three grade and two purebred Holsteins and nine purebred Ayrshires, owned by McPherson Brothers. The average fat was 29.23 lb. and average milk was 774 lb. The A. N. McClinton herd consisted of ten grades and two registered Holsteins and is second for both milk and fat, the figures being 667 lb. milk, 25.41 lb. fat respectively. The County herd consisted of sixty registered Holsteins and is third for milk average, the figures being 646 lb.

There were 408 cows in this association of which 147 are grades, 33 registered Ayrshires, 22 registered Jerseys, 192 registered Holsteins, 6 registered Guernseys and 8 registered Shorthorns. During October 336 cows were tested in the twenty-four herds. There were twenty cows that exceeded 40 lb. fat, three exceeded 50 lb. while nineteen produced over 1,200 lb. milk. The tester for this association is Mr. L. M. Stark.

CANADIAN TESTING

Queen Beulah with 34,577 lb. milk, 1,433.75 lb. butter heads the list of Canadian cows finishing their records in the two months from September 1 to October 31. She is owned by Dr. H. A. Clark, Brockville, Ont. Her butter record stands fifth highest for Canadian cows and her milk record is at the head of the Canadian list. Raymondale Abbekerk with 25,597 lb. milk, 1,275 lb. butter is second in the report. She is owned by D. Raymond, Vandrenil, Que.

Springbank Snow Countess, 23,405 lb. milk, 1,223.75 lb. butter heads the three-year-old class. She is owned by T. H. Dent & Son, Woodstock, Ont.

The two-year-old class is headed by a member of the government herd at Agas-

siz, B. C. This is Agassiz Favorit De Kol with 21,343 lb. milk, 1,001.25 lb. butter. This heifer is a junior two-year-old and her record places her fifth in her class for all Canada. A number of creditable records made on twice a day milking are reported in both the ten months and 365 day divisions.

MARYLAND TESTING

Although grade Holsteins were first and second for production in the Maryland Cow Testing Associations for October, there were six purebred Holsteins in the list of the ten highest producers, the other two being grade Jerseys.

Walter Magruder of the Upper Montgomery Association had the two leaders, Lula producing 82.6 lb. fat, 1,835 lb. milk and Molly 74.5 lb. fat, 1,733 lb. milk. Charles Sigler of Caroline County Association had a purebred Holstein, Rainbow, in third position with 72.5 lb. fat. J. D. King, of Germantown, enrolled in the Upper Montgomery Association owned a purebred Holstein in fifth place with 69.7 lb. fat, 2,248 lb. milk. C. R. Rathell, Wye Mills, had two purebred Holsteins enrolled in the Talbot County Association. The cow in seventh position had 66.5 lb. fat, 2,145 lb. milk to her credit and the tenth cow had 64.4 lb. fat, 2,148 lb. milk credited to her. John M. Dennis, of Riderwood, had a purebred Holstein with 66.4 lb. fat, 2,112 lb. milk and Mack Walker of Gaithersburg, had one with 65.5 lb. fat, 1,820 lb. milk.

Two junior cow testing associations have been organized in Frederick County. One is under the supervision of Mr. Harry McDonald, instructor at the County Agricultural High School at Frederick and the other under Mr. Henry R.

average. Buyers from a considerable distance were present and the bidding was spirited. Difficulty in securing competent help and pressure of professional duties were the reasons given by Dr. Nobles for disposing of his prize winning herd.

A sale was held at the pavilion at Barron, Wis., November 20, at which ninety head of grade and purebred Holsteins were sold. The top purebred cow sold for \$250 and her six weeks old heifer calf for \$100. A grade Holstein brought \$175. Yearling purebred bulls brought \$90 and \$100 and yearling purebred heifers from \$75 to \$125.

WILL SELL HOME AND HERD

On Thursday, December 18, on the farm three miles from Annville, and four miles from Palmyra, Pa., will be sold the beautiful farm and home owned by Wayne Light, now a resident of Akron, Ohio. This farm is splendidly located as Lebanon Valley College is located at Annville and the farm is only eight miles from Lebanon and eighteen miles from Harrisburg—in easy reach of two thriving cities, one of which is the state capital.

The exact size of the farm is 102 acres and 5 perches and a public road leading from the William Penn Highway bounds it on the east. The buildings are in splendid repair. The house contains eight rooms and there is a story and a half summer house. These with the large bank barn are built of stone. Mr. Light says that the barn, which is as good as new, cost more to build than he expects the farm to bring. The farm is fertile and in a high state of cultivation and consists of gravelly loam and limestone soil. A kiln ready to burn lime is on the farm. This is a real home, with fruit trees—apple, peach, cherry, plum, quince, pear. In addition there are a large number of black walnut trees valuable for lumber.

This farm is splendidly located with a near-by market for dairy products, poultry or vegetables all of which it is adapted to growing. It is a slightly place and is suitable for a country home for anyone wishing to live near a college town or within easy driving distance of the state capital. There are already two large country homes within sight of the farm.

The personal property consists of a complete set of farm implements practically as good as new. The livestock consists of horses, mules, Duroc hogs, poultry of various kinds and twenty-two head of Holstein cattle, ten of which are registered.

Among the registered animals are Queen Sylvia Brookside, an A. R. O. cow tracing to many noted animals including Brookside Pontiac Paul. Another purebred is Model Burke of Baxter Run, a daughter of King Model Korndyke Hengerveld, he by the noted King Model from Woodmont Hengerveld Helen, a 31 lb. grand-daughter of Hengerveld De Kol.

Welleson Hengerveld Alcartra is another member of this herd and is a grand-daughter of King Segis Pontiac Alcartra. Sisters of this cow have made very large records at least two crossing the 30-lb. mark.

At the head of this herd is the two-year-old bull, Clear Spring Ruth Sadie Vale King, a splendid individual, nearly all white. His dam is a granddaughter of Pietertje Hengerveld Segis while his sire is by King Korndyke Sadie Vale from a 34 lb. daughter of Sir Korndyke Pontiac Artis. All the grades as well as the purebred females are bred to this bull.

Only the fact that Mr. Light is unable to personally operate this farm brings it and the herd into the market. He has chosen to dispose of it at public auction under the management of the veteran Holstein breeder, S. R. Miller. The sale will start at 12.30 p. m. Thursday, December 18. Anyone coming by train to Annville, a station on the Reading Railroad, will be carried to and from the farm. Annville is also reached by trolley running from Palmyra via Lebanon to Myerstown. You can obtain a catalog by writing S. R. Miller, at Chambersburg, Pa., or to the owner Wayne Light, Harbel Manor, Akron, Ohio., but the sale will be held on the farm which is near Annville, Lebanon County, Pennsylvania.

BATTLE CREEK SANITARIUM

For some time the Battle Creek Sanitarium has leased the Lakewood Dairy Farm from its owners, Wentworth and Stewart, but recently purchased this farm as well as another and now owns 783 acres. A new barn has recently been erected, 137 by 38 feet. This is to be the main dairy barn. The dry cows and the young stock will be kept on the Post Farm.

There will be a special milking room. From their stanchions in the main barn, fourteen cows at one time will be ushered into this compartment in which they will be milked. The walls of this room will be of white tile and the floors of black tile and the cows will only remain in it while they are being milked.

At Lakewood Farms it was found that it cost forty-one cents to produce a pound of butterfat and \$1.46 for one hundred pounds whole milk. For each dollar spent for feed produce worth \$2.06 was realized. On Sunday, November 9, the total production of the herd was 2,406.7 lb. milk.

BUYS A SON OF CREATOR

John Mathison of Plover, Wis., recently purchased from C. O. Christ of Fort Atkinson, a purebred Holstein bull sired by Creator. Mr. Mathison who is a member of the Plover Cow Testing Association has 39 animals on his farm of 132 acres. Several of his cows have made outstanding records in cow testing association work.

lb. for the day. She is credited with 35 lb. fat in 16 days. She is being fed eleven pounds daily of a grain mixture consisting of one part oilmeal, three of bran, four of barley and four of oats in addition to clover hay and corn silage. Last year as a five-year-old, Johanna produced 13,564 lb. milk and 467.6 lb. butterfat.

The registered Holstein herd owned by Charles Jones heads the list for the highest months work of the Dodgeville Testing Association by averaging 40.5 lb. butterfat. The two highest producing cows are members of this herd. Mr. Jones is vice-president of the association, W. R. Prideaux is president, and Edward Perkins secretary-treasurer.

High herd honors in the Coon Valley Cow Testing Association during October went to Elmer Johnson, whose Holsteins averaged 38 lb. butterfat. The high cow was owned by L. O. Brye produced 1,267 lb. milk, 63.3 lb. fat.

Cow Testing Association Reports

WISCONSIN TESTING

Ninety of the 141 Wisconsin associations reporting October production were headed by black and white cows, thirty-six of which were purebreds. The five highest producers were black and whites, the leader being a cow in the Tomahawk association and owned by Makida Farms. She was credited with 101.5 lb. fat. A grade Holstein owned by F. Chrysler of the Lodi association was second with 83.1 lb. fat. Harry Broughton, of Albany, owned the purebred that was third with 77.5 lb. fat. A registered Holstein in the Marshfield association and owned by Wm. Schimmelpfeg was fourth with 77.2 lb. fat, and another registered Holstein owned by Gillis and Draxler of Glenwood City was fifth with 76.8 lb. fat. The leading herd consisted of 8 purebred and grade Holsteins owned by Frank Werner of Richfield association. Their average was 47.8 lb. fat.

IN ALLEGHENY COUNTY, PA.

Daisy, a purebred Holstein owned by the Allegheny County Home, led the Montour Valley Cow Testing Association for the month of October by producing 1,556 lb. milk. She did not test as well as some of the others, however, and is in ninth place in fat production with 44.95 lb. H. E. Cleland owned the grade Holstein, Maryetta, that led for fat production with the total of 55.56 lb. Flo, owned by McPherson Bros. was second with 54.78 lb. and a ten-year-old registered Holstein owned by L. J. Stewart & Son was third with 54.52 lb. In fourth place was a three-year-old Holstein, Sessie, owned by the County Home with 49.10 lb.

It is rather difficult to say what breed carried off the honors for high herd

average. The leading herd consisted of three grade and two purebred Holsteins and nine purebred Ayrshires, owned by McPherson Brothers. The average fat was 29.23 lb. and average milk was 774 lb. The A. N. McClinton herd consisted of ten grades and two registered Holsteins and is second for both milk and fat, the figures being 667 lb. milk, 25.41 lb. fat respectively. The County herd consisted of sixty registered Holsteins and is third for milk average, the figures being 646 lb.

There were 408 cows in this association of which 147 are grades, 33 registered Ayrshires, 22 registered Jerseys, 192 registered Holsteins, 6 registered Guernseys and 8 registered Shorthorns. During October 336 cows were tested in the twenty-four herds. There were twenty cows that exceeded 40 lb. fat, three exceeded 50 lb. while nineteen produced over 1,200 lb. milk. The tester for this association is Mr. L. M. Stark.

CANADIAN TESTING

Queen Beulah with 34,577 lb. milk, 14,337.75 lb. butter heads the list of Canadian cows finishing their records in the two months from September 1 to October 31. She is owned by Dr. H. A. Clark, Brockville, Ont. Her butter record stands fifth highest for Canadian cows and her milk record is at the head of the Canadian list. Raymondale Abbeckerk with 25,597 lb. milk, 1,275 lb. butter is second in the report. She is owned by D. Raymond, Vaudreuil, Que.

Springbank Snow Countess, 23,405 lb. milk, 1,223.75 lb. butter heads the three-year-old class. She is owned by T. H. Dent & Son, Woodstock, Ont.

The two-year-old class is headed by a member of the government herd at Agassiz, B. C. This is Agassiz Favorit De Kol with 21,343 lb. milk, 1,001.25 lb. butter. This heifer is a junior two-year-old and her record places her fifth in her class for all Canada. A number of creditable records made on twice a day milking are reported in both the ten months and 365 day divisions.

MARYLAND TESTING

Although grade Holsteins were first and second for production in the Maryland Cow Testing Associations for October, there were six purebred Holsteins in the list of the ten highest producers, the other two being grade Jerseys.

Walter Magruder of the Upper Montgomery Association had the two leaders, Lula producing 82.6 lb. fat, 1,835 lb. milk and Molly 74.5 lb. fat, 1,733 lb. milk. Charles Sigler of Caroline County Association had a purebred Holstein, Rainbow, in third position with 72.5 lb. fat. J. D. King, of Germantown, enrolled in the Upper Montgomery Association owned a purebred Holstein in fifth place with 69.7 lb. fat, 2,248 lb. milk. C. R. Rathell, Wye Mills, had two purebred Holsteins enrolled in the Talbot County Association. The cow in seventh position had 66.5 lb. fat, 2,145 lb. milk to her credit and the tenth cow had 64.4 lb. fat, 2,148 lb. milk credited to her. John M. Dennis, of Riderwood, had a purebred Holstein with 66.4 lb. fat, 2,112 lb. milk and Mack Walker of Gaithersburg, had one with 65.5 lb. fat, 1,820 lb. milk.

Two junior cow testing associations have been organized in Frederick County. One is under the supervision of Mr. Harry McDonald, instructor at the County Agricultural High School at Frederick and the other under Mr. Henry R.

Shoemaker, instructor at the Middletown High School. Students of these two schools weigh the milk, take the samples, make the tests and compile the figures.

The first month's work shows that Morris Ramsburg of Lewistown had the highest producing cow and the highest averaging herd in the Frederick County Junior Cow Testing Association. Mr. Ramsburg's grade Holstein, Myrtle, produced 57.5 lb. fat, 1,249 lb. milk. A grade Holstein in the herd of John Dade was second with 56.2 lb. fat. Mr. Ramsburg's twelve Holsteins averaged 30.07 lb. fat and Mr. Dade's twenty-two Holsteins averaged 25.81 lb. fat.

TESTING IN WESTERN ASSOCIATIONS

Purebred Holsteins owned by the Western State Hospital at Steilacoom, Washington, make a remarkable showing in cow testing association work, the entire eighty head averaging 53.2 lb. fat, 1,356 lb. milk. Washington again scores with the second herd which consists of twenty-six registered Holsteins with an average of 47.6 lb. fat, 1,426 lb. milk. They are owned by A. G. Lawson & Sons of Blanchard, Washington. Gorzeman & Bevaant, of Huntington, Cal., have thirty-two Holsteins that averaged 47.2 lb. fat, 1,276 lb. milk; Lou Minick of El Monte, Cal., has forty-three that averaged 45.7 lb. fat, 1,220 lb. milk, and H. H. Smith of Chehalis, Washington, had sixteen that averaged 45.4 lb. fat, 1,184 lb. milk. Thus the five leading large herds consist of black and whites.

In the forty-seven cow testing associations, 1,555 herds containing 33,766 cows were tested. Of this number 5,003 animals exceeded 40 lb. fat. Nevada leads for high average, the 119 cows in her ten tested herds averaging 31.9 lb. fat. Washington is second with the average of 30.78 lb.; California is next with an average of 30.59 lb. fat.

In the forty-seven cow testing associations in eight states under the jurisdiction

of the Western Bureau of Dairying Office, 217 cows were sold to the butcher because the records indicate that they were unprofitable. While 217 cows culled from a total of 33,766 cows does not seem like very many, this culling is being done every month of the year and as feed prices advance more culling will follow. It is these low producing cows that contribute to any surplus that occurs in production. The worst feature of it is that such a surplus is usually produced at a loss by the dairymen. Under present conditions every dairymen should give his cow-testing association records special attention and eliminate every cow that fails to show a profit, provided they have been fed and handled in such a way that no doubt remains as to their ability to produce.

IN THE WISCONSIN ASSOCIATIONS

Sam Banker of Johnson Creek, has a herd of purebred and grade Holsteins that make a great showing in the Fort Atkinson Association. Three of his cows each earned over \$147 profit during the year and eight earned over \$130. Evergreen milked 313 days and is credited with 11,827 lb. milk, 419.3 lb. fat and a net profit over cost of feed of \$167.04.

Tester Clarence Bragg figures that raising purebred male calves for breeding purposes is a losing proposition. He says that the high cow in the association last year was a purebred Holstein, Margaret Canary Rag Apple, owned by John Pester. Margaret during the year produced 15,875 lb. of milk averaging 3.57% or 566.7 lb. butterfat. After deducting the cost of her feed the value of her product was \$198.92. Her yearling son was sold a few days ago for \$125 and Mr. Bragg figures that Mr. Pester lost money.

Inka Johanna Artis, a member of the Pester herd, on the tester's official visit averaged 36.3 lb. milk at night and followed with 34.7 lb. in the morning or 71

lb. for the day. She is credited with 35 lb. fat in 16 days. She is being fed eleven pounds daily of a grain mixture consisting of one part oilmeal, three of bran, four of barley and four of oats in addition to clover hay and corn silage. Last year as a five-year-old, Johanna produced 13,564 lb. milk and 467.6 lb. butterfat.

The registered Holstein herd owned by Charles Jones heads the list for the highest months work of the Dodgeville Testing Association by averaging 40.5 lb. butterfat. The two highest producing cows are members of this herd. Mr. Jones is vice-president of the association, W. R. Prideaux is president, and Edward Perkins secretary-treasurer.

High herd honors in the Coon Valley Cow Testing Association during October went to Elmer Johnson, whose Holsteins averaged 38 lb. butterfat. The high cow was owned by L. O. Brye produced 1,267 lb. milk, 63.3 lb. fat.

For the fourth time the high average in the Footville-Evansville Testing Association is held by the Holstein herd of Wayne Lewis with an average production of 1,253 lb. milk and 44.7 lb. fat. The association leader was a registered Holstein owned by Harry Broughton with 2,040 lb. milk and 77.5 lb. fat, her average test being 3.8%.

Pinery Pontiac Perfection, a registered Holstein owned by Morton Geraldson, led the Madison Association for October by producing 1,530 lb. milk, 61.2 lb. butterfat. The high herd consisted of registered and grade Holsteins owned by Charles Achenbach and their average was 897 lb. milk, 31.1 lb. butterfat.

Young Lady—How is it you don't come to Sunday school, Katie?

Katie—Oh, please, miss, I'm learning French and music now, and mother doesn't wish me to take up religion till later.

JAMES E. EASTMAN
R. D. No. 2 Rome, Pa.

HOLSTEIN LEAD IN IOWA

There are two cow-testing associations in Chickasaw County, Iowa. Berta, a six-year-old Holstein owned by Henry Maschmeyer of Fredericksburg, led association No. 2 by producing 610 lb. milk, 54.7 lb. fat. The high herd consisted of ten purebred Holsteins owned by John De Wilde and their average was 1,088.9 lb. milk and 37.84 lb. fat.

The No. 2 Association started work the 12th of last October. At the head of the herds in it there are thirteen purebred sires and four grades. During October eight cows produced over 50 lb. fat and the 162 cows on test averaged 600 lb. milk and 20.9 lb. fat.

WHY C. T. A. WORK PAYS

By making a change in the ration and the method of feeding it, Paul Lehman, with his nine cow dairy was able to increase his profits in one month enough to pay his dues in the Cumberland County Cow Testing Association for eight months.

A similar instance occurred in the herd of S. E. Raudabaugh. Improvement in the method of handling caused two cows to pay the Cow Testing Association dues for the entire dairy for the first quarter.

The registered Holstein herd owned by Ivo V. Otto of Carlisle, Pa., led the November list by averaging 1,375 lb. milk, 44.5 lb. fat. The Boiling Springs herd consisted of seventeen registered Holsteins.

The herd of eleven grade and purebred Holsteins, owned by Niesley Bros. was second with an average of 1,170 lb. milk, 41.4 lb. fat.

The highest producer was a purebred of the Niesley herd with 77.1 lb. fat, 1,812 lb. milk. Mabel, owned by Ivo V. Otto, was second with 75.1 lb. fat, 2,085 lb. milk while Otto cows were fourth, sixth and ninth. Paul C. Gible, of Mechanicsburg, had a registered Holstein in seventh place with 61.3 lb. fat, 1,752 lb. milk and W. W. Peffer had a purebred in tenth place with 56.2 lb. fat, 1,606 lb. milk.

In the Cumberland County Association, twenty-six herds containing 244 cows were tested by A. A. Raudabaugh of New Kingston. There were forty-eight cows that produced more than 40 lb. fat and sixteen over 50 lb. while forty-five cows exceeded 1,200 lb. milk.

BUYS 150 HOLSTEINS

Around 150 head of grade and purebred Holsteins have been purchased for Northern Indiana farms by W. G. Sage of Chicago, who with five farmers has been travelling around the dairy section of Wisconsin particularly Fond du Lac County. At Fond du Lac they took the entire fourteen purebred animals owned by Fred Sonn; twenty purebreds from John Roach; seventeen from Flint Jones; three bulls from the County farms and sixteen head from the Williams farm at Rogersville. The reported price was approximately \$10,000.

SLIFER SELLS MILK TO BUCKNELL

A. Conrad Slifer of Lewisburg, Pa., owns a fully accredited herd of Holstein-Friesians. The milk produced in the Slifer dairy is consumed in the dining rooms of Bucknell University and Holstein milk undoubtedly helps to win football games.

At the head of Mr. Slifer's herd is King Pontiac Ormsby Pietje son of King Pontiac Alcartra Pietje from a good record daughter of Ormsby Kornadyke Lad. This bull is siring stock of choice individuality and the young things of the Slifer herd carry off a goodly portion of the ribbons whenever they are exhibited at local fairs. The blood lines in this herd are of the best known to Holstein breeders, Pontiac, Hengerveld and Changeling blood being prominent while a number of them are closely related to Keystone Beauty Plum Johanna probably the most famous Holstein ever bred and developed in the state of Pennsylvania.

HOMER N. LATHROP
Sherburne New York

LOG CABIN HERD

Crawford County is noted for the health of its cattle and for the fact that every herd in the county is under state and federal supervision. One of the leading Holstein establishments in Crawford County is the Log Cabin Herd, owned by County Commissioner Ralph C. Jackson of Conneaut Lake, Pa. Mr. Jackson is a busy man so Superintendent W. E. Mapous has charge of the farm and looks after the cattle.

At the head of Log Cabin Herd is the splendidly bred bull King Hengerveld Lefa Joh. This handsome bull is a son of King Joh and Yankee Lefa, 32.09 lb. butter, 568.8 lb. milk in seven days. She was first tested as a junior three-year-old, and at that time made a year record of 675.11 lb. butter, 14,938.2 lb. milk. For three successive years after she was given seven days' tests and each time increased her production. Yankee Lefa is from a 22 lb. daughter of Yankee Boy De Kol and was sired by Dutchland Colantha Sir Inka. Volume 35 of the Blue Book credits this bull with 97 A. R. O. daughters and as there are a large number of daughters of this bull that have never yet been tested, it is safe to conclude that he will become a century sire. Daughters of Dutchland Colantha Sir Inka have made very large records both when tested for a year and short time test. He was bred from producing strains being a son of Colantha Johanna Lad and Lady Princess Beets, a 30 lb. daughter of Inka Princess' Canada Prince.

King Joh has a number of good record daughters including one that made over 40 lb. butter in seven days. He was by King Segis Pontiac Alcartra and from Uneeda Kornadyke Abigail, a 33 lb. daughter of Johanna McKinley Segis.

Thus King Hengerveld Lefa Joh combines very closely the blood of Dutchland Colantha Sir Inka, Colantha Johanna Lad, King Segis Pontiac Alcartra and Johanna McKinley Segis, four sires noted for the great work of their daughters. It is no wonder that the offspring of this bull show remarkable promise.

BUTTERMILK AND SILAGE

Professor Oscar Erf, head of the dairy department of the Ohio State University is recommending that about three gallons of buttermilk be added to each ton of corn put into silos. The idea is that the buttermilk will act as a starter and stimulate fermentation of the right kind. Two kinds of acids are likely to form in silage—acetic, such as is found in vinegar, and lactic, which causes milk to sour. It is believed that the lactic acid will help milk production in dairy cattle fed such silage. Professor Erf also recommends that a few ounces of lime be sprinkled over silage as it unites with the lactic acid in the treated silage and forms calcium lactate, which is easily assimilated by the cows.

A Classified Advertisement in THE BREEDER AND DAIRYMAN is a paying investment.

Silverwood Stock Farm

is the home of a producing herd. Our cows have made splendid records in C. T. A. work, up to 16,000 lb. milk in a year.

They are bred to the great sire, **KING PONTIAC ALCARTRA PIETJE** or to **DUTCHLAND KONIGEN CREAMELLE BOY** a son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 881.21 lb. butter, 21,701.5 lb. milk in a year—her dam 29,591.4 lb. milk.

Herd under State and Federal Supervision.

RECENT SALES FROM MAPLE GROVE

Page 751 of the November 22 issue carried a story of recent sales from Maple Grove Stock Farm. We are pleased to learn from a letter received from Mr. Jones that the demand for stock from this good accredited herd continues.

November 8, Leonard L. Nelson of Conneautville, Pa. purchased a young bull. His dam, Maple Grove Pontiac Betti, is a good daughter of King Pontiac Jupiter, that well bred son of King of the Pontiacs. The sire of the calf was Maple Grove Ybma Glista, one of the bulls in service in the Maple Grove herd. He is a son of Model Daniel Glista, from Maple Grove Spofford Princess, 641.3 lb. milk, 27 lb. butter in seven days.

Four days later, on November 12, George W. Nelson also of Conneautville bought a young bull. His sire was Maple Grove Fairview King Jupiter, a son of King Pontiac Jupiter, while his dam has a seven day official record of 461.5 lb. milk, 20.59 lb. butter.

November 15, J. B. Still of Spartansburg, Pa., took another nice young bull, a son of Maple Grove Ybma Glista. The dam of this calf was Maple Grove Woodcrest Lady Glista, another good member of the herd sired by Model Daniel Glista, whose three nearest dams are all 30 lb. cows.

Maple Grove Stock Farm is near Centerville, Crawford County, Pa. The Maple Grove herd were pioneers in tuberculosis eradication work and this herd is accredited. Perhaps it is because of this and because the cattle are given care and handling that can be duplicated on any good dairy farm, that so many animals are sold to residents of Crawford County. The Jones are working dairymen who believe that the Holstein cow is the best dairy machine invented or developed. They believe in purebred stock and besides purebred Holsteins, they have Percheron horses, Berkshire hogs and Oxford sheep.

ALONG THE SUSQUEHANNA TRAIL

Travelers along the Susquehanna Trail pass the well known establishment owned by Murray A. Miller which is located between Milton and Lewisburg, Pa. This establishment is known as Sunny Lawn Stock Farm and the Sunny Lawn Holstein herd has been established longer than any other herd in Northumberland County. It is accredited and holds an enviable record for health as well as production. The Miller herd is enrolled in the local cow testing association and the splendid showing made by this working dairy indicates that Mr. Miller is a good care taker and has good animals in his charge.

On the main silo at Sunny Lawn Stock Farm there is a reproduction of the True Type animals sponsored by the National Association. The silo faces the trail and so calls the attention of passersby to the fact that Sunny Lawn Stock Farm is the home of registered Holsteins of high quality.

THE MACKS AND THEIR HERDSIRE

Lafayette and Floyd Mack are brothers residing on adjoining farms near Montrose, Penna. Both are good dairymen and think the Holstein cow is the most profitable dairy cow yet developed. Although they own separate herds they are partners in herdsires. At the recent Susquehanna Fair the Macks carried off the male and female grand championships and owned the grand champion herd. When you consider that Susquehanna County has more Holsteins and more Holstein herds than any other county in Pennsylvania and that the animals of this county have for many years been noted for production and quality you can realize something of what this means, for the Susquehanna breeders patronize their county fair and animals to win must be of good quality.

At the head of the Mack herd stands Grand Champion Segis 2d, a real show bull, although he has not been exhibited for a number of years. His father and mother were both show animals while his grand dam Aaggie Pauline Sarcastic, was long known as the highest record show cow of the breed. The dam of Grand Champion Segis 2d made 37.15 lb. butter in seven days as a four-year-old heifer and the six nearest dams of this bull averaged 32.07 lb. butter in seven-day official test.

FOR SALE—Yearling Holstein bull; cow to freshen first week in January, \$135, immediate sale. Accredited. MRS. I. T. SHADE, Harris Station, Ohio.

GLISTA BLOOD IN WESTVIEW HERD

Westview Herd is owned by Merle W. Ongley of Centerville, Crawford County Penna. This herd is under state and federal supervision and passed its first tuberculin test clean. A number of the animals are of Glista blood and are descendants of some of the best cows ever in the great Cornell University herd. In this herd there are a number of grand-daughters of FINDERNE PRIDE JOHANNA KORNDYKE, a bull whose daughters have made tremendous milk and butter records. He was a son of FINDERNE PRIDE JOHANNA RUE, formerly world's champion cow for yearly production and one of the greatest animals ever officially tested.

PROVEN VALUABLE

Every Holstein breeder knows that the time will come when the younger members of his herd consists of daughters of his herdsire and so, to avoid inbreeding, it becomes necessary to dispose of the bull or else sell off his daughters. The Miller Brothers of Clarks Summit, Pa., have an especially wellbred bull in King Sadie Vale Hengerveld Ormsby. This handsome fellow will not be five years old until the second of next March. He has been used in four herds and has proven so good a sire that the younger members of the herds are his daughters. A number of them are in milk and Mr. Miller writes that all gave from 40 to 50 lb. per day in their first lactation period.

King Sadie Vale Hengerveld Ormsby is a son of King Sadie Vale Hengerveld. The recently issued volume 35 of the Blue Book shows that he has thirty daughters with creditable records some tested for a year, one of which produced over 1,000 lb. butter. He was by King Korndyke Sadie Vale and from S. V. H. Belle De Kol, 37.38 lb. butter in seven days as a senior three-year-old, the highest record daughter of Sir Veeman Hengerveld.

S. V. H. Effic, the dam of King Sadie Vale Hengerveld Ormsby has a number of splendid records. As a junior two-year-old she made over 24 lb. butter in a week; as a junior three-year-old, 26.17 lb.; as a junior four-year-old, 28.33 lb. which she practically equalled the next year with 28.27 lb. As a five-year-old she was tested for the year and is credited with 1,085.60 lb. butter, 24,050.5 lb. milk. She is a daughter of Sir Veeman Hengerveld from Netherland Effic Ormsby, a 25 lb. three-year-old with a year record of 789 lb. butter made as a mature cow. She in turn was from a 20 lb. dam and was by Sadie Vale Sir Ormsby, a son of Sadie Vale Concordia, the first 30 lb. cow.

The ten nearest dams of King Sadie Vale Hengerveld Ormsby have seven-day records averaging 29.608 lb. butter. He traces twice to Sir Veeman Hengerveld, three times to the first 30 lb. cow, Sadie Vale Concordia, and once to the first 37 lb. cow, Pontiac Clothilde De Kol 2d. He has been used in four accredited herds.

All students of stock breeding know that it is better to use a sire of proven quality than an untried animal. King Sadie Vale Hengerveld Ormsby is a bull whose offspring can be seen, their quality ascertained. He is remarkably well bred and the quality of his offspring indicate that he is a valuable sire. His quality should place him at the head of a herd where his merit could be again demonstrated.

ABOUT VALLEY VIEW HERD

For more than sixty years, O. P. Walker of Thompson, Pa., has lived on the farm where he now resides. He has successfully solved the problems most farmer fathers experience—the one of keeping the boys on the farm—for three of his sons are associated with him in the management of his establishment and

business is done under the name of O. P. Walker & Sons.

It was one of the sons, Percy, who first interested his father in purebred Holsteins. The question of starting with improved stock was discussed seriously for a long time and then about nine years ago a couple of cows were purchased at a local sale. A few others were added and now the herd consists of at least forty animals practically all raised on the premises. The first cow that they ever owned is still a member of the herd although she is approaching fifteen years of age.

A number of the younger members of the herd are daughters of Dutchland Konigen Hengerveld Lad, a son of King Segis Pontiac Konigen and Dutchland Colantha Lady Grace, 27.72 lb. butter in a week as a mature cow. As a senior four-year-old she was tested for a year in which she made a record of 17,539.9 lb. milk, 781.11 lb. butter. She was a daughter of Colantha Johanna Lad, her dam was a daughter of Hengerveld De Kol and her dam's dam was by De Kol 2d's Butter Boy 3d, thus combining as closely as possible the blood of three famous century sires.

The six nearest dams of Dutchland Konigen Hengerveld Lad have seven-day records that average 30.605 lb. butter, 556.6 lb. milk. His daughters are nice individuals and are producers.

With their neighbors, A. L. Howell & Son and E. R. Gelatt & Son, the Walkers own an interest in King Ormsby Endercamp, a son of King of the Ormsbys from Vandercamp Segis Aaggie Jewel, 29.37 lb. butter in a week, 904.32 lb. butter in a year. This cow was a daughter of Judge Segis and, like the offspring of that noted sire, is a choice individual.

The Valley View Herd is under state and federal supervision and passed clean at the last test.

ANDERSON'S HERDSIRES

On the hills of Chenango County not far from Norwich, N. Y. is the farm of Den E. Anderson. Mr. Anderson owns a big producing herd which is under state and federal supervision and which passed its last test clean.

At the head of the Anderson herd is King Reliance Lockhart Veeman. He is a grandson of King Segis Pontiac Alcartra and King Pontiac Reliance and a great-grandson of King of the Pontiacs and Sir Veeman Hengerveld. His dam was exhibited as a three-year-old at New York state fairs and won first prize in her class. She was tested in the dairyman's division for 365 days as a senior four-year-old and she produced 15,837.7 lb. milk, 882.16 lb. butter. This butter record was world's record in that class and the milk record the second highest at time of making.

The junior sire is a son of King Reliance Lockhart Veeman and Jewel Clothilde Alexina De Kol, a grand old cow with a record of 29.13 lb. butter, 598 lb. milk in a week. Tested for 30 days she averaged 81.6 lb. milk per day and has three good record daughters.

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building, Scranton, Pa.

PEDIGREES BACK ROBINSON STOCK

The animals owned by A. E. Robinson of Montrose, Penna., possess pedigrees which carry the names of many big producers. The senior sire at this establishment is the famous King Pontiac Alcartra Pietje undoubtedly the most famous bull that ever made his home in the northern portion of the Keystone State. He has one daughter with a 30 lb. seven-day record, two daughters that have each averaged 100 lb. milk a day during a week of official test and, despite the fact that practically all of his daughters have been in small herds owned by working dairymen, he has a long list of good producing progeny. Sons and daughters of this bull have been shown at many fairs and have won a large number of prizes. He was a son of Fairmont Zerma Segis Pietje, formerly world's champion junior four-year-old, while his sire was from the noted K. P. Alcartra and was by King Segis Pontiac son of the first cow to make 37 lb. butter in a week or over 1,000 lb. butterfat in a year. K. P. Alcartra made a world's record for yearly butter production as a junior two-year-old and then, as a senior three-year-old, made world's butter records for both seven and thirty days.

Idyllwilde Korndyke Dionagen, the junior sire of the Robinson herd is also a very handsome bull. His dam as a junior four-year-old made 31.36 lb. butter in seven days and was from a cow with a 31.3 lb. official butter record that in turn was from a 30 lb. cow. Thus the three direct descendant dams of Idyllwilde Korndyke Dionagen have seven-day 30 lb. butter records. A bull of superb individuality, he is transmitting these characteristics to his offspring. Mr. Robinson owns one of the handsomest herds in northern Pennsylvania and is a skillful and painstaking dairyman and breeder.

HONEY FOR RADIATORS

Last year the Pennsylvania Department of Agriculture recommended that honey be added to water in auto radiators to prevent freezing. Professor J. R. Hepler, apiarist at the University of New Hampshire experimented along this line and recommends the following which has been found to withstand zero weather.

Take equal parts of honey and water, and add a little extra of the latter to make up for evaporation. Heat the water to the boiling point, stir in the honey and bring the solution to a boil. Then stir in one quart of either wood or denatured alcohol for each three gallons of solution and allow to boil three to five minutes. Stir occasionally and skim off the scum that rises. Fill the radiator to a point two inches below the overflow pipe. It is important that all gaskets be in good condition and all joints tight. If evaporation reduces the level of the liquid, add sufficient water or alcohol to bring it back. The honey solution is said to give the engine better radiation, and to retain its heat longer.

Advanced Registry Cows for Sale

—ALSO—

BULL CALF—Calved Nov. 7. Price \$50.00. A. R. O. dam—her dam a granddaughter of Colantha Johanna Lad with 3 A. R. O. daughters.

Head Your Herd With Hillside Volunteer

Born March 21, 1924

Sire: **King Pontiac Maple Knoll Ormsby** that great son of King of the Pontiacs from a 33-lb. sister to Ormsby Korndyke Lad.

Dam: **Hillside Rosemary**, 460.8 lb. milk, 30.74 lb. butter.

This young bull is full brother to Hillside Pontiac Rose, 474.5 lb. milk, 25.24 lb. butter in 7 days; 2,011.7 lb. milk, 102.80 lb. butter in 30 days at 25 months old, a showing not equalled in this country last year by any heifer of her age.

Hillside Volunteer is extra-well grown, 75% white and only \$400.

Hillside and Springbrook Farms
TRUCKSVILLE, PA.

Herd recently passed another Clean Test.

HARTSOOK BUILDING ANOTHER HERD

Fred Hartsook of Lankershim, Cal., who had the misfortune to lose his large valuable herd last spring from foot and mouth trouble, is rapidly building another herd. On a ranch a long distance from Lankershim he had a herd of young heifers which now numbers 138, practically all of his own breeding. Many of these are soon due to freshen. Then he has a small herd of purebred Holsteins on a part of the Lankershim ranch. Another part of this ranch has been leased to a firm of commercial dairymen who are now milking grade Holsteins.

Mr. Hartsook has intimated that he will depend upon the natural increase of his herd to build it up instead of buying stock from outside.

WILLOW BROOK STOCK FARM

Willow Brook Farm is the name of a Holstein establishment near Thompson, Penna., in the northeastern portion of Susquehanna County. The Willow Brook herd is noted for the size, type and producing capacity of the animals therein. At the head of this herd stands Creamelle Korndyke Korngen, a very handsome animal, a son of Dutchland Korndyke Creamelle Boy and Inez Walker Korndyke. This cow is one of the best animals the Bowells ever owned and was a daughter of their first purebred, Inez Monk 3d. There are a number of daughters and granddaughters of Inez Monk 3d in the herd and they are all good ones.

The junior herdsire at this establishment is King Ormsby Endercamp. He is a son of King of the Ormsbys and his dam is Vendercamp Segis Aaggie Jewel, a very handsome cow with a seven-day record of 29.37 lb. butter. She also has a yearly record of 21,110.5 lb. milk, 904.32 lb. butter. She was a daughter of Judge Segis a bull with a long line of good record daughters. Some of the best show cows in the state of Washington were sired by Judge Segis.

King Ormsby Endercamp heads three herds as he is jointly owned by the Bowells, O. P. Walker and Sons and E. R. Gelatt and Son. There is a regular Holstein Community around Thompson and practically all of the herds are on the accredited list.

PETRAK RETAILS HOLSTEIN MILK

Holstein milk produced by the dairy of Ludvik Petrak of Cedar Rapids, Iowa, is sold as grade A milk in that city. About 230 quarts are used daily.

Mr. Petrak has just been remodeling his barn and will have room for 25 cows besides pens for bulls and calves. His establishment is known as Evergreenside Farm.

At the head of the Petrak herd is King Korndyke Pontiac Lass. He is assisted by King Pietertje Ormsby Piebe 48th, a son of Hargrove and Arnold's great show sire.

Built to Farmer
Demands

Hooks behind the wagon, but two men, set the fodder has 6 H. P. Engine which for other farm power jobs, is all steel.

Cattle like stalk fodder better than shredded fodder; try them and be convinced. OHIO SHOCK HUSKERS husk clean, no ribbons, are to the Dairy and corn farmer what the binder is to the wheat farmer. Write today for our circular D.

The Ohio Husker Co.,

Doylestown, Ohio

TO BE SOLD AT PUBLIC SALE

VALUABLE REAL ESTATE AND BEAUTIFUL COUNTRY HOME
THURSDAY, DECEMBER 18, 1924

Farm contains a little over 102 acres, located in North Annville Township; 3 miles northwest from Annville (home of Lebanon Valley College); 4 miles northeast from Palmyra; 8 miles from Lebanon; 18 miles from Harrisburg. Farm is bounded on the east by the public road leading from the William Penn Highway to Bellegrove.

SOUTHEAST SIDE OF FARM HOUSE

SOUTH SIDE OF BARN showing Stone Wall of Exercise Yard

The buildings consist of a 2½ story 8-room stone house; a 1½ story stone summer house; a large, stone bank house; and hog house. All buildings are painted and in good repair. New 10x36 Natco Silo with chute and feed room all complete, never erected.

Farm is divided into six fields, all in a high state of cultivation. Fertile gravelly loam and limestone soil. Lime kiln ready for use on the farm. Fruit trees consist of apple, peach, cherry, pear, plum, quince, etc. A large number of black walnut trees ready to cut. Never failing spring of clear, fresh water near the house.

This farm is suitable for dairy, poultry or vegetables. All have a near-by ready market. Land is slightly rolling, just enough to give a good view over the surrounding valley.

Trains and electric cars passing 1½ miles from the farm can be seen from the home yard. This is an ideal place to erect a large mansion or home for some one wishing to live near a good college town and within a short ride to the state capital. Two large mansions are within sight of farm. A home and farm of this kind is seldom offered at public sale, but here is an exceptionally good opportunity to buy a home that will pay large returns on the investment.

At the same time and place there will be sold at public auction a complete set of farm implements, good as new; also livestock consisting of horses, mules, Duroc hogs, chickens, turkeys and 22 head of Holstein cattle. Ten are registered and include Welleson Hengerveld Alcartra (a granddaughter of the \$50,000 bull, King Segis Pontiac Alcartra), Queen Silva Brookside, Model Burke of Baxter Run, and the two-year-old bull, Clear Spring Ruth Sadie

Vale King. All grades are bred to this bull.

Conveyances will meet trains at Annville station, Reading Railroad.

Auctioneers: Bomberger and Gilbert. Clerks: Harry G. Light and Morris M. Ellenberger. Sale and pedigree manager: S. R. Miller.

Write for catalog. Sale will start at 12:30 p.m., when conditions will be announced by the owner.

Harbel Manor, Akron, Ohio

BUCKS COUNTY BREEDERS BUYING

Dairymen of Bucks County, Pa., are showing confidence in the Holstein business by the purchase of a number of high priced cattle. At the recent dispersal sale held by John P. Crozier at Upland, Pa., two very well bred heifers were purchased by Charles Parsons, of Fallsington. These heifers were both by Colantha Finnerne Korndyke, son of the noted Kolrairie Finnerne Bess with a year record of 35,085.4 lb. milk, 1,396.45 lb. butter. The dam of one of these heifers is a daughter of the famous Carnation King Sylvia.

At the same sale Wilmer Twinning of Wycombe, purchased two heifers of fashionable breeding.

Cook & Bennetch of Langhorne secured two nicely bred animals. One of these Carnation Matador Mercedes, is a daughter of Matador Segis Walker of

Carnation fame. The other heifer of the Cook & Bennetch purchase is a granddaughter of Tilly Alcartra, formerly world's champion milk producer and one of the greatest cows of the Holstein breed or, for that matter, of any breed. At the recent dispersal of the Rancocas herd, held at Trenton, Cook & Bennetch purchased Tressie Car Born, a cow with a record of producing 111 lb. milk a day and 35 lb. butter in a week. They also secured this cow's two-year-old daughter together with a three-year-old granddaughter of King of the Pontiacs. Mr. Parsons also purchased stock at this sale.

CHRISTMAS TREE NEWS

Except for trees coming from certain infested areas, the quarantine prohibiting the shipment of Christmas trees and Christmas greens into Pennsylvania from New England states effective during the

Christmas season last year has been modified greatly this year. Similar action will probably be taken by other states.

This quarantine was established in October, 1923, in order to prevent the spreading of the gypsy and brown tail moth. This action was taken because of the increased areas believed to be infested by the gypsy moth and because there was considerable uncertainty as to the exact extent and degree of infestation. Information derived from later studies indicates it is safe to modify the quarantine measure.

Not having gasoline unless it is imported, South Africans distilled or manufactured from molasses a motor fuel known as Natalite and now produce this on a large scale, evidently successfully, for it is announced that a factory will soon be erected at Queensland, Australia, in which Natalite will be produced.

MAPLE GROVE YBMA GLISTA

His dam, MAPLE GROVE SPOFFORD PRINCESS, 641 lb. milk, 27 lb. butter in a week, was bred, raised and tested here.

His sire, MODEL DANIEL GLISTA, was by a great show bull and from a 31-lb. Glista cow from a 34-lb. Glista dam.

Yet you can buy his sons from us at prices ranging from \$50 upwards; his daughters from \$65 upwards.

The dams are big producing cows and the entire herd is ACCREDITED.

The Harbeck Herd

A New York State Aggregation of Accredited Producers

FEW herds can boast such a healthy history as can the purebred herd owned by Jay B. Harbeck & Sons, of Black Creek, New York. The Harbecks have always been in the dairy business and have been breeding purebred Holsteins for upwards of twenty years. For nearly a dozen years they have owned purebred cattle only. Despite the fact that the cattle have been tuberculin tested on this farm for twenty years, a reactor has never been found. Consequently the health of the herd is vouched for by both state and federal veterinary authorities and it is on the accredited list.

Few herds can show a better production record than can this aggregation of registered Holstein-Friesians.

READY FOR MILKING TIME

The books for the year 1923 show that there were twenty-four milkers of which thirteen were two and three-year-old heifers, yet the average for the entire two dozen was 11,402 lb. milk.

Mr. Jay Harbeck, the senior member of the firm was born in a house on part of the land he now owns. The family have lived in their present residence for the past fourteen years. The Black Creek district is one of the best dairy districts of Allegany County which is noted for being the home of big producing cows, so that the Harbecks have always been dairymen.

A lot of things happen in twenty years even in a Holstein herd. The lives of animals are comparatively short and so a history covering two decades would be quite voluminous. Therefore in our story we will only touch on a few of the most prominent animals that have been owned at this establishment.

One of the first sires was Beryl Wayne Sir Clothilde No. 51360. His dam was White Bess Clothilde 2d, an animal that won a number of prizes in the show ring. His sire, Beryl Wayne's Son has a number of tested

daughters, some in the thirty-pound class, and, as his name indicates, was from Beryl Wayne, 27.87 lb. butter, 608.1 lb. milk in seven days, the highest record in the aged cow class at time of making.

Billy Clothilde Mercedes 2d headed this herd for a time. He was of Clothilde and Mercedes breeding on both sides of his pedigree and so traces to two of the greatest foundation cows of the breed. A number of daughters of this bull were officially tested in the Harbeck herd and one of them, Mary Wayne Clothilde, made a seven-day record of 694.9 lb. milk, 27.64 lb. butter. We may mention in passing that her dam was a daughter of Beryl Wayne Sir Clothilde.

We should judge from Mr. Harbeck's conversation that the herdsire he thought the most of was Mutual Friend Sarcastic De Kol 3d, a bull raised on the farm. His sire was by Elnora Sarcastic Lad and from Clintonia Hartog De Kol 2d, a cow with a seven-day record of 27.02 lb. butter and a year record of 17,102 lb. milk, 775.67 lb. butter. The Mutual bull sired the older members of the present Harbeck herd and the size and

STARTING FOR THE PASTURE

type of these animals and the magnificent udders they carry indicate that he was a high class sire. One of his daughters, Daisy May De Kol Mechthilde, produced 725.1 lb. milk in a week. One year she made 15,638 lb. milk in nine months and another 22,027 lb. milk in twelve months. Colantha De Kol Sylvia Champion, a grandson of this cow is at present being used on some of the younger members of the herd.

Royal Johanna Korndyke No. 227642, was the sire of most of the young cows and heifers at present in the herd. He is a bull of splendid individuality. His sire, Colantha Johanna Lad 8th was raised in this neighborhood and was in service in several herds. It was on account of the splendid individuality of his offspring and the producing capacity shown by his daughters that

he was purchased by the Chapins who placed him at the head of the Bonalevo herd. He left behind him in Allegany County, a number of splendid sons that are in their turn siring handsome offspring noted for individuality and powers of production. Herds in the southern counties of New York State and scattered throughout Pennsylvania are headed by sons of Colantha Johanna Lad 8th and we have yet to see a poor one.

Royal Johanna Korndyke is both a son and grandson of Colantha Johanna Lad 8th. His dam, Butter Girl Johanna Korndyke as a two-year-old heifer made a seven-day record of 24.33 lb. butter, 602.8 lb. milk. One of her daughters, Butter Girl Johanna Korndyke 2d as a three-year-old heifer made a year record of

A MEMBER OF THE HARBECK DAIRY

25,066.3 lb. milk, 942.88 lb. butter. Butter Girl Johanna Korndyke was from May Butter Girl De Kol, 30.92 lb. butter, 690.8 lb. milk in a week, 25,594.2 lb. milk, 1,067.53 lb. butter in 365 days. This cow was the mother and grandmother of some splendid record animals. She has two other daughters tested as junior four-year-olds, one of which produced 32.55 lb. butter in seven days and the other 659.8 lb. milk, 26.63 lb. butter in a week and 22,823 lb. milk, 955.4 lb. butter in a year. Butter Girl Johanna, as a senior two-year-old, is reported to have produced 699 lb. milk in seven days which at time of making was the world's record for a heifer of that age.

A number of the daughters of Royal Johanna Korndyke have been officially tested. As a senior three-year-old, Aaggie Wayne Johanna produced 605.4 lb. milk, 24.08 lb. butter in a week. Royal Mary Korndyke as a junior three-year-old is credited with a seven-day record of 464.9 lb. milk, 25.77 lb. butter with over a ton of milk and 101 lb. butter in thirty days. Rose Clothilde Mutual Korndyke as a junior three-year-old

has 22.54 lb. butter, 443 lb. milk to her credit and a ten months' record of 14,969.6 lb. milk, 653.60 lb. butter made as a junior two-year-old, she being only twenty-four months old when she started this record, during which she carried calf 201 days. Johanna Mutual Butter Girl was also tested for ten months and has 15,725.3 lb. milk, 670.67 lb. butter credited to her. Colantha Royal Johanna also a junior two-year-old, has a ten months record of 13,930.1 lb. milk, 588.32 lb. butter. When you consider that the Harbecks have a farm of 420 acres, that they are practical everyday farmers who do most of their own work, you can imagine what these records mean.

The herd is enrolled in the local New York State Dairy Improvement Association and the tester reports that several daughters of Royal Johanna Korndyke produced, as two-year-old heifers, over 15,000 lb. milk in the association year.

Owing to the fact that so many of the younger members of the herd are daughters of Royal Johanna Korndyke, Mr. Harbeck has leased this bull to Roy W. Chamberlain of Caneadea, N. Y. who has a good herd about ten miles distant and the bull is now in service in the RO-AN herd which is also accredited and one of the great natural producing ability.

King Colantha Aaggie Quality is at present in service in this herd. His sire, Colantha Sir Aaggie, has a long list of high record daughters and was by Colantha Johanna Lad from the former world's champion and first 34-lb. cow, Aaggie Cornucopia Pauline. The dam of King was Colantha Quality Lassie May. As a junior three-year-old she made a seven-day record of 601.2 lb. milk, 25.99 lb. butter and has a junior three-year-old record of 18,658.7 lb. milk, 758.40 lb. butter in a year. She is from Bonalevo Quality May, 24,182.1 lb. milk, 1,119.32 lb. butter in a year, a daughter of King Quality from one of the many good daughters of Admiral Walker Pietertje.

Colantha De Kol Sylvia Champion, the younger bull now in service is from Daisy May Colantha De Kol, a daughter of Royal Johanna Korndyke and Daisy May De Kol Mechthilde. He was sired by Sir Champion Sylvia, a son of Champion Echo Sylvia Pontiac and Belle Model Champion Sylvia 30.29 lb. butter in a week, a daughter of the twice 37 lb. cow, Belle Model Johanna 2d.

A glance over the herd register indicates more of the quality of this herd. We have already mentioned the records made by Daisy May De Kol Mechthilde. Her maternal sister, Lady Cleta Clothilde produced 13,772 lb. milk in a year in cow testing association work and has an official record made as a senior two-year-old of 485.6 lb. milk, 18.47 lb. butter. Her daughter, Lady

ONE OF THE YOUNGER HARBECK MILKERS
Notice the toplines and udder

ROYAL JOHANNA KORNDYKE
Sire of the younger milkers at Harbeck

AN OLDER MEMBER OF THE HARBECK HERD
Unexcelled for udder and teat placing

Cleta May Korndyke, sired by Royal Johanna Korndyke as a two-year-old heifer produced 9,092 lb. milk in her first lactation period. Mary Wayne Clothilde, the 27 lb. daughter of Billy Clothilde Mercedes 2d has an association record of 15,076 lb. milk. Mutual Friend Aaggie Johanna, a daughter of Royal Johanna Korndyke made 16,439 lb. butter in a year as a junior four-year-old while her full sister, Beauty De Vries Johanna freshened at twenty-three months and is credited with 12,433 lb. milk. Jennie De Vries Johanna, another daughter of Royal Johanna Korndyke as a two-year-old heifer produced 7,944 lb. milk.

The Harbecks are staunch advocates of cow testing association work. Mrs. Harbeck keeps the herd books

and is well posted on blood lines and records. There are three sons but only one, Maurice, now lives at home. He has two children, one of which is a nine months old baby girl. His boy is a chip off the old block and is never so happy as when around the cows. Maurice is agent for the G. L. F. and at the time the representatives of the BREEDER AND DAIRYMAN were at this farm, he was unloading a carload of feed purchased coöperatively by the Harbecks and some of their neighbors. The Harbecks are believers in coöperation for besides purchasing part of, if not all, their feed in this manner, they work with their neighbors in such jobs as threshing and filling silos. Mr. Jay Harbeck was filling a neighbor's silo by means of a tractor at the time of our visit.

The Agricultural Year

AMERICAN agriculture is in the best position it has held since 1920 says this year's report of the Secretary of Agriculture. The report was compiled under the direction of the late Secretary Wallace, has been carefully revised by representatives of the agricultural department who had been in close touch with him and is transmitted to the president by the new secretary Howard M. Gore.

The report says that the prices of many crops are at the highest point in four years, while cost of production has declined somewhat from the high point of the depression period. The gross income of the current crop year is estimated as approximately twelve billion dollars or about one-half billion more than the previous crop year.

A favorable readjustment has taken place in price ratios between agriculture and industry, due partly to an advance in prices of the things farmers have to sell and partly to the decline in the prices of the things they have to buy. While the purchasing power of farm products is 18 per cent below the pre-war level it is 16 per cent above the index for May, 1921, when the depression was in its worst period. Farmers have made crop readjustments which helped to bring the various lines of production into better balance.

The past year's harvest was the finest in five years. Though not the greatest in volume of products, it was the best balanced and represented the best income.

It would be a mistake to conclude that the American farmer is done with the troubles of the depression period. If the readjustment is left to blind economic forces it will be many years before that can be said. Although farm commodity price levels are headed toward a better position, they have still a large gain to make before agricultural products will be on a parity with other products. This means that agriculture is still laboring under a heavy disadvantage.

Cash returns from dairy and poultry products do not promise to exceed last year's income from sales of \$1,980,000,000. Marketing of poultry products during the first nine months of 1924 was less than in the same period of 1923, and it is possible the peak of poultry production has been passed. In dairying, production continues to increase, but heavier marketing may not result in a greater income. There is no certain prospect

of increased income from cattle and sheep production. Probably the returns will be about the same as those of last year.

The recent agricultural depression struck American agriculture in a transition period. Within a decade it had increased its production 15 per cent, not by increasing the number of farm workers, but by increased efficiency. Rejuvenation of equipment was in full swing. Road horses were being exchanged for automobiles. Some regions were introducing tractor power. A great program of pure breeding and disease control was under way in the livestock industry. Farmers everywhere were pushing ahead to a better living standard.

All this development was checked by the postwar crisis. The increased productive efficiency which normally would have meant prosperity brought bitter fruit instead. Buying of new materials and replenishment of equipment stopped. Farmers ceased to buy tractors and depended on horsepower. Great herds of livestock were dispersed. The South was handicapped in its fight against the boll weevil. Standards of living were reduced. Farmers drew on their cash reserves and on the equity in their land, and debt accumulated. In short, the condition by the end of a decade of extraordinary progress in agricultural efficiency was the reverse of what might have been logically expected.

The depression which began in 1920 was not merely a stretch of lean years, such as farmers have had to go through before. It was a financial catastrophe, the full effect of which can not yet be measured. Though all parts of the country have not felt this depression equally, no region has escaped.

Much of our agricultural distress has come from misfit land policies and systems of farming. This is particularly true of our great semiarid region where attempts to cultivate small farms on land adapted by climatic conditions to grazing have helped to destroy range-stock industry and brought little but disaster to the settlers. In this region agriculture should be based primarily on grazing. Our land laws should be revised to promote that end.

Much of our agricultural expansion in the future must take place on lands requiring reclamation either by drainage or irrigation. Department studies have shown that land reclamation projects heretofore under-

taken have made much land available for cultivation before there was any need for it. Until there is a greater need for cultivated crops much of the land that it is proposed to reclaim should be left to produce pasture, timber, and game. Additional land reclamation at the present time will merely aggravate the adverse conditions under which our farmers are working. So far as reclamation is subsidized it is subsidized in part at the farmer's own expense.

Income from agriculture has not in any year since the price decline of 1920 sufficed to allow both a commercial return on capital and adequate rewards for the farmer's labor, risk, and management. Yet it has shown a gradual improvement in the last three years. In 1920, after deducting operating costs and a wage allowance for the farmers' labor, and before paying interest on debts, the net income on the current values of agriculture capital was only 0.6 per cent. It increased to 1.4 per cent in 1921. It made a further gain to 3.1 per cent in 1922 and 1923. The indicated further improvement to nearly 3.8 per cent for the present crop year thus represents a very substantial advance from the low point of the depression period. These returns, however, are made on a capital valuation that has been scaled down. Thus the real gain is not as large as the apparent gain.

The drop in the gross income of agriculture from \$15,800,000,000 in 1919 to \$9,550,000,000 in 1920 roughly shows the extent of the disaster suffered by agriculture from the fall of prices. Similarly the improvement already cited in the gross income of the industry as a whole since 1920 measures the general betterment that has taken place. But perhaps the rewards to actual farm operators may come nearer to indicating the position of the average farmer. Actual farm operators, after paying interest on borrowed capital and rent on rented farms, may earn approximately 2 per cent on their own capital investment in the crop year 1924. This compares with a loss of 3.1 per cent on their capital investment in 1920, a loss of 1.4 per cent in 1921, and a profit of 1.5 per cent and 1.4 per cent in 1922 and 1923.

Farm purchasing power, as measured by the quantity of things for which a definite amount of agricultural commodities can be exchanged, has improved somewhat in the last 12 months. Although the index number of prices paid to producers of 30 farm products was the same in September, 1924, as in September, 1923, the price level of nonagricultural goods had declined. There was consequently an increase in purchasing power of farm products in terms of nonagricultural products. Thus in September, 1924, the ratio of farm prices to wholesale prices of nonagricultural goods was 82, compared with 78 in September of 1923, while the average level of farm prices remained about the same there were important changes in prices of some products. Farm purchasing power in some localities has been materially increased by large yields of crops that have brought good prices.

Conditions in the dairy markets were unsettled during the first nine months of 1924. Prices in the early part of the year followed an uncertain course. The low point of the usual spring decline of butter prices was reached in April, a month before flush production

began. September opened with a quantity of butter in storage of 156,232,000 pounds, an increase over last year of 53,500,000 pounds. This heavy surplus was an occasion for concern, because up to October 1, prices remained below storing prices so that it was impossible to move storage holdings except at a loss.

An encouraging development toward the end of the year was the firm tone of foreign markets, which eliminated the possibility of large imports into the United States. In the early part of 1924 and during 1923 imported butter was a considerable factor in the market situation. Domestic production of butter, however, appears to be running about 8 per cent heavier than a year ago. Thus, the heavy storage surplus, notwithstanding the prospect of diminished imports, means that consumption must be materially increased if the season ahead is to pass without a price decline. What has been said regarding butter pictures in a general way the trend of other dairy products. Dairy men, moreover, are beginning to feel the pressure of higher feed prices.

On the whole, however, dairying has been one of the bright spots of the agricultural situation since 1921. Though prices of dairy products slumped in that year they came to a stable basis on a higher level than that to which farm commodities generally sank. This was partly due to the fact that dairy products, unlike wheat and livestock, usually find a broad market at home and are therefore comparatively unaffected by conditions in other countries.

Progress continued in our dairy industry, with the result that the number of milk cows in the United States increased from 23,594,000 on January 1, 1921, to 24,675,000 on January 1, 1924. Milk production increased from nearly 90,000,000,000 pounds in 1920 to nearly 110,000,000,000 pounds in 1923. Total output of dairy products in the first eight months of 1924 showed an increase of between 7 and 8 per cent over the output of the price period of 1923.

The increased dairy production has been readily consumed, but at lower prices. Indeed, the United States last year, besides consuming practically all its domestic output of dairy products, imported the equivalent of 20,000,000 pounds of butter. In the first seven months of 1924 imports of butter were larger than in the same period of 1923. Dairying conditions were specially favorable in 1923. Farm value of dairy production in that year exceeded \$2,500,000,000, or \$115,000,000 more than in 1921. Though in the first eight months of 1924 the prices of butter and cheese were somewhat lower than in the corresponding period of 1923, the decline was not sufficient materially to hurt the industry. In the main the outlook continues favorable, because the domestic market for dairy products is extending and improving.

Dairy farmers, however, should keep an eye on the foreign situation. For the last 10 or 15 years the market for dairy products in this country has been to a considerable extent independent of the dairy markets of other countries, since our production has very nearly equaled our consumption. With the rehabilitation of European agriculture, now well under way, this position may undergo a change. Dairy production has been expanding in Europe as well as in the United States.

High prices prevailing for dairy products in this country offer an attractive market for foreign producers which they will naturally seek to exploit. There is consequently a possibility that foreign competition will be an influence in our dairy product markets in the compara-

tively near future. While this possibility does not alter the fact that the immediate outlook for the American dairymen is favorable, it indicates that he should not consider the opportunity for expansion in dairying unlimited.

The Walker Boys Stay Around Home

A Story of Valley View Farm and Its Denizens

IN the northeastern corner of Susquehanna County near the village of Thompson, Pa., is a large Holstein community. One of the best herds in this community is owned by O. P. Walker and Sons. The sons, of whom there are three in the firm, are Percy W., Clifford M., and Carl A., the latter a seventeen-year-old boy now in high school. There is one other son, a merchant at Gelatt, another nearby village, but he is not a member of the firm.

The Walkers started with purebred Holsteins about nine years ago. Percy, the oldest of the boys at home, became interested in purebred Holsteins and their pro-

A PAIR OF YOUNG PRODUCERS
In the Valley View Dairy

duction and so induced his father to purchase a couple of cows from a sale held by Sam Entrot, a Pennsylvania breeder who was dispersing his herd. A few others were purchased and now the present herd contains about forty head. The establishment is known as Valley View Farm.

At least one of the original cows is still a member of the herd. She is Regal Maggie Mercedes Pietertje 2d No. 256852, born January 14, 1914. Her sire was Ada Jimmy Mercedes De Kol, her dam was Regal Maggie Mercedes Pietertje, a daughter of Ophelia Pietertje Paul 2d. There are a number of daughters and grand-daughters of this foundation cow in the herd.

The younger members of the herd are by Dutchland

Konigen Hengerveld Lad, there being ten four-year-olds by this bull. He was a son of King Segis Pontiac Konigen. His dam, Dutchland Colantha Lady Grace has official records made as a six-year-old of 554.9 lb. milk, 27.72 lb. butter in a week, and 2,168 lb. milk, 107.53 lb. butter in thirty days. As a senior four-year-old she was given a year test in which she produced 17,539.9 lb. milk, 781.11 lb. butter. She was a daughter of Colantha Johanna Lad while her dam, Aaggie Grace De Kol Hengerveld, was by Hengerveld De Kol from a daughter of De Kol 2d's Butter Boy 3d. Here is combined the blood of three noted century sires. In fact, a five-generation chart of Dutchland Konigen Hengerveld Lad contains the names of six century sires as well as King Segis. The six nearest dams of the Dutchland bull have official records averaging 30.605 lb. butter, 556.4 lb. milk while the records of his seven nearest dams, those appearing on a four generation chart, average 29.10 lb. butter with a daily milk average of 76.3 lb.

The next herd sire was Konigen Creamelle Fayne. His sire, Dutchland Konigen Creamelle Boy, was also a son of King Segis Pontiac Konigen from a cow with 881.21 lb. butter, 21,701 lb. milk in a year, a daughter of the noted Dutchland Colantha Vale, 1,082.37 lb. butter in a year. His dam, Fayne Pontiac Alcartra, was a full sister to Pietertje Alcartra Pietje, the 30 lb. daughter of the famous King Pontiac Alcartra Pietje.

The present head of the herd is King Ormsby Endercamp, owned jointly with Howell & Son and Gelatt & Son, owners of high class Holstein herds located nearby. This bull was by King of the Ormsbys from Vandercamp Segis Aaggie Jewel, 29.37 lb. butter in a week, 21,110.7 lb. milk, 904.32 lb. butter in a year. She is one of the handsomest daughters of Judge Segis who first headed one of the leading New York State herds and then spent the rest of his life on the Pacific Coast in the Hollywood herd. The offspring of this bull have won many honors in the show ring and his daughters are noted for production.

Ormsby Endercamp

No official work has been done in the Walker herd but many records have been made by near relatives in other herds. This establishment has always been enrolled in cow testing association work whenever one operated in the neighborhood and the cows have made a splendid showing both as producers and as profit earners. The herd is under state and federal supervision and the latest test was clean.

The animals are housed in a roomy, comfortable barn with cement floors and their stable, although nothing fancy, is considerably better than what is

THE VALLEY VIEW DAIRY IN FLYTIME

usually found in working dairy herds. The Walkers are first class caretakers as well as farmers. The animals are well grown and in good flesh, with large square udders and evidently are producers.

Valley View Farm consists of 112 acres of hilly, well watered land, a typical Susquehanna County dairy farm and as the name indicates, overlooks a pleasant valley. In addition to the home farm, one hundred additional acres are rented.

Mr. Walker has lived on the place sixty-four years, his parents coming there when he was nearly two years old. He has spent his entire life on the farm. One year he carried mail but the route passed his own door

O. P. WALKER AND ONE OF HIS FOUNDATIONS COWS

and he arrived at his place about noon and always had dinner there. Mr. Walker is the kind of man you like to meet, a working farmer with a genial smile and pleasant manner, well read and well informed. He has a passion for improvement. For example the road passing the farm had been worked a short time previous to the visit of the representatives of the BREEDER AND DAIRYMAN but they did not do the job quite to the satisfaction of Mr. Walker and, at the time of our visit, he was engaged in widening the road so it would be more serviceable for passing vehicles while the

Walker wagons and cars could make easier turns from the driveway to the highway. This desire for improvement is evidenced in the herd, for its condition, as well as the size and type of the animals, reflects great credit on its caretakers.

The International Butter Situation

FAR-REACHING changes have taken place in recent years in the development of the dairy industry throughout the world. Such changes are now vitally affecting the volume and course of international trade in dairy products and directly or indirectly are having their influence upon the markets in the United States.

In the present situation there is no doubt that the foreign butter market is exerting a strengthening influence upon the market in this country. At a time when foreign production is the heaviest it has ever been, recently renewed purchases by Germany of very substantial quantities of foreign butter together with seasonal scarcity of imported supplies in Great Britain have contributed to prevent what seemed otherwise to be an inevitable decline in the price of butter. A later phase of the foreign situation may in turn have the opposite effect upon the market for butter in this country and abroad.

Dairy production has been increasing in recent years in virtually all countries the world over. This can safely be attributed to the general profitability of dairying as compared with other farm enterprises. There is every reason to believe, furthermore, that this expansion is of a substantial and permanent nature. Even though consumption of dairy products may be expected to be increased more readily than world production can be checked, the process will involve the keenest of competition for profitable markets. Already, the general depression in the European margarine industry gives added evidence of heavy world production of butter.

The most recent growth in dairying has taken place, not in the older European dairy countries such as Denmark and Holland, but in the comparatively new and unexploited countries, particularly New Zealand, and in Australia and Argentina. The most marked change in the world's dairy production since the outbreak of the war has been this shift from the northern to the southern hemisphere, with the corresponding shift in the seasonal trend of supply as well as the additional dairy resources made available to the trade.

Russia, before the war, was second only to Denmark as an exporter of butter with an average exportation of 150,000,000 lbs. annually. With the outbreak of the war her surplus was for years entirely cut off. At present the European butter trade is about back to prewar volume with the former Russian supply replaced by butter from other and newer producing countries. Russia, however, is again beginning to export in considerable quantities. It seems well for the dairy industry of the United States and elsewhere that some of the prewar German demand is being revived at the same time.

The British butter market through a combination of circumstances has been relieved during much of the

past year from the pressure which might have been expected to result from the general tendency toward recovery of world production and trade. In the year ending June 30, 1924, Great Britain imported 501,760,000 lb. butter compared with the record importation of 513,097,000 lb. during the preceding year. The sudden revival of German demand has been referred to. An altogether temporary check upon production in Australia and New Zealand due to drought also contributed to cut down the otherwise rapidly growing supplies. Even with these conditions prevailing, the total production of butterfat in New Zealand decreased only about three per cent from that of the previous season. In ordinary seasons, it is safe to say, there will be a steady increase in dairy production in that country. In Australia, near the close of the season in July, large stocks of butter were reported as having still to be disposed of before the spring supplies commenced. Conditions in both dominions are exceedingly favorable for the new season just begun.

It is in the prospect for increased supplies from Australia and Argentina together with continued recovery of the dairy industry in Europe in the coming year that British markets may be expected to find such ample supplies as to react unfavorably, rather than beneficially, as at present, upon the market for American dairy products. The conclusion is forced upon observing dairymen everywhere that throughout the world production will continue to increase with more and more consideration being shifted to the demand side of the equation.

Amsdale Herd Now Accredited

IN our story of the Amsdale herd, owned by the Amsden Brothers of Cuba, N. Y., we said that the herd was under state and federal supervision and at the last test passed clean. On the day the paper was issued, December 8, a letter was received from Amsden Bros. saying that the herd had again been tested and again passed clean so that it is now on the accredited list. This herd has now been tested annually for five years, three times with negative results.

Suppression of Milk

THE disease known as agalactia, or suppression of milk, is not infectious in cattle, as it is in sheep and goats. Neither is it so common. Occurring, as it usually does, at calving time, agalactia seems to be unfavorably influenced by such predisposing causes as indigestion, loss of appetite, mammitis, insufficient or unsuitable feed, plant poisoning, severe insect stings on the udder, thirst, enforced driving, fear or excitement, or the removal of the calf. Incidentally, agalactia is a reliable symptom seen in rabies in the cow.

Treatment.—The animal, if a heifer, should first be examined for the possibility of atresia, or imperforation, of the teats. Eliminating this possibility, the attention should be directed toward determining, if possible, the contributing cause or causes, which should receive prompt attention.

The animal should be surrounded with an environment most conducive to her comfort and complete satisfaction. She should be supplied with an abundance of fresh, clean, drinking water, and have a generous allowance of a ration, preferably in the form of a warm mash, calculated to stimulate milk secretion. Milk secretion may be assisted by the repeated administration of strychnin, one-half grain, and pilocarpin, 1 grain, in water at five-hour intervals, until six doses have been given. Massaging the udder with lard or an ointment containing extract of belladonna leaves may assist in bringing her to her milk. Efforts should be made to milk her twice daily, at regular milking time, even though the efforts are unrewarded. If the calf is brought to her side shortly before milking time, this additional appeal to her maternal instinct may have the desired effect.—*Farmers' Bulletin 1422.*

Labor was prior to capital, but property is the fruit of labor. Let no man, therefore, who is houseless, pull down the house of another, but let him labor diligently to build one for himself, thus assuring that his own shall be safe from violence when it is built.—*Abraham Lincoln.*

Wounds or Contusions

WOUNDS of the udder may be caused by barbed-wire cuts, briar cuts, nail snags, long and jagged finger nails of milkers, bites of dogs, the trampling of teats under the hoofs of other cattle, high barn doorsills, fence jumping, goring, etc.

Treatment.—Cleanse the wound and keep it clean. If the skin is laid open or the wound is gaping, the underlying tissue should be thoroughly cleansed with an antiseptic solution, the hair should be shaved or clipped from around the injury, and the lips of the wound should be brought together and held in position by means of sutures or strips of adhesive tape. Tincture of iodine should be applied at intervals. In case of pus formation, suitable drainage should be provided, and the wound dressed frequently to prevent the germ-laden discharge from reaching the teat orifices, as such a contingency might involve the infection of one or more quarters, with disastrous consequences.—*Farmers' Bulletin 1422*

Secretary Wallace On Taxation

FARMERS often find their taxes too heavy because of the way in which they are raised. Taxes collected from farmers are usually based on a general property levy. They are levied upon the selling value of the property but are normally paid out of income. Too often the amount of the tax has little or no relation to the amount of the farmer's income. Selling values of land which serve as the basis for taxation do not rest only on current earnings but also on anticipations of future earnings. This often means that taxes have to be paid on fictitious values. Perhaps the general property tax system should be modified.

Another defect in our tax system which tends to increase the burden on agriculture is the fact that a large amount of personal property in urban centers escapes the tax assessor. Some tax evasions are unlawful and others have the sanction of law. Among the latter are those made possible by the enormous volume of tax-

exempt securities that has been issued. Farmers' wealth is mainly in the form of land and other forms of personal property which can readily be assessed. Farmers are consequently forced to pay a larger part of the total tax bill than their share of the national wealth warrants.

Service

KINGSLEY, Pa., December 1, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:—

Sold Ideal King Korndyke within five hours after getting paper with ad in, and he was sold from that ad. Now, I call that going some. He goes to Messrs. Dana & Lloyd Mitchell and Floyd Hibbard of Springville, Pa. Received a letter from Allen Brumbaugh, Greencastle, Pa., the new owner of Ideal King Clothilde, saying he was very much pleased with him.

So you may change my ad stating that we have sold the two bulls in the past thirty days, etc. This leaves us with one bull calf one month old on hand. He is a grandson of Pietje Alcartra Fayne being from her youngest daughter. Yours very truly,

CECIL L. A. RESSEGUIE.

The prudent, penniless beginner in the world labors for wages a while, saves a surplus with which to buy land or tools for himself, then labors for himself another while, and at length hires another beginner to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequent energy to progress and improvement of condition to all.—*Abraham Lincoln*.

Steam yarn to shrink it before knitting it into garments. While still in a hank place on a plate in a steamer, keep there for several minutes and when dry it will be soft and fluffy and unshrinkable.

NOT ABOUT COWS

Edited by Mrs. Crab-Apple Horndyke

"Merry Christmas"

THE DAY

THE time when Christmas was first definitely observed is not known, but as early as the third and fourth centuries, well known writers refer to it as an established feast. Other dates were celebrated as the day of the Nativity, but finally December 25th was universally adopted. It is now not so important to observe the exact day of the Saviour's birth, as it is to have the true spirit of the day, helping and loving our fellow men. Strange to say, the use of holly and mistletoe and the Yule log have all descended from pagan days, yet they are the features that distinguish this holiday from all others. Take away the decorations, the Christmas tree and Santa Claus, and much of the meaning of the season would be lost to children.

St. Nicholas

YES, St. Nicholas really and truly lived, "once upon a time" many, many years ago. Over fifteen hundred years ago, he was the Bishop of Myra, and was supposed to have performed many miracles of healing. His birthday came on December 6th and was celebrated with special observance in many European countries, becoming one of the most popular of saints' days, which were the holidays of olden times. Since he was the patron saint of travellers and of young people, and because his birthday came so near Christmas he was finally given the rôle for which he is now most famous—the bestowing of gifts at Christmas time. It was the Dutch who affectionately nicknamed him "Santa Claus."

Mistletoe and Holly

THESE two plants are closely associated with Christmas, especially in England where they grow in abundance. In our own country we have to be content with rather poor imitations. The mistletoe is a plant of many traditions, having been used by those ancient priests, the Druids, who cut it from the sacred oaks and gave it to people for charms. Its use as a ceremonial plant is probably the origin of the now (alas!) obsolete custom of "kissing under the mistletoe." If the charm worked in those older days, it must have rendered the lady beautiful or the man blind. The holly gets its name and its place in Christmas decorations from its use in the church in early days, it having been called the "holy" tree, which later developed into the hollytree.

WANTED—A kind, gentle dog to keep the COWS off OUR PAGE! Or else we'll have to change the title.

MRS. C. A. H.

"'Twas the Night Before Christmas"

NO Christmas season should be allowed to pass without the reading aloud of those two classics—Dickens' "Christmas Carol" and Clement Moore's "A Visit from St. Nicholas." Anyone having such an ingrowing disposition as to be unable to thrill to these gems of literature ought to be treated to a generous dose of what Scrooge received.

Worth Knowing

POUR boiling water over nuts before cracking them and allow them to stand three or four minutes. The meats will then come out whole. This is especially good for pecans and hickory nuts.

Solomon's Ribs

TO one egg, well beaten, add one tablespoon sugar, one tablespoon melted butter and flour enough to roll very thin. Cut in oblong pieces, about two by three inches, make six slits, three from each direction, slanting towards the center like the ribs of the body. Fry in deep fat, and sprinkle with confectioners' sugar.

Meatless Croquettes

Boil and mash sweet potatoes, season well with salt, pepper and butter, add one-quarter as much broken walnut meats and a little cream. Mold into cakes, dip in egg and bread crumbs and fry a golden brown. Serve hot with buttered peas. May be used as the main dish at supper time.

To Make Your Own Baking Powder

Take one pound cream tartar, one-half pound corn starch, one-half pound baking soda. Sift several times. Keep in tin cans. In two weeks sift again several times, when it will be ready for use.

LUMPS OF LIMPING LIMERICKS

A rude saucy boy was young Jake
Who claimed Santa Claus was a fake.
But as Christmas drew near
He worried for fear
His claims might not be a mistake.

In the dim lighted parlor below
Hung a bunch of decoy mistletoe
Though she seemed to appear
Unaware it was near
Not far from that spot did she go.

A smart little wife named Anne Barr
Bought her hubby of powder, a jar,
So he bought for her
An electric affair
To light his cigar in the car!

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
EUGENE B. BENNETT, Contributing Editor

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

December 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Dairy Arithmetic

IN his article on surplus milk and its problems appearing in this issue, L. P. Emmerick, Assistant Dairy Husbandman of the Virginia Dairy Extension Office, gives an example of "dairy arithmetic." Using figures derived from herd records of dairymen shipping milk into Washington and belonging to Virginia Cow Testing Associations, Mr. Emmerick shows how it is possible for the dairyman to ship less milk and, at the same time, increase the net receipts. By eliminating unprofitable cows from their herds, the dairymen would be able to not only produce at a lower cost but, by taking surplus milk off the market, command a higher price. Mr. Emmerick also shows where, by cutting the feed, owners may increase the cost of production and so trim their net income two ways, first by lopping off part of the gross income and secondly by increasing the cost of producing milk. Conversely he shows how it is possible to give more feed to less cows and decrease the cost of production.

In feeding dairy cows for milk production, there is a maximum point; below that point the dairyman is not using enough feed to get the maximum profit earning capacity of his cows. If he goes above that point, his cows may produce more but at a greater cost. The successful dairyman is he who feeds well but does not attempt to force his cows.

In the cow testing associations as they are at present operated there is a constant culling, the poorer producers going to the butcher while stock to replenish the herd is raised from the most profitable cows. This culling is not spasmodic but goes on month after month, year after year. In the twelve months from November 1923 to October 1924, there were 5,996 cows on test in the state of Virginia and during the year no less than 1,044 cows or 17½% were sold as being unprofitable. During the month of October alone in the forty-seven cow testing associations in eight states under the jurisdiction of the Bureau of Dairying's western office, 217 cows were sold to the butcher because their records indicated that they were unprofitable. While 217 cows from a grand total of 33,766

on test during the month does not seem like a very large proportion, yet this work, going on month after month during the passing years must exert a beneficial effect. Poorer producers are automatically eliminated; stock is raised from the better producers and the dairyman-owner will have better machinery with which to manufacture milk and butterfat. Thus he will be enabled to decrease his production costs and the more he culls the more profit he will make; first, because his cost of production will be lower and second, because by handling fewer cows, his surplus will be cut down and he will be able to obtain a better price for the milk and butterfat he markets.

Another New Registry Association

AN association to register grade cows is reported by *Hoard's Dairyman*. This new association, entitled the Standard Bred Cattle Club, originated in Wisconsin. Only cows are eligible to full registry and to qualify a cow must, in cow testing association work, have produced 300 lb. or more of butterfat in a year. A separate herd book is to be kept for the grades of each breed and the animals recorded therein will be known as "Standard Bred Holsteins," "Standard Bred Guernseys," etc. Besides the performance requirements, it is also necessary that the cow be sired by a purebred registered bull and that she conform in markings to the requirement rules of the association in which her sire is recorded. There is a provision made for tentative registration of heifer calves whose dams are Standard Bred Registered Cows, the full registry to be completed when these calves have made production requirements. We assume this means that, in the case of a heifer calf from a recorded cow that if said heifer calf make the production requirements, the rule that her sire must be a registered bull will be waived.

We keep cows for their production or rather for their profit making ability and no cow should ever be recorded or bred from that was not able to make milk and butterfat at a profit over cost of feed. But it must not be forgotten that one of the chief merits of a purebred animal is its ability to transmit its breed characteristics. A cow that would qualify for registration in such an association may have a registered sire and be from a dam of low quality and no particular breed. Her offspring would carry 25% of the blood of its maternal grandsire, 50% of the blood of its own sire and 25% of the blood of its maternal granddam, the cow of poor quality. From what we know of the Mendelian law and of reversion, we would anticipate that a number of the second generation would take after its maternal granddam and might be good for nothing.

The advocates of the new cattle club believe "that, as time goes on, pedigrees of grade cattle will be made available and larger service will be done in saving good purebred bulls." In theory this is all right but we all know that very few bulls are kept until their grade daughters demonstrate their excellence in cow testing association work.

While we naturally favor the Holstein-Friesian breed, we are for anything that will better the dairy industry.

But we question the advisability of registering grades. Why not make more of the records made in cow testing association work by purebred cows and save the bulls from the best of these cows for use in grade and native herds. Cow testing association records represent normal production—production that can be expected in any good herd if the animals are given good feed and care.

We believe that the time is coming and will soon be here when breed registry associations will not register cows until they have shown their ability to produce and to make a profit over the feed cost. Some kind of tentative registration will be adopted for calves and full registration will not be granted until the animal has made a cow testing association or herd production record. When a calf is dropped the birth shall be reported to the secretary of the association, as is already required by the American Guernsey Cattle Club.

In all the purebred dairy breeds there are low producers but in most of these cases the fault is in the raising. Undersized, poorly raised, half-fed animals cannot be expected to produce large amounts of butterfat. To guard against such "purebred" scrubs, the breed associations may require animals to weigh a certain amount when they are two years old. Any animal not coming up to a stated weight, girth and weight will be refused registration even if it conform in type and color markings to breed requirements. A somewhat similar scheme is already in effect in Holland and has been talked of in this as well as in other countries and was, we believe, in the minds of the founders of the Dutch Friesian Herd Book when they originated their association and herdbook in this country about fifty years ago.

Time to Make a Change

WHEN the present Advanced Registry system was designed by its originators, they had an idea that it would be used as a "culling" system, that cows unable to reach Advanced Registry requirements on normal care and feed would not be used for breeding purposes. Notice the words "on normal care and feed." But very soon after the Advanced Registry system was put in operation, breeders began to feed cows on test more and better rations than were given to the general dairy. This practice has increased until the markets of the world are searched for palatable food products, so that the cows will eat more and thereby increase their production of milk and butterfat. Any grain or by-product likely to increase even temporarily the percentage of fat is at a premium. Cows are dried off early in their previous lactation period, are fattened for months before their freshening date and while they are on test are tended with a care equal to that given to the most delicate infants.

Skillful feeders who have spent a lifetime around stock are paid as one writer says "a salary equal to that of a college president" in order that their services may be secured—for what? To handle the cow so that she will make better milk or increase her earning capacity? No, but in order that the cow may be made to eat more, to produce more regardless of profit, that she may be driven night and day at maximum speed

and so make a sensational record, many times wrecking her health and ruining her reproducing ability.

At first sight this practice would seem to defeat itself as, if the cow had no offspring the owner could not realize upon the sensational record. But in practice it works out like this. The cow has a large number of half sisters and half brothers, to say nothing of aunts and cousins, nephews and nieces. Stories of the cow's performance are published in many papers. Then there comes a demand for animals of related lines of breeding. At once, the owners increase the price of their stock irrespective of producing capacity. All that is needed is that the animals for sale be related to the new champion. Bulls carrying a percentage of the blood of the new champion head herds all over the country regardless of their own type and individuality, and as a result offspring are raised when the facts are that if the new owner had his new herdsire dropped in his own herd, he would never think of using him. The effect is that instead of increasing producing capacity, the producing capacity of the younger members of the herd is actually below that of the older members and as a transmitter of dairy qualities their own sire is inferior to the sire of their dams.

Isn't it about time to take stock of the purebred business, to do away with practices that are working harm to the breeders, as well as to the stock, and get right down to everyday, honest business principles?

"The tendency of civilization is to make the farmer a producer of raw materials solely, with the manufacturing and distribution entirely in the hands of the highly organized, but not necessarily efficient, urban centers. No nation can long survive solely on a basis of production of raw materials, leaving in other hands the marketing of the material in its raw state, as well as the manufacturing and final distribution to the ultimate consumer. It is the history of both nations and industries following this course, that the producer of the raw materials becomes steadily poorer, while the distributor and manufacturer becomes richer and more powerful."—George H. Stevenson.

Advertising has given permanence to business. The advertiser must stay where he can be found—when he can be kicked or complimented, as the case may be. And as kicks are not only painful but profitless, the advertiser must be honest or go broke.

If you buy a piece of real estate you expect a deed for it. If you buy a purebred Holstein you expect a registration certificate and a transfer certificate showing that you now own the animal. Well—so does the other fellow.

I believe in a spade and an acre of ground. Whoso cuts a straight path to his own living, in the sun and rain and sprouting grain, seems to be a universal working man. He solves the problem of life.—Emerson.

Lord help 'em, there are men who apparently assume that a sour attitude toward humankind is dignity.

THE PRACTICAL DAIRYMAN

SURPLUS MILK AND ITS PROBLEMS

By L. P. EMMERICK.

During most of the past year the Washington market, a market which consumes about 35,000 gallons of milk, has been burdened with a surplus of from 8,000 to 12,000 gallons per day. According to the laws of supply and demand even a small surplus of any commodity on a market will cause a very considerable drop in the price of that commodity. We would then expect that with a surplus of from 20 to 35% that there would have been a tremendous drop in the price, and unquestionably there would have been if this surplus milk had been placed on the open fluid milk market. However, the farmers have an association known as the Maryland-Virginia Milk Producers Association with a membership of about 85% of all dairymen shipping to Washington. They own a plant in Washington where this surplus milk is handled. This has kept this extra milk off the fluid milk market, and has thus prevented a complete price smash. However, it has not prevented the lowering of the price of milk to the farmer, as this surplus milk, which has been manufactured, brought manufacturing prices which are considerable below the fluid milk price and has thus lowered the general price level.

In order that all members should share alike in taking care of this surplus, a pooling plan was inaugurated whereby the same price is paid to all members for a given class, grade and test of milk, regardless of whether it is shipped to a dealer or to the surplus plant. Of course there is a differential for grade, test, etc. It has been possible to do this by a deduction from the regular milk price. This brokerage, which also takes care of the upkeep of the association, has amounted to about four cents a gallon most of the year. The continued large surplus this fall also prevented the regular fall increase in the price of milk.

This condition has brought forth two very important problems for the farmers supplying this market to solve.

First.—How to get rid of the surplus.

Second.—How to cut the cost of production in order to be able to make a profit at the lower price levels.

There are two ways to get rid of the surplus. First, to cut down feeding, and second to get rid of all low producing, unprofitable cows known as "boarder" cows. Either one of these methods will get rid of the surplus if carried far enough, but let us see what effect each method has on the cost of production and profits.

A number of farmers this fall have adopted the former system, not so much to cut out the surplus, as that problem they believe belongs to the officers of the association, but because they say they cannot afford to feed high priced feed at the present price of milk. True, they cannot, and never will be able to feed high priced feed at a profit to their low producing, "boarder" cows, and most dairy farms have them. But at the same time they cannot afford not to feed their good cows sufficient to keep them at high producing level because they (the cows) will be producing the most efficiently when producing close to their normal ability. The study of several thousand Cow Testing Association records made in this state this past year shows that within the limits of good dairy practices there is a direct relation between production and cost of production and profits. In other words the higher the production per cow, if the production secured by feeding according to good dairy practices, the less it costs to produce a gallon of milk and the more profitable she will be. Now when we cut the feed on a cow below what she should be getting according to her production, we undoubtedly cut down production, and thus increase the cost of production and decrease the profitability of the cow, and so are in a worse fix than before. Here is what the records show of the Prince William and Fairfax No. 1 Cow Testing Associations, all of whose members ship to Washington. According to their 1923 records it cost almost 2 cents a gallon less to produce milk from cows that

produced about 6,500 pounds of milk than from cows that produced only 5,500 pounds of milk for the year. At the same time on 1923 prices the cow making 6,500 pounds of milk a year made \$21.95 more income over feed cost than cows only producing about 5,500 pounds. Suppose we had a herd of 24 cows whose average production was 6,500 pounds, which is a fair average production, and we cut down our feeding so that the herd only averaged 5,500 pounds for the year. Then according to these figures we increased the cost of producing milk almost two cents a gallon and cut down our income \$21.95 per cow, or for the herd of 24 cows we cut down our income over feed cost \$526.80 for the year. If we had cut out enough of the surplus to increase the price it would slightly better these figures, but we surely have not solved the problem of lowering the cost of production.

Now let us come to the second method, the elimination of the low producing or "boarder" cow. The "boarder" cow is really responsible for the present situation. If all of the cows that did not pay for their keep and whose milk is shipped to Washington were eliminated, there would be no surplus, it would be more than wiped out. Mr. A. D. Lynch, director of the Dairy Marketing Department of the Illinois Agricultural Association, very well states the case of the "boarder" cow, when he says "The farmer who has cows not worth the milking and who sells milk from such animals in competition with that of efficient cows, is guilty of unfair trade practice and is largely responsible for the present surplus of dairy products. Dairymen who flood the market with milk of 'boarder' cows are unfair and unwise business men because they cut prices for other producers in addition to their own self-inflicted personal loss." Referring again to the figures of the Fairfax County No. 1 and the Prince William County Cow Testing Associations we find that cows producing about 7,500 pounds of milk a year produce milk at a feed cost of fully 2 cents a gallon less than cows producing 6,500 pounds, or 4 cents a gallon less than cows producing only 5,500 pounds. The 7,500 pound milk cows also made \$26.79 greater income over feed cost than the cows producing 6,500 pounds. Again if we had our herd of 24 cows whose average production is 6,500 pounds of milk, and by cutting out six "boarder" cows, we were able to raise our average production for the remaining 18 to 7,500 pounds we would have lowered our cost of production 2 cents a gallon or 4 cents over the other method, we would have just about the same income over feed cost, a larger profit due to lowering the labor cost, interest and other overhead, and we would have relieved the market of 21,000 pounds of milk during the year. An examination of the records of some of the herds shipping to Washington would give us more striking figures than the example just used. A recent study of the records of one herd showed that the upper half of the herd showed a larger profit than the whole herd. By getting rid of the "boarder" cows the present surplus problem would be solved.

The next question is how to find the "boarder" cow. It is not what a cow does at one particular time of the year, it is what she does over the whole years time that makes her profitable or unprofitable, and the best, surest and cheapest method of finding that out is by joining or organizing through your County Agent and the Dairy Specialist from your State College, a good Cow Testing Association, and not only finding out the "boarder" cow, but also finding out your cost of production, and other facts which will enable you to put your dairy on a straight business basis. We must get rid of the "boarder" cow and have more efficient herds. The most practical way to do this is through cooperative Cow Testing Associations.

Mother: "Dorothy, you have disobeyed mother by racing around and making all that noise. You shan't have that piece of candy."

Dorothy: "Oh, I see! I've been fined for speeding."

CUTTING DOWN THE FEED BILLS

The growing interest in the use of a small grain mixture with first class legume hay, prompts the following suggestions to those situated so as to make use of them.

Use Canada field peas, a late two rowed barley, (alpha preferred) and a good variety of oats. Mix the seeds at the rate of one bushel oats, one bushel barley, and one-half bushel peas. Seed the field at the rate of one and one-half to two bushels per acre on fertile soils where there is danger of lodging or injury to the seeding. As much as two and one-half bushels may be used elsewhere, depending on soil conditions.

Arrange to plant the crop early. The pea seed should receive the proper legume inoculation before mixing with the oats and barley. This is inexpensive and can be secured through your Farm Bureau office. It is desirable to get a good growth of the peas. Failure to inoculate may reduce the yield. Forty bushels weighing 50 lb. per bushel are frequently reported.

The department of Agronomy has found that when planted in the proportions above indicated, that the resulting seed crop will be composed as follows: 50% oats, 27% barley, and 23% peas. The feeding value of these feeds when used in rations has been calculated on this basis. To illustrate the saving which this grain crop makes when used with high quality hay, such as alfalfa, the following ration is shown:

	LB.	DIGESTIBLE PROTEIN	TOTAL DIGESTIBLE NUTRIENTS
Alfalfa hay	12	\$1.27	\$6.19
Corn Silage	35	.38	6.20
Oats, barley and peas....	12	1.40	8.90
Oil meal or Gluten meal..	1	.32	.76
		3.37	22.05

Nutritive Ration 1:5.5

Standard required for 40 lb. of 4%

milk including maintenance 3.30 21.76

The above amounts meet the needs of a cow weighing 1,000 pounds and producing 40 pounds of 4% milk. With the feeds used, it has been necessary to buy only one pound of high protein feed to balance the ration. This would not have been possible had alfalfa hay not been fed, and peas planted with the barley and oats. Where circumstances permit, it illustrates the possibilities of more nearly supplying the needs of the herd from farm grown feeds.

In the absence of alfalfa, good clover hay might do nearly as well. In either case the hay should be handled and cured carefully, so as to preserve its bright green color, and save the leaves. Protein is expensive and usually deficient in farm grown rations. By using alfalfa and peas as shown in the ration, more than half of the total protein of the ration may be obtained from the alfalfa and peas.

The mineral requirements of the animal, a subject now receiving so much attention, are generously supplied; about three-fourths of the lime being derived from the alfalfa and peas.

A similar ration largely purchased, composed of 10 lb. timothy hay, 35 lb. cornsilage, 4 lb. oats, 3 lb. barley, 3 lb. oil meal, and 3½ lb. gluten meal, would have the same nutrient value as the farm grown ration already discussed. However, due to the absence of peas, and the use of timothy hay, much protein would need to be bought, the roughage would be less palatable, less than half the amount of lime would be had, and the cost would be greater.

Ground peas, oats and barley in the proportions above stated makes an excellent grain feed without supplements for growing heifers, bulls, ewes, and lambs. Where the proportion of peas seems to be less than 20%, a little more oil meal may well be added.

Its sweetness and aroma, and freedom from dirt, foreign materials, and other forms of adulterations, commend it in many ways for wider use on New York farms.—*New York State Feed Letter.*

Jack: "Grandpa, we've been arguing whether the clock stands or sits on the mantel."

Grandpa: "It's half-past eight by the clock and only a quarter to eight by the right time; therefore, I should say it lies on the mantel."

FACTORS GOVERNING MILK PRODUCTION

The factors which govern milk production in the order of their importance are: the animal; the environment; and the feed supply. Although the actual production is dependent upon the individual cow, the kind and quantity of feed, the method of housing and management—yet the actual capacity for production is an individual characteristic. This individual capacity or ability of the dairy cow is dependent entirely upon an inherited quality. Some cows have inherited the ability to make large quantities of milk, but never get the opportunity to show the ability, because of poor feeding and management. On the other hand, no amount of feed or careful handling will produce this ability for large milk secretion. Proper conditions and feeding can only bring out these good qualities which are the results of inheritance.

The original wild cows from which all present day dairy cattle come, produced milk only to nourish their calves. By breeding, selection and development man has produced cows that not only secrete milk in large quantities but over a longer period of time each year than these original cows did. This abnormal milking quality is therefore inherited and since it is an abnormal development is not reproduced uniformly by all animals. It tends to revert to the original state, if man does not continually strive to keep it at a high level by continued intelligent breeding, selection, and development.—*Clemson College Dairyman.*

A THOUGHT FOR FEEDERS

It is frequently asserted that successful business ventures in the different lines depend largely upon the purchase of raw materials at favorable prices. When such prices get out of line with the price the products will bring, production ceases or failure ensues.

For the dairyman, not only is the price of the ingredients used important but the efficiency with which they can be converted by the cows is equally significant. It has been conservatively estimated that one ton out of every eight purchased by feeders in New York state is unwisely used, and therefore an economic waste. Don't go into debt to buy feed for poor cows. The feed dealers and agents will survive without that business.

Two small boys were conversing and the smaller of the two remarked, "My uncle has a wooden leg."

"Huh," replied the other, "that's nothing. My sister has a cedar chest."

PRICES CAUSE CHANGE IN RATIONS

Since October 21, ten feeds have made an average advance in price of \$2.30 per ton. Four feeds have declined on the average \$2.21. The net result is a slight tendency to increase. This probably is no greater than the usual seasonal increase, due to demand for winter feeding. It is not great enough to adversely effect the margin of profit with cows that proved profitable on the costs of the previous month.

Barley declined \$3.35, Gluten feed \$1.00, Gluten meal \$2.00, Cotton seed meal \$2.50 per ton. Based on prices noted, the New York State College Animal Husbandry specialists offer the following mixture as a guide for the current month in securing a purchased grain mixture. The shift in the price of ingredients has made it possible by using 100 lb. of hominy instead of 200 lb. and 200 lb. of gluten feed instead of 100 lb. of oil meal to hold the increase in the cost of an 18% digestible protein mixture down to 56 cents per ton over the previous month.

300 lb. middlings 200 lb. cotton seed meal
200 lb. bran 200 lb. gluten feed
100 lb. hominy

Each thousand pounds contains 189.4 lb. digestible crude protein. The cost figured on a car lot, Utica, cash basis is \$20.74 per thousand lb. or \$41.48 a ton.

THE OLEO MENACE

The 58th Annual Session of the National Grange in Atlantic City, Nov. 12 to 22, passed the following resolution on Oleomargarine. "Whereas, the Margarine Manufacturers of the Nation are steadily increasing their production of Vegetable Margarine which is placed on the market and sold in competition with Butter, and Whereas, Margarine is sold as a spread for bread principally because it tastes and smells like real butter and, this taste and smell is secured by churning vegetable oils in Skimmed milk, but does not give to the Vegetable Oil products any of the health qualities of real butter, and Whereas, the sale of Oleo is becoming a serious menace to the dairy interests of the Nation and if allowed to continue will disrupt the dairy interests, Resolved, That we favor the enactment of a Federal law prohibiting the use of milk products in the manufacture of vegetable oil butter substitutes for the purpose of giving to such substitutes the odor or taste of butter."

This resolution was introduced by the representatives of the Oregon State Grange and the law which is suggested is similar to the law which has been on the statute books in Oregon but which was defeated by referendum in the last election. This action by the National Grange seems to indicate that there is a new awakening of national interest in the menace to agriculture

which is found in the fraud and substitution which marks the manufacture and sale of imitation dairy products.

The awaking on the subject of the menace to American agriculture of the Oleo business which now draws its chief raw material from non-American sources is exceeded by the awaking which is noted in the whole subject of the competition of foreign, tropical and oriental oils and fats with American products of similar character. It is not alone the dairy industry that is suffering from this competition, but the cottonseed, peanut, soybean and the swine industries.

As the date approaches for the hearing which the United States Tariff Commission is to hold on the application of the representatives of the soap, lard compound, paint, varnish, oleo and other fat consuming industries for a reduction on the tariff rates on vegetables oils, the magnitude of the danger which threatens these lines of American Agriculture will become more and more manifest. The investigators sent to Europe, Asia and the South Sea Islands early in the year have completed their work and are now returning and the Tariff Commission staff expects that as soon as their report is completed notice will be issued of this public hearing. So in the coming 3 or 4 months the dairy and other interests defending the present tariff rate on vegetable oils and other fat products will be again faced with their traditional enemies.

YOU CAN CATCH A FEW FISH WITH A SPOON HOOK

With the object of developing a new breed of dairy cattle which should combine the good qualities of the Jersey and Holstein breeds, a group of people in the Southwest have prepared and distributed propaganda which, we understand, has had quite wide circulation.

We are favorably inclined toward dreams, for from them have come many of the world's achievements and men who lack vision seldom accomplish very much. Yet in this instance we can forecast nothing but disastrous results. The movement seems ill-founded and unsubstantial at the very beginning.

The promoters of this scheme would form an organization to be known as the Climatic Breeders Association. Why that name we cannot tell, for neither the Jersey nor the Holstein breed needs to be acclimated to any part of the United States. They are already quite generally and generously distributed in the several different climates to be found within our country's borders.

Everyone who is interested in breeding and who has given it even a cursory study, is aware that crossing distinct breeds is a thankless and profitless task. The first generation of out-crossing different breeds sometimes results in good animals; rarely they carry the good points of both breeds; frequently they carry the bad points of both. To evolve a new and dis-

tinct breed from the crossings of Jerseys and Holsteins would be an undertaking of great expense and necessarily occupying a great many years of time.

It is doubtful, also, if the cross breed were finally produced and bred a sufficiently long time to permit fairly general true reproduction, if the new breed would be an improvement over either of its predecessors. It is a mistake to destroy the purity of blood which each of these breeds possess and which has been perpetuated and improved for hundreds of years, when the result is dubious in the extreme.

Cross breeding is not to be recommended. There are many cases where a purebred Jersey sire has been used upon grade or scrub females of other breeds with a gradual change toward Jersey type and Jersey economy of production; and the finality, if carried on through a sufficient number of generations, of fixing the Jersey characteristics of economy of production and excellent beauty of form. This practice is recommended only when a person owns scrub or grade cattle and desires to breed better cattle. If he possess dairy animals of high grade caliber of any breed, it would be cheaper and quicker for him, should he desire to change to another breed, to sell his present stock and purchase animals of his chosen breed.

At all events, this movement for the breeding of a new breed of dairy cattle will interest few consecutive live stock breeders, be they Jerseymen, Holstein adherents, or believers in other breeds than these two. The propaganda is designed to influence the man of means, one in a county, to join in the movement. The bait is alluring, for it promises large financial returns, but we happily fear that it is too easily to be recognized as a "spoon."—*The Jersey Bulletin.*

BUSINESS MAY BE TOO GOOD

"What goes up must come down." That is as applicable today as it was in war times or even before. There is constantly a demand for the leveling of prices in agricultural commodities, one of which is purebred live stock. Some have been leveled already.

One cannot help but think of some of our live stock interests that apparently are traveling a divided highway. Down one road the farmer and his kind of cow are making progress, while down the other road the wealthy agriculturist with his dairy cow fancies is making headway by leaps and bounds in a dollar mark way.

No breeder of purebred live stock can evade the fact that the value of live stock can be measured only on their value as producers of milk, meat, wool or power. There can be no other true value. Any other value tends to divide the ranks of the breeders, setting up two classes.

May we not ask whether sales that average in round figures \$1,800 and \$2,800 and even \$1,000 or more are good for a

breed? Remember that such averages include all kinds and ages. Many believe that there has come a time when even in live stock sales there needs to be a leveling of prices.—*Wisconsin Agriculturist.*

THE PASSING OF TWO GREAT COWS

Two famous cows died early in December. College Belle Wayne, the most famous bovine of South Dakota has been a member of the dairy herd at South Dakota College for the past sixteen years and hundreds of students graduated from that college have studied her form during class periods. College Belle Wayne was a large cow, at one time weighing over 2,000 lb. Several years ago when a dairy demonstration train visited many parts of the state, she was part of the college exhibit, and so is well known to South Dakota dairy farmers. At one time she was a world champion and even today her seven-day milk production of 824.3 lb. is the highest ever recorded in South Dakota. Her butter record was 35.38 lb.

Several of her sons and daughters became famous and she is the dam of College Belle Wayne 2d, the greatest producing cow ever owned by the College and champion of the state for both milk and butterfat, being credited with 27,896.1 lb. milk, 1,145.67 lb. butter in 365 days.

Everyone who has seen the Cornell University herd within the last dozen years knows Glista Ernestine. She was born on the farm and died December 11 when sixteen years old. She is the only cow that ever made a 30 lb. official seven-day butter record seven different years. Her highest seven-day record is 823.3 lb. milk, 35.967 lb. butter and she has a year record of 1,042.16 lb. butter. She is credited, during her lifetime, with the production of 202,005 lb. milk, 7,342 lb. butterfat. She has averaged 17,600 lb. milk a year for eight years. Glista Ernestine has been exhibited several years at the New York state fair and was at the 1923 National Dairy Show held at Syracuse, N. Y.

She, too, has been an object of study for hundreds of agricultural students while thousands of dairy farmers from New York and surrounding states have examined her type and form.

If, as someone has said, there is a heaven reserved for great cows, College Belle Wayne and Glista Ernestine have gone to that distant country and there are two new stars in the Milky Way.

AUSTRALIAN DAIRY BRAND

"Kangaroo" is the brand word adopted by the Australian Dairy Council for butter and cheese produced in that country and exported. This brand will be applied to all cheese grading ninety-two points or over and to all butter grading ninety-two per cent or more which is the product of pasteurized cream.

My Herdsire

He is by King Segis Pontiac Konigen, and his dam is an A. R. O. granddaughter of Dutchland Sir Pietertje Hengerveld and Beauty Pietertje Butter King.

His first twenty-two sisters tested for a year average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision and passed clean at last test.

RAYMOND D. STRICKLAND

Susquehanna Co., R. D., Nicholson, Pa.

High Quality & Low Prices

Our stables being crowded we offer

Young Bulls

\$50--Upwards

Young Heifers

\$65--Upwards

The dams are big producers and of our own breeding for generations.

The sires are MAPLE GROVE YBMA GLISTA or CLEVER MODEL GLISTA, handsome bulls from great cows, and royally bred.

In addition—this herd is ACCREDITED.

MAPLE GROVE STOCK FARM

Cows of her type, quality and producing ability are bred to

Model Darius King Segis

son of the famous

Clara Clothilde Lyons

639.8 lb. milk in 7 days as a two-year-old.

Stock from this ACCREDITED Herd will make good ANYWHERE.

Fred B. Keeney

Wyoming County LACEYVILLE, PA.

Only \$40

Bull Calf, Born Nov. 5, 1924.

Large and one-third white.

Sire is from a tested daughter of ORMSBY KORNDYKE LAD and was sired by KING PONTIAC ALCARTRA PIETJE, he a 35-lb. son of King Segis Pontiac Aleartra.

Dam—MOLLIE DE KOL BOON 2d, 298901, has a homemade record of 22.3 lb. butter from 577.5 lb. milk. She is a real good dairy cow with an almost ideal udder and is a granddaughter of Changeling Butter Boy, one of our good century sires.

Herd Fully Accredited

A. Conrad Slifer,

Lewisburg,

Penna.

Daughters of our herdsire,

Echo Belle Model King

are good property, pleasant to look at and profitable to own. They are backed by producing strains for his SEVEN nearest dams have seven-day records averaging 35.49 lb. butter.

Our herd numbers 85 head and is under State and Federal Supervision.

WARD D. LOOMIS,

Chenango Co. R. D. 4, Bainbridge, N. Y.

LOOK OUT FOR THIS FELLOW

The following letter has been received by F. L. Houghton, Secretary of the Holstein-Friesian Association of America. All owners of Holstein-Friesian cattle or cattle of any kind are warned to be on the lookout for this swindler, who is reported to be a man of pleasing appearance and plausible address.

If he attempts to work this game on you, call up your banker and also your chief of police.

CITY OF WATERLOO, IOWA

DEPARTMENT OF POLICE

Waterloo, Iowa, December 9, 1924.

Mr. F. L. Houghton, Secretary,
Holstein-Friesian Association,
Brattleboro, Vermont.

Dear Sir:

Respectfully calling your attention to the enclosure which is an exact photographic reproduction of a check given to Dr. Scott of this city by one H. C. Helms, for whom we hold felony warrant, charging "Cheating by False Pretence." Helms' description appears on the reverse side of the check.

Helms is a polished confidence worker and is known to have victimized cattle breeders throughout Iowa, Minnesota, Michigan, Kentucky, Tennessee and has recently attempted similar operations at Oswego, New York; New Albany, Indiana, and several other points. He is very well versed in thoroughbred dairy cattle, and operates his game by representing himself as an agent for some large creamery company, commissioning by them to buy dairy cattle for them.

He usually calls on one of the leading veterinaries and gets a line-up on such herds, then gets the veterinary to introduce him to the herd owners. At the first herd he makes a small selection, agrees on price and terms of shipment, then he proceeds to the second herd for the purpose of purchasing cattle

in sufficient quantity to make one carload. During the course of this operation he inquires whether he would be able to get a check cashed. Upon presentation of apparently proper identification, the check is cashed, which later proves to be a fraud.

When identification was requested in the above referred to case, he exhibited letters and mail which served to identify him, and a bank book on the Citizens State Bank of Champaign, Illinois, which showed a deposit of \$6,000. Also one on the Farmers & Merchants Bank of Nashville, Tennessee, with a deposit of approximately \$9,000.

My investigation in this matter proves conclusively that this fellow has operated this game for a period extending over one year, and confines his operation to breeders of Jersey, Guernsey and Holstein Dairy Cattle. The last I heard of him was in Grand Rapids, Michigan, about four weeks ago, where he fleeced a Holstein breeder out of \$650.00.

We are fully determined to not only stop this fellow's nefarious operations, but to land him. I, therefore, ask your coöperation and request that you get in touch with and warn your association members of this fellow. Instruct them to be on the lookout for him as he is certain to make his appearance in the near future, and if he does, to cause his arrest and wire us collect.

I am also writing the Jersey and Guernsey Breeders' Associations.

Trusting that you will favor me with a reply, and thanking you in advance for any courtesy extended in this matter, I am,

Very truly yours,

(Signed) E. A. LEIGHTON,
Chief of Police.

Per.

E. A. Steffens,

Supt. of Identification.

DESCRIPTION.

Age 30, height 6 feet, weight 170, brown hair, blue eyes, smooth shaven, straight nose, good teeth, very neat appearance, usually wears dark clothes and brown fedora hat. He affected quite a pronounced Southern accent.

THE TRIP FROM MILWAUKEE TO PORTLAND

A very newsy and entertaining letter was received by the BREEDER AND DAIRYMAN from Roy L. White. Mr. White assisted his father, Frank White, in exhibiting the show herd of the Jefferson County Asylum. The splendid work of this show herd at the Wisconsin State Fair, the Waterloo Dairy Cattle Congress and the National Dairy Show has been told in the columns of this and other papers. Much of the credit for their fine appearance is due to the care they received for the Whites are master show men.

After the National, it was decided that Wisconsin should be represented at the Pacific International. As was to be expected the Asylum herd was well represented in the exhibit, furnishing 13 of the 26 animals. The Grand Champion bull, Johanna Rag Apple Pabst, was owned by J. E. Pick of Hartford. There were three representatives from the Carnation Milk Farms, two from the Pabst Holstein Farms, two owned by Philip Linker, Hartford; and one animal came from the herds of Christ and Hackbarth, Ft. Atkinson; John Zoberlin, Plymouth; Agricultural School Farm, Wauwatosa; H. E. Dickenson, Oconomowoc; and G. Keys, Richland Center.

The special train was made up of fourteen cars of which ten contained horses and ponies, Holsteins being in the other four cars. The Wisconsin cattle occupied two cars and the other two were taken up by cattle owned by the Carnation Farms returning from their eastern show trip. The Milwaukee and St. Paul Railroad carried the train to St. Paul where it was transferred to the Great Northern. This railroad had scheduled seven stops along the line and had well advertised this fact so that many people had a chance to see three of the National Dairy Show champions, as well as other blue ribbon winners both cattle and horses.

At Fargo, Grand Forks and Devils Lake, N. D. and at Malta, Havre, Great Falls and Kalispel, Montana, the train was stopped and some, if not all of the cattle were unloaded and talks were given to the sight-seers. Sunday was spent at

CLUB HELPED THE JUNIORS

Henry Weiner of Columbus was elected president of the Columbia County Holstein Breeders' Club at their annual meeting held at Portage, Wis., Nov. 28. Curtis Ellickson, Arlington was elected vice-president and Frank I. Dourna, Poynette, secretary-treasurer.

W. W. Curtis, Rio, and R. J. Williams, Cambria were elected directors for two years. The secretary's report given by S. C. Cushman, Wyocena, showed that 33 members had paid up their dues and were active members of the association for the year.

The association has sponsored a calf club of 33 members during the past season. Members of this club were second, sixth and eighth with their Holstein calves in junior club classes at the Wisconsin State Fair.

LEAGUE BUYS MORE SHIPPING STATIONS

The properties and business of the Clover Farms, Inc., an old established high class milk distributing company, has been purchased by the Dairymen's League Coöperative Association, Inc. The formal transfer took place December 16.

The League will sell the city holdings and retail business to the Bordens and will retain the seven New York State milk receiving stations which are situated at Homer, Solon and Preble, Cortland County; Afton, Chenango County; Rock Glen, Wyoming County, Shekomeko, Dutchess County; and Jacksonburg, Herkimer County. Four of these plants have grade "A" permits.

The Clover farms started business November, 1897. The first day's deliveries consisted of sixty-eight quarts. The company now has 160 delivery routes.

Since 1913 milk from the establishment at Homer has been supplied to infant feeding stations operated by the New York City Department of Health.

Murray A. Miller

R. D. 3,

Milton, Pa.

Great Falls where all the cattle and horses were unloaded and a real little fair was staged at a large sale barn near-by. Talks were given by various members of the party as the prize animals were led through the ring. More than 5,000 people saw them there, due to the special invitation sent out by the Great Falls Chamber of Commerce.

"This special train was," Mr. White says, "one of the biggest pieces of advertising that has been pulled off for some time. It certainly gave a great number of people a chance to see the best cattle and horses of the Middlewest and from the cattle standpoint the best of all was that so many appeared greatly interested in the dairy stock."

The trip started Thursday, October 16, and Portland was reached Tuesday, October 21. In order to take care of the stockmen the Great Northern had a Pullman day coach and diner attached to the train, an action which was greatly appreciated.

At Portland the train was met by six planes which escorted it to the show grounds and movies were taken as the stock was unloaded. As our readers know, the buildings of the Pacific International Exposition were burned July 23. Mr. White says that in 55 days the new buildings, covering eleven and one-half acres, were completed and turned over to the show directors the day the exposition opened.

Mr. White expresses his appreciation for the treatment given the cattlemen and their charges by the Manager O. M. Plummer. He gives a very comprehensive report of the show but as a report was given in the November 22 issue of the BREEDER AND DAIRYMAN we will not repeat it. According to Mr. White competition was very keen in most of the classes. He especially praises the mature cow class and the class for two-year-olds and in conclusion says:

"While most of the blue ribbons came to Wisconsin one doesn't want to get the impression that the show was an easy one for them. The Oregon breeders had some fine cattle which should have been better conditioned. Many of the showmen were beginners and should be given a lot of credit for their efforts. They are going to profit by the showing made by the Wisconsin cattle and will give a real battle to any other herd or herds that show at the Pacific International in the future. This is going to be one of the real shows of the country and more breeders of all breeds should make an effort to attend."

Roy says that they had a wonderful trip and that after they returned to Wisconsin, the Jefferson people staged a real homecoming celebration. After a few days, Mr. White returned to his home in Waterloo, Ia., from whence his letter was written.

DAIRYMEN HEAR GOOD TALKS

The annual meeting of the Schuylkill County Dairymen was held at Pottsville, Penna., November 25 and 26. Dr. Harry Turner of the Pennsylvania Bureau of Animal Industry spoke on the Prevention and Control of Contagious Abortion in Cattle and gave suggestions on the prevention and control of tuberculosis. The doctor gave advice as to the best procedure to follow when a cattleman wants his stock tested.

R. H. Omstead of State College talked on the feeding of cattle and gave valuable suggestions for increasing production. He said that the better kind of cattle would not cost much more to keep but whatever greater expense was incurred was more than made up by large production. He recommends forming of cow testing associations and spoke both morning and afternoon on these subjects.

CRAIG RE-ELECTED

Joseph A. Craig of Janesville, Wis., was re-elected president of the Rock County Holstein Breeders' Association by the board of directors at the annual meeting December 2. The other officers are: vice-president E. P. Coon, John Jones, Milton Junction, secretary; and Archie Reid, Jr., Janesville, treasurer. Directors elected to succeed those whose term expired were George Shoemaker, Janesville; Fred Milbrandt, Evansville; Earl Ward and John L. Fisher, Janesville.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

Jan. 14-15—Syracuse, N. Y. Fifth Annual Sale New York Holstein Ass'n.
January 22, 1925—Denver, Colo., Colorado Holstein-Friesian Association Annual Consignment Sale.
Feb. 17—Waterloo, Ia., Sherman Bros. Dispersal.
March 10—Waterloo, Ia., Iowa Spring Guaranty Sale.

FROM THE E. H. WITTER ESTATE

For years the late E. H. Witter consigned animals from his accredited herd to the sales of the New York Holstein-Friesian Association and at the 1925 Guarantee Sale held under the auspices of this club at the Coliseum at the State Fair Grounds, Syracuse, there will be a nice consignment sent by the executors of the E. H. Witter Estate. The Witter herd has been established over twenty-two years and has been on the accredited list for several years.

In this consignment to the State Sale is Baby Walker Butter Boy. Her dam, Baby Era Butter Boy, is also the dam of Era Butter Boy Pontiac, 28.03 lb. butter, 642 lb. milk in a week. It is interesting to note that Baby Walker Butter Boy is a granddaughter of Era 3d, the first purebred Holstein owned by E. H. Witter. Twenty-two years ago he traded a grade animal and a flock of poultry for Era 3d, then a young heifer and from her has descended many of the best animals in the present Witter herd.

Baby Walker Butter Boy is a daughter of Czar Walker Clothilde formerly at the head of the Witter herd. He was by the noted A. R. O. sire, Czar Walker, and his dam, Bonalevo Clothilde Walker, has a seven-day record of 666.7 lb. milk 31.70 lb. butter and a ten months record of 20,225 lb. milk, 953.50 lb. butter. During the making of this record she carried calf 212 days. She was by King Quality from a 22 lb. daughter of Admiral Walker Pietertje. Czar Walker has ninety percent or more of the same blood as Bonalevo Walker Quality Rosa, 1,040.38 lb. butter in a year.

Another animal in the Witter consignment is a handsome four-year-old heifer from Zerma Ormsby Alcartra, 436.2 lb. milk, 21.33 lb. butter in seven days as a three-year-old. She is a daughter of Zerma Pietertje Alcartra, whose sire is King Segis Pontiac Alcartra and whose dam is a 25 lb. daughter of a 28 lb. cow.

The Witter farm is at Cuba, Allegany County, N. Y., and the farm itself is right by the Cattaraugus County line. The herd has always been run from the standpoint of dairy production, animals coming from this herd have made good in other herds.

GLENN GERMAN'S CONSIGNMENT

The 1925 Guarantee Sale of the New York Holstein-Friesian Association will be held in the Coliseum at the State Fair Grounds, Syracuse, N. Y., on January 14 and 15. To this sale Glenn German of Cuba, is consigning his handsome cow, Dorothy Francine Johanna Lad. This cow as a three-year-old made an official record of 476.4 lb. milk, 20.36 lb. butter in seven days.

Her dam Francine Pietertje Colantha, tested for the first time when ten years and ten months old, made a seven-day record of 491.1 lb. milk, 18.69 lb. butter and

AND ON THE ACCREDITED LIST

PASTURE CORNER ON MERRYALL FARMS

These cows and others in the herd have semi-official records, made under farmer conditions that range up to 20,500 lb. milk and from 600 lb. to over 800 butter. They are bred to bulls with 30 lb. blood in every line of their pedigrees. Segis Pietertje Prospect breeding. Prices reasonable. Quality high.

A. L. BURLINGTON, Bradford Co., Wyalusing, Pa.

she has another tested daughter with 535.5 lb. milk, 23.05 lb. butter as a four-year-old.

Dorothy Francine Johanna Lad is from a granddaughter of Brookside Pontiac Paul while her sire is by King Korndyke Sadie Vale 8th and from a daughter of Colantha Johanna Lad 8th, thus combining the blood of two great sires noted for the producing capacity of their daughters and granddaughters.

The German herd has been accredited several years and has been established more than a dozen years. Glenn C. German purchased the farm and three head of purebred Holsteins—two two-year-olds and one yearling from an uncle and has raised his present herd from this foundation stock, introducing new blood by the means of good herdsires.

For a number of years this herd was enrolled in the Allegany County Dairy Improvement Association where the accounts show that the cattle were profit earners, making substantial returns over the cost of feed.

Two remarkably well bred bulls are in use in this herd. King Madaline Butter Boy is from a tested daughter of King Pontiac Johanna, and Madaline De Kol. 646.3 lb. milk, 31.23 lb. butter in seven days. King Pontiac Johanna was a son of King of the Pontiacs from Johanna Mechthilde De Kol, one of the handsome daughters of Hengerveld De Kol and dam of two 31 lb. cows. The sire of King Madaline Butter Boy is from Briar Pontiac Daisy, a 30 lb. daughter of Pontiac Jewel Butter Boy and was by the noted bull King Pontiac Hengerveld Fayne whose sire was King of the Pontiacs and whose dam made 34.33 lb. butter in seven days, 1,129.37 lb. butter in a year.

The younger herdsire in service in the German herd is Oatka Pontiac Ormsby. His sire is Allamuchy Ormsby Pauline, a son of King of the Ormsbys and his dam, Oatka Pontiac Korndyke, made 30.78 lb. butter in seven days as a four-year-old.

ECHOES FROM THE SALES

There were twenty-eight bulls sold at the Outagamie-co Holstein Breeders Association at Appleton, Wis., December 3. The average age was 9.7 months and the average price was \$73. The highest price was \$165 and the lowest price, \$50. None of the bulls were over thirteen months old.

George Chelquist's Holstein herd was dispersed at Canonsburg, Pa., November 29. The crowd was small but the prices were considered fairly satisfactory. The highest price paid for a cow was \$225. The animals in milk averaged \$105 and the entire herd with calves included averaged \$87.59.

The purebred Holstein herd of Clyde Shade of Ottawa, Kans., was dispersed late in November. The average price for the thirty-one head was \$116.50. Five head were purchased for the State Hospital herd at Osawatimie, including the highest priced animal of the sale, a cow for which \$295 was paid.

The Washington County Holstein Association held their annual sale at West Bend, Wis., November 26. The most noteworthy thing about the event was the difference cow testing association records made in the prices for the animals. The average for registered cows with cow testing association records was \$135; without records, only \$86. Registered heifers, a year old from dams with cow testing association records averaged \$86; those from untested cows averaged \$76. Grades with cow testing association records averaged \$114 and grades without cow testing association records averaged \$70.

The Eastern Iowa State Breeders Sale held at Waterloo, Ia., December 2, resulted in ninety-seven head averaging \$95. A number of young calves went from \$12.50 to \$40 and this of course brought down the average. The top price for a cow was \$225 which H. W. Bacon, of Hazleton, paid for a cow consigned by Ed. Eitel & Son, of Hawkeye. The top of the sale was \$280 for a young son of K. P. O. P. Tidy consigned by Frank C. Lee, Arlington, and purchased by G. C. Van Nice, of Vinton. T. J. Weakley of Clarksville, Mo., took home a carload of Iowa Holsteins and he bid on a large number of animals including the calf which topped the sale and purchased a number of good ones.

At the Fond du Lac Holstein Breeders Association sale held November 24 and 25, ninety head of all ages were sold for an average price of \$72.75. Bluebird Segis Ormsby Count, an eleven months old bull brought \$200, the top price. He was consigned by S. H. Bird of South Byron, Wis., and purchased by H. W. Betry & Son of Berlin, Wis. Two females each brought \$180. Maple Grove Fayne Ormsby, consigned by C. H. Braatz, of Brandon, was purchased by Bassett & Bushweiler, of Fond du Lac. Bess Johanna De Kol Ormsby, consigned by S. H. Bird, was purchased by Edgar H. Zobel of Ripon. The consignments were from twenty-four herds. Had there been more buyers present, prices would undoubtedly have been higher.

FOR SALE—Yearling Holstein bull; cow to freshen first week in January, \$135, immediate sale. Accredited. MRS. I. T. SHADE, Harris Station, Ohio.

Cow Testing Association Reports

OCTOBER TESTING IN VIRGINIA

By L. P. ENMERICK,
Assistant Dairy Husbandman

During October there were fourteen active Cow Testing Associations with 259 herds and 6,685 cows reported on test. Of this total 471 cows produced over 40 lbs. butterfat, and 115 over 50 lbs. butterfat.

The high herd for the month was the herd of twelve grade Guernseys owned by T. D. Burfoot, a member of the Henrico Cow Testing Association. This herd averaged, including dry cows, 760 lbs. milk and 36.5 lbs. butterfat. Mr. H. L. Butler & Sons herd which has recently been reduced to six purebred Holsteins averaged 1,171 lbs. milk and 45.2 lbs. butterfat, but a Virginia Cow Testing Association ruling requires that a herd must have at least eight cows to be considered for high herd. The Butler herd is enrolled in the Culpeper Cow Testing Association. Of the ten high herds, six were grade or purebred Holstein herds, three were grade or purebred Guernsey herds and one was a purebred Jersey herd.

The high cow for the month was a grade Holstein cow owned by J. S. Morris of Charlottesville, Va., a member of the Albemarle Cow Testing Association. Her record for the month was 1,551 lbs. milk and 81.1 lbs. butterfat. Of the ten high cows, six were grade Holsteins, two were purebred Guernseys, one a grade Jersey, and one a purebred milking Shorthorn.

The average production of all cows, including 936 dry cows, was 483 lbs. milk and 20.7 lbs. butterfat. The Loudoun Association had the highest butterfat production, the 436 cows in this association, including 42 dry cows, was

24.5 lbs. butterfat. The Fairfax County No. 1 Association had the highest average milk production. The 680 cows in this association, including dry cows averaged 588 lbs. milk.

With winter approaching, the Cow Testing Association members are weeding out their unprofitable cows as is shown by the fact that 114 unprofitable cows were sold during the month. Five purebred bulls and thirty-seven purebred cows were bought by members during the month.

HOLSTEIN HERD HAS BEST AVERAGE

The high herd in the Muskego-Vernon Cow Testing Association which completed its year of operation on November 15th, belongs to Benjamin Peacock and Sons and consists of thirteen grade and purebred Holsteins which averaged 12,406 lb. milk and 423.2 lb. fat.

B. A. Clark's herd of 23 grade and purebred Holsteins averaged 11,420 lb. milk and 404.3 lb. fat.

The leader for the year is a purebred Holstein with 17,425 lb. milk, 685 lb. fat. She is owned by A. J. Paul of Hales Corners, Wisconsin. Second to her is another purebred with 17,446 lb. milk and 600.9 lb. fat. Her owner is Hugh Christian of Big Bend. A grade Guernsey is third and the fourth and fifth cows are owned by Peacock and Son. They are both purebred Holsteins and their records are 553.2 lb. fat and 540.6 lb. fat.

Three herds averaged over 400 lb. fat. Eighteen of the 26 tested herds averaged over 300 lb. and the 404 cows completing the year's work averaged 8,651 lb. milk, 338 lb. fat.

PENNSYLVANIA TESTING

In Pennsylvania during October, 8,524 cows were tested in the 26 associations. Of this number 157 exceeded 50 lb. fat and 383 produced 1,200 lb. or more of milk. During the month 37 cows were sold as being unprofitable and nine bulls were purchased. The two highest milk producers were registered Holsteins, owned by A. C. Yoden of Mifflin County. One is credited with 2,508 lb. and the other with 2,303 lb. The third cow on the list, another purebred Holstein, averaged 2,188 lb. She is enrolled in the Butler County association and is owned by Alex Martin of Bakerstown.

Registered Holsteins are first and third for butterfat production. In first place is a cow owned by Albert Sarig of Bowers, with 87.3 lb. fat. A Jersey is next with 80.4 lb. and a purebred owned by Wm. H. Landis, East Greenville, is third with 77.6 lb. The Montgomery County association has the highest ten cows, they averaging 61.7 lb.

BEST IOWA PRODUCER

Granny, a four-year-old grade Holstein heifer, owned by Virgil Cook of Goodell, Iowa, led the state for milk production honors last year. Granny produced 20,889 lb. milk and 738.6 lb. fat.

Granny milked 335 days. The total value of her production was \$336.85, and the feed cost \$131.34, leaving a net profit of \$227.51. Her feed throughout the year consisted of silage, clover, green corn, soybean hay, corn and cob meal, cracked corn, oats, bran and oil meal, as the season dictated.

Mr. Cook is a member of the Wright County cow testing association, which is just starting on its second year of work.

HOLSTEIN HEADS VIRGINIA C. T. A. WORK

By L. P. ENMERICK

During the past twelve months, November, 1923-October, 1924, there have been thirteen active Cow Testing Associations in Virginia, with 247 herd and 5,996 cows, or an average of twenty-four cows to the herd. The average production of these 5,996 cows was 6,749 lbs. milk and 279.2 lbs. butterfat. This is an increase of over 500 lbs. milk and over 20 lbs. butterfat per cow above the production of the previous year. Contrast this production with the production of the average Virginia cow which produces 2,511 lbs. milk and about 100 lbs. butterfat in a year.

There was an average of 592 cows per month which produced over 40 lbs. butterfat, and an average of 163 cows per month with a production of over 50 lbs. fat. The highest producing month of the year was May when all cows, including dry cows, averaged 667 lbs. milk and 27.1 lbs. butterfat. The lowest producing month of the year was October when all cows, including dry cows, only averaged 483 lbs. milk and 20.7 lbs. butterfat.

During the year, 1,044 unprofitable cows were sold, and 56 purebred bulls and 205 purebred cows were bought by the members of Virginia Cow Testing Associations.

Four different months of the year the high cow produced over 100 lbs. butterfat for the month. In eleven of the twelve months of the year the high cow for the month was a purebred or grade Holstein. A purebred Guernsey led the state one month. Purebred or grade Holstein herds led the state eight months, purebred Jerseys led the state two months, and grade Guernseys led the state two months.

The high association for these twelve months was the Fairfax County No. 1 Cow Testing Association. This is the fourth year in succession that this As-

sociation has led the state. The production for the year (November, 1923-October, 1924) was 7,682 lbs. milk and 309.0 lbs. butterfat for the 626 cows in the association. The highest producing association in milk during this period was the Henrico Association. The 590 cows in this Association averaged 7,776 lbs. milk and 295.1 lbs. butterfat.

The highest producing cow of the year was Dijkstra Pontiac Jeanetta; this four-year-old purebred Holstein, owned by H. L. Butler & Sons of Culpeper, Va., a member of the Culpeper C. T. A., produced 22,937 lbs. milk and 841.1 lbs. butterfat during the year.

High herd honors also went to the Butler Herd. This herd of nine purebred Holsteins averaged 14,268 lbs. milk and 520.3 lbs. butterfat. Last year this herd averaged 15,083 lbs. milk and 519.34 lbs. butterfat. Mr. Butler's herd has been largely developed by his sons, who developed the herd from calves they secured in calf club work.

GREAT NORTHERN PROMOTES DAIRYING

The Great Northern railway has purchased a carload of purebred Holstein bulls which will be given to farmers along the lines in Montana and South Dakota. Farmers' meetings for the discussion of dairying will be held at each community where a bull is to be placed. A local committee will designate the farmer to whom the bull is to be given and it is to be his own property but he has to keep it in his own herd for the use of his neighbors at a nominal fee. The contract which he signs provides that the bull shall not be sold or otherwise disposed of within three years, but at the end of that period may be exchanged for another bull of like breeding.

"Were you born with a silver spoon in your mouth?"
"No, I was born owing \$89 of the world's debt."

MONTGOMERY COUNTY ASSOCIATION

The Montgomery County Cow Testing Association ended its seventh month with November. During the month 26 herds were tested with 319 cows in milk. No less than 36 cows produced more than 1,200 lb. milk, 37 exceeded 40 lb. fat and 16 made 50 or more lb. fat.

The highest butterfat producing cow in the association was Green Hill Aaggie Segis Hengerveld 833424, a three-year-old purebred Holstein owned by Wm. H. Landis, East Greenville, Pa. She produced 1,875 lb. milk with a test of 4.5% or 84.3 lb. butterfat. She was also the highest producing cow in the association for the month of October. She was likewise third highest butterfat producer in the state for that month, among 8,524 cows in 26 associations. The two highest butterfat producing cows for the month are daughters of sires owned by the Montgomery County Holstein Bull association.

Mr. Landis must have a good herd for the four leading producers are owned by him as well as the sixth and seventh on the list. One of his two-year-olds is credited with 66.65 lb. fat and 1,581 lb. milk. As might be expected, the Landis herd is first for average production, the 19 cows averaging 1,147 lb. milk, 42.02 lb. fat. Carl A. Sager is tester of this association.

SARCASTIC WAS IN FRONT

Sarcastic, a registered Holstein cow belonging to H. E. Long of Landisville, Pa., was the best producer of butterfat in the Garden Spot Cow Testing Association during the past year. Sarcastic produced 10,095 lb. milk, 469.5 lb. butterfat. Blackie, a grade Holstein owned by Abner Risser, of Lancaster, led in milk production with 12,865 lb. milk, her butterfat being 463.6. The Garden Spot Association operates in Lancaster County, Pa.

Cow Testing Association Reports

OCTOBER TESTING IN VIRGINIA

By L. P. EMMERICK,
Assistant Dairy Husbandman

During October there were fourteen active Cow Testing Associations with 259 herds and 6,685 cows reported on test. Of this total 471 cows produced over 40 lbs. butterfat, and 115 over 50 lbs. butterfat.

The high herd for the month was the herd of twelve grade Guernseys owned by T. D. Burfoot, a member of the Henrico Cow Testing Association. This herd averaged, including dry cows, 760 lbs. milk and 36.5 lbs. butterfat. Mr. H. L. Butler & Sons herd which has recently been reduced to six purebred Holsteins averaged 1,171 lbs. milk and 45.2 lbs. butterfat, but a Virginia Cow Testing Association ruling requires that a herd must have at least eight cows to be considered for high herd. The Butler herd is enrolled in the Culpeper Cow Testing Association. Of the ten high herds, six were grade or purebred Holstein herds, three were grade or purebred Guernsey herds and one was a purebred Jersey herd.

The high cow for the month was a grade Holstein cow owned by J. S. Morris of Charlottesville, Va., a member of the Albermarle Cow Testing Association. Her record for the month was 1,551 lbs. milk and 81.1 lbs. butterfat. Of the ten high cows, six were grade Holsteins, two were purebred Guernseys, one a grade Jersey, and one a purebred milking Shorthorn.

The average production of all cows, including 936 dry cows, was 483 lbs. milk and 20.7 lbs. butterfat. The Loudoun Association had the highest butterfat production, the 436 cows in this association, including 42 dry cows, was

24.5 lbs. butterfat. The Fairfax County No. 1 Association had the highest average milk production. The 680 cows in this association, including dry cows averaged 588 lbs. milk.

With winter approaching, the Cow Testing Association members are weeding out their unprofitable cows as is shown by the fact that 114 unprofitable cows were sold during the month. Five purebred bulls and thirty-seven purebred cows were bought by members during the month.

HOLSTEIN HERD HAS BEST AVERAGE

The high herd in the Muskego-Vernon Cow Testing Association which completed its year of operation on November 15th, belongs to Benjamin Peacock and Sons and consists of thirteen grade and purebred Holsteins which averaged 12,406 lb. milk and 423.2 lb. fat.

B. A. Clark's herd of 23 grade and purebred Holsteins averaged 11,420 lb. milk and 404.3 lb. fat.

The leader for the year is a purebred Holstein with 17,425 lb. milk, 685 lb. fat. She is owned by A. J. Paul of Hales Corners, Wisconsin. Second to her is another purebred with 17,446 lb. milk and 600.9 lb. fat. Her owner is Hugh Christian of Big Bend. A grade Guernsey is third and the fourth and fifth cows are owned by Peacock and Son. They are both purebred Holsteins and their records are 553.2 lb. fat and 540.6 lb. fat.

Three herds averaged over 400 lb. fat. Eighteen of the 26 tested herds averaged over 300 lb. and the 404 cows completing the year's work averaged 8,651 lb. milk, 338 lb. fat.

PENNSYLVANIA TESTING

In Pennsylvania during October, 8,524 cows were tested in the 26 associations. Of this number 157 exceeded 50 lb. fat and 383 produced 1,200 lb. or more of milk. During the month 37 cows were sold as being unprofitable and nine bulls were purchased. The two highest milk producers were registered Holsteins, owned by A. C. Yoden of Mifflin County. One is credited with 2,508 lb. and the other with 2,303 lb. The third cow on the list, another purebred Holstein, averaged 2,188 lb. She is enrolled in the Butler County association and is owned by Alex Martin of Bakerstown.

Registered Holsteins are first and third for butterfat production. In first place is a cow owned by Albert Sarig of Bowers, with 87.3 lb. fat. A Jersey is next with 80.4 lb. and a purebred owned by Wm. H. Landis, East Greenville, is third with 77.6 lb. The Montgomery County association has the highest ten cows, they averaging 61.7 lb.

BEST IOWA PRODUCER

Granny, a four-year-old grade Holstein heifer, owned by Virgil Cook of Goodell, Iowa, led the state for milk production honors last year. Granny produced 20,889 lb. milk and 738.6 lb. fat.

Granny milked 335 days. The total value of her production was \$336.85, and the feed cost \$131.34, leaving a net profit of \$227.51. Her feed throughout the year consisted of silage, clover, green corn, soybean hay, corn and cob meal, cracked corn, oats, bran and oil meal, as the season dictated.

Mr. Cook is a member of the Wright County cow testing association, which is just starting on its second year of work.

HOLSTEIN HEADS VIRGINIA C. T. A. WORK

By L. P. EMMERICK

During the past twelve months, November, 1923-October, 1924, there have been thirteen active Cow Testing Associations in Virginia, with 247 herd and 5,996 cows, or an average of twenty-four cows to the herd. The average production of these 5,996 cows was 6,749 lbs. milk and 279.2 lbs. butterfat. This is an increase of over 500 lbs. milk and over 20 lbs. butterfat per cow above the production of the previous year. Contrast this production with the production of the average Virginia cow which produces 2,511 lbs. milk and about 100 lbs. butterfat in a year.

There was an average of 592 cows per month which produced over 40 lbs. butterfat, and an average of 163 cows per month with a production of over 50 lbs. fat. The highest producing month of the year was May when all cows, including dry cows, averaged 667 lbs. milk and 27.1 lbs. butterfat. The lowest producing month of the year was October when all cows, including dry cows, only averaged 483 lbs. milk and 20.7 lbs. butterfat.

During the year, 1,044 unprofitable cows were sold, and 56 purebred bulls and 205 purebred cows were bought by the members of Virginia Cow Testing Associations.

Four different months of the year the high cow produced over 100 lbs. butterfat for the month. In eleven of the twelve months of the year the high cow for the month was a purebred or grade Holstein. A purebred Guernsey led the state one month. Purebred or grade Holstein herds led the state eight months, purebred Jerseys led the state two months, and grade Guernseys led the state two months.

The high association for these twelve months was the Fairfax County No. 1 Cow Testing Association. This is the fourth year in succession that this As-

sociation has led the state. The production for the year (November, 1923-October, 1924) was 7,682 lbs. milk and 309.0 lbs. butterfat for the 626 cows in the association. The highest producing association in milk during this period was the Henrico Association. The 590 cows in this Association averaged 7,776 lbs. milk and 295.1 lbs. butterfat.

The highest producing cow of the year was Dijkstra Pontiac Jeanetta; this four-year-old purebred Holstein, owned by H. L. Butler & Sons of Culpeper, Va., a member of the Culpeper C. T. A., produced 22,937 lbs. milk and 841.1 lbs. butterfat during the year.

High herd honors also went to the Butler Herd. This herd of nine purebred Holsteins averaged 14,268 lbs. milk and 520.3 lbs. butterfat. Last year this herd averaged 15,083 lbs. milk and 519.34 lbs. butterfat. Mr. Butler's herd has been largely developed by his sons, who developed the herd from calves they secured in calf club work.

GREAT NORTHERN PROMOTES DAIRYING

The Great Northern railway has purchased a carload of purebred Holstein bulls which will be given to farmers along the lines in Montana and South Dakota. Farmers' meetings for the discussion of dairying will be held at each community where a bull is to be placed. A local committee will designate the farmer to whom the bull is to be given and it is to be his own property but he has to keep it in his own herd for the use of his neighbors at a nominal fee. The contract which he signs provides that the bull shall not be sold or otherwise disposed of within three years, but at the end of that period may be exchanged for another bull of like breeding.

"Were you born with a silver spoon in your mouth?"

"No, I was born owing \$89 of the world's debt."

MONTGOMERY COUNTY ASSOCIATION

The Montgomery County Cow Testing Association ended its seventh month with November. During the month 26 herds were tested with 319 cows in milk. No less than 36 cows produced more than 1,200 lb. milk, 37 exceeded 40 lb. fat and 16 made 50 or more lb. fat.

The highest butterfat producing cow in the association was Green Hill Aaggie Segis Hengerveld 833424, a three-year-old purebred Holstein owned by Wm. H. Landis, East Greenville, Pa. She produced 1,875 lb. milk with a test of 4.5% or 84.3 lb. butterfat. She was also the highest producing cow in the association for the month of October. She was likewise third highest butterfat producer in the state for that month, among 8,524 cows in 26 associations. The two highest butterfat producing cows for the month are daughters of sires owned by the Montgomery County Holstein Bull association.

Mr. Landis must have a good herd for the four leading producers are owned by him as well as the sixth and seventh on the list. One of his two-year-olds is credited with 66.65 lb. fat and 1,581 lb. milk. As might be expected, the Landis herd is first for average production, the 19 cows averaging 1,147 lb. milk, 42.02 lb. fat. Carl A. Sager is tester of this association.

SARCASTIC WAS IN FRONT

Sarcastic, a registered Holstein cow belonging to H. E. Long of Landisville, Pa., was the best producer of butterfat in the Garden Spot Cow Testing Association during the past year. Sarcastic produced 10,095 lb. milk, 469.5 lb. butterfat. Blackie, a grade Holstein owned by Abner Risser, of Lancaster, led in milk production with 12,865 lb. milk, her butterfat being 463.6. The Garden Spot Association operates in Lancaster County, Pa.

VALUABLE CALIFORNIA HERD

E. S. Hass and M. E. Meade own and operate the El Colmo herd of purebred Holstein cattle at Norwalk, Cal. It will be remembered that nearly two years ago Mr. Hass purchased the herd owned by Mrs. Anita Baldwin of Santa Anita. This purchase included the noted bull King Korndyke Pontiac Acme for which Mrs. Baldwin is said to have paid \$41,000. Many of the animals in this herd have tremendous yearly records. Anokia Princess Pontiac has a record of 1,095.35 lb. fat, 27,389.5 lb. milk made in a year as a senior two-year-old. This was world's milk record in that class at time of making. She has a son by King Korndyke Pontiac Acme and the ten nearest yearly tested dams of this young fellow averaged 24,299 lb. milk, 1,024.3 lb. butter. The herd contains two young heifer twins, full sisters to the great show bull and show sire, Prince Aaggie of Berylwood.

Their are now sixty milkers at El Colmo Ranch. The milk from these is bottled on the ranch and retailed in Whittier as grade A raw milk. The herd has passed a clean tubercular test and is considered one of the best in southern California.

BEST JUDGE AT THE NATIONAL

Charles W. Craig of Oconomowoc, Wis., has been awarded a gold medal by the National Holstein-Friesian Association for being the best judge on Holsteins, out of a class of 113 farmers, at the National Dairy Show held in Milwaukee.

CLEANING UP

The high cow for October in the Greenleaf Cow Testing Association was owned by John W. Coenon. This record Holstein produced 57.9 lb. fat, 1,379 lb. milk. A herd of ten registered Holsteins owned by Joseph Hosken of De Pere, Wis., was the highest herd with an average of 26.2 lb. fat, 620 lb. milk. The best two-year-old was a grade Holstein with 41.5 lb. fat.

PENNSYLVANIA FARM PRODUCTS SHOW

January 19-20-21-22-23 has been selected for the staging of the Annual Pennsylvania Farm Products Show to be held in Harrisburg.

A number of new features will be added. The premiums have been increased and the prize money will be \$5,250 or \$1,780 more than the 1924 amount.

The show will be staged in four large buildings conveniently located in the central portion of Harrisburg. Twenty-five statewide agricultural organizations have already intimated their intention to cooperate and will hold meetings in Harrisburg during show week. This includes the State Federation of Holstein-Friesian Clubs. Reduced fares on all principal railroads has been arranged for by the Pennsylvania State Chamber of Commerce, reports Manager H. E. Klugh.

SELECT PRIZE WINNERS

Ten choice Holsteins were shipped from Auburndale, Wisconsin, October 9 to Ontonagon, Mich. to become part of the county herd. Each of the animals is said to have won one or more blue ribbons at a state or county fair.

Two five-year-olds came from the herd of E. E. Royce, of Marshfield; two three-year-old heifers from the John Wuehrich, Greenwood; a two-year-old from the herd of C. F. Schroeder & Sons, Marshfield; two two-year-old heifers from J. C. Kieffer, Auburndale, and two from the herd of George Kieffer, also of Auburndale. The total price was \$3,150 for the ten head, an average of \$315. Some of these animals will be seen at the fairs next year.

HOLSTEIN BULL BOUND FOR SPAIN

Governor Matador is the name of a fine Holstein bull sold by the Carnation Farms to Joaquin Velasco of Madrid, Spain. He started on his long journey from Oconomowoc to Madrid, November 5th.

WISCONSIN LEADS FOR CHEESE

A recent survey by the United States Department of Agriculture shows that 70% of all cooperative cheese factories in the United States are in Wisconsin, that 60% of farmers belonging to such enterprises are located in Wisconsin and that 70% of the business handled in 1923 by cooperative associations for marketing cheese was transacted by Wisconsin organizations.

In 1841 a Wisconsin farmer persuaded his neighbors to turn their surplus milk over to him to make into cheese, but the oldest living organization from which the department is receiving reports is the Cayadutta Cheese Factory at Fonda, N. Y. This association was formed about 1863 and in 1865 was making cheese from the milk of 845 cows. A total of 323,426 lbs. cheese was made that year which was marketed in 23 lots with prices ranging from 13½ to 18¼ cents a pound. Sales by this association in 1923 amounted to \$29,000.

The cooperative cheese factory is comparatively a very small enterprise. Eighteen per cent of the local associations reporting are handling business amounting to less than \$20,000 a year; 65 per cent, a business less than \$40,000 and 95 per cent a business of less than \$100,000. The annual turnover of many of the milk marketing associations runs into millions of dollars.

BIG HOLSTEIN BARNS BURNED

The large stock barns of C. G. Keyes near Richland Center, Wis., were destroyed by fire December 2. Flames broke out about midnight in the horse barn and rapidly spread to the cattle barn. Before the blaze could be subdued two barns, two large silos, a granary and the ice house were consumed.

The herdsire Sir Pontiac Pauline De Kol, a prize winner at the Wisconsin State Fair, was slightly burned but was rescued although his rescuers had quite a fight to get him out of the building. All the stock was saved with the exception of four horses and three calves. Mr. Keyes estimates the loss at more than \$30,000, most of which is covered by insurance.

WILL HAVE HOLSTEIN HERD

The board of supervisors in session at Richland Center, Wis., voted to replace the shorthorn herd now at Richland County Farm by Holsteins. Supt. Charles Snyder announces that about 25 good grade cows will be secured to begin the building of the herd and he is now on the lookout for a good Holstein bull. The intention is to get gradually into purebreds and at some future time have an entirely purebred herd.

BIG RECORDS BACK OF HIM

King Ormsby Korndyke De Kol now heads the Holstein herd at the Wisconsin State Reformatory. His dam made 1,146 lb. butter in 365 days when she was four and one-half years old and she made 24.34 lb. butter in a week eight months after freshening.

Colantha Sir Pontiac Aaggie Abby

the junior herdsire at

Chenango Valley Stock Farm

is backed by big producers for the official seven day records of his seven nearest dams average 32.31 lb. butter, 591.3 lb. milk and his fifteen nearest dams average 31.86 lb. butter, 605.5 lb. milk.

Cows and heifers of regal backing bred to this grand young bull at reasonable prices.

HILLSIDE AGAIN LEADS

It's a rare season when the famous breeding establishment at Hillside Farms, owned by J. N. and W. H. Conyngham of Wilkes-Barre, does not furnish a mark for other state record makers.

And the present season offers no exception. Under the handling of that peer of herdsmen, D. P. Honeywell, Hillside Farms has just brought out the youngest thirty-pound heifer ever developed in Pennsylvania in Hillside Elizabeth Ormsby. Freshening with first calf at three years and eleven days this record breaking youngster started out immediately on her sensational production, milking the first day more than 50 lb. and increasing this yield until she averaged to produce more than 64 lb. milk a day for the week and attaining 30.73 lb. butter for the seven-day period.

Developing the youngest 30 lb. Holstein in the state gives the Hillside Farms the unique position of holding the two extreme records on 30-pounders in Pennsylvania. In Hillside Pietje Honora this herd also holds the state record for the oldest cow to attain 30 lb. butter in seven days. To develop the youngest and also the oldest animals in the Keystone Commonwealth to qualify in the coveted 30 lb. class is a distinction to be envied. Both were fitted and handled by "Del" Honeywell who is known wherever the great Holstein cow has attained prominence.

The Hillside herd gives proof of what intelligent and constructive breeding will do. To begin with, it is one of the oldest herds; and one of its owners years ago was a director in the National Association. Type and production have always been the objective—it being understood, of course that Health was paramount. The blood of the greatest families has always stood at the head of the herd. A son of the famous Pietje 22d (imported in dam) was for years the senior sire. He was followed by a 33-lb. son of Colantha Johanna Lad, who in turn was followed by a 33-lb. son of King of the Pontiacs. The latter bull sired the new 30-lb. first calf heifer, which already gives him two 30-lb. daughters in heifer form, in addition to an imposing list of two-year-olds from 20 to 25 lb. as well as three-year-olds up to 29½ lb.

Prepotency has always been a significant characteristic of the Hillside individuals and the sons and daughters of these Holsteins can always be depended to carry on. It is this trait which permits Hillside to blaze the trail of state records. The first 30 lb. animal in the state was developed in this herd in Hillside Annette. Her daughter, Hillside Saxon, twice produced over 32 lb. Then Saxon's junior two-year-old daughter established a state record. Following this, Hillside took the senior two-year-old state record with Pocono Constance. The latter animal as a five-year-old then made 35 lb. in seven days while Hillside Rhododendron, her stablemate was standing beside her in the test barn also making 35 lb.

Last year Hillside brought out another three-year-old in Dottie Akinside with 30 lb. and in Hillside Pontiac Rose this

herd produced a junior two-year-old with more than 25 lb.

Space limits telling the individual triumphs achieved. In passing, it can be added, however, that while record production seems to be synonymous with Hillside, yet type is the first impression that strikes a visitor to this splendid herd. Mr. Honeywell, the superintendent, is an authority on Holstein type and no animal can enter the herd regardless of production records unless the individual scales high in breed characteristics.

WE WOULD LIKE TO VISIT HIM JUST NOW

Daily temperature between 70 and 80 degrees, hundreds of acres of growing head lettuce, and great fields of cotton are reported by the former Pennsylvania breeder, Jay B. Quick, who with Mrs. Quick and daughter are located at Glendale, Arizona.

Mr. Quick, who for a time had charge of the cattle on the farm belonging to the University of Arizona, is now foreman on the Manistee Ranch about nine miles from Phoenix.

Manistee Ranch is owned by a millionaire stock owner and is one of the nicest homes in the Salt River Valley. The ranch consists of 320 acres, part of which extends to the borough limits of Glendale, a town of about 3,000 inhabitants. All the stock on Manistee Ranch are purebreds including Percheron horses, Duroc hogs and a few Jerseys. The owner has large ranges along the border and ships cattle to Manistee Ranch to be fattened. At times part of the feed is stored in two silos of extra size.

The Salt River Valley is under irrigation from the Roosevelt Dam, has a practically tropical climate and is one of the "beauty spots" of the Southwest. Oranges, grapefruit, dates, etc., grow in abundance. Prosperous homes are much in evidence.

In sending in instructions for changing his mailing address, Mr. Quick says he is just as much interested as ever in what the breeders in Pennsylvania and the East are doing and does not want to miss the paper. We are glad to learn from his letter that the Quicks are comfortably located and that Mrs. Quick, on whose account the family moved to the West, is very well in her new home.

HEIFERS HAD TO SWIM

Four heifer calves belonging to Sam Carson of Hermiston, Ore., involuntarily made a record long-distance swim. The heifers strayed away from the herd and fell into a concrete-lined canal. The water was too deep for them to wade and the sides were too steep for them to scale, so the animals had to swim or perish. They were noticed by a farmer nine miles below the Carson place and removed by use of ropes.

Teacher—"Children, can any of you tell me what is the most dangerous part of an automobile?"

Tommy—"Yes, miss, I can! It's the driver."

THE DETROIT CREAMERY HERD

A herd of 900 Holstein, Jersey, and Guernsey cows is owned by the Detroit Creamery and kept on their farm near Mt. Clemens, Michigan. The Detroit Creamery representatives have purchased many of the highest priced animals at leading sales and the investment in the cattle alone runs into big figures.

It is now thirteen years since the first 150 acre farm was purchased. The Creamery Company now owns 2,200 acres. The Walker-Gordon farm was first located on Woodward Avenue, but after a time the Detroit Creamery Company took over the establishment and now Walker-Gordon Certified milk is produced.

At the head of the dairy department is J. W. McWilliams, graduate of the Michigan State Agricultural College. Associated with him is the veterinarian, Dr. L. H. Smith, a graduate of the Ohio State University. The dairy alone calls for a staff of 75 men.

There are eight certified barns each with a capacity of 50 cows and one new barn with 60 cows. The 24 silos hold an average of 175 tons. The yield of milk is 600 quarts daily.

NEW ENRIGHT HERDSIRE

King Colantha Quality, No. 239206, now heads the Edendale herd owned by M. L. Enright, East Grand Forks, Minn. This bull is a son of Colantha Johanna Lad 8th and Bonalevo Quality Walker Pietertje, 35.22 lb. butter in a week, 27-508.2 lb. milk, 1,330.15 lb. butter in a year when over ten years old.

King Colantha Quality was owned by O. M. Hanabarger of Filmore, Ill., but was bred in New York State. Because of ill health, Mr. Hanabarger was compelled to dispose of his herd and although all the daughters of this bull were sold to go to Cuba, 30 head averaging about \$400, Mr. Enright placed this sire at the head of his own great herd.

King Colantha Quality is a well marked bull and in good flesh would weigh about 2,400 pounds. The Enright herd is strong in the blood of Sir Pietertje Ormsby Mercedes and the new bull introduces entirely different blood lines.

LARSEN HERD WINS PRIZES

August 6th part of the Holstein herd owned by H. O. Larsen of Dike, Iowa, left the farm for an extended show trip starting with the Missouri State Fair. They returned October 30th with 304 prize ribbons, banners and silver loving cups. They won 31 championships and grand championships, 131 first prizes, 101 seconds, 27 thirds and 9 fourths. They exhibited at the state fairs of Illinois, Indiana, Tennessee, Kentucky, Virginia, North and South Carolina as well as several other fairs. The animals were in charge of V. E. Larsen. With one exception every animal in the exhibit was bred on the Larsen farm.

HARSHAW BOUGHT A PRODUCER

Echo Sylvia Lipkje, purchased when nearly two years old at the Susquehanna County Breeders Sale by John R. Harshaw of Chenango Forks, N. Y., recently freshened giving her owner a nice heifer calf. In her first lactation period, she produced 8,535 lb. milk in ten and one-half months and she dropped this heifer just twelve months and one week after her first freshening so that she was dry only about six weeks. Mr. Harshaw writes that he expects her to do better than 10,000 lb. this year.

Echo Sylvia Lipkje was bred by B. F. Jones & Son of South Montrose, Pa. Her dam is a 17 lb. junior two-year-old daughter of King Tweede Spring Farm from a 21 lb. daughter of Elmwood De Kol Burke. Her sire was Woodmont Echo Sylvia Champion, the first prize three-year-old bull at the 1922 New York State Fair. His dam, the 30 lb. cow, Butter Boy Empress was grand champion at that fair the year previous.

The Harshaw herd is now accredited. It is headed by Sir Walker Lashbrook Homestead, a son of Sir Walker Segis Homestead from Queen Pontiac Oak Marie, 640 lb. butter, 19,179 lb. milk in ten months as a four-year-old. She was by Aaggie Pontiac Grahamholm Lad and from Hengerveld Oak Marie, 1,016 lb. butter, 25,120 lb. milk in 365 days as a senior four-year-old.

THE START OF A BIG THING

In 1883, former Governor Jeremiah Rusk called attention to the value of the work done at the Wisconsin College of Agriculture and recommended the establishment of a State experiment station. This recommendation resulted in the introduction of a bill favoring a project which, after some opposition, finally passed the legislature.

Professor W. A. Henry appeared before the committee who had charge of the bill, stating the importance of adequate financial aid in order for the experiment station to start right. The work of Professor Henry had also been commended by Governor Rusk.

In 1887 the station was permanently established with Professor Henry as director and in 1891 he was made Dean of the College of Agriculture. When the Professor first came to Madison in June, 1880, the College consisted of a small farm house, a couple of small barns, very little livestock and very few tools.

ROBERTSON SHIPS BULL TO MEXICO

H. E. Robertson of York, Pa., recently shipped one of his show bulls to old Mexico. This bull was exhibited at a number of fairs last fall and was a consistent blue ribbon winner. Mr. Robertson hated to let him go but says he got real money for him. He is a son of Robertson's great herdsire, King Piebe of York.

If You Want Fresh Cows, Springers, Heifers or Young Bulls

BRED IN THE PURPLE, you can secure them in Susquehanna and Wyoming Counties, Pennsylvania, from the following breeders and dairymen whose establishments are within easy driving distance of Tunkhannock, Thompson, or Montrose. *You are invited to inspect these herds and make your own selection.*

COMMERCIAL SALES COMPANY

Dept. C 10 225 W. Huron St. CHICAGO, ILL.
Listed with Dun and Bradstreet

PROFITABLE COW TO OWN

Lester Carpenter of Barron, Wis., is the owner of a purebred Holstein cow that made a record of 914 lb. butter, 23,847 lb. milk in 360 days while enrolled in the Barron Cow Testing Association. This cow is Sunnyhill Lorne Queen Korndyke by King Korndyke Grace De Kol, and from Sunnyhill Lorne Queen Colantha. The value of the product was \$383.34, and the value above cost of feed was \$220.25.

The index to agricultural and manufactured goods prices are about to re-establish "diplomatic relations."

HOLSTEINS HELP REFORM

Association with purebred Holstein cows is helping to reform prisoners at the Detroit House of Correction. A 1,200 acre farm is worked entirely by the prisoners of which there were 214 on hand the middle of October. Captain Edward Denniston, who is superintendent, says that in three years time there has only been three attempts to escape, despite the fact that there is no bar or lock visible to keep the prisoners confined.

The farm is self supporting. Last year 12,000 pounds of potatoes were grown and thousands of cans of tomatoes, corn, beans, and other vegetables were put up by the female prisoners in the canning factory. There are thirty-eight horses and eighty cows which include Edgeriver Dot, a prize winner at a number of fairs and a cow that has given over 100 lb. milk in a day. The milk is sold to city institutions and put up in an electrically operated bottling and refrigerating plant.

The prisoners live in dormitories closely resembling army barracks. There is a recreation hall where plays can be given and where cards, checkers and other games are played during the evening.

INCREASING COLLEGE HERD

Thomas M. Oleson of the South Dakota Agricultural College has been making a tour of southern Wisconsin and purchased six heifers for the college herd, three of the six being purchased in Walworth County, two in Jefferson and one in Dodge County.

One of the animals going to the college was Happy Home Daisy Johanna from the herd of James Henderson of Elkhorn. It was planned to consign this two-year-old to the Holstein sale at the time of the National Dairy Show this fall but in consideration of \$350 and the advertising he will receive, Mr. Henderson sold her now. She was sired by Creator and her dam is Daisy Colantha Korndyke 2d.

Two heifers were purchased from Wm. O'Leary of Honey Creek. Both were three-year-olds; one is a daughter of Kayewood Douglas Pontiac from a 23 lb. dam. She was first prize senior two-year-old in the Boys' and Girls' calf class at the Walworth County Fair. The other heifer is a daughter of East Troy Sir Ollie, Mr. O'Leary's herdsire and her dam was a 17.94 lb. two-year-old daughter of Kayewood Douglas Pontiac. The price of these two heifers is said to be \$300 each.

HOLSTEINS FOR MONTANA

S. J. Kelly and Sons of Twin Bridges, Montana, recently purchased fifteen head of well bred Holsteins from the Masola herd at Waterloo. The local county agent, H. C. Burgess, assisted in making the selection and is a staunch advocate of the dairy business for the rich bottom lands of Madison County.

Trucksville, near Wilkes-Barre, Pa.

Herd recently passed another CLEAN Test.

MORE NEWS FROM CRYSTAL SPRINGS STOCK FARM

Mr. Ritter, manager of Loysville Orphans' Home, after spending some time looking for a good bull came to Crystal Springs Stock Farm and purchased a son of Jessie Maida Ruth. Jessie Maida Ruth was born on Crystal Springs Stock Farm and made a 16 lb. junior two-year-old record after she dropped this bull. She was then sold to Mr. H. E. Robertson and in the Robertson herd she milked 100 lb. milk a day for 140 days producing 742.61 lb. milk in a week. In 365 days she made a record of 946.05 lb. butter, 24,103.1 lb. milk. Loysville Orphans' Home has a splendid herd and is now headed by a great bull as Sir FINDERNE VALDESSA Maida is one of the best sons of FINDERNE Sir Valdesa.

Guy Snodgrass of Woodbine, who purchased a good bull a while ago, returned a little later and purchased two big husky two-year-old heifers to add to his foundation stock.

Maurice Gross of Mt. Wolf, Penna., came to Crystal Springs Farm and purchased three heifers and a bull. They were not only big and well grown but were also of show type, each one was from an A. R. O. dam and by sires from cows that had made 30 lb. or more butter in a week. Mr. Gross already has a good herd to which he has added some fine stock.

F. W. Hoke of Hanover, took two big husky three-year-olds for foundation

stock and they form one of the best pairs that has left the farm for a long while.

Paul Spangler of Mt. Wolf, Penna., took a heifer by FINDERNE Sir Valdesa from a 20 lb. yearling. This show heifer was purchased for foundation stock. A Mr. Trostle of Loysville, purchased three good heifers also for a foundation herd. They were all daughters of FINDERNE Sir Valdesa and all from big cows with A. R. O. records.

Two heifers and a young bull went to Mr. Bernheisel of Loysville, who inspected a dozen or more herds before he came to Crystal Springs Stock Farm. The purchaser got animals from good record cows as well as high class individuality.

We are glad to tell of the results of sales to satisfied customers. FINDERNE Sir Valdesa had not only worlds of breeding behind him but he is also a good bull that is producing offspring 50% better than himself. His offspring are already in a number of leading herds. The herd at Crystal Springs Stock Farm has not only type but also production. Since the herd was founded twelve years ago there never has been a calf or any animal sold to a butcher on account of want of demand. The herd numbers 40 head and sons and daughters of FINDERNE Sir Valdesa are always in good demand. There are a number of cows at this establishment now making long time records and you may expect more news from Crystal Springs Stock Farm.

M. E. BASHOAR.

FOUNDATION COWS AT CRYSTAL SPRINGS FARM

BUSINESS GOING TO THE DOGS

It is reported that a business of \$36,000 in twelve months was done by Thomas Shover proprietor of Shomont Farms, Monticello, Iowa, in white collie dogs. In addition he sells Holstein cattle, Spotted Poland China hogs and Angora cats.

This was two years ago and while the dog business this year will scarcely equal that figure Mr. Shover reports it as being entirely satisfactory. Dogs are farmed out from Shomont, thus eliminating a lot of labor and liability to contagious disease. The man taking the dog has a half interest in the female and has the option of keeping half the pups or selling them back to Mr. Shover, who takes the other half interest. The work of registering the animals and keeping

track of the breeding data requires the full time of a secretary.

Shomont dogs have won high awards at many exhibits this year and there is a big demand for them. They are sent to every state in the Union as well as China, Argentina, Cuba and Mexico.

Shomont Farms is also the home of a good herd of Holstein cattle which ranked fifth in the state cow testing association for 1923. The bull in service at this establishment, Yankton Pontiac Gerben, has been a winner in several show rings this fall while the senior sire was second in his class this year at the Interstate Fair held at Sioux City, Iowa.

One well-equipped dairy farm in Argentina has a herd of seven thousand (7,000) Holsteins, purebreds and grades.

Just for Fun

Hans is a farmer who, when a young man, came from Germany to this country as an immigrant and in his adopted home has become a successful farmer.

He is particularly proud of his doorway. One day he was grieved to notice his front gate open and a huge truck loaded with telephone poles driving in. He went out but learned that the truck was from the telephone company and that the foreman was ordered to plant poles across his lawn and the adjoining few acres.

Said Hans, "Dot is my vront yard. You can't do dot."

The telephone foreman calmly waved a paper under his nose and said, "Oh, yes we can. We have the authority from the court right here in this paper."

"Vell," said Hans, going into the house, "Maybe you can."

He went on out through the back door and going to the pasture gate unhooked it and returned to the house. Soon a big Holstein bull, weighing at least a ton, came tearing up the lane into the yard and scattered linemen over the fence in a hurry. Hans calmly came out on the front porch when the enraged foreman yelled, "Hey, take that bull away. How can we work with him around?"

"Vell," said Hans, "Vy don't you show him dot paper vot you showed me?"

REVERSE ENGLISH

Private Jones was summoned to appear before his captain.

"Jones," said the officer, frowning darkly, "this gentleman complains that you have killed his dog."

"A dastardly trick," interrupted the owner of the dog, "to kill a defenseless animal that would harm no one!"

"Not much defenseless about him," chimed in the private, heatedly. "He bit pretty freely into my leg, so I ran my bayonet into him."

"Nonsense!" answered the owner angrily. "He was a docile creature. Why did you not defend yourself with the butt of your rifle?"

"Why didn't he bite me with his tail?" asked Private Jones.

One Sunday two lovers went to church. When the collection was being taken up the young man explored his pockets, and finding nothing, whispered to his sweetheart, "I haven't a cent, I changed my pants."

Meanwhile the girl had been searching her bag and finding nothing blushed a rosy red and said, "I'm in the same predicament."

KILLJOY

A wife recently stopped her husband's wedding by dropping in when it was in progress. Some wives will never learn that their place is in the home.

"What makes the butter so white?" asked one city maid, accustomed to the yellow creamery kind.

"Don't you know," said the other city girl wisely, "they left the egg out of it."

A celebrated singer was in a motor car accident one day. A paper, after recording the accident, added, "We are happy to state that he was able to appear the following evening in four pieces."

She—"It's funny to me women didn't take to short skirts long before they did." He—"No mystery about that. They had to wait for silk stockings to come within the reach of all."

We are not very strong believers in the theory that man descended or ascended from a monkey. It is much more probable that woman made the first monkey out of man.

A village with very few children piqued the curiosity of Francis Wilson, the actor, one summer, and he said to a farmer:

"Not many children here."

"No, sir, not many," was the answer.

"How often are children born here?" asked Wilson.

"Only once," was the answer.

A butcher in a certain town had read considerable about "Milk from Contented Cows," and wanting to keep up with the times, he placed this sign in his window: "Sausages from Pigs that Died Happy."

Much from Little—The Returns from a Classified Advertisement appearing in THE HOLSTEIN BREEDER AND DAIRYMAN.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

ACCREDITED!

AMSDALE CLOTHILDE HENGERVELD

AMSDALE HERD is now Accredited, has been established nearly 30 years, and, with the exception of the herdsires, every animal was born on the place.

We would like to sell our coming-crop of calves. They are sired by the 30-lb. bull

KING ECHO SYLVIA COLANTHA SPOFFORD

His dam produced 30.55 lb. butter, 700.7 lb. milk in 7 days and is a grand cow.

His sire is the grandly bred bull SIR CHAMPION SYLVIA, one of the best sons of Champion Echo Sylvia Pontiac.

If you are interested in calf club work or desire stock you can depend on at reasonable prices, don't miss this chance.

AMSDEN BROTHERS

CUBA

NEW YORK

KEEP THESE IN MIND!

THIS FEDERALLY ACCREDITED HERD sends a nice consignment to the New York State Breeders' Sale, State Fair Grounds, Syracuse, N. Y., January 14-15, 1925.

Baby Era Butter Boy 476103, a daughter of *Czar Walker Clothilde*, whose dam produced 666.7 lb. milk, 31.70 lb. butter in a week—953.50 lb. butter, 20,225 lb. milk in 10 months.

Also a four-year-old daughter of *Zerma Ormsby Alcartra*, 436.2 lb. milk, 21.33 lb. butter in 7 days as a three-year-old. Bred to *King Walker Lyons Arcady*, our handsome grandson of Ormsby Korn-dyke Lad and the 40-lb. four-year-old, Highland Burke Joh.

These animals are fine individuals and are representative of our Federally Accredited Herd—which has been established 22 years.

Estate of E. H. Witter, Cuba, New York

Silverwood Stock Farm

TYPE, BREEDING AND PRODUCTION

Cows and heifers of this quality are bred either to KING PONTIAC ALCARTRA PIETJE or to DUTCHLAND KONIGEN CREAMELLE BOY—his dam a 881 lb. year record daughter of a 1,263 lb. cow, who in turn is from a 1,155 lb. dam.

Our cows milk 12,000 lb. to 17,000 lb. in a year of C. T. A. work.

Herd under State and Federal Supervision. Stock for Sale. Prices Reasonable.

H. S. BROWN & SONS, 6417

Susquehanna Co.

Thompson, Pa.

AN ACCREDITED CONSIGNMENT

DOROTHY FRANCINE JOHANNA LAD

476.4 lb. milk, 20.36 lb. butter in 7 days as a three-year-old. Her dam made 18.69 lb. butter in 7 days when nearly 11 years old (her first test) and has another A. R. O. daughter, 23.05 lb. butter, 535 5 lb. milk as a four-year-old.

Dorothy's sire was a grandson of KING KORNDYKE SADIE VALE and COLANTHA JOHANNA LAD 8th—transmitting sires of remarkable excellence.

She is due to freshen three weeks after the sale by KING MADALINE BUTTER BOY, a show bull.

His dam is a tested daughter of King Pontiac Johanna and a 31 lb. cow. His sire is from a 30 lb. cow and by a son of a 1,129 lb. year record cow.

See Dorothy at the New York State Breeders' Sale, State Fair Grounds, Syracuse, N. Y., Jan. 14-15, 1925. And don't forget she is from an ACCREDITED HERD.
